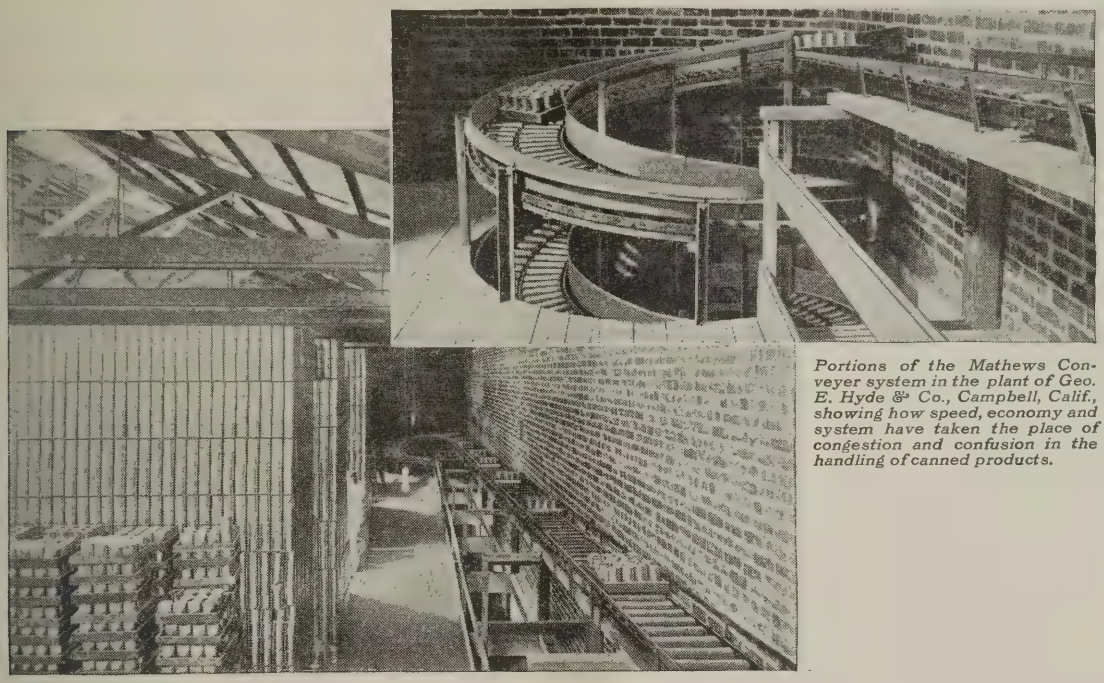
SOME months ago the suggestion was made to the United States Bureau of Agricultural Economics that we might be of service to the canning trade by formulating standards for the various fruits and vegetables used in this industry, somewhat similar to the grades we have already established for the merchandising of these crops for fresh market purposes. It was felt that if such grades could be made applicable to the purchase of raw stock a basis would thereby be created for contracts and other dealings between the canner and the grower that could not fail to make more harmonious and equitable the business relations between the two, and that ultimately would result in a measurable improvement in the quality of the stock delivered to the manufacturer. The opinion was expressed that the government, due to its entirely neutral viewpoint could formulate these grades advantageously and secure their adoption more readily than if they should be proposed by either the manufacturers or the growers. Federal grades would not be regarded with suspicion. In this connection I wish to say that the attitude of this Bureau is a wholly disinterested one. We do not seek to further the interest of the grower at the expense of the canner nor are we championing the cause of the canner with little regard for the grower. Our only motive in establishing grades for cannery crops is to be of service, if possible, in stabllizing the industry and promoting better methods of buying and selling raw stocks.

During the past summer this Bureau undertook a study of certain phases of the canning industry in an effort to determine whether Federal grades for cannery crops are advisiable or practicable, and if so upon what basis such grades should be formulated. The work we have done so far has been confined entirely to tomatoes, since that is one of the most important crops grown for cannery purposes. Tentative grades for this crop have been drafted, which as yet are only provisional form and may be revised to some extent before we consider them suitable to be recommended as official grades. It has been our aim to so construct these standards that they will dovetail closely with good commercial practice.

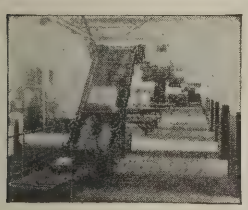
Their Desirability—There is little question as to the desirability of standards. If tomatoes could be bought by the canner on the basis of grade and a price paid for this raw stock that is commensurate with the quality delivered rather than on a flat average basis, one of the elemental problems of the manufacturer would undoubtedly be on the way to solution. I believe that each one of you is striving, more or less diligently, to put out a high grade product, and if you are to do this you must have good materials to work with. You cannot take out of the can better goods than went into it. It is my belief, therefore, that you will welcome any proposition that suggests the possibility of improving the goods offered to you by the farmer. I have run across a common experience this past summer; no doubt it is a familiar one with many of you. The canner who has a part or all of his acreage under contract is required to accept, during the course of a season's run especially in years like the present one, ton after ton of green, cracked, or otherwise undesireable tomatoes, simply because growing conditions are bad, the supply is short as well as poor, and if he is going to continue in business he has to keep growers in line and prevent them from selling to others the tomatoes he needs so badly. Your only recourse under such conditions is to strive valiantly to keep the deliveries as good as possible, and then by careful and tedious trimming salvage whatever good material there may be, even though it necessitates discarding half or more of the tonnage you have bought and paid for. And what is more, it has all been paid for at the same price as that paid for the very finest tomatoes delivered under your contracts. A condition not calculated to be very gratifying to either yourselves or to your better growers, certainly, nor likely to encourage better cultural and handling methods. And so long as a ton of tomatoes is merely a ton of tomatoes, with no distinction made as to quality, I predict a continuation of slack methods on the part of many growers and an uphill battle to improve the cannery crops grown by them.



If a way is devised to combat this ever present evil, if a means is provided whereby you can buy on grades that are fair to both buyer and seller, if a course can be mapped out that will enable you to secure tomatoes at a cost more nearly equivalent to their actual value, I believe that it will receive your hearty endorsement. If such a proposal has the added merit of being so business-like as to be satisfactory to the grower and to make your relations with him more harmonious, I see no serious obstacles in the way of giving it a fair trail.

Other Farm Products Standardized—During recent years grades have come into general use in all parts of the country in the preparation of all sorts of farm crops for market and are now considered by both buyers and sellers as a very necessary feature of any well ordered system of marketing. We see grain being warehoused and sold on United States grades. Standardized grading and packing of apples in the Northwest is largely responsible for the success of the fruit industry in that section. Potatoes are being graded by Federal standards in every important potato growing state and these grades are the basis of sale, market reports, inspections, adjustments, etc., in every market in the land. Wherever standardization of any commodity has received an intelligent trial it has been accompanied by an improvement in quality, and a betterment of general market conditions, from the standpoint of both the buyer and the seller. As the grower's experience has broadened in the use of grades he has become more and more convinced of the wisdom of marketing his crops by this business-like method rather than by the antiquated unsystematic method of trying to dispose of everything he grew without regard to the variations in the quality and condition.

The principle of standardization is now firmly established and becomes more popular each year. Consequently it is my belief that the time is opportune to suggest to the grower of cannery crops that he apply to his dealings with the canner this grading principle that he has been using so successfully in the marketing of his wheat, his apples or his potatoes. I am firmly convinced that grades are applicable to most, if not all, of the fruits and vegetables grown for cannery purposes.



It is my understanding that to a large extent peas are bought on grade, and I have observed that certain manufacturers of tomato products buy their tomatoes on more or less definite standards. I have been told by these canners that under no circumstances would they return to their former methods of buying; that the principle of purchasing these commodities for the cannery on grades has proven so satisfactory that they intend to continue to use their locally drawn standards until they can replace them with uniform grades bearing the official approval of the United States Department of Agriculture.

It is recognized that these crops frequently show wide differences in quality and condition due to varying factors such as climatic, cultural and soil conditions, as well as to the different degrees of care employed by the growers in handling the mature fruit. The value to the canner of a given lot of tomatoes is reflected directly by these differences in quality, and consequently it is impossible to establish a flat price for a ton of tomatoes that will be fair to the canner and grower alike under all conditions. The grower who delivers a load of tomatoes of poor quality certainly does not deserve as high a return as his neighbor who brings in a load of fine, large, red-ripe tomatoes. Yet

Portions of the Mathews Conveyer system in the plant of Geo. E. Hyde & Co., Campbell, Calif., showing how speed, economy and system have taken the place of congestion and confusion in the handling of canned products.

Gravity points the way to labor and power economy

Lugging, carrying and wheeling are the drudge jobs in every industry. The labor they employ produces nothing. It can't be other than indifferent, inefficient, costly. For the monotonous grind leads nowhere—it destroys initiative, develops no skill, promises no advancement, holds no hope.

Switch more of this class of labor onto production jobs and you will have taken a long step toward cutting costs, increasing output and reducing factory overhead.

Mathews Gravity ball-bearing Roller Conveyers point the way. They have records of cutting handling expense as much as seventy-five per cent. Fifty per cent is a fair average. You can easily figure the saving in your own plant—and when you've done that you'll quickly forget the cost of a Mathews system.

The Mathews enables quicker and more economical loading and unloading of cars and motor trucks; keeps work moving through the plant—operation to operation, floor to floor, warehouse to shipping platform, etc. The way it helps to speed up production, the way it cuts down time and power wastage by keeping hands busy and machines "fed", is a liberal education to any industrial head or production manager.

The operating force—*free gravity!* Thus the Mathews saves fuel as well as time and labor. (Occasionally a handling route may require a lift or two, in which case there's a Mathews Automatic Elevator to fit the need.) Could any industrial story be more interesting or timely than this? Write for the new Mathews catalog showing the great range of uses and installations (permanent and portable) of Mathews Conveyer systems.

in many cases he gets it; it isn't because the canner doesn't care what sort of stock he receives; it isn't because he can use both good and bad tomatoes to equally good advantage. But it is because up to the present time there has been no basis provided for determining the variations in quality upon which definite gradations in price may be constructed. That is one result which we hope may be accomplished by the establishment and adoption of United States grades for cannery crops.

Standard grades will create a common language with which to describe each individual lot of tomatoes. It seems reasonable to assume that such grades will be of material assistance in promoting fair and equitable business relations between the canner and his growers. The careful and conscientious grower will be encouraged to continue his good work while his careless and shiftless neighbor will be stimulated to greater efforts in order to share in the higher returns brought by No. 1 stock. The very fact that a delivery of high quality tomatoes would bring more money than one of poor quality cannot fail to encourage the improvement of cultural and handling methods. The intelligent use of such grades will tend to raise the average quality of the crop. This is what the canner wants, certainly. It will reduce the number of growers who consider their tomatoes as a side issue and who give them only such attention as is convenient. Incidentally it will focus interest upon better seed selection and plant breeding, and I am sure we are agreed that there is much need for this kind of work. In many localities the varieties and strains of tomatoes that are planted for cannery use are not well adapted for this purpose. Both yield and quality are poor. The trade is thoroughly awakened to this condition and is giving widespread support to programs undertaken by several colleges and experiment stations which have in view the ultimate elimination of all unproductive and poorly adapted strains of tomatoes and the constant improvement of a few well selected varieties. The grower who finds that he is unable to produce tomatoes that will grade United States No. 1 will be inclined to discriminate more carefully thereafter in the purchase of his seeds or plants.

It is hardly to be expected that the grower of cannery tomatoes would use these proposed grades as a basis for separating the crop into two or three classes before hauling to the cannery. I believe that would increase the handling costs so much that it would not be feasible. It appears to me that the more logical plan is for the canner to use them as a basis for sampling the loads as they come to the receiving platform, thereby fixing the value of each load. The lot that grades United States No. 3 is surely not so valuable as one that grades United States No. 1. It is my impression that the canner does not want the load sorted into so many crates or baskets of No. 1's, so many No. 2's etc. He wants the culls left out, of course, but as a rule he is not prepared to handle lots of different quality separately and so the individual loads lose their identity immediately after being unloaded at the receiving station platform.

The careful and conscientious grower would profit through such an application of these grades by receiving a return commensurate with the large amount of first quality tomatoes and the scarcity of culls in his load. On the other hand a delivery of poor quality could be quite justly discounted in direct proportion to its actual value to the manufacturer. A canner buying on a grade basis would thus be enabled to secure tomatoes at a cost nearly equivalent to their actual value.

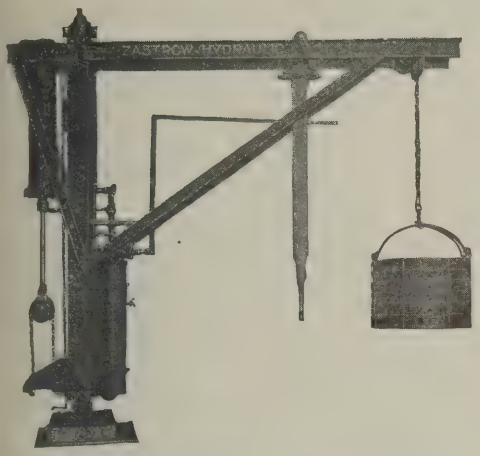
There are certain difficulties that may be anticipated in putting into effect a workable plan of grading raw stock. I have noticed that at times when the demand exceeds the supply there is keen competition among canners for the available tomatoes. This, of course, tends to make the growers independent, particularly in communities where numerous competing canners are located. Hence, if one canner whose standards are high should reject a load of tomatoes because the stock did not grade United States No. 1 the grower, if he chose, would have ready access to other manufacturers who might not be so particular. For this reason any system of grading to be most effective should be adopted uniformly over as wide a territory as possible, thereby placing your buying methods on a plane of equality.

To Avoid Disagreements—I fear there may be frequent disagreements between the canner and the grower as to the actual grade of a given lot if the sampling should be done by either party. The canner says the load is No. 2. The grower stoutly maintains that it is No. 1. Both are perfectly sincere, perhaps, but the fact remains that there is a difference of opinion. One is bound to be wrong, and the only logical way of determining which one is to call in a third, in whose integrity. impartiality and fitness to judge they both have confidence. I believe I foresee the need for developing a disinterested inspection system coincidentally with the adoption of grades. Perhaps this is another place where the government can be of service to you. The Bureau of Agricultural Economics already has in operation such a system of fruit and vegetable inspection, with which you are all more or less familiar. True, it was designed primarily for determining the grade and condition of crops intended for consumption as fresh fruits and vegetables, but there is no legal obstacle in the way of making this service available for determining the grade of cannery crops as well, in case sufficient demand for it should arise. This service in its present form is in no way compulsory. Its use is entirely optional, but the constantly increasing requests being made for it are indicative of the benefits it confers upon those who employ it. I mention this as a possible development to keep in mind; if you see fit to call upon us for a service of this kind we shall undoubtedly undertake to extend the scope of this inspection service so as to take care of your needs. A method of sampling will have to be developed that will be accurate and rapid, and that will not require a highly trained man to do it. It will have to be done rapidly enough so as to not hold up the wagons and trucks and slow down the receiving and unloading operations. This difficulty has been suggested, and unquestionably deserves serious consideration. However if properly organized, I am sure that this process of sampling can be done rapidly and cheaply. It is now being done regularly by numerous canners, and have devised means for handling the stock so rapidly that there are pratically no delays whatever.

In constructing these tentative grades for cannery tomatoes we have been guided largely by suggestions and information furnished us by those intimately associated with the canning industry and familiar with its problems and commercial practices. They have been submitted to a few representive growers and manufacturers and have been revised somewhat in the light of their constructive criticism. You will understand that we do not consider these standards as perfect by any means. They merely represent something which we have established as a starting point and which we hope to improve upon as our experience grows. We are ready at any time to receive suggestions from any of you because we defer to your extensive experience in the manufacture of canned foods.

In conclusion, let me say that I am hopeful that a number of manufacturers will adopt these tentative standards as a basis for their 1924 contracts, thereby providing us with an opportunity to observe next year how they work under actual commercial conditions. We are planning to go into this matter a little further next summer at the time the tomatoes are being delivered to the canneries. We will try to determine by working directly with the tomatoes, whether we have worded these grades properly. By giving them a thorough test in that way we can learn what revisions, if any, will be necessary in order to make them suitable to your conditions. In case we are able to render you a service by promulgating grades for tomatoes, we will undoubtedly be encouraged to undertake the establishment of grades for other cannery crops in the near future.

THE WISCONSIN LABELING LAW GENERAL ORDER NO. 11 R—HOW IT APPLIES TO CANNED FOODS



By W. E. Nicholoy

Field Secretary Wisconsin Pea Canners Association, Before Western Canners, Friday, November 9th, 1923

THE subject which was assigned to me or suggested was "Wisconsin Labeling Laws." From what I have learned recently, there probably are many of you who think that the Wisconsin Pea Packers Association is responsible for Wisconsin labeling laws, and if this were wholly true it would not be necessary to call your attention to the slight error in the printed program, but the Wisconsin labeling law, or General Order No 11-R of the Wisconsin Department of Markets, is not an own child of the Wisconsin Pea Packers Association.

The present Wisconsin labeling laws have been in the process of formation for nearly four years. The first public hearing regarding standardization of grades and labels for Wisconsin Canned Peas was held in Madison March 24th, 1920. This hearing was called by and held before the Division of Markets, Wisconsin Department of Agriculture, and at that time the Wisconsin Pea Packers Association was strongly represented and emphatically opposed the proposed regulations. As a result of the opposition from our industry, no definite action was taken, but a committee was appointed by the Division of Markets to further consider standards. This committee was composed of three canners and three jobbers. Afterwards two more canners were added to the committee and on March 29, 1920, the Division of

Markets advised that the contemplated standards would not apply to the pack of 1920. Since that first hearing several others —five I believe—have been held.

In January, 1922, a proposed General Order No. 11 was issued by the Department of Markets to become effective June 1st, 1923. This was protested because of too short notice and on February 10th, 1922, General Order No. 11 was published, effective June 1, 1924.

General Order No. 11 met with considerable opposition from both the canners and jobbers because it not only applied to both canners' and jobbers' labels, but it also prohibited the shipment of unlabeled peas. So after further hearings, on August 14, 1923, General Order No. 11 was supplanted by General Order No. 11-R, effective June 1, 1924. So much for its history.

General Order No. 11-R applies equally to canners' and jobbers' labels, but it does not prohibit the shipment of unlabeled peas. If jobbers' labels are applied within the State, they must comply with the order. Labels upon all peas sold within the State, either to State jobbers or retailers, must comply with the ruling, and beginning June 1, 1924, all peas sold by retailers to the public must comply with this ruling. It matters not whether they are Wisconsin peas or peas from other States, and regardles of whether they bear a canner's or jobber's label.

WINFORD E. NICHOLOY
Field Secretary
Wisconsin Pea Canners Association

General Order No. 11-R defines peas as of two varieties. Under this heading the order reads: "The words 'Early Variety Peas' shall appear in type at least one-fourth (¼) inch high upon the label of every can containing peas which are from seed of the early maturing sorts having a smooth skin. The words 'Sugar Peas' or 'Sweet Variety Peas' shall appear in type at least one-fourth (¼) inch high upon the label of every can containing peas which are from the seed of late maturing varieties having a wrinkled skin and sweet flavor." Note that this does not say that the can must bear a label.

General Order No. 11-R also requires that the true size number of the peas appear on the label. For example: "The word and numeral 'Size 3' shall appear in type at least one-eighth (⅛) inch high on the label of every can containing peas, all of which were graded for size before pre-cooking (blanching) and were small enough to pass through a screen of 11-32 inch (8.7mm.) mesh."

In addition to permitting the shipment of unlabeled peas, General Order No. 11-R differs from General Order No. 11 as follows: Article No. 8 reads: "The words and numerals 'Size 5 and 6' shall appear in type at least one-eighth (⅛) inch high upon the label of every can containing 'Sugar' or 'Sweet Variety' peas of both size 5 and size 6." This is to take care of the canner who is not or cannot economically separate the 5s and 6s. Article No. 9, which is self-explanatory, reads: "The words 'Mixed Sizes' and a statement of the sizes so mixed shall appear in type at least one-eighth (⅛) inch high upon the label of every can containing peas, all of which were graded for size before pre-cooking (blanching) and the sizes subsequently mixed, provided, that this designation shall not be allowed if the can contains less than twenty per cent, by weight, of peas of any one size." Article No. 10, relative to ungraded peas, reads: "The words 'Ungraded for Size' or 'Pod Run' shall appear in type at least one-fourth (¼) inch high upon the label of every can containing peas, which were not graded for size before pre-cooking (blanching), provided that, where any sizes have been removed, the designation shall be 'Ungraded for Size', together with a statement of the size or sizes so removed."

Colonel Lee, in suggesting this subject, assured me that you folks from outside of Wisconsin were interested in knowing the details of the new Wisconsin labeling law. To me the subject seems so dry as to remind me of the fellow who asked the Judge if he had tried any of the hootch which the new bootlegger was peddling about town. "No," replied the Judge, "but I've tried everybody who has."

And now in conclusion, I want to say just a few words to you about Association work. You canners who are members of State Associations having a full time Secretary who devotes his entire time to Association work know the value of this work. A large part of the pioneering has been done and you canners whose local or State Association does not have a full time Secretary are passing up a good bet. Unlimited good can be accomplished if you get the right man and give him the right kind of support. Make your Association work for you every day of the year. A State Association that meets once a year for a good time and for the purpose of electing officers is only half an Association. Properly organized, we can exert a large influence for the good of the industry. Don't pass the buck to the Western or National Canners Association. When problems like the present request for ½ of 1% allowance in lieu of swells come up, be ready to meet them. Get your State Association working so you can back up the National Association and their special committee. It's high time the Canning Industry got a part-time job on the receiving end. We have been the best little bunch of givers the world has ever known. There's a limit.

There is no other business I know of which is so much in need of close-knit, cohesive Association work. Neither do I know of any business in which this is so hard to accomplish. With a full time Secretary, Executive Secretary, or whatever you wish to call him, you can maintain a better control and supervision over every department of your business. Your Secretary can supply you with Trade Statistics, Data on Acreage, Production and Movement of Stocks. He can promote interest in your Association, establish and maintain cordial relations between canners, thus developing confidence. He can bring you into closer working relationship as an Industry with various departments of your State Government. And what is perhaps even more important, he can cooperate with other State Associations in common problems—but to do all of this he must have your cooperation.

And just one other thought. Regardless of how good your State Association is, or how efficient and aggressive the Western or National Association is, you hold your destiny largely in your own hand. Pack Quality Canned Foods, label them intelligibly, market them at fair prices and you will prosper.

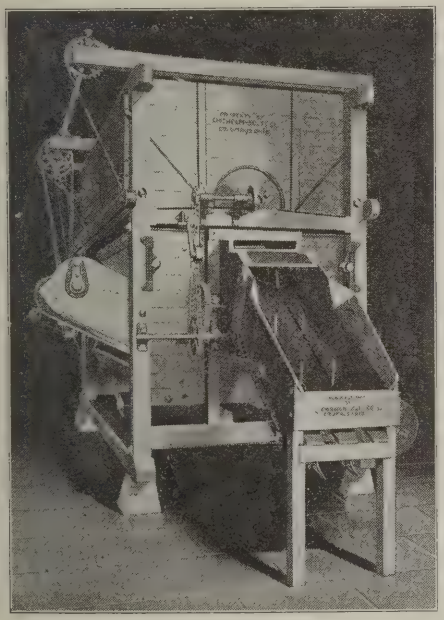
THE LOOSE JOINTS IN CANNED FOODS WEEK

By Mr. Frank Shook,

Assistant Secretary, National Canners' Association,
Before the Western Canners' Association, Chicago,
November 8th, 1923.

LAST year's campaign was a success. The first year we needed 325,000 window streamers. Last year 1,500,000. And the fact that this time we have four times as much money pledged for the coming campaign as we did last year, indicates a healthy state of mind on our part. Fifty per cent of the contributions came from canners who did not contribute last year.

What I have to say to you this afternoon is regarding the loose joints in it. Knowing them, we can help work them out.



One of the loose joints in the campaign was the finding out from local markets how much material they wanted. That is a very easy thing for them, through their local committee to work out. You know how many retail grocers you are going to cover. There is no sense in our sending this stuff by express if freight can take care of it. No sense in waiting

until the middle of February to find out how much material any committee will want.

Last year we asked the local organizations in the various districts to let us know by December 15th how much material did not. The joker is that the man who did not was the man they wanted, and we would get it to them. Some did. More to complain because the material did not reach him. You don't wait until the last minute to place your orders for labels. You make an estimate for future use, so you will have the labels in time for your use.

We place the contract, and the printer must have at least a month to print the material. This should be some time in November. It will then be some time in December before they are shipped out.

Some canners wait and wait before contributing. I told my secretary to keep me advised of all the contributions that come in while I am away. We have had one since I left. That is not very many. One of the State chairmen has asked me what to do to get the canners to contribute. I don't know what to do other than we have been doing. We can only write you and invite you to contribute. Then write again. I think the quintescence of salesmanship is not to get discouraged, and to keep after a person until he does the thing you want him to do, and which he is willing to do, but not until the last minute.

Our expenditures for this campaign are growing as it grows in popularity. I hope that we can work out some way this afternoon of being able to order supplies in ample time, so that we can send them to the local committees in large quantities—not by express or parcel post—but by freight direct from the manufacturers of the streamers to the local committees.

Chicago should be able to tell us very soon how many it needs. We will give them to you.

The plan this year is similar to last year's.

The canners are to raise the funds.

The brokers and wholesale grocers are to raise funds for local advertising. They are to get the co-operation of the retailers.

We should pay more attention to letting the consumer know what is happening. You couldn't get a large crowd to a World's Fair if you did not let the public know through publicity that there was going to be a world's fair. The same with Canned Foods Week. We can't advise the consumers on the 28th of February that the next day there is going to be Canned Foods Week, and that there will be special inducements. I don't know how to do it. But people have been notified of things in advance. We knew in advance that there was an election last Tuesday. The same processes can let the public know there will be a Canned Foods Week. We should not loose sight of that important matter.

Someone suggested canners could furnish pamphlets for the retailers to use to let the consumers know there will be a Canned Foods Week.

I am afraid that when Indianapolis gets ready to use its money, they will use it to get the co-operation of retailers in Indianapolis. And in St. Louis, the same way. They won't let the consumers know about it.

If we should attempt to have handbills printed to distribute among 600,000 retail grocers in the country, we wouldn't know where to begin. Each would want at least 100. That would mean 60,000,000. So I think that would be an impractical way to do it, even if we had the money, and we haven't. That may be a problem that the distributors and retailers could adjust.

First, let's get the contributions.

Second, let's place the orders for some definite quantities of material we are going to furnish.

Third, let the Washington office know at the earliest possible date, city by city and State by State, how much material is wanted.

Fourth, let's work out some plan of letting the housewives know that we are going to have a Canned Foods Week, so they can get ready for it.

Fifth, let's have a little rejoicing over it. Be glad that we have done it better than ever before.

Sixth, let's not do it behind each other's back, but with the cards on the table.

That reminds me of the story about the old, fastidious bachelor who found that his colored maid was using his own private bath.

After scolding her, he added: "And what makes me feel worse about it is that you have been doing it all the time behind my back."

CHAIRMAN CLARK: There is another matter in connection with Canned Foods Week that I have given considerable attention to, and that is some advertising in the retail grocers' papers. I don't know the circulation of these various papers, but I know they reach a goodly number of retail grocers.

Mr. Mulligan called my attention to the fact that we were overlooking a real good thing.

I replied that we didn't have the money. But that is a poor excuse for the canning industry to make.

That is one way to make the announcement to the retailer. We would get him interested and acquainted with the fact that the campaign was to be put on. This is done now largely by the salesmen of the distributors, and we have to rely upon that source almost entirely.

CONVENTION DATES

December 4-5, 1923—Iowa-Nebraska Canners, at Omaha, Hotel Fonteneke. Annual Convention and banquet.

December 6-7, 1923—Ohio Canners, Southern Hotel, Columbus, O. Annual Convention.

December 10-11—Tri-State Canners, Hotel Adelphia, Philadelphia, Pa. Annual meeting.

December 12th and 13th—New York State Canners, Hotel Powers, Rochester. Annual Meeting.

January 8-9, 1924—Utah Canners' Association, Utah Hotel, Salt Lake City. Annual convention.

January 21st to 26th, 1924—National Canners, Canning Machinery and Supplies, National Food Brokers, Machinery Exhibit, etc., Buffalo, N. Y.

Note:—Secretaries can help their cause by keeping us informed as far ahead of time as possible, and so keep this column correct and complete.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, DECEMBER 3, 1923

WEEKLY REVIEW

Market Quiet But Steady Demand of Retailers Continues—Higher Prices in Prospect Cause Holders to Wait—Demand Chiefly for Unlabelled Tomatoes—The Tri-States Seem to Hold All Tomatoes—Pea Futures Being Used to Wreck the Warehouse Plan?—Corn Is Strong—Sweet Potatoes Advancing.

MARKET WITHOUT LIFE—With the great day of reckoning—inventory time—looming very close, all buyers have adopted the policy of no more buying of canned foods, but in most cities and in most cases the insistent and steady demand of the retailers is causing a steady flow of small orders for all sorts of canned foods. When the canners here are asked they reply that things are very quiet, but the brokers report some business every day, and in some cases for fair-sized lots.

The real feature of the market is that everyone acknowledges that stocks in wholesalers' and retailers' hands are low, and that after the turn of the year there will be such heavy demand, and, owing to the fact that canners' stocks are also very low, higher prices to the canners seem certain. These higher prices are taken almost as a matter of course by both canners and buyers, and the canners are, accordingly, holding for this better demand; and the jobbers, although needing more goods, are waiting until they can be counted in their new inventory. This new demand may set in before the end of December, towards the latter days of the month, when the books have been closed for the year and it is too late to receive the goods during 1923. The long-headed buyers will thus buy early, hoping to get in ahead of the advances which they see coming. So the entire market can be reported as very strong and very hopeful. Business in general is good, the people are eating more canned foods than ever before, and, so far as the canners are concerned, they can enter into the holiday season with free minds and bent solely upon a thorough enjoyment of it. This is the first time in five years that this could be said, and they have certainly earned the rest.

TOMATOES—The chief demand seems to be for unlabeled stock, the jobbers' labels showing how low these stocks are in the distributors' hands; but it is said the supply of such goods is growing very small. After the canners have shipped their futures, and particularly as the season grows late, most canners want to finish the work, and so permit their hands to label and ease the surplus, so that it may be shipped at once, and without holding any extra help for the purpose. Others consider that the goods carry in unheated warehouses in better shape if labeled and placed in the cases. There is a "comfy" feeling about saying that the season is over; most of the good gone, and what few are left are ready for immediate shipmen upon demand. But this makes hard picking for the jobber wh needs goods for his own label. And it should be noted here tha most holders of surplus tomatoes, especially, knowing that all th country has to come to the Tri-States for its supplies, are re fusing to consider deferred shipments. The orders must be fo immediate shipment or the holders will take their chances fo the better prices later. The market is holding very firm and u to outside prices. There are no changes to note in our tomat prices this week.

PEAS—Just as the Germans threw the Austrians and th Hungarians and other of their allies to the Russians t hold them and save their own skins, so the big jobbers seen to be doing with the pea canners in their efforts to break dow the Warehousing Plan. Of course, they want future peas, bu it begins to look to us as if they were buying more generall and heavier of future peas than they would otherwise, trying t get these contracts signed with a flat allowance instead of on th Warehouse Plan. If they can get these contracts signed as the want them, then they will waive them in the faces of the rest o the industry to show that the canners are not living up to thi Warehouse Plan. They are making the most of every contrac signed on the old flat allowance basis, advertising it until it look like some of the offerings of a canner anxious to sell, and wh gives the thousand cases to twenty different brokers. It is no hard to make one offering of a thousand cases look like 20,00 cases, and that is what is happening in these future pea sales where they were made early and before the Plan was adopte or understood. This view is strengthened by the apparent ab sence of any opposition to the higher costs and prices which pe canners are forced to make for 1924 goods. Harken back a few years and you will find that, no matter how justified the highe costs, the jobbers objected very strenuously to granting them For instance, every Winconsin canner contends that he canno pack standard 4s and 5s at $1 and make any money, but last vea the jobber drove hard for a 90c price, and 95c was a good price Now the canners have set the price at $1.05 for No. 4 and No. sweets, and are getting it. Some canners are asking $1.10 an are geting it. It is said that both spots and future peas are wel sold up. Indiana is quoting Standard 5s at $1.05 and at $1.1 for No. 4 Standards.

CORN—The year's figures on the corn pack did not have th effect on the market that some feared. There has been re ported some little weakness in corn, in one market particularly but this is regular with corn. It never seems able to make a avance without some section weakening, and we do not attribut this present weakness to the statistics. Corn is strong becaus shoepeg standard corn has advanced here to $1.20, and no sectio reports any figure reduction in the price. Most of the Wester there is not too much of it by a wide margin. In fact, No. States report corn stocks down to as comfortable a position a the tomato canners feel, and that means a strong position fo corn. Maine is cleaned out of spots, as is New York State, an

is section shows very few offerings of any kind, and these are full market prices.

SWEET POTATOES—This article has taken on a little added life this week, as the packing of sweet potatoes has been light and the stocks are low. The market has advanced to $1.05 for No. 2s and $1.20 to $1.25 for No. 3s, and is ery firm

OF MORE IMPORTANCE—While the market prices have gone, temporarily, into hibernation for the holidays, the industry might very profitably consider some other important market features. The first and most important, we believe, the Warehousing Plan. This has been adopted by the canning dustry, and canners should stand back of it and refuse to conder any contract without it. It will take some backbone, but it is orth all that it costs. The wholesalers, who are against it, ust see in their advocacy of the flat allowance a very decided renuous effort to hold on to it. They are virtually tr ing move heaven and earth to carry their point, and where there so much smoke there must be some fire. Next week we will ve the full version of the wholesalers' case, and a brief answer their claims, and we suggest that you wait for this. This lan is in force and must be sustained, and we know that the reat body of canners are supporting it 100 per cent. If there re any dissertions from it they are rare exceptions, and can be ken as such. In fact, most of the opposition to the Plan is ntered in and around New York city.

Another matter is the fine State and local meetings the canrs are now holding. They are meeting in the general way, but most cases they are holding executive sessions where they alk turkey." That is the way to get out the real business, if e canners will but hold to their expressions and assertions fter meetings. The great mass of canners has gained mightily confidence in each other, and with the growth of this confince the troubles will disappear. All that has ever been needed as been confidence in each other and an ending of the old suspion of your fellow canner. Learn to respect your competitor as ou think he should respect you. He is probably as high-class a an, trying to conduct his business in as high-class a way as you , and if you will work together you will both succeed very much etter than in the past. Here is a market possibility of the reatest importance.

NEW YORK MARKET

oliday Quiet Pervades This Market—Holding Stocks Down—Wholesalers Working Hard in Opposition to the Warehouse Plan — Futures Active — Tomatoes Quiet—Corn Prices Easier—Pie Fruits Strong—Personal Items.

By "New York Stater,"
Special Correspondent "The Canning Trade."

New York, Nov. 29, 1923.

HOLIDAY QUIET—The Thanksgiving spirit has taken hold of the market this week, and canned foods trading has been quiet. This is one year when the canners themlves can join in the Thanksgiving festivities without feeling at they have nothing to be thankful for, and present market dications point to a similarly favorable market during the 24 season.

Hold Down Stocks—Wholesale grocers and chain store uyers are limiting their purchases for factory shipment to nall quantities, and are not buying beyond their immediate eeds. Most of the buyers are endeavoring to hold their ocks down to a minimum until after they have concluded eir first of the year inventory. A good buying movement is pected during the early spring months of 1924, as few jobrs have covered their canned foods needs very far in advance is season. When this spring demand does materialize, a aring market is anticipated, with conditions all in favor of e canner. With unsold stocks held by canners the lightest r years past, buyers will have to pay what the canners are king or go without.

Against Warehouse Plan—By unanimous vote, New England States food and drug officials, at a meeting in Boston st Saturday, with representatives of the United States Dertment of Agriculture, opposed the National Canners' Assoation plan for warehouses to handle spoiled canned foods. To protect themselves against possible incorrect claims, New England canners, members of the National Wholesale Grocers' Association, are asking that a warehouse be established in Massachusetts, such warehouse to be under the supervision of the Massachusetts Department of Public Health. A committee of the health official is now conducting an inquiry into the entire matter, and is expected to either approve officially or condemn the warehouse plan. Sentiment at the meeting seemed to be against any likelihood of repeal of existing regulations to permit of the establishment of the proposed central warehouse.

Still Against Warehouse Plan—The National Wholesale Grocers' Association continues its active campaign against the warehouse plan. In a bulletin issued yesterday the Association states that wholesale grocers of Illinois and St. Louis have passed resolutions opposing the warehouse plan. Of great interest to the canners of the country is the following statement of the jobbers' organization: "Canners of all food products continue to instruct their brokers to sell, in the East, on the graduated percentage allowance plan and sales are being made daily on that basis. Wholesale grocers everywhere should ask for the graduated percentage allowance plan or the label return plan."

Futures Are Active—There has been quite a good deal of future pea business, and some on future Western corn. placed in the New York market at fixed prices, buyers for private labels getting their orders in very early. It appears that some of the canners have been overdoing the future game, as some of the pea packers accepted contracts from New York buyers before they knew that can prices are to be higher in 1924 than they were during the 1923 season.

Sardine Season Over—The sardine canning season legally comes to a close in Maine this week, and the shortage of the canned fish continues unabated. Few of the canners have any stocks on hand, and the fortunate packers who have any surplus to sell are assured of a strong market, with possibly higher prices, for the remainder of the present season, as the demand for the fish continues active.

Tomatoes Quiet—Price cutting on Nos. 2s and 10s tomatoes appears to have come to an end, and the Southern packers are now quoting the market firm at list. Weaker holders have apparently gotten rid of their stocks, and the market is now in the control of the stronger elements on the small quantities which still remain in first hands. The trade has a long time to go before the 1924 tomato pack will be available, and the outlook favors a strong and possibly advancing market until that time.

Standard Corn—Canners have eased off a little on standard corn, and goods can now be had at 99 cents from packers who two weeks ago were quoting 95 cents factory. There is no real reason why the market should be cut, as the statistical position of canned corn is very firm. Maine canners are offering but a little fancy Golden Bantam at $2.00 f. o. b. cannery, but the quantity so available is exceedingly limited. New pack fancy Maine Crosby is offered in a small way on the resale market here at $1.75, ex-warehouse New York.

Bakers' Fruits Strong—A strong market for No. 10 pie fruits is reported. First hand stocks have sold readily this year, and the jobbing market is taking on more activity as the demand continues and available stocks dwindle. Several price advances have taken place, and it looks as though the demand for dried fruits for the bakery trade will be stimulated as a result of the strong market for canned bakers' fruits.

Personal Items—Jas. Kenney, local canned foods broker, is back from a week's trip through the Middle West in the interest of the Portland Packing Co.

V. M. Teed, of H. M. Ruff Co., tomato canners, of York, Pa.., was in the market during the week.

Fred A. Tillman, of Tillman & Bendel, San Francisco wholesale grocers, was visiting friends along Hudson Street during the week.

L. E. Souder, of the Garden State Canning Co., Elmer, N. J., was visiting his brokers, V. A. Seggerman Co., Inc., during the week.

Charles T. Ward, general manager of F. H. Leggett & Co., sailed this week for an extended European business trip.

William Silver, prominent canned foods factor of Aberdeen, Md., was on Hudson Street during the week.

F. H. Taylor, of Taylor's, Inc., fruit canners of Santa Ana, Cal., left for home this week, after spending several days visiting the local trade in company with his brokers, D'Arcy Van Bokkelen.

A. R. Rodway, of A. R. Rodway, Inc., prominent food products brokers, was visiting the New York office during the

week. Mr. Rodway is making his headquarters at the Chicago office at present.

Arthur P. Williams, president of R. C. Williams & Co., Inc, spent Thanksgiving at Atlantic City.

Many members of the canned foods trade attended a house-warming party given by R. A. McKee, well known canned milk broker, at his Brooklyn home last Saturday night.

Lee Dingee, sales manager for Wakefield & Co., of Chicago, was among the visitors on Hudson Street this week.

Mr. Knapp, of Bert C. Kiethley Co., canned tomato and other canned foods brokers, of Indianapolis, was on the Street this week.

CHICAGO MARKET

The Buyers On One Day and Off the Next—Retail Demand Keeps Them in Market—Stocks Are Low—No Future Prices on Corn Yet—Buyers Forced to Go East for Tomatoes—Spot Peas Sold Out and Future Peas Getting in Same Position.

By "Wrangler,"
Special Correspondent "The Canning Trade."

Chicago, Nov. 30, 1923.

THE MARKET—Brokers report that the canned foods market in Chicago with the wholesale trade is irregular, and that the buyers will one day refuse to buy at any price and declare that they are going to hold off until after the first of January, 1924, and the next day, when the broker calls, they will give him a good order and tell him they are in a hurry for the goods.

The disposition is to hold stock down to a minimum until after the first of January, but the demand and conditions of trade do not permit the buyers to withraw from the market, as they would like to, and as they threaten to do.

The fact is that stocks are low of nearly all canned foods in the hands of wholesalers, and that if they hold off buying until after the first of January, as they are trying to do, there will be a big rush for spot canned foods after that time.

The convention season is absorbing considerable time, and canners, brokers and buyers in the various localities are attending the conventions, but even at the conventions some business in canned foods is being done and some buying of futures is noted.

Corn—No prices have been named on canned corn for future delivery so far, and probably will not be until after the National Canners' Convention at Buffalo, N. Y., January next. Prices on canned corn for immediate delivery remains steady, and standard corn can be bought in any of the surrounding States of the Central West at 90c f. o. b. cannery, although some canners are trying to get 95c, and are getting that price on less than carload purchases.

Tomatoes—In canned tomatoes, the buyers are now compelled to look entirely to the Tri-States, as there are no canned tomatoes to be had in Indiana, Michigan, Ohio, Kentucky or Missouri—all the canners are sold out. There may be a few lots that are held in reserve, speculatively, or a few less than carload lots held for nearby trade, but it may truthfully be said that there are no canned tomatoes available in the Central West.

Peas—The situation of canned peas for immediate delivery in Wisconsin has been described so frequently that it is unnecessary to again say that the canners are practically sold out. They are not only sold out of spot goods for prompt delivery, but they have sold largely of canned peas for future delivery, 1924 pack.

The prices for the 1924 pack of canned peas of standard quality especially, are ranging higher than the opening price of 1923, but the higher grades are but very little different as to price, and when it is considered that there will be an advance in the price of tin cans, taking effect January 1st, 1924, in fact, practically in effect now, of about 5c per dozen on No. 2 cans, it is to be seen that the price for 1924 pack is proportionately very little higher than that of 1923.

Sardines—A very heavy advance in the price of domestic and American sardines, f. o. b. Maine canneries, changes the status of these goods on the market. They can no longer be retailed for 5c the can, as has been the case for many years, but are now in the 10c retailing price or two for 15c, and this is likely to check the demand.

Therefore, though the pack is very short, or so reporte the probability is that a short pack at the higher price will sufficient to meet the demand, as they will sell so freely.

String Beans—There is an urgent inquiry for cut strin less beans, green and white wax, but the brokers find di culty in securing any with which to fill the demand. Who beans graded for size are almost impossible to obtain.

Apples—Canned apples are in some demand at pric ranging from about $3.25 f. o. b. Michigan for standard weig pack and $4.25 for heavy weight pack. The packing of appl in Michigan is practically over, as the winter stock has be picked and barreled and put into winter storage, which i creases the cost so that canners are not able to pack in No. cans profitably at the present prevailing prices.

There are a few lots of canned apples remaining unso in Michigan and New York State has some unsold lots, but t packing this season has almost been "to order," that is to s the canners would not put up the apples in cans unless th had in view a very reliable and prompt outlet for them. Ther fore pie bakers who have not bought a supply of canned appl will find difficulty in doing so in the spring, and will find th will have to pay a much higher price.

Beets—There is a good demand for canned beets, esp cially of the small counts and for cuts, providing they a packed in enameled-lined cans and have good color. Fad beets are not wanted at any price, as they are almost unsalab

Pineapple—Hawaiian pineapple, which has for so weeks past been dragging, is recovering a little bit, and the is some demand for standard and extra stanard crushed No. pineapple from the bakers and the bakery supply people. T demand for the regular sizes of sliced and crushed, howeve is limited, and there are plenty of offerings at prices bel Packers' Corporation opening.

Pumpkin—The demand for canned pumpkin is, for t present, well supplied. Buyers who were urgent and in hurry to get a supply in time for Thanksgiving trade, w probably begin to buy again within a few days for holid trade; but for the time being the market for this article very quiet.

Fruit—Michigan canned fruits of every description are little dull now—in fact, the wholesalers are very well su plied, not in a large but in a small way, and the buying h been checked by the heavy advance in freight rates from Mic igan to Chicago since navigation closed.

The Warehouse Plan—Although a number of trade p pers, which are particularly favorable to the wholesale gr cers' interests are still fighting the canned foods regional wa house proposition in their columns, they are just a little t late, as the action for the establishment of zonal warehous has been taken by the National Canners' Association, and is effect, and all the belated arguments which may be advanced opposition to it will not change the situation.

It is to be observed that all the grocery papers whi are denouncing the plan are doing so apparently in sympat with the National Wholesale Grocers' Association, and do n say anything about the plan having been accepted by t American Wholesale Grocers' Association, which has a larg number of wholesale grocers in its membership than the N tional Wholesale Grocers' Association. Neither do they s anything about quite a large proportion of the membership the National Wholesale Grocers' Association, which favors t plan, for the reason that it does away with all the bother a annoyance in relation to spoils and swells, and takes it aw from the wholesale grocer placing the responsibility upon t canners, and that the canners are perfectly willing to acc the responsibility.

ST. LOUIS MARKET

Seasonal Quietness Prevails—Late in December Buying W Again Commence—Jobbers Sold Down Close—Higher. Costs Affecting Future Sales—Jobbers Have Enough Tomatoes for the Present.

By "Missourian,"
Special Correspondent "The Canning Trade."

St. Louis, November 29

THE MARKET—Seasonable conditions in canned foods v vail. Business is as quiet as it generally is at this s son of the year. Distributors are getting ready for th inventories and are not buying beyond their requirements. Th

ill not come into the market for any large amount of canned oods until the latter part of December, and then they will buy or shipment after the first of the year, so that new goods will ot arrive until after their inventories have been completed. hose who have stocks of desirable goods are holding on to them nd are not forcing sales. Spot trading is confined mostly to mall orders to be used for filling in requirements.

Both distributors and jobbers have sold out pretty closely, nd the task of inventorying will be one of the lightest for many ears. Canned foods are stiffening materially, particularly on pot goods, and firmer prices prevail all along the line. There s not much spot being ordered and holders want all the can get.

There have been new can prices set, effective January 1, and affects the sale of late packs. It is claimed by the can makers hat higher tin plate prices are responsible for the advance.

It is predicted by those who are supposed to know that there ill be a general shortage of most all staples. This shortage ill get worse as the season advances and the time for a new ack comes near. This will cause a general scramble for all tocks. It will tend to a more normal movement. Even futures ay be affected, and it may have a tendency to be taken on on ontract in larger quantities.

Tomatoes—The demand for tomatoes in this market is quiet. obbers are stocked up well enough for their requirements, so hey do not need to increase their holdings because the retail rade in general is pushing holiday lines and the distributor ants to keep his stock low for his inventory. The only class of etail stores pushing tomatoes seem to be the chain stores and ey are offering some good bargains. Southern and Coast markets will not sell except at full prices. Canners are not selling reely. They are maintaining their prices. Middle Western ackers are not offering because they are short of goods. After he first of the year a higher market will probably prevail. Some ackers now who have any holdings are offering at slight concesions. It is only the packers, however, who have no warehousing acilities who are doing so. In California the canning season s about over and are not selling, as they are looking for further dvances and have no large reserves.

Corn—Prices on both fancy and standard corn are firm. here would be more activity in fancy if there was a heavier offering. Standard is gaining in confidence right along, and buying has not been checked by increased prices. Buyers are somehat cautious in making purchases, and if the corn does not ome up to requirements they either demand a concession or hrow it back on the seller. This the seller will not accept

Peas—The market in peas shows no change. Futures are eing offered, but it is believed by some traders to be too early o make an issue of 1924 lines when they should feature current oods. There is an inclination to buy from canner, but outsiders re not a big feature in the country. Fancy lines are desired, ut it is hard to get them. When canners offer their goods they re taking into consideration the advance in can prices effective anuary 1. Old packs are firm in tone. Futures are not a big eature. The majority of Wisconsin canners have not named rices. They are firm in their views for 1924. They say cans ill cost more, labor they think will be as high or higher. as this ear, so there is no reason why they should quote low prices. If nything they will be higher.

Miscellaneous Vegetables.—String beans are very scarce. t is hard to get what retailers need. There has been a light ack of Southern spinach and the high cost of raw material and abor is noticed in quotations. Good brands of sauerkraut are elling well. Asparagus tips are being taken mostly by quality and not by brands, as there are small holdings. Sweet potatoes are in fairly good demand.

Fruits—California peaches are being called for on spot, but rices remain firm. The holdings are not large. Cherries are trong on short offerings, but he trade is quiet. There is a good all for No. 10 pie fruit from the bakery and restaurant trade. ears are wanted in small quantities and are having a steady ale.

Fish—The salmon market is holding firm on all grades. The rade is quiet. Most of the buying done by distributors in small uantities.

CALIFORNIA MARKET

A Report of "Marketing Day" Recently Held—All Growing Interests Represented—Co-operatives the Ruling Factor—Preston McKenney Recounts the Fruit Packs—California's Fruit Pack Has Increased 400 Per Cent in Ten Years—An Immense Increase in the Peach Average—Costs More to Distribute Fruit Than to Grow and Can It.

By "Berkeley,"
Special Correspondent "The Canning Trade."

San Francisco, Nov. 28, 1923.

THE Marketing Day program arranged by the University of California and held in California Hall on the University campus at Berkeley, November 22, attracted many growers, canners, jobbers and other handlers of California products. All phases of marketing were considered, with special attention to the co-operative plan, which has proved such a success with growers in this State.

The morning session was given over to an address of welcome by President W. W. Campbell, who described fruit growing as being one of California's most important activities, and who urged growers and canners to make the University of California their university.

He was followed by C. C. Thorpe, manager of the California Walnut Growers' Association, who spoke on "Price Fixing in Co-operative Marketing," and described the plan which has brought success to walnut growers in disposing of their crops and in stimulating the demand for walnuts. Ralph Merritt, manager of the Sun Maid Raisin Growers, told of the steps that had been taken to meet the problems of the raisin grape growers and which had proved such a task, owing to the tremendous increase in tonnage during recent years. The morning session was brought to a close with a talk by Prof. H. E. Erdman, of the University of California, on "The University and Co-operatives."

The afternoon meeting was conducted under the chairmanship of A. C. Hardison, and was attended by many canners and growers interested in the growing of deciduous fruits.

Clyde L. Seavey, president of the Railroad Commission of the State of California, outlined the transportation problems of 1923. He stated that for the first time since the World War railroad operations were to be regarded as normal, and that new records in car loadings were made in this State. During 1922, 40,557 cars of fruit left California in the fresh state in refrigerator cars, and great difficulty was experienced in handling these loadings, while up to the first of November of this year 63,209 cars of refrigerated products had left the State, with practically no congestion. While new records in efficiency have been broken during the past year, he predicted that further gains in this direction will be made in the future.

The next speaker was J. A. Teagarden, president of the Auburn Fruit Exchange, who is considered an authority on the subject assigned him, "Marketing Fruit Green." Everyone connected with the business, growers, packers, jobbers and even canners are interested in the future of the Eastern fresh fruit business, he said. While the Eastern jobber makes demands for fruit greener and greener, he warned against listening to this, and urged that the business be built up on a quality basis. Size, color, flavor and maturity are the factors that should govern the selection of fruits for shipment East. He cast aside the old idea that fruit ripens materially in transit and declared that it arrived in New York with about the same color and degree of ripeness as when placed in the box in California. Fruit for shipping, as well as fruit for canning, should contain a proper sugar content and matured fruit keeps better than the immature article, which shrivels away. Inflated prices have tended to increase production, until over-production is promised. The remedy is for growers to produce better fruit and get it into the hands of consumers in better shape. He urged the stamping of the grade on the packed product.

A. M. Mortensen, general manager of the California Prune and Apricot Growers's Association, outlined the marketing problems of the producer of apricots and prunes. He stated that growers have three channels for disposing of apricots: The Eastern fresh market, canners and the dried fruit market. None

of these proved very profitable this year, he said. Quite a quantity was shipped in the fresh form, but many shippers lost money. Canners insisted on getting large sizes and were not in the market for large quantities. Prices ran a wide range, with much fruit selling at $15, $20 and $25 a ton, and he knew of instances, he said, where deliveries were made to canners at $10 a ton. When growers cannot sell their fruit green to shippers or canners they dry the balance on hand, and this year the output ran to very small sizes, with the quality indifferent. The crop this year, the speaker said, was the largest on record, but he stated that fully 25 per cent of it was not picked. The crop in 1922 was light, and for this reason growers looked for heavy returns, but the reverse proved to be the case.

Prunes are marketed largely in the dried form, Mr. Mortensen pointed out, with the few sold in the canned form dried before they are placed in a can and cooked. He outlined the plan of selling followed by the co-operative organization of which he is general manager, and told of the difficulties in disposing of the new crop with a surplus on hand from last year. This year's crop, he said, is now estimated at about 175,000,000 pounds.

E. W. Moorhead, sales manager of the California Peach and Fig Growers' Association, led a discussion on co-operative marketing, and opened with the statement that the new idea, and one commonly referred to as the California plan, is to tell buyers all the details of the business, the size of the crop, the carryover and all the facts, making frankness the keynote.

The open discussion was followed by a talk by Preston McKinney, secretary of the Canners' League of California, on "The Present and Future Outlook for Canning Apricots." He prefaced his remarks with the statement that it was very difficult to segregate apricots from other fruits, and that in many respects from the market standpoint, the situation in general was much like that on apricots. The apricot, he said, is a distinctive California product, very limited quantities being produced outside this State. While considered a fine fruit at home, it is not as well known throughout the country as it should be, and in the canned form has not taken with the American public as freely as might be expected. The export demand is relatively better than the domestic demand, the fruit being well liked in England. Canners like to handle it, as the crop comes on between cherries and peaches, and they get more cases per ton from apricots than from almost any other fruit. He expressed the opinion that a much larger demand can be built up for canned apricots, but to do this quality must be kept foremost in mind.

"There is a world of romance in the canning business," said Mr. McKinney. Last year there were 15,000,000 cases of fruits packed in California, 3,000,000 cases in Oregon and Washington and 6,000,000 cases in the Hawaiian Islands, or 24,000,000 cases on the Pacific Coast. Almost two-thirds of this carried California labels, making a great "ad" for the Golden State. The products, too, are a great "ad" and tell the story of California sunshine. In the past ten years the output of California canned fruits has increased 400 per cent, while the increase in the population of the United States has been about 10 per cent. Less than 20 per cent of the output is exported."

Canned fruit is out of the luxury class now, and it will remain out, said Mr. McKinney. No more will peaches be sold at 50 cents a can. Prices this year are on a very close margin of profit for canners. In fact, only those able to operate in the most efficient manner will make any profit at all. The year will not go into history as a profitable one, but goods are moving and conditions are sound. If we are to succeed as canners, we must feature quality and stand out from other competition. A huge acreage is coming into bearing and prices must be kept low in order that all that can be packed be marketed. During the past three years there has been a complete reversal, he said, in canners' problems. Formerly canners rushed buyers into the field long in advance of the canning season to contract stocks and the one whose needs were not filled early was out of the running. Now there is an abundance of fruit and the problem is to get a market for it.

Dr. E. S. Moulton, chairman of the executive committee of the California Canning Peach Growers, told of the immense increase in the acreage of canning cling peaches during recent years, and stated that the acreage in California is now 30,000 acres in bearing, with 59,000 acres promised by 1927. Based on this acreage the pack of cling peaches should be more than 14,000,000 cases that year. To insure the marketing of such an immense output quality must be raised, he said, and the public must be told about California peaches. Those who are producing the fruit should conduct an advertising campaign to popularize it. It is not a case of getting peaches into the tin can, said Dr. Moulton, but a case of getting the tin can into the alley. In answer to a question, he suggested that the consumer should be told on the label just exactly the grades of fruit offered. Answering another question, he stated that the outlook for canned freestone peaches was not promising despite the fact that this fruit has a better flavor than cling stones. It is harder to handle and does not keep its shape well.

The conference was brought to a close by Frank T. Swett, president of the California Pear Growers' Association. His subject was "Marketing Canning Fruits," but he stated that the real problem was marketing canned fruits. Growers tried to fix prices at a level that would give them adequate return this year, but their attempts failed. In the case of pears, a good market was found for the fresh article in the East and quantities were disposed of. At the prices paid by canners only the very best pear orchards returned a profit to growers. Mr. Swett is not optimistic over the oft-repeated assertion that a profitable market can be found for all the fruit that can be grown in California. It now costs more to distribute canned fruit than to grow and pack it. Many in the trade are hopeful of a clean-up of the canned pack this year, which will enable the industry to start off with a clean slate in 1924.

MAINE MARKET

No Winter Market as Yet—Lumber Camps Waiting for Snow—Maine's Corn Pack About All Gone—Better Demand for String Beans—Apple Canners Busy—Blueberries About Cleaned Up.

By "Maine,"
Special Correspondent "The Canning Trade."

Portland, Me., Nov. 30, 1923.

NO WINTER YET—While snow has fallen in New York and Vermont, winter is evidently as far away from Maine as it was a month ago. We have been enjoying real spring weather for the past week, with good rain over the week end, but no sign of snow or very low temperature. This means enjoyment for the ordinary citizen, but slow business for all lines of trade. Winter shipping, which is of vast importance to this port, has not commenced yet; lumber camps are fully manned, but idle because of the lack of snow, and many mills and factories are running on part time, due to low water and lack of power. One of our largest local power companies is now manufacturing three-quarters of its current with coal, instead of one-quarter as in normal times, and even now is unable to supply power sufficient to meet the industrial demand.

Corn—The maine corn market, practically bare when the packing was finished, is now like Mother Hubbard's cupboard—and, to continue the simile, there are some don't-want-future buyers who are as hungry for goods as the Hubbard dog. No prices are quoted on goods, as there is so little to sell. Golden Bantam has sold at $2.00 for cut No. 2 size, and $7.00 for No. 10 on the cob. Crosby is worth $1.55 to $1.60. There are only clean-up lots of either variety offered, and are sold at top prices.

String Beans—There has been a revival of the demand for cut green stringless beans, though the goods have been cleaned up even since the close of the canning season. Last sales were reported at $1.35 for No. 2s and $5.25 for No. 10s, but it is about impossible to find even small lots in first hands today.

Apples—Apple canners are busy, and are shipping out the goods as soon as packed. The quality this year is proving much better than was anticipated, and is in good demand. The price holds at $3.50. The season will doubtless be curtailed, as the available supply of fresh fruit is fast being used up.

Clams—Clams are in the market at $1.25 and $1.85 for five and eight ounce sizes, the latter being packed only on order. It is reported that on some sales the prices for eight-ounce clams have run as high as $2.00, and that the offerings now made are subject to advance at any time.

Sardines—The close of the sardine pack shows no change in the figures which have been reported throughout the season. It still stands that the 1923 pack has been less than 25 per cent of normal, and that stocks on hand are the smallest for many many years. Buyers are taking this up in "driblets," and the New Year may find a bare market on Maine sardines.

Blueberries—Blueberries are cleaned up, and there is no apparent quite an unfilled demand for these goods, inquiries coming in very frequently By another year the blueberry industry will doubtless be on a firm footing, and the result will be much more satisfactory to both canner and buyer.

EDITORIAL

WILL CANNING BE OVERDONE IN 1924?—The possibility of this is looming as a spectre in the minds of many canners and others, and not without good reason. The thing that is frightening most of the canners, now in the business, is that the high prices now ruling for canned foods are tempting new men to enter the industry, and as is well known there are a large number of new factories going up or under contemplation. In Wisconsin alone there will be an addition of fifteen or twenty new factories for 1924, some of them additions to present companies, and others new canners just entering this attractive field. The old canners would like to discourage these new ones and persuade them to seek other fields for their endeavors. In this Tri-State region, and in many other sections, some of the farmer organizations look upon the canners as veritable "gold diggers," and believe that if they can raise the crops and sell them to canners, who make fortunes, as they think, upon canning them, they could put in their own canneries, pack their own crops and make all this profit. It is so easy to figure this out on paper—but so damnably hard to make it come true from a bank-showing angle. The best organized growers in the world are on the Pacific Coast, where co-operative growers' organizations are immensely strong, and hardly one of them there has failed to try this venture into canning. How many of them, however, have made anything but a failure of it?

The tomato growers organized a few years ago into a very strong and autocratic body, in the heart of the great Tri-State tomato growing region. And not content with the prices which the canners offered for their crops, they decided to guy their own cannery and run it. Their experience and that of the others ought to be of benefit to any who may be tempted now; but it will not be. Human nature is so constituted that it does not like to learn from others' experiences—it can always pick the flaws and faults which caused the disaster in those "others," and it has to burn its own fingers before it will believe.

But there is no use railing against the additions to the canning family. We must have them, and we need them. It would be anything but a compliment to the industry if no one sought to enter its ranks. And we will go even further and say that the present additions to the idustry will mean better efforts to produce quality and to avoid the pitfalls which earlier canners fell into than those earier canners did. That is but the natural result of evolution—men are wiser today and better business men and have learned that to succeed business must be built upon honesty and fair dealing. There is no question but what the general plane of business is very much higher than it used to be, and that there is a very decided minority to the number who now think they can catch a customer, skin his hide off and get away. The day of those fly-by-nights has gone and we will not be bothered with them again. So there is no need to worry about that feature.

That the new canners may disturb the market in their selling prices, owing to inexperience and lack of knowledge of costs, and because of a possible lack of quality, also due to inexperience, is possible. But that is all part of a day's work, and they may learn a whole lot faster than some of the "old died-in-the-wool" have been able to do.

The real danger will come from the present canners and their eagerness to increase their outputs. These men should understand conditions; should know that the present good prices for big packs are due to the record-breaking clean-up of spot goods during the past two years; that the 1923 packs came upon bare floors. We honestly believe that if all canners will pack a thoroughy acceptable quality—and by that we do not mean that the entire pack must be of extra fancy stuff—but a can well filled of the kind of quality food that will cause the consumer to want more—that the canners may go ahead as hard as they please and consumption will keep ahead of production. But the trouble is that there are a lot of men in the business who cannot resist the temptation that "everything will sell this year." And still worse than this, a lot of men who, seeing such canners working on that principle, fall into line and produce the same kind of goods. The first canners may be said to be fools who know no better, but the second class are crooks, who do know better, but deliberately produce trash. Don't misunderstand us; there are not many such in the business, but the acts

of the few are magnified into greater proportions than they deserve—as a market influence. The industry ought to be so closely organized that it could read out of its ranks such black sheep, and some day it will be.

We have said that the real danger will come from the canners now in the business, and we mean the better class of canners. The danger is that they will contract for more crops than they can handle and produce quality. Every canner knows that he can handle just so much, and get it into the cans in fine shape and of the quality it should be. Add just a little more to that; push the operators and the machines a little too fast, and quality has to go overboard. There is the danger. We have often said, and it is absolutely true, that Dame Nature has always been the best friend the canners have ever had—because she has stepped in, cut the yields down and so let the canners get by. But this must not be counted on. If you intend to increase your output in 1924, look well to your factory equipment and don't overload it. Keep your factory capacity ahead of your acreage all the time, and then, when that big yield does come, you will not be caught and ruined. If the industry plays it the other way, look what the consequences can be: a tremendous pack of below-standard quality, and the market prices—and the demand—gone for three years. There is the real danger from the present high prices, and the high prices of futures, and not from the new canners going into the business. In these days of the rule of the Pharisees the custom is to watch your brother's morals; well, that is all wrong, as it was in the days of Christ. Watch your own morals and you will not have time to watch the morals of your brothers, and they will not need watching.

AN EXPERIMENT?—Is the purchase of cannery crops on the basis of grade a revolutionary experiment? The plan of using standard grades in determining the value of the raw material purchased by canners has been suggested by the United States Bureau of Agricultural Economics, and the facilities of that Bureau have been offered in promulgating grades for this purpose. Is such an idea feasible and can it be put into practical application in this industry?

There is no denying that buyers and sellers of fresh fruits and vegetables have come to look upon the principle of grading as a very essential element to successful merchandising and consider that the adoption and use of grades has eliminated much of the source of misunderstandings, deception and sharp practices. The advantages that accompany a fair and practical system of grading may be enumerated as follows:

1. A stable basis is provided for contract and purchase, upon which buyer and seller can deal with mutual confidence, understanding and satisfaction.

2. Agreements are made definite and specific, so that fraud and deception are minimized.

3. Standardization encourages the production of larger crops of superior quality, by providing a stimulus for the producer to strive for the higher grades and the attendant premium.

4. Waste and losses are prevented, since culls and unmarketable stock are discarded in the field, thus saving handling costs.

Grades have been recommended by the U. S. Department of Agriculture for almost two dozen fruits and vegetables, and these Federal standards have been voluntarily adopted by buyers and sellers in every important producing section and market in the country. The answer is clear; transactions based on grade pay well in dollars and cents and increase satisfaction t everybody concerned.

It is common knowledge that most big transactior in apples, potatoes and other semi-perishables are mac on a grade basis, but it is not so generally known tha this principle is now being applied extensively t peaches, asparagus, tomatoes and even such a high perishable commodity as strawberries. It has bee demonstrated conclusively not only that the princip is sound, but that it can be applied to all sorts of cor modities, perishables and non-perishables, under great variety of conditions. It seems reasonable conclude, therefore, that a way can be found for tl canner to evaluate deliveries of raw material by sar pling them on the basis of grade. The benefits offer by such a plan are of such decided value that it wou seem to be worthy of a thorough trial.

The government has prepared tentative standar for cannery tomatoes and is planning to test them o carefully at the earliest opportunity. The canning i dustry should support this movement with all the e ergy at its command.

THE WISCONSIN BEET CANNERS MEET

Hold Special Session at Green Bay—Adopt Warehou Plan—In Favor of Standardized Grades.

THE Wisconsin Beet Section, of the Wisconsin P Canners Association, held a special meeting Green Bay, Wis., on November 22nd, and 75 p cent. of the beet canners of the State were represente

A resolution that the organization should go record in favor of the Zone Warehouse Plan for t settlement of small claims was passed unanimously.

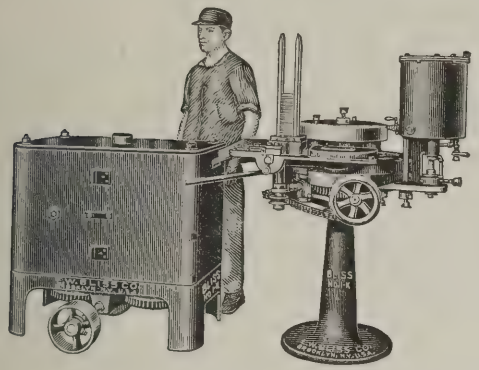
The report made by the National Committee Standardizing Grades of Beets was adopted with t recommendation that ½ inch in size diced beets added.

An inventory of the spot canned beets on ha was taken and the result showed that there were pr tically no whole beets left in canners' hands, and t amount of cut beets was very small.

Plans are under way to have a snappy, intere ing and educational program at the National Beet S tion meeting at the National Convention in Buffalo January. All canners of beets are invited to ta part.

FREIGHT & SHIPPING NEWS

EFFECTIVE December 5th, rates on canned foods from timore to Shreveport, La., and Texarkana, Tex-Ark, various points grouped therewith will be reduced to 75c 100 lbs., via New York or Philadelphia and thence coastwise li through Gulf Ports.



The Mississippi-Warrier River Barge Line on Decem 15th, will establish reduced less than carload rates on can foods from St. Louis and East St. Louis to Memphis, 58 Vicksburg, 75c; New Orleans and Mobile, 83c per 100 lbs.

The Arizona Corporation Commission has filed compl with the Interstate Commerce Commission alleging that rates on dried beans, dried fruit, canned foods and numer other commodities, between points in Arizona and points in C fornia to be unjust, unreasonable, discriminatory, preferer and prejuditial. The I. C. C. has assigned the case as Do No. 15377 and will set same for hearing shortly.

Railroads serving Chicago, Peoria and other Illinois po are considering the establishment of through rates on var commodities from Illinois points, including Chic- and Pe to Pacific Coast points via rail to East St. Louis or Cairo th via Mississippi River Barge Line to New Orleans and coast steamers through the Panama Canal beyond. Rates to be n on basis of 80 per cent. of present all-rail rates from such po to Pacific Coast.

LANDRETH GARDEN SEEDS

THE LANDRETH

SPOT OR 1923 CROP SEEDS

We have for spot delivery, a few Alaskas, Green Admirals, Advancers and White Admirals. These are all short. Sweet Corn is short. We still have some however. Write us for prices.

We also have the following for spot delivery——

Peas Okra Cabbage Cucumber
Corn Tomato Spinach Snap Beans
Beet Squash Pumpkin Cauliflower
Dwarf Lima Beans

Or any other varieties you may want.

FUTURE OR 1924 CROP SEED

When ready to place your Contract order for delivery after 1924 crop is harvested, write us for prices.

If we had not grown good seeds, given fair prices and careful attention to business, we would not be the oldest Seed House in America, as this is our 139th year in the business.

As Some Jobbers View The Warehousing Plan

The flat allowances they propose—The National Wholesale Grocers' Objections

The trouble, Annoyanice and Expense itemized—Claim many orders being signed on flat allowance basis

By "New York Stater"
Special Correspondent "The Canning Trade"

WHOLESALE grocers and chain-store buyers in this market are determined to do business on their own terms, insofar as swell allowance is concerned, and they are uniform in denouncing the zone warehouse plan of the National Canners' Association.

Members of the local trade are lining up the support of the big buyers in other markets, and expect that the zone warehouse plan will ultimately be rescinded by the canners.

Brokers report that they are finding it practically impossible to talk business on futures with either wholesale grocers or chain-store buyers unless their packers are willing to grant a graduated percentage allowance in lieu of swell claims.

From reliable reports it appears that the canners are not standing as uniformly as they should behind their zone warehouse platform. Business has been booked on 1924 pack Wisconsin peas and Illinois corn with some of the largest packers in the field, with a percentage-allowance clause in the contract instead of the zone-warehouse clause, it is reliably stated.

J. W. Herscher, president of the National Wholesale Grocers' Association, has been at Association headquarters this week, presumably on the swells proposition, and numerous canners, packing for buyers' private labels, have been here during the week, conferring with their brokers and buyers on the problem.

The National Wholesale Grocers' Association, in a statement reiterating its opposition to the zone warehouse plan of the canners, has advised all of its members to insert in their contracts for 1924 canned foods the following clauses:

"Swells—Except as hereinafter provided, the seller shall make the buyer a flat allowance from the contract price in full consideration of all swells and spoilage computed according to the following percentages:

"For goods in all sizes of tins excepting No. 10—

"One-fourth of 1 per cent allowance on peas, string beans, corn, pumpkin, spinach, beets, succotash, lima beans, red Alaska, pink and chum salmon, and tuna fish.

"One per cent allowance on all vegetables and fruits packed with seeds or pits, excepting tomatoes.

"One-half of 1 per cent on all other fruits, fish and vegetables, including tomatoes.

"For foods in No. 10 tins—

"Three-eighths of 1 per cent allowance on peas, string beans, corn, pumpkin, spinach, beets, succotash and lima beans.

"One and one-half per cent allowance on all vegetables and fruits packed with seeds or pits, excepting tomatoes.

"Three-fourths of 1 per cent allowance on all other fruits, fish and vegetables, including tomatoes.

"But if the shipment contains goods that are found to be spoiled by reason of hidden defects and the buyer so notifies the seller within sixty days after notice of arrival by transportation company, the buyer, in addition to his other rights under this contract, shall be entitled, at his option, either to reject the shipment or to obtain from the seller an allowance for all the spoilage caused by said hidden defects.

"The said percentage allowance above specified shall be made to and accepted by the purchaser in full settlement for all losses caused by hidden defects as hereinbefore provided, but subject nevertheless to the further provision that if there be development of swells or spoilage or both on or before August 1 of the year following the pack, in excess of double the above-mentioned percentages, the matter shall be settled by mutual agreement or arbitrated under the rules of the National Wholesale Grocers' Association of the United States, the National Food Brokers' Association and the National Canners' Association."

In commenting on the canners' plan, the National Wholesale Grocers' Association says: "It should be remembered that this system (the warehouse plan) presupposes an elaborate and involved coding of individual cans and labels, and that the canner who is a member of the National Canners' Association will be charged one fee for this warehouse inspection service, and that the non-member canner will be charged another and a higher fee. And, in addition, it should be remembered that there are 4,000 wholesale grocers and 400,000 retail grocers. If the retailer averages 10 returns per year, 4,000,000 claims will have to be handled.

"In view of all these facts, the National Wholesale Grocers' Association desires to reiterate its opposition to the warehouse inspection plan in toto, and at the same time to urge wholesale grocers, in the best interests of the canning industry and its distribution problems in particular, to ask for a simple, workable credit plan when they buy from the individual canners. There are three such plans, viz:

"1. Contractural provisions permitting the return of labels for credit, or

"2. Contractural provisions, when buying from a canner, packing a full line of canned food products, allowing one-half of one per cent flat allowance with proper safeguards, or

"3. Contractural provisions allowing graduated percentage allowances by products, with proper safeguards."

Unofficially, it is understood that buyers—that is, the wholesale grocers—are demanding one-half of one per cent, and accepting one-quarter of one per cent on many items. The chain-store buyers, however, appear to be determined to buy only on one-half of one per cent allowance.

There has been some talk by canners to the effect that if they are forced to give the buyers one-half of one per cent, there will be a heavy amount of swells in 1924 deliveries. This kind of talk is foolish in the extreme, as the jobbers have only to refer such cases to the Government authorities under the provisions of the regulations affecting the shipment of spoiled foods in interstate commerce. At the same time this kind of talk does not do justice to the intelligence of either the canners or the wholesale grocers and chain-store distributors.

Arthur P. Williams, of R. C. Williams & Co., Inc., who was chairman of the jobbers' committee which took up the swells question with the canners in Chicago early this month has issued an open letter on the subject, addressed to "Our Canner Friends Wholesale Grocers and Food Officials of City, State and Federal Government."

This open letter of Mr. Williams reads as follows:

"That the policy of our house has been to encourage the immediate destruction of swelled canned foods wherever found.

"Our present method is to instruct our salesmen to remove the label from the swelled tin and immediately destroy same. We, in turn, pass credit to our customer, and that ends the matter.

"The above is our full and complete plan—three lines.

"The proposal of the National Canners' Association under their so-called warehouse plan is objectionable because of its complications and because it is liable to throw swelled canned foods back into channels of commerce and because it is uneconomical—in fact, extravagant. The following is their method:

"A. Retailer reports swells to jobber.

"B. Jobber notifies canner.

"C. Canner notifies jobber to instruct retailer to return swells.

"D. Jobber notifies retailer to return swells to zone warehouse.

"E. Retailer makes application to City, State or Federal Government for permit return swells.

"F. After obtaining permit, retailer packs up and ships to zone warehouse.

"G. Retailer sends bill to jobber covering swells and shipping and packing charges.

"H. Jobber sends charge for same to canner.

"I. Canner receives memorandum from inspector at zone warehouse.

"J. Canner notifies jobber whether the returned goods were swells or not.

"K. Jobber then sends credit or notifies retailer that no credit will be allowed.

"L. If inspector of zone warehouse decides that the goods are not swells, the retailer loses the cost of the goods returned plus the charges, unless he can throw this expense on to the jobber.

"This seems to me unreasonable, complicated and unnecessary when we are willing to accept from the canner a graduated percentage allowance which is in keeping with the record of average swells in previous years' packing.

"There are more than four hundred thousand distributors of canned foods in the United States, and if each one of these distributors should return, say, three separate packages of swells during the year 1924 at an average charge for express, freight, parcel post (provided the postal department or the express companies or the railroads accept such matter) the rates will be approximately from 15 to 25c per package, or, say, 75c for each distributor, or a sum of three hundred thousand dollars.

"Beyond this there will be an expense of one or two inspectors in each zone warehouse, together with the rent for the warehouses. Estimating the above labor at $50 per week for thirty warehouses, $75,000; rent $2,000 per year, or $60,000, makes a figure of cost of operation of the plan, without regard to clerical work or postage or billing, of $435,000.

"All of which can be saved by the simple graduated percentage allowance; also, the biggest gain to the canning industry will be the assurance that, with the co-operation of the Bureau of Chemistry and the local Boards of Health, that swelled-spoiled foods will be immediately destroyed and not get into the channels of commerce.

"Would it be well for the consumers of the United States to know that the canners feel it necessary to operate thirty warehouses for the examination and destruction of swelled canned food?"

OUR REBUTTAL—This is merely a rehashing of all the arguments that have been put forward against the Warehousing Plan, rather too pointedly made as indicating too great anxiety for the Flat Allowance Plan. By that we mean they have overemphasized the "red tape," the trouble, the annoyance of carrying out the Warehousing Plan, and likewise the cost of it. All wholesale grocers should know—and we believe that all canners, by this time, know—that neither of these contentions are honest or true. As to the "red tape": there is not one bit more red tape to the Warehousing Plan, not one bit more trouble or annoyance than there was under the old plan of swells guarantee which was in effect for so many years, and against which no one ever heard a word of complaint. In the olden days the swells were returned to the canner; under the new plan the swells are returned to a nearby warehouse. The whole difference, therefore, is as to the point of shipment. Under whatever plan the wholesalers formerly collected and returned these swells, they can continue to collect and return them. Formality requires that the pure food authorities be notified of such shipment, and a permit for such shipment secured. In olden days a whole lot more explanation had to be given to the State food authorities to permit the swelled canned foods morgue to exist, and the shipment back to canners had to be "sneaked" in, lest some inspector caught the shipment, en route, attached it or destroyed it. The food inspectors were reasonable and took the word of the wholesaler that the "morgue" would be shipped back to the canners for claim allowance, and, after its arrival, the word of the canner that the goods would be examined for cause of spoilage, and then destroyed; but the danger was always there. We are not afraid to predict that no food inspector, anywhere, would think of seizing any lot of swelled canned foods consigned to any National Canners' Laboratory, at designated warehouse, and that the question of inter or intra-State shipment of such lots of spoiled canned foods will never be raised, where they are consigned to such warehouse. The food authorities are back of this plan; they welcome it as a real solution of a very troublesome matter, and the troublesomeness comes from the Flat Allowance method of settlement.

To erect a mountain of trouble in the carrying out of the Warehousing Plan can only be construed as an excuse, and one which will not hold water. If, in the olden days, Mr. Williams followed the "A to L" plan in the collection of swells, he will have to modify it only to the extent of shipping the goods to warehouse instead of to canner. But the truth is, they would very much prefer ridding themselves of every vestage of trouble by allowing all claims without question, and let the canners pay the losses. If Mr. Williams has his way, we will make one further prediction: in a short time no cheap boarding-house, restaurant or hotel will ever again have to pay anything for its supplies of canned foods—they will just strip the labels off the used cans and demand re-embursement. If Mr. Williams wants to check against all the crooks now using that method of easy money, he will find his real mountain of trouble.

A refund on returned labels would burst the Bank of Monte Carlo in one season. If the solicitude for the welfare of the canners' pocketbooks is real, let him show it here.

The canners are ready and willing to pay any honest losses that may occur in their goods—and no others. And they will stand all expense and such trouble as may happen, and they would not have adopted the plan if it had shown the remotest chance of being so expensive. They know what they are doing in this. Of course, they deeply appreciate the solicitude shown for them and their welfare; but, then, this has been the invariable attitude of the jobbers since memory runneth not to the contrary—has it not?

There have been some contracts made for 1924 goods on the flat allowance basis, but they were made before this Warehouse

Plan had been adopted, or by canners who had not become acquainted with the Plan. There were but few such contracts. Now all the leading canners of the country, in every section, whether members of the National Canners' Association or not, have adopted the Plan, and will sell goods on no other basis. The entire canning industry has adopted the Plan, because, after all, it is their business and they intend to co-operate with the pure food authorities, State and National. Much will be made of any canner who lets go of a block of goods under the flat-allowance plan, but the rank and file of canners will not be misled by such reports.

The American Wholesale Grocers' Association, with nearly two thousand members, double the number of the National, approves of the Warehousing Plan, and we have it on good authority that the National Wholesale Grocers' Association is anything but a unit in its opposition to the Plan. In fact, many of them will have nothing to do with the flat-allowance plan. And the same, we understand, is true of the Chain Store Association, where one or two powerful influences are holding the Association to the opposition.

The fight is really between the objectors and the pure food authorities, because the canners are determined to keep spoiled canned foods from the market, and to see that they are surely and certainly destroyed, under the surveilance of the food authorities. That can only be done through the Warehousing Plan, and if Mr. Williams or any other wholesale grocer or chain-store operator doubts this truth, let him ask the food authorities. The wrongful use of spoiled canned foods has increased by leaps and bounds since the flat allowance was substituted for the return of swells, and all food law enforcement officers know this.

"FACTORY COST ACCOUNTING"

By Mr. Harry McCartney

Of the Sears & Nicholls Canning Co., Chellicothe, Ohio.

An Address before the Western Canners' Association, Chicago, Friday, November 9th, 1923.

THERE have, perhaps, been about as many papers prepared on this subject as an any other one subject effecting the canning industry, and yet there is probably no one angle of our business that needs more careful attention than the subject of costs.

The accounting system adopted by the National Canners' Association some years ago takes care very nicely of the actual bookkeeping problems of the canner, but in operating this system it is necessary to keep complete and accurate cost records. Of course, practically all canners have some sort of cost accounting system, so far as their individual business is concerned, but I doubt if there is much uniformity in system or in results obtained.

A uniform system provides the best way of figure costs, although in any system provision must be made for keeping the same up to date. It results in better informed competition within the industry, and establishes public confidence that selling prices are fixed by producers who have full knowledge of their costs. The arguments against a uniform system are usually: confidence in one's own system, whether it be good or bad; examples of other successful concerns who apparently succeed without cost systems, and the feeling of "Oh, what is the use? I am getting all for my goods that I can get anyway."

I do not believe that any of these arguments hold good. Most cost systems in use in any industry today could probably be improved upon. The successful competitor may have an excellent cost system, and the ability to produce goods cheaper than the other fellow, and with proper cost accounting systems, costs would undoubtedly be reduced; but, above all, the industry will be placed in a better standing in the business world, and particularly with its banking connections.

As I said, most every concern is keeping some sort of cost records, and does at the end of the season figure out the per dozen cost of items going into his product. It seems to me, however, that we are very lame in our estimating departments. In making prices we usually figure out what our costs were the preceding year, and estimate as closely as we can the increases and decreases that we will have the next year, and then most of us forget all about the costs except keeping records of same until the end of the season, and then sometimes wonder why our profits are not as much as we had expected.

The national government, after a great many years of endeavor, finally succeeded in getting a budget system put into effect, and all of us have noted the savings that have been made since this system was made operative. It certainly is more necessary for a business concern to budget their business than it is for the national government, because the government has ways to get money that are not the privileges of the business man.

Before making future prices, every canner should analyze very carefully each item of the costs in the preceding year, and then proceed to set up a budget covering each item of expense he expects to entail for another twelve-month period. The volume of goods expected to be packed will, of course, materially effect the total amount of money actually expended in overhead items, and the amount of goods to be packed must, of course, be determined before any items of overhead are actually determined.

The overhead should be divided into three general groups:

(1) Factory overhead.
(2) Administrative expenses.
(3) Selling expense.

In the first division of factory overhead I would suggest thirty-five or forty different divisions, consisting of the following:

Superintendents' Salaries.
Fieldmen's Salaries.
Watchmen's Salaries.
Fieldmen's Expenses.
Repairs to Buildings and Grounds.
Repair to Equipment.
Power, Heat, Light and Water.
Insurance on Bldgs. and Equipment.
Insurance on Canned Goods.
Taxes.
Factory Stable Expense.
Miscellaneous Drayage.
Depreciation.
Miscellaneous Expenses.
Paste, Glue, Stencils and Ink.
Rental on Closing Machines.
Crates, Boxes, Baskets.
Expense of Automobiles.
Boarding House Expense.
Sanitary Expense.
Expense of Farmers' Meetings, such as Dinners, etc.
Factory Traveling.
Plant Rental.
Moving Equipment.
General Warehouse Expense.
Labeling and Nailing Canned Goods.
Loading and Shipping Canned Goods.

In the case of concerns operating branch plants, I suggest an item of clerical salaries and office supplies and expense.

In administrative expense, I suggest a division about as follows:

Officers' Salaries.
Office Salaries.
Legal Expense.
General Traveling Expense.
Miscellaneous.
Dues and Subscriptions.
Telephone and Telegraph.
Donations.
Premium on Surety Bonds.
Interest to Banks, etc.
Capital Stock Tax.
Postage.
Office Supplies and Expense.

Selling expense should include the following:

Salaries of Salesmen.
Salesmen's Traveling Expense.
Office Salaries in Sales Dept.
Salesmen's Supplies.
Samples.
Telephone and Telegraph—Sales Dept.
Advertising.
Brokerage.
Sales Allowances, etc.

Some may object to such a large number of accounts, but it is only by subdividing overhead into a large number of items that the necessary information can be obtained. By using a system of numbers or symbols for these various items, the actual accounting work may be much simplified. In estimating costs upon which to base selling prices, almost every item going into the makeup of the cost, with the exception of cans, labels and boxes, must of necessity be an estimate rather than an actual figure. It behooves us, therefore, to make our estimates only after having secured every possible bit of information available. The items making up direct or base factory cost can be, and usually are, very closely estimated; but the disappointment in the year's returns has usually come from the fact that overhead items were underestimated.

After having arrived at what is considered as a conservative estimate of the amount of money needed to cover the items of overhead, the amount of overhead per dozen of goods to be packed is then ascertained, and the selling prices based, of course, upon this figure.

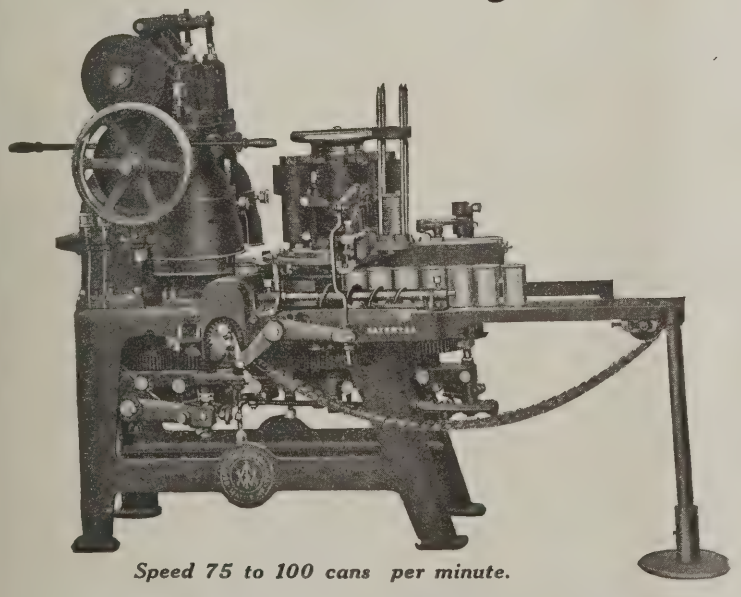
Every accountant has his own idea of the method that should be followed in distributing overhead. Some canners divide the total amount of overhead by the number of cases produced, others by the number of dozens produced regardless of size, while others reduce the output to a basis of either $1, $2 or $3 size cans. It seems to me that it is proper that overhead in the canning business should be determined on the basis of pounds of finished prod-

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.



Southern Can Company

Baltimore, - - Maryland

uct produced, or, in other words, reduce the total pack of its equivalent in a certain size can. Take, as an illustration, a factory packing two items, say corn and tomatoes. One year the packer decides to run all his tomatoes into No. 2 cans, while the next year he decides to pack mostly No. 3 tomatoes. If he proportioned his overhead by the number of dozens produced without reducing the No. 3 cans to their No. 2 equivalent, it seems to me that he is loading his corn pack with an undue amount of overhead for the year that he produces No. 3 tomatoes instead of No. 2; whereas, if he reduced his entire pack to an equivalent basis, he would have the proper charges for overhead on each product each year. I submit, therefore, that after determining the amount and the sizes of goods expected to be packed, that the various sizes should be reduced to a common equivalent based upon the capacity of the cans. We have attempted to figure this out in our own business, and use the following basis:

1 dozen No. 1 cans equals..... .54 dozen No. 2 cans
I dozen No. 2½ cans equals.....1.47 dozen No. 2 cans
1 dozen No. 3 cans equals.....1.67 dozen No. 2 cans
1 dozen No. 10 cans equals.....5.26 dozen No. 2 cans

Or if No. 3 equivalent is desired:

I dozen No. 1 cans equals..... .323 dozen No. 3 cans
1 dozen No. 2 cans equals..... .598 dozen No. 3 cans
1 dozen No. 2½ cans equals..... .879 dozen No. 3 cans
1 dozen No. 10 cans equals.....3.15 dozen No. 3 cans

The canning business is a business that spends considerable money in the first six months of the year getting ready to pack, and packing usually only during the last six months. All of the money expended for salaries, repairs, and, in fact, every item of overhead is a prepaid expense until the pack actually commences, and should be set up on the ledger as such. As soon as the pack commences, and at the end of each month thereafter, this prepaid expense item should be credited with the amount of overhead actually earned, which amount is determined by multiplying the number of dozens produced by the estimated overhead per dozen, as determined the first of the year. If, as the season advances, it is found that the pack is smaller than anticipated, it is necessary to change the overhead item per dozen in order to take care of this change. For a canner packing only one item—peas, for instance—this means that until he gets started into the pack all the expenses up to that time are shown on his ledger as prepaid expense; but as quickly as his pack is completed, this prepaid expense item is wiped out, and a reserve created which should be sufficient to take care of the expenditures for overhead items made during the balance of the year.

The items of direct cost, such as cans, boxes and raw produce, etc., should be figured up at the end of each month, or sooner if the pack of any particular item is finished before the end of a month, and the proper entries made charging these items off the books and into a cost account. By taking an inventory of the finished product, which should be done monthly, your trial balance will disclose your true condition.

As soon as the trial balance is taken off your general ledger, a comparative statement should be gotten out, showing the amount of money appropriated for each item of overhead for the month, the exact amount of money spent for each item, and the third column should show a savings or excess expenditure for the year to date. This statement given to the management monthly enables them to stop any unnecessary expenses or correct errors in the budget, and change their selling prices accordingly. With daily reports furnished by the factory, the base or direct cost per dozen can be determined within a fraction of a cent for each day's run, and within twenty-four hours after the run is completed.

With the overhead budget figured carefully, the only thing that can materially effect the estimated profits is change in production, due to short crops or otherwise, and, where possible, reserve for crop hazards should be set up to take care of any shortage. On the other hand, if the total pack for the year is much in excess of five or ten year average, used as a basis, the savings in overhead on account of this increased production should be credited to this reserve for crop hazard rathed than to profit and loss.

REPORT OF TRAFFIC COMMITTEE

Delivered by Mr. William Clapper, Chairman,

To the Western Canners' Association, Chicago, November 9th, 1923.

IT is presumed that as long as there is business there will be need for adjustments; especially is this true in the relation of freight rates to business—all large business being, to a greater or less extent, usually greater, dependent upon the equitable adjustment of rates they are compelled to use in the movement of their manufactured products. And in a country of much magnitude, diversified interests, it is not difficult to see that a proper adjustment at all times is not one of the easy tasks among our daily duties.

The most pressing and important problem in freight rates today to both Western producers and canners is perhaps the West-bound Continental rates, more particularly those affecting Pacific Coast terminal points.

It is a fact, although perhaps not well known at this time, that the rate on canned foods from Groups D (points between Indiana-Illinois boundary and Mississippi River) and Groups E (points between Mississippi-Missouri River territory) are but 10c. per cwt. higher than they were in 1914, at which time we enjoyed a 40,000-lb. minimum, with greatly restricted mixture, as compared with 60,000 lbs. today—with liberal mixture.

Now, this being true and considering the greatly increased costs of doing business, a pleasure in which all carriers participate, as well as any other large or small business institution, it would seem it is as low a rate as could reasonably be expected and an adjustment that should be satisfactory to any well-informed manager, but it isn't. Why?

Because of the advent of the Panama Canal and its low water rate competition from Atlantic to Pacific points of call.

To us in the Middle West, who are unable to take advantage of the low rates this new route makes possible, it would appear to be taxation without representation, owing to the fact that we helped pay for the building of the Canal, and now can't use it. But, on the other hand, it is being used to our very serious disadvantage.

At the close of the war, when freight rates were at the peak, the canned foods rate, all rail, to Pacific Coast and intermediate points, was from this territory $1.50 per cwt. In May, 1921, the carriers made application to reduce this figure to $1.30, but before hearing could be had the 10 per cent reduction became effective, making the rate $1.35. In the fall of 1921 the carriers made application to reduce the rate to $1.15, which, after a series of hearings that extended around the Grand Circuit, was denied. One of the reasons given was that it might be detrimental to our friend the Canal. Later on the carriers again undertook a reduction, and were successful in getting their rates to Pacific Coast points applicable to intermediate territory as follows:

From—

Chicago	$1.05
Mississippi River	1.00
Missouri River	.95

Where we stand today, as compared with an average rate via Canal of 73½c., made up about as follows:

Average C. L. rail rate from producing point to all outer	.27
Average boat rate all outer to Pacific points of	.40
Incidental charges, wharfage, insurance, cartage or switching at delivery points	.065
	.735
A difference in favor of the Canal route of	.265
Or per doz. on No. 2 goods of	.05

From reports received it is apparent the last adjustment has permitted the Mid-West canner to regain a goodly portion of his business at intermediate points, but is still finding difficulty at terminal point.

And how to overcome this disadvantage is a problem that both your able secretary and traffic committee have been endeavoring to solve. We have all we can ask for from a comparison viewpoint with present and former rates, considering increased costs, but on the other hand our friendly enemy, the Canal, still has us bested.

We are open to advice.

THE RETURN OF SWELLS FROM THE LABORATORY STANDPOINT

By W. D. Bigelow,

Research Laboratory, National Canners' Association, Address Before the Western Canners' Association, Chicago, November 9, 1923

DURING the last five years the Research Laboratory of the National Canners' Association has been conducting a series of fundamental studies regarding the processing of canned foods. The information gained by these studies is placing the processing of canned foods on a scientific basis. It introduces a considerable degree of certainty in a field where previously guesswork prevailed.

We Manufacture for Canner:

VERTICAL PROCESS KETTLES
HORIZONTAL PROCESS KETTLES
AGITATING PROCESS KETTLES
AUTOMATIC PROCESS KETTLES
CRATES
COOLING TANKS
TROLLEYS
STEAM HOISTS
PICKING TABLES
PEELING TABLES
PEA WASHERS
CAN RUNWAYS
TROLLEY TRACKS
EXHAUST BOXES

For Milk Packer:

SWEETENED MILK FILLERS
EVAPORATED MILK FILLERS
STERILIZERS

McSTAY MACHINE CO., Manufacturers
515 Van Nuys Building, Los Angeles

When this work was undertaken, I vaguely hoped that we might be able to lay down directions that would entirely stop underprocessing. As the work has developed, however, and we have been brought into more general touch with the operations of canning plants, I have grown to realize that this is one of the ideals for which we must always strive, but which we can never hope to attain. The variations in canning procedure are so great and the number of things that "may happen" so numerous that eternal vigilance will always be necessary to prevent occasional underprocessing of canned foods. This is a matter I have discussed on several previous occasions, and at this time I will only refer briefly to some of the variations in canning procedure which have an influence on the time necessary for processing.

Among the conditions that affect the sterilizing value of the process and in which occasional error may be made are the following:

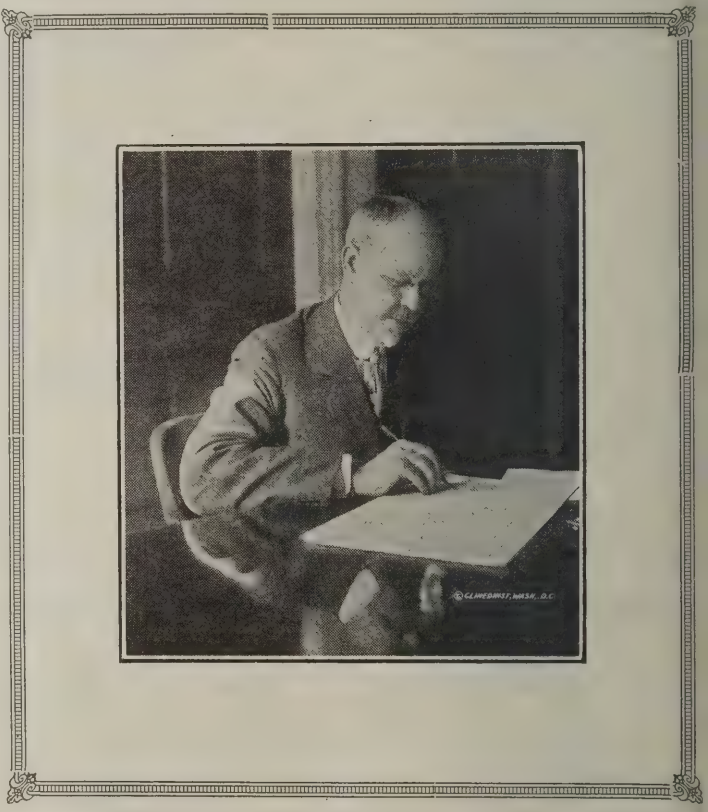
(1) The initial temperature may be too low;
(2) The contents may be too closely packed;
(3) The accuracy of the retort thermometer;
(4) The amount of care exercised in holding the retort thermometer at the desired temperature;
(5) The "coming up" time of the retort;
(6) The influence of the temperature control apparatus on the "coming up" time and initial temperature of the retort;
(7) The size and shape of thermometer pockets;
(8) The amount of venting and the position of the vents;
(9) The construction of the retort, especially the distributing system on the steam pipes;
(10) The amount of water in the retort during processing;
(11) The manner in which very small cans are stacked in the retort; and
(12) The manner of cooling the product and the promptness with which it is cooled after processing.

These conditions have all been emphasized so often that they should be familiar to all canners. It sometimes happens, however, that some of them are overlooked and considerable spoilage results. Still more frequently new processing devices are introduced in which for some unforeseen reason an error is made in the temperature employed. This applies to commercial processing devices to a certain extent and to a much greater extent to home-made processors.

During last summer I happened to be present in a canning plant that had just installed a new commercial processor and had turned on the steam for the first time. The machine was started according to the directions of the manufacturer. A study of its operation showed that it was not introducing to the product anything like the amount of heat necessary for sterilization. It was a simple matter to change the operation of the machine so that it would effectively sterilize the product. If this study had not been made when the machine was started, it would have been operated according to the manufacturer's instructions until spoilage in the warehouse showed that sterilization had not been accomplished.

About the same time one of my associates responded to an appeal from one of our members and found that his trouble was due to the use of a home-made sterilizer which did not employ the amount of heat the canner thought he was using.

Errors of this kind are especially frequent in continuous cookers. Sometimes the heat is not uniform throughout the cooker. With rotating cookers errors are sometimes made by over-estimating the influence of rotation on the heat penetration of some products



But under-processing is not by any means the only cause of spoilage in canned foods; perhaps it is not the chief cause. Several other causes are familiar to the industry. Among these may be mentioned: imperfections in plate and cans, improper operation of the double seamer, inadequate exhaust, delay in processingafter the cans are sealed, insufficient cooling after processing and improper storage. Oxygen from air left within certain products accelerates the perforation of the cans and lends to the spoilage of many fruits which might be marketed with safety if the air were adequately removed before sealing the can.

Springers sometimes occur because of over-filling the cans, insufficient exhaust and storage under improper conditions.

When spoilage occurs or when canned foods become unmerchantable, it is obviously important to establish the cause of their condition, partly to fix the responsibility and partly to take steps to prevent a recurrence of the condition. Under such circumstances the assistance of the Research Laboratory is often requested. When this is done, we are often able to point out the cause of spoilage and sometimes are able to establish that the unmerchantable condition is due to causes previously unknown in the industry. Some illustrations may be of interest.

In one large fruit canning plant visited by a representative of the laboratory it was found that perforation with strawberries was limited to certain varieties The berries of such varieties contained large cavities filled with air. This was obviously the cause of the unusual amount of perforation experienced with these berries. Methods for eliminating the oxygen held in this manner have been studied, and the results of this work will be given strawberry packers.

One canner found occasional dark spots on peas put up in No. 10 cans. In sending a case of samples to the labora-

DR. W. D. BIGELOW
In the Laboratory
At Washington, D. C.

tory, he described his method of canning in considerable detail The discoloration was found to be due to copper, and from his description of his process it was suggested to him that the copper came from the contact with metallic copper in a gravity brine tank. Having this suggestion, the canner realized that he had introduced a copper hopper above his filling machine with which the peas after blanching were in contact for a longer time than the gravity separation apparatus. He also found that peas took up copper more readily after blanching than before. The suggestions made by the laboratory, therefore, enabled him to locate the cause of the trouble promptly, and he eliminated the discoloration by coating the hopper with tin.

The bleaching of sour pitted cherries in occasional glass jars was found to be due to particles of aluminum. It is well known that in pitting cherries the plunger sometimes becomes slightly bent, so that it gouges particles of metal from the aluminum cylinder of the pitter. These particles of metal, of course, find their way into the cherries and may be the explanation of the bleaching of cherries, which has always been noted in occasional cans.

An unusual amount of spoilage in No. 10 canned peas was found to be due to the agitation of the cans loosely stacked in the crates in retorts partly filled with water and processed at 250 degrees. By reducing the temperature of process to 240 degrees, and thus lessening the strain on the cans, the spoilage was stopped.

Corn Shaker

Black Discoloration in Corn.

Mr. Corn Canner:-

If you are troubled with Black Discoloration in your corn here is a remedy--use our Corn Shaker.

This thoroughly mixes the contents of the can and the black disappears.

Shaking also gives the corn a rich, creamy appearance.

AYARS MACHINE COMPANY --- SALEM, NEW JERSEY.

Brown Boggs Co. Ltd., Hamilton, Ont. Sole Agents for Canada.

These are typical instances of questions that are from time to time referred to the Research Laboratory. Frequently the sample consists of a single can, or a very small number of cans. Often the cans selected for sending the laboratory are not representative of the spoilage that has been encountered. It happens occasionally that where we have not been able to reach a conclusion regarding the cause of spoilage from the samples sent to the laboratory, we are able to establish the reason by visiting the canning plant, where we can study a larger number of cans and look into the conditions of canning.

It is obvious, however, that only a very small percentage of the cases of spoilage and unmerchantable canned foods are referred to the laboratory for examination. We have long felt that if we had opportunity to study such cases more generally, we would be able to learn of new and unusual causes of spoilage much earlier than we have under conditions heretofore obtaining in the industry, and could suggest remedies for them. There is now under consideration a plan by which we believe that this may be brought about. The National Canners' Association has proposed that in case of claims for spoiled and unmerchantable products those shipments, or parts of shipments which canners have heretofore ordered returned to their plants, shall be sent to designated warehouses in various parts of the country Here they may be given a preliminary examination and where necessary adequate samples may be sent to the laboratory for more detailed examination. The preliminary examination in the warenouse will usually be sufficient. It will be conducted by men trained in the Research Laboratory and experienced in the canning industry.

Frequently the examination of these goods will disclose directly the cause of their condition. Often they will suggest further inquiries which will be made at the canning plant, and sometimes will suggest a survey which may be made at the plant while it is in operation. Information gained in this way will permit the Research Laboratory to make specific suggestions to individual canners. It will also give us a general insight into the kind of spoilage that is occurring generally over the country, and will doubtless suggest new investigations that should be planned with a view to preventing such spoilage.

It has been suggested that this work was of such a distasteful nature that it would be difficult to find men who would willingly undertake it. This would be true if it were contemplated that men should give up their whole time to work of this kind When it is made merely an incident in the work of technologists, who spend their time in the canning industry, however, it affords an opportunity to make them more familiar with the problems of the industry. They are more than compensated for the unpleasant nature of the work by the insight it gives them into what is happening in the industry and the light it will throw on the reasearch problems of canning technology.

In this work our own technologists will have the advantage of the co-operation of the chemists employed in the various State food commissions. In several States we have already been invited to extend our work into their laboratories wherever it is found desirable. The work done under these conditions will also give an opportunity to demonstrate to the State Food Control officials our methods of examining canned foods and the interpretations we place on the results of our examination. The industry has often suffered from a lack of adequate information regarding these matters among State and municipal food control officials. It is believed that that situation may be largely remedied by the warehouse plan for the return of swells.

LOOKING FOR MORE LOBSTERS.

A SPECIAL commission has left France for Madagascar for the purpose of arranging the organization of a lobster canning industry in the vicinity of Tulear on the southwest coast of the island, according to a report which has just been received by the Department of Commerce from Consul J. G. Carter. So fond are the French of canned lobster that they draw upon the output of practically every lobster canning establishment of the world.

MEETING OF INDIANA CANNERS ASSOCIATION

Indianapolis November 20-21, 1923 Claypool Hotel.

WHAT has been pronounced by both officers and conventionites as probably the best Convention the Indiana Canners Association has ever held, took place at the Hotel Claypool, Indianapolis, on November 20th and 21st. As an instance, it might be cited that there were 117 canners present at the "closed" meeting on Wednesday, and from this the Association hopes soon to have its membership up to the 100 per cent. mark.

The meetings opened on Tuesday morning, the 20th, President C. L. Turmail welcoming the assembly, and making one of his characteristic good addresses. During this he recommended the following for consideration:

1st, I want to recommend that this association appoint a membership committee to make effort to get every canner in the State as a member of our State Association.

2nd, I would recommend that our State Association co-operate closer with the Western and National Association. I believe they can be of great help to our State Association and perhaps we can be of some help to them.

3rd, That the Association give a vote of thanks to the machinery and supply men and the brokers for the part they have taken in giving us entertainment at our conventions and the help they have given us during Canned Foods Week, and especially do we want to express our thanks to their committee who have devoted so much of their time for our comfort and entertainment, namely, Mr. W. B. Palmer, Frank Langsenkamp and A. E. Coddington.

4th, That a committee of canners be appointed in due time to take care of Canned Foods Week—that is, the contributions of the canners. I believe that every canner should contribute his part to the national fund for expense of the window streamers, etc., and to the state fund for any advertising campaign which might be inaugurated for our state. We made a good showing last year; we can make it still better this year. If every canner will come in, the burden will be light. I am sure no one wants to be a free rider all the time, and yet we have canners in the State who have never contributed a cent to this fund. It is certainly the greatest move ever made to sell more canned foods, and if there is a canner in the State who does not want to increase the sale of his products, I would like to hear from him.

5th, I believe there should be a committee appointed to take care of the display of canned foods at the national convention to be held at Buffalo in January. We are certainly all interested in boosting Indiana canned foods, and I consider this a great opportunity. Every canner in the State should contribute a few cans of his products for this exhibit. There will be no expense to the individual canner, other than donating a few cans of his products.

The Warehousing Plan Adopted—President J. A. Anderson, of the National Canners Association, the next speaker on the program, explained in detail, much after the style of his addresses at Chicago and Milwaukee, which have been recently published in these columns, the points of this plan; and Assistant Secretary Frank M. Shook likewise elaborated upon the plan, with the result that such canners as had had hazy or uncertain ideas of the matter, changed their minds and became enthusiastic about it. Indiana lined up solidly behind the plan.

Better Tomato Seed—At the afternoon session Prof. H. D. Brown, of Purdue Experiment Station, explained the work of their station on better tomato seed propagation, saying, in part:

The Indiana Baltimore tomato seed continued to outyield other varieties and strains of tomatoes in tests at Purdue Experiment Station, La Fayette, this summer. The average yield of the 6 Indiana Baltimore selections (individual plant selections made in 1922) was 13.35 tons per acre, while the average yields of the

46 seedsmen's lots was 12.18 tons per acre. This is a difference of 1.17 tons, or an increase of 9 6 per cent over the average yield of the seedsmen's strains. The seed which was saved for the canner's seed production plot came from the highest yielding lots which had an average yield of 15.14 tons per acre. Thus seed was saved from lots that produced 24.3 per cent better than the average of seedsmen's varieties.

In order to check the variations in soil fertility, 36 checks were grown, every 10th row being a check. The average of these 36 lots was 13.39 tons per acre. The seed used for these checks is the same as that used in the canner's multiplication plots at Orleans this year. It is interesting to note that the average yield of these 36 check plots is 1.21 tons per acre above the average yields of the 45 seedsman's lots and is approximately the same as the average yields of the selections made from the Indiana Baltimore. Thus it is apparent that field tests were necessary to verify the value of the seed saved from plant selections made in 1922. By forcing lots into early maturity it is possible to determine which lots are the highest producers, so that seed can be saved from duplicate plantings of the high-yielding lots grown as a midseason crop.

Yield records were discontinued September 14th this year, due to the early frost. The frost caught most strains of the Indiana Baltimore with a heavy set of fruit, while many of the seedsman's strains were through yielding. In fact, most seedsman's lots which outyielded the checks were early varieties. Since frost came nearly a month early this year, it would hardly seem advisable to breed an earlier strain because of the loss of one year's crop.

Type of Fruit—In order to reduce the amount of blossom and rot and to produce fewer misshapen fruits, selection during the past two years has been toward a deeper fruit and one that is more nearly round. Data collected during the past years indicates that deep round fruits are freer from these two imperfections than the elongated flattened types.

Selections are always made with a view to securing a strain which is the least inclined to crack, but all lots cracked more or less during the past unfavorable season.

Disease—The amount of leaf spot prevalent in the fields during the past season has made this disease of considerable importance. Unfortunately there is little or no difference between varieties and strains in their ability to resist the leaf spot disease. If the disease continues to be serious, some control measures must be forthcoming. Perhaps the recommendations made by the United States Department of Agriculture can be applied effectively if modified to suit Indiana conditions.

The breeding of a strain resistant to the soil-borne disease known as Fusarium was started this season, but due to the cool summer the disease was not nearly so destructive as it has been during the past. For this reason the tests this summer did not have much value. The work will, however, be continued in order to secure a wilt-resistant Baltimore, suitable for Indiana conditions.

Mr. John A. Lee, secretary of the Western Canners Asociation, and widely known as "Wrangler" of The Canning Trade, spoke upon the question of Organization. His remarks were followed very closely and had the effect of a later resolution looking towards closer co-operation between the canners of the various States.

"An industry like the canning of foods," he said, "cannot stand still—if it does, it will retrograde. Therefore those engaged in it, should meet and know each other, confer with and learn from each other, learn how the difficult problems of food preservation have been solved and how improvements in quality have been made.

"Learn to know your neighbor as a friend and quit disliking him as a competitor."

Can Prices for 1924—Mr. H. A. Baker, of the American Can Company, explained the can question, now uppermost in canners' minds, because of the predicted higher prices in 1924. Besides a genial personality and ability as a speaker, Mr. Baker is an expert on the tin plates, and he proved his ability to make clear a situation over which his company had no control.

The Making of Pulp—Mr. O. Z. Zinn, of the Campbell Soup Company, as one of the largest buyers of tomato pulp in the country, spoke upon this important question. He contended for an improved quality of production all along the line, and urged closer co-operation with the growers to the end of an improvement in the quality as it comes from the fields. Speaking of his own specifications in the buying of pulp he contended that they were not hard to meet if the packer had the right equipment. On this subject he said:

Quality and Grade of Finished Fancy Heavy Tomato Pulp—Seller agrees that said fancy heavy tomato pulp must have a bright red color (such color is to be determined when the pulp has been brought to a uniform specific gravity of 1.022 at 20° centigrade), and a good tomato flavor, free from bitter, flat, sour or scorched taste, free from all seeds or broken seeds, that same shall be guaranteed to comply with all State and Federal food laws, and to be within the limit of bacteria, yeasts, spores and molds, as provided in the Federal Regulations, that same shall be finished through a twenty (20) mesh screen having 1/40" diameter holes, and shall contain no reprocessed or re-cooked pulp. Each can shall be properly processed and properly cooled after processing; and shall be stacked in such a manner that the pulp will not stack burn and the cans will not rust. The fancy heavy tomato pulp, without the addition of salt, must contain not less than ten and one-half per cent (10½%) of tomato solids determined by drying in vacuo at 70° centigrade.

The outlook for the coming year looks good enough now to encourage every effort. Indiana canners did not make enough money during 1923 to afford long winter trips to Florida so it will give them a good opportunity to stay at home and fix up the cannery this coming winter and spring. There are many little changes around the cannery that will help, and you will forget them if not attended to promptly.

Through the proper effort, which I know you can give, we look forward to a bigger and better Indiana tomato crop and pack during 1924.

Wednesday morning, as we have said, was given over to a closed session in which the canners considered every phase of the industry from the raw products to the wohlesale grocer, and from which some very important and valuable data developed. The canners were there and took part in the discussion, lending their experiences freely.

A committee was appointed to solicit new members, and a strong effort is to be made to place Indiana in the 100 per cent. membership class.

The Election—President Turmail retired and the vice president, John Souder, of Greenfield, Ind., was elected as president. Mr. Frank M. Hundley, of Summitville, Ind., was elected vice president, and Secretary-Treasurer Kenneth N. Rider was re-elected for another year.

The Resolutions Committee brought in the following report:

Resolved, That it is the sense of this Association that the payment of a greater brokerage than three per cent on tomato pulp is unreasonable and not warranted by trade conditions.

Resolved, That this Association again recognizes the magnificent work of the Horticultural Department of Purdue Agricultural Experiment Station in its development of an improved tomato seed. We maintain that the results already obtained fully warrant and demand a continuation of this work in the interest of Indiana's premier position in the tomato world.

Resolved, That the President shall appoint a membership committee whose sole duty shall be to secure a larger membership, to the end that every canner in the State shall be enrolled as a member of the Association.

Resolved, That the Association hereby pledges its hearty support to the regional warehouse plan, so called, for disposition of the vexatious swells question, and extends its endorsement to the plan of the National Canners' Association for handling same.

Resolved, That the Association tender a vote of thanks to the machinery and supply men and the brokers for the part they have taken in giving us entertainment at our conventions

UALITY

Sprague-Sells Picking Tables

Illustration shows our metallic apron Picking Table, on which the peas are carried in straight rows in the depressions so that splits, stones and other foreign matter are easily seen and removed. No cracks or crevices to accumulate dirt. Easily cleaned and sterilized.

We also build rubber belt type tables in any size desired.

Sprague-Sells Picking Tables

The products of both our factories are sold through the General Sales Office in Chicago. We can supply from our own plants practically any machine you may need.

Whenever you are planning any changes or additions to your equipment, let us submit a proposal covering your requirements. When quick action is necessary, telegraph or telephone at our expense.

Address all inquiries on both lines to

and the help they have given us during Canned Foods Week, and especially do we want to express our thanks for their committee, who have devoted so much of their time for our comfort and entertainment, namely, Mr. W. B. Palmer, Mr. Frank Langsenkamp and Mr. A. E. Coddington.

Resolved, That we believe there should be a committee appointed to take care of the display of canned foods at the National Convention to be held at Buffalo in January. We are surely all interested in boosting Indiana canned foods and consider this a great opportunity. We recommend that all canners contribute liberally of their products.

Resolved, That in order to have closer co-operation, thereby accomplishing more for the individual canners and also the industry, we recommend active membership in the State Western and National Associations, for "In union there is strength" and "United we stand, divided we fall."

Resolved, That every canner is vitally interested in the distribution of canned foods, and as Canned Foods Week is a very large factor in such distribution, we recommend and urge all Indiana canners to contribute to National Canners' Association Canned Foods Week Committee for the expense of streamers and distribution, and we also recommend a State-wide campaign as formerly conducted through the help and co-operation of the jobbers and brokers of the State.

Resolved, That the Secretary express our appreciation to President James A. Anderson, Prof. H. D. Brown, Col. John A. Lee, Mr. Wm. A. Moore, Dr. H. A. Baker and Mr. O. C. Zinn for their interesting part of our program.

Resolved, That the great appreciation of the Indiana Canners' Association be expressed to the officers, Clarence L. Turmail and Kenneth N. Rider, for their untiring efforts to make a successful year, especially for their good work done at Milwaukee to bring to the attention of the public the fine display of Indiana canned foods.

(Signed) J. J. ROGERS,
E. O. GROSVENOR,
A. L. DREYER.

The Entertainments—On Tuesday evening the entire Convention was the guest of the Brokers and Supply Men of Indiana at a theater party.

PROGRAM
ASSOCIATION OF NEW YORK STATE CANNERS, INC.

Hotel Powers

Rochester, N. Y., December 12th and 13th, 1923

THE annual meeting of the Association of New York State Canners, Inc., will be held at the Powers Hotel, Rochester, N. Y., on December 12th and 13th. The following is a brief summary of the program:

Wednesday, December 12th, 10 A. M.—Reports of President, Treasurer and Secretary; appointment of committees; report of Committee on No. 2½ Cans.

Wednesday, December 12th, 2 P. M.—Addresses by President James A. Anderson, of the National Canners' Association; President Philip A. de Puyt, of the National Retail Grocers' Association; Mark A. Daly, of the Associated Industries of New York State. and G. F. Osborne, of the Livingston County Canning Co. (Oil Compression Engines in the Cannery).

Thursday, December 13th, 10 A. M.—Addresses by Dr. R. W. Thatcher, of the State Experiment Station; Prof. R. A. Emerson, of Cornell University; C. G. Woodbury, of the National Canners' Association, and C. W. Hauck, of the U. S. Department of Agriculture.

Thursday, December 13th, 2 P. M.—The legal business meeting of the Association for the election of directors, reports of committees, and the transaction of miscellaneous business. This session will be followed by the cutting of the experimental apple packs, and the testing of pies made from these packs.

While the courtesy of a good attendance to hear our speakers is requested, we wish to call attention to the fact that the transaction of business is a very important part of our meeting, and your prompt attendance at the morning session on Wednesday and the afternoon session on Thursday is especially requested.

ENTERTAINMENT

Wednesday, December 12th, 12:30 P. M.—Ladies' luncheon at Sibley, Lindsay & Curr Co., tendered by the machinery supply men and brokers. After the luncheon a theatre party at the Eastman Theatre will be given under the same auspices.

Wednesday, December 12th, 8:15 P. M.—Theatre party at Keith's Temple Theatre, given by the Association.

Thursday, December 13th, 7:00 P. M.—Dinner dance and entertainment given by the machinery supply men and brokers at the Seneca Hotel.

The details of the entertainments tendered by our friends, the machinery supply men and brokers are in the hands of a special committee, and inquiries should be addressed to Harry Kasselow, American Can Co., 301 Union Trust Building, Rochester.

The theatre party on the evening of the 12th is given by our Association. Four hundred seats have been reserved, and seats will be allotted to you in the order of application to me. In general it is expected that two tickets will be reserved for each plant and for each associate member, but we will try to see that any reasonable requirements of members are satisfied. Please fill out the enclosed card and return at once to me. Tickets will be distributed at the morning session on the 12th.

CONVENTION DATES

December 10-11—Tri-State Canners, Hotel Adelphia, Philadelphia, Pa. Annual meeting.

December 12th and 13th—New York State Canners, Hotel Powers, Rochester. Annual Meeting.

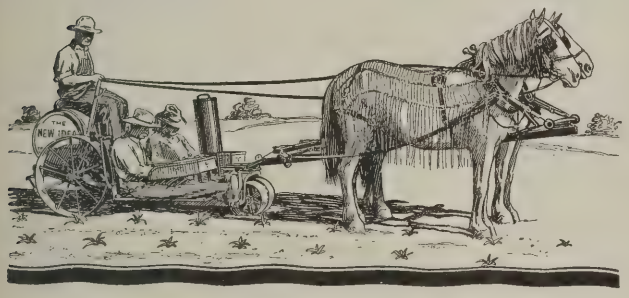
January 8-9, 1924—Utah Canners' Association, Utah Hotel, Salt Lake City. Annual convention.

January 21st to 26th, 1924—National Canners, Canning Machinery and Supplies, National Food Brokers, Machinery Exhibit, etc., Buffalo, N. Y.

Note:—Secretaries can help their cause by keeping us informed as far ahead of time as possible, and so keep this column correct and complete.

New Idea Transplanting Insures Bigger Crops

The ability of your growers to keep your kettles filled at canning time is supremely important. Every bushel more they can raise represents added profit you can make. And that is why it will pay you to find out about



NEW IDEA TRANSPLANTERS

Improper transplanting is the chief menace to the two major can-house crops - - tomatoes and cabbages - - and many canners have recognized the value of co-operating with their growers on this important point. They are buying New Idea Transplanters, not only for their own acres but for loaning to their local growers each Spring.

The New Idea Transplanter is a remarkable improvement over other types, covering more acreage per day and getting better yields than any other transplanter on the market.

It will pay you well to encourage its use in your territory. We will gladly send literature to you and to any names and addresses of your growers that you care to give us.

THE NEW IDEA SPREADER CO.
COLDWATER OHIO.

IMPROVED STEEL PROCESS KETTLE

Manufactured to hold 800, 1,000 and 1,200 2-lb. cans. Conceded to be the best; hundreds in use. Double thermometer pocket riveted to each kettle. Constructed so as to use either water, dry steam, or open bath process.

The Department of Raw Products

"Quality" cannot be produced in the can unless quality products are produced on the farm. This Department will, therefore, seek the best thoughts of the country on better crops, and how to produce them, and ways and means of combating the enemies of such crops.

The assistance of all agricultural experts is sought and heartly invited, a way offered them here to reach the entire canning industry of all States; and we likewise extend to all our readers an invitation to explain their troubles and ask remedies. And by all means let those who have devised ways or descovered remedies give the benefit of their experience to those less fortunate.

"Quality" canned foods can only be attained by the co-operation of all canners towards the production of quality crops.

THE COMMUNITY PLANT BED A SUCCESS

Its Results in the Tri-States in 1923.

ECONOMICAL production of tomatoes, the keynote in the success of the tomato canning industry in Maryland, has received a decided impetus in the State as the result of the introduction of the community plant bed idea.

This was the consensus of opinion of county agents, specialists and other interested persons who attended a conference in Baltimore early in November to review results obtained during the past year in the promotion of the tomato industry. Reports coming from both Maryland and Delaware indicated the development of an entirely new interest on the part of growers in the production of strong, vigorous plants as one of the primary essentials in successful tomato culture.

The community plant beds were given credit for much of this interest. Reports from Maryland counties, where community plant beds were tried during the past year, indicated that not only had the plant beds succeeded in producing plants above the average in quality, but that they had been responsible for stimulating interest among growers who produced their own plants. As a result plant beds throughout the State were prepared more carefully, sprayed more regularly, and consequently produced better plants than in former seasons.

It was the general opinion that the community plant bed had demonstrated its possibilities, and that the coming season will witness a greater number of them in the State. Preliminary estimates, as given at the conference, indicated that probably forty-five beds would be established in the tomato-growing counties the coming year.

The conference was called at the instance of C. G. Woodbury, of the National Canners' Association. This organization, Mr. Woodbury explained, has assisted in promoting the community plant bed idea because of the interest of canners in improving the quality of the tomato pack. A quality pack, he stated, could not be obtained without quality production, a factor that is correlated with high yield. The conference had been requested, he said, to receive reports of results during the past year and to make plans for a continuation of the work another season, if such action seemed desirable.

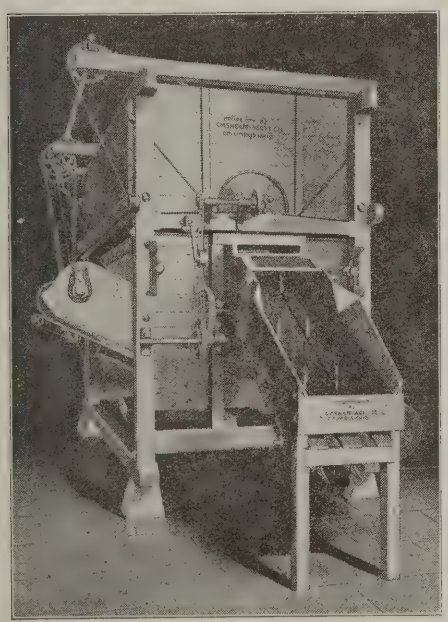
A. D. Radebaugh, county agent in Cecil county, who assisted in supervising the community beds in the State the past season, told the conference of his endeavor to secure better seed by saving selected fruit in the field and by comparative tests of different strains of the Greater Baltimore. Speaking of his experience with plant beds during the past year, Mr. Radebaugh said he had found dusting easier, cheaper and just as effective as spraying in controlling diseases and insect pests. Plant beds from a quarter to a half acre in size were found most satisfactory, he said, and beds of larger area were seldom advisable. The importance of a mulch of equal parts of leaf mold and tankage after the seed had been sown was a point which Mr. Radebaugh stressed. Drilling the seed thinly in the row and having the field properly fertilized for the plants were other factors which he mentioned as important.

E. P. Walls, county agent in Talbot county, Maryland, reported the results from five community plant beds. Some of them were too large, he said. The best results had been obtained from a bed an eighth of an acre in size, he said. The growers generally were enthusiastic over the results and were ready to undertake similar projects the coming year, he said.

Somerset county (Md.), where three beds were planted, obtained only fair results, according to the report of County Agent C. Z. Keller. This was due to the uncertainty of the price situation early in the year which discouraged growers and caused them to lose interest in the projects. More good seed had been sown and more spraying had been done during the season than ever before, he said. He described other improved methods of growing plants in the county, and said that in fields where fertilizer containing 10 per cent potash had been used better yields and better quality tomatoes had been grown.

Worcester county growers, who had obtained plants from the two community beds in that county, had yields above the average, reported County Agent E. I. Oswald. Poor seed in one case and bad weather in both cases operated to make the results less successful than they might have been. Growers generally, however, followed improved methods, said Mr. Oswald, and a considerable number saved seed from selected plants for use next season.

A poor market for the crop in Anne Arundel county was a discouraging factor of the past season among growers, reported G. W. Norris, county agent. The one community plant bed that was tried, however, gave satisfactory results and growers secured an average yield per acre about three times that of the average for the county.



Dorchester county started out with prospects for approximately four million plants, said County Agent E. W. Montell, but actually grew about two and a half million. Six of the eight beds started in the county were successful. Sea weed, which had been used as bedding for hogs and rotted down, was found to be the best mulch for the seed bed. Plants were sold at 75 cents per thousand, and at this price one of the half-acre beds netted a profit of $238. The average yield in the field for the county, Mr. Montell said, was around five or six tons per acre, but one demonstrator, using plants from a community bed, secured a yield of twelve tons.

ANDERSON-BARNGROVER MFG. CO.
San Jose, Calif.

There were many difficulties with the four beds in Harford county, according to County Agent B. B. Derrick. More than enough plants to supply the growers were secured, however, and the projects had the effect of stimulating individual plant growers to better methods of production. Sixty per cent of the growers in the county sprayed plants in the beds during the season, he said, while not more than 5 per cent had followed such practice in former years.

William S. Silver, of Aberdeen, reporting from the canner's viewpoint, said that growers generally in his section of the State were pleased with results obtained from the community plant beds. More attention was being given to saving seed from selected plants, he said, and probably 75 per cent of the requirements of his territory would be taken care of with home-grown seed. One grower had saved as much as 100 pounds from selected plants, he said.

One bed in Kent county, one and a quarter acres in area, was severely damaged by heavy rains, said County Agent H. B. Derrick. Plants in the undamaged rows, however, proved to be of fine quality and showed increases in the field of from two to four tons per acre over average plantings. Many more plants than were grown could have been sold, he said.

Dr. T. F. Manns, pathologist at the University of Delaware, said that of six beds planted in Delaware, one proved a failure, one was a partial failure and four were successful. The beds gave only about half the number of plants expected, he said, which led to an actual count of the number of seed in a pound. It was found that from 140,000 to 185,000 seed were contained in a pound, and that two or three seed should be planted for each plant expected. Heat protection was given the Delaware beds for three nights, he said. The most satisfactory results in heating were obtained from coal and old railroad ties. Dr. Manns also reported some results with different fertilizers. Six hundred pounds of a 4-6-10 gave an increase in yield of 60 per cent, he said, and where this amount was doubled the increase was likewise doubled.

Prof. J. B. S. Norton, of the University of Maryland Experiment Station, reported on disease surveys and discussed particularly the mosaic disease. This disease was first noted in Kent and Queen Anne counties twelve years ago, he said. It has spread widely since that time. Losses from the disease in the State probably would not exceed 5 per cent, he said, although in certain fields the losses might be very much higher. Suggesting means for controlling the leaf spot, Prof. Norton emphasized the importance of early planting, rotation of crops and spraying the seed beds.

M. M. Stewart, secretary of the Maryland Farm Bureau Federation, told the conference that a study of the form of contract between growers and canners is being made by the Farm Bureau, and that a committee appointed for this purpose is expected to make recommendations for next year.

It was repeatedly brought out during the conference that the past season had been particularly unfavorable for the production of plants. Weather conditions in Indiana had created a scarcity of plants among growers in that State, it was declared by Mr. Woodbury, who added that Maryland growers probably would have been short of their planting requirements had it not been for the community beds.

It was decided by the conference that the plant bed projects should be continued, and that reports of results obtained during the past season ought to be published for guidance during the coming year.

TENTATIVE GRADES OF RAW TOMATOES

Meeting of Tri-State Executive Committee and Many Growers' Associations Adopt Them.

THERE was a meeting of the Agricultural and Executive Committees of the Tri-State Packers' Association, with Mr. Charles W. Hauck, of the Bureau of Agricultural Economics, Washington, D. C., at Wilmington, Del., November 28th, for the purpose of going over with him certain tentative grades of tomatoes and definitions thereof for cannery use.

This matter originated at the Annual Meeting of the Tri-State Packers' Association last January, and Mr. Hauck has been devoting a great deal of time and effort to its elaboration since by travelling over the country, and meeting groups of growers of tomatoes, as well as visiting canneries while in operation, so as to become thoroughly acquainted with the subject both from the growers' and canners' standpoint.

This has led to his formation of the said tentative grades, which have been submitted to quite a number of growers at various meetings, and have been universally adopted by them.

And, inasmuch as the Tri-State section is the largest single producer of tomatoes in the country, he is anxious to have these grades tried out in this territory, and, accordingly, he was desirous of presenting them to the proper committees of the Association, for their consideration and amendment, if necessary from the canners' standpoint.

This was done very thoroughly, and all present unanimously endorsed the proposed grades and definitions, and a committee was appointed, consisting of Messrs. A. T. Stevens, Samuel Watson, Clyde Carroll, C. L. Reckord and H. P. Strasbaugh, to join the Agricultural Committee (Messrs. F. A. Torsch, Lucius Hires and H. L. Cannon), in presenting a resolution embodying this endorsement at the coming Annual Meeting of the Association at Philadelphia, December 10th and 11th, for confirmation or rejection by the association as a whole.

These grades and definitions thereof will be put into pamphlet form and will be sent to any canner interested in them upon application to either Mr. Hauck or the Secretary of the Tri-State Packers Association.

The idea seems to be that canners and their growers in different localities should adopt these grades for the year 1924, when Mr. Hauck may have the opportunity to see how they work out in actual practice, so that, if satisfactory, the government may afterwards put the same into effect.

Mr. Spilman, of the same bureau as Mr. Hauck, brought before the meeting the matter of standardization of truck packages, and showed by photographs and otherwise the importance of reducing the number of the different sizes, so as to form standard sizes of 8, 16, 24, 32 and 48 quarts, or 1, 2, 3, 4 and 6 pecks. The size package in which canners generally are interested is that usually called the 5/8 bushel basket. He strongly advocated the elimination of the 5/8 basket, and the substitution therefor of the 3/4 bushel basket, as the latter when filled with tomatoes weighs only 6 2-3 lbs. more than the filled 5/8 basket, and would call for fewer baskets to handle the crop and would mean less cost for handling. Whereas it takes 60 baskets of the 5/8 size to make one ton, it will take but 50 baskets of the 3/4 size. This facilitates handling, keeping records and estimating, and tends towards standardization of this important carrier.

(The Tomato Grades will be published Next Week.)

For Sale—Machinery

FOR SALE—100,000 No. 2 Southern Pine Box Shooks, 5-8 x 5-16, a carry-over from our spring contracts. Will sell for less than today's market. Price delivered your station on application.

W. E. Robinson & Co., Bel Air, Md.

FOR SALE—Several No. 2 Max Ams Double Seamers, in good condition; price reasonable.

Address Box A-1123 care of The Canning Trade.

FOR SALE—

We have on hand at bargarin prices for quick shipment the following, all being in first class condition and subject to inspection:

2 Sprague Inspection Tables as shown on Page 93 of Sprague's late catalog.
1 No. 14 Disc Exhauster
1 Westcott Washer about 20 ft. long
2 Sprague Goose-neck Elevators for Peas, Beans, etc.
3 Variable Speed Pulleys
3 Kraut Cutters
1 Large lot of chain, Sprockets, etc., for Corn Conveyors
5 40x72 Retorts
1 Harris Hoist
2 Emerson Dicing Machines
3 Monitor Pea Washers
2 Boiler Iron tanks 18 ft. long, 6 ft. wide, 2 ft. high

and other miscellaneous bits of canning machinery in A-1 condition, We are willing to dispose of this material at exceedingly low prices for prompt shipment and will give reasonable terms.

A. K. Robins & Company, Baltimore, Md.

FOR SALE—Having decided to discontinue packing peas, we offer the following pea machinery; all machines in good order:

1—Ayars 12-pocket Rotary Pea Filler.
3—Hansen Pea Fillers.
2—Huntley Blanchers, 12 feet long.
2—No. 6 Huntley Cleaners.
1—No. 3 Huntley Cleaner.
2—4-screen Colossus Separators.
2—Nested Separators.
6—No. 147 Clipper Cleaners.
2—10-inch Cup, Ferrell Elevators, 18 feet long.
3—Fairbank's Platform Scales.

Address Box A-1118, care of The Canning Trade.

FOR SALE—

1—16-foot Monitor Steel Frame Blancher.
1—Style X Monitor Washer.
1—Monitor Pea Picking Table.
1—Elgin No 375 Type Plunger Filler with tartaric acid-ing attachment and roller capper.
1—Wonder Continuous Cooker, Style F.
1—Burt Labeling Machine for No. 3 cans.
1—No. 1 Monitor Scalder.
5—40x72 Retorts.
1—35 H. P. Buckeye Horizontal Engine.

Canning Machinery Exchange, Marine Bank Bldg., Baltimore, Md.

FOR SALE—Two Steam Chests – One 8 feet long and one 10 feet long with cars, at $100.00 each.

The White Packing Company, Moultrie, Ga.

FOR SALE—Wisconsin Pea and Corn canning factory. Most favorably located. Priced right.

Address Box A-1124 care of The Canning Trade.

FOR SALE—8 No. 68 A. T. Max Ams Seamers in splendid mechanical condition. These seamers are automatic in every respect, being arranged for cover feed and body feed, at $275.00 each.

The Heekin Can Company, Cincinnati, Ohio.

FOR SALE—

2—No. 7 Clipper Cleaners, $50.00 each.
2—Sprague-Reynolds Goose Neck Sanitary Elevators, complete, approximately 35 feet, $3.00 per foot.
1—16-inch Sprague Elevator Boot, $75.00.
3—Monitor Style "Y" Washers, wood frame, $200.00 each.
1—Plummer Blancher, just the thing for a No 1 line, rebuilt last year, good condition, $250.00.
6—Closed Retorts, 40x72 inches, complete without crates, $100.00 each. Tagliabue Controllers, $25.00 each extra.
1—Peerless No. 5 Exhaust Box, $125.00.
2—Cuykendall Corn Mixers, $150.00 each.
1—Sprague Iron Buggy Truck, $25.00.
1—Sprague Wood Buggy Truck, $10.00.

Address Box A-1119, care of The Canning Trade.

FOR SALE—No. 89 Max Ams locker with automatic feed and notching and soldering devices.

1—No. 4 A. Slaysman power press
1—Max Ams automatic roll flanger
1—No. 134 Max Ams power press
3—dies for No. 10 covers
2—Max Ams curlers for No. 10 covers
1—No. 74 Max Ams compound liner
1—Stevenson No. 4 power press
1—Stevenson foot power retester for No 10 cans
1—Mitchell slitter with 5 prs. cutters, takes stock 30 in. wide (in fair shape)
1—Ayars slitter with 6 prs. cutters, takes stock 26 in. wide (in fair shape)
1 set foot power, square shears 22 in. wide
1 baleing press No. 12 Handy.

These machines can be inspected at our plant at Ridgely.

Saulsbury Bros. Inc., Ridgely, Maryland.

FOR SALE—1 Special Adjustable Burt Labeling Machine, made to take six assorted sizes of round containers, four to sixteen ounces. Equipped complete with motor and in excellent condition. Machine can be rebuilt for any size can required. For quick sale will dispose of this machine at a very low price. Liebenthall Bros. & Co., 1436 W. Ninth Street Cleveland Ohio.

For Sale Seed

FOR SALE—We have a small surplus of Golden Bantam, Crosby Early, Large Late Crosby, Improved Hickok Country Gentlemen and Evergreen Sweet Corn all grown here by ourselves for seed purposes, from belated stock seed which was carefully tested for disease and vitality by the rag doll testing system which eliminates disease and unfertile barren stalks. We have been growing and improving this corn for a number of years under the above system. This work has been done by our Mr. Skinner with the assistance of Dr. Woodbury and the Department of Agriculture. We are offering this and will be pleased to receive your inquiry.

W. R. Roach & Company, Grand Rapids, Michigan

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, DECEMBER 10, 1923

WEEKLY REVIEW

General Holiday Business Is Brisk—Canners Supplying the Small Orders at Proper Prices—Futures in Corn and Tomatoes in No Hurry—Canners Must Know Costs—Future Prices Should Be Better After the New Year Sets In—What Constitutes "Bargains" in Tomatoes—A Figure on the Tomato Pack of 1924.

HOLIDAY BUSINESS BRISK—We might dismiss the canned foods market this week by saying that there has been no change in conditions during this week from what have prevailed for the past two weeks. An ex-ray of the past three weeks would show conditions identical as to prices, demand and offerings—just the same kind of business, neither more nor less, and at practically the same identical prices. We know that we dare not do that, and turn to some other subject, because some of our close market followers would seriously object that we had not reported on the week's market. And yet what we have said is the real market report.

A swing around among the wholesalers and the retailers finds business really very good, demand brisk and orders plentiful. And canned foods are playing, possibly, a larger part in the Christmas goods than used to be the case. That is the one feature of the market that shows real life, and it is a very good omen for the coming weeks—after the turn of the year. The retailers are not stocking up heavily; in fact, they are taking just enough to get by comfortably, knowing that they can buy more if they need it. But their demands upon the wholesalers are keeping his stocks at a very low ebb. In fact, this demand is keeping the jobbers coming into the market for more goods, and invariably for quick shipment. No one seems to mind this hand-to-mouth style of buying any more, and, least of all, the canners need worry since it is eating away visible supplies of spot goods at an alarming rate. And most canners have learned that in former years they did business backwards. That is, when they had a call for a few cases instead of a carload or wholesale lot, they used to tell us and the outside world that they were cleaning out a little holding and let it go below the full market price—because it was only a few cases. In other words, they would sell a few cases at a better price than they would sell a carload. It's hard to believe, but that's the fact. In no other industry under creation could anyone find a similar condition, but it existed in canned foods. Now practically all canners have thrown overboard that "cleaning out a small lot" stuff, and when a buyer wants a retail lot of goods, charge him a retail price; that is, a price higher than for carloads. It costs the canner more to get out and ship 25 cases or 10 cases to two different buyers than it would, proportionately, to ship a carload to the one buyer, and the canner is, therefore, justified in charging the higher price. Besides, it is a well-known trade custom that you must pay more at retail than at wholesale. So the canners are making the wholesalers pay for buying at retail, and it is about time.

FUTURES—The future pea market did not open extraordinarily early—it opens every year at about the time it did this season—and it has been very brisk, and an immense lot of peas have been sold. It is a little early to open future selling on corn and tomatoes, and yet there are those trying to do this. But the jobbers do not seem anxious to take on this business at this time. Good quality and heavy demand for peas have taught the jobbers to cover requirements quickly, and while they can get the goods they want; but they see no such reason to hurry on corn and tomatoes. And it is just as well that they do not. We doubt if these canners have properly figured their increased costs for 1924, and we hope the years of adversity have taught them the folly of guesswork on future costs. An order on your books below cost is worse than no order at all, especially as the banks now have access to cost figures. The picture of a canner called before his banker because he is loaded up with futures sold below cost of production must be a pathetic one. We can imagine that it will be found rather hard to float a loan under such a condition. This is no time to "guess" costs—know what you are doing, or price them extra high to be on the safe side. Don't run your business on another man's prices. Despite your self-conceit he may be able to produce goods and make a profit at a price which would mean loss to you. If you don't know what your goods cost, try to find out; visit a fellow-canner and compare notes; it may do you both good. And don't hurry about naming future prices on corn and tomatoes. After the new year becomes well settled the prices on spot goods will most likely be better than they are today. In that case it will be easier to get a fair price for your futures—at least, better than you can get now. The higher the spot market, the better the future market.

TOMATOES—The little weakness which appeared in tomatoes a few weeks ago seems to be disappearing. There were some willing to part with their goods rather than take a chance on freezing, and this annual fear brought about this weakness. Either they have been sold out or have been put into safe storage, for the market is better this week, and the bargains one hears of in this section are now not below $1.32½, even for unknown packs. Of course, the better-known canners are holding for prices very much above that, $1.40 to $1.50 being nearer the real valuations. There are very few tomatoes in any other section of the country than this Tri-State territory, and most canners now know it. We notice that out in Indianapolis what few tomatoes can be found are quoted thus: 752 cases extra standards, No. 2s, $1.15; 59 cases standard, No. 2s, $1.10; 2,500 cases standard, No. 3, $1.55; 600 cases extra standard, No. 3, $1.60; 1,500 cases standard, No. 3, $1.65. This will give the Eastern tomato canner some idea of what they consider "bargains" in tomatoes in the Central West. It is hard to wake up some of our tomato canners before their goods are

taken away from them at a price far below their real value; and then it is cruel to wake them up.

Nothing has been heard of tomato statistics as yet, but the Bureau of Agricultural Economics of the Department of Agriculture, under date of November 30th, and just recently received, estimates the 1923 pack at 13,159,000 cases. They arrive at these figures by computing the number of acres grown for canning, the average yields, and the average production per ton. In former years they have rather closely approximated the figures issued by the National Canners' Association, but usually are slightly in excess of these actual figures. They credit Maryland with 4,973,-cases, California with 1,635,000 cases, Delaware with 606,000 cases, New Jersey with 485,000 cases, Indiana with 958,000 cases, and Virginia with 1,052,000 cases, to mention just a few of them.

OTHER ITEMS—We notice that succotash has advanced in this market this week, the kind with green limas being now quoted at $1.50. No. 3 sweet potatoes have likewise advanced 5c per dozen, and are now quoted at $1.20. Prices on mixed vegetables have been rearranged, and are now named at $1.10 for No. 2 and $4.50 for No. 10s.

THE MARKET—All items of canned foods are strongly held, and not many free offerings. The usual demand has continued, and the amount of goods passed out is quite good in total volume.

The heavy demand for raw oysters for the Christmas season is on, and the packers are finding trouble getting enough to supply it. So far there has been no severe weather to interfere with oystering, but the supply does not seem to exist, for otherwise it would be on hand at the good prices ruling.

NEW YORK MARKET

Trade Quieting Down—Many Will Attend the Tri-State Convention—Some Call for Corn—The Swells Question May Be the Big One of the Buffalo Convention These Jobbers Think—Future Peas Wanted—Pie Fruits Are Active—Notes of the Market.

By "New York Stater,"
Special Correspondent "The Canning Trade."

New York, December 6, 1923.

TRADE Has Quieted Down—Dealings in the spot canned foods market have been few and far between during the past week. The market is beginning to feel the full effect of the usual pre-holiday dullness, and operations are slowing down all along the line. With most of the distributors covered on their requirements up to the end of the year, trading on the spot position is of the pick-up variety, with buyers coming in for 5 or 10 cases at a time to fill out orders already booked for shipment.

Tri-State Convention Interests—Interest at present is centered in the convention of the Tri-State Packers' Association, which will be held in Philadelphia early next week. Many of the local brokers will drop down to the Quaker City to take in the convention and its attendant festivities, and it is not entirely improbable that first bookings of 1924 pack tomatoes may be put through at that time. A price has already been put out by a brokerage concern, and it is possible that the strong position of the market for old-pack goods, as evidenced by the present sold-up condition of the market, may tempt some of the canners to take a chance on booking futures at fixed prices.

Some Call for Corn—There has been some inquiry for corn in the local market during the week. With Eastern fancy corn in short supply, and canners in other sections of the country rather closely sold up, buyers are anxious to take on more fancy corn wherever available at fixed prices. Illinois has advanced fancy Country Gentleman 2½ cents, to $1.27½, f. o. b., and holders are beginning to take $1.30. Standard corn, both Southern and Western packs, can still be had at 90 cents, cannery.

Swells—Interest in the swells question has lagged a little during the week. The feature development of the market here was the action of Arthur P. Williams, chairman of the Conference Committee of the National Wholesale Grocers' Association, in addressing a letter to health enforcement officials in every State in the Union, asking them to enforce the present regulations against the shipment of spoiled foods, and reiterating the determined opposition of the wholesale grocery trade to the warehouse plan.

Convention Topic—If present plans of wholesale grocers and brokers are carried out, it is proble that the swellls problem will be the paramount issue of the forthcoming annual convention of the National Canners' Association in Buffalo. Wholesale grocers and brokers seem to be of the opinion that they can get the National Canners' Association to back down on the warehouse proposition, and to put into effect instead the percentage plan.

How It Is Done—The story is told on the Street that a certain large canner, during a visit to one of his buyers here, told the buyer that, as a matter of principle, he (the canner) would not grant one-half of one per cent in lieu of swell claims. The canner said, however, that he would increase the cash discount to a point where the total discount to the buyer would equal the usual cash discount, and one-half of one per cent in lieu of swells claims. The buyer, so the story runs, gravely informed the canner that as a matter of principle, he (the buyer) would not buy this canner's pack unless he could get one-half of one per cent discount in lieu of swell claims, and that a clause so stating the agreement should show in the contract. At present the situation is deadlocked.

Future Peas Wanted—There is still considerable interest shown in the future canned pea situation. Wisconsin has booked considerable business, Ohio has taken some business, and New York State canners are coming into the market. Thus far an actual price list covering the pack of a reputable New York State canner has not been seen by the writer, but it is understood that the ideas of the New York canners are about the same as those of the Wisconsin packers' 1923 prices, with a possible 5 to 10 cent advance on standards in the more popular siftings.

Pie Fruits Active—Demand for No. 10 pie fruits continues to show activity on spot. Among the items inquired for are gallon apples, red sour pitted cherries, pineapple, berries and peaches. Gallon peaches are strongly held, and as a result of this condition buyers have been turning to the dried peach in some quantities. An offering of Northwestern solid pack pie apples at $3.85, f. o. b. Washington cannery, was noted during the week.

Canned Prunes Popular—Canned prunes have met with a good demand this season. The popularity of the canned article, as well as its practicability, is demonstrated by the fact that the San Jose cannery of the California Prune and Apricot Growers' Association has been working day and night shifts for some time past packing canned prunes on a Government contract.

Experimental Cannery—News advices from Washington today state that an experimental canning factory is being erected by the Chilean Government in the "Quinta Normal," the national farm, in Santiago. Machinery costing $60,000 will be used in the cannery. Chile's fruit industry has been rapidly forging to the front during the past several years, and the development of the canning industry will constitute a menace to California's South American canned fruit business. This season it is expected that approximately 100,000 cans of fruit will be put up and shipped to Europe on trial in order to test the demand and market possibilities. If the Chilean canned product sells well, efforts will be made to develop a large canning industry in Chile under private management and financed by private capital.

Personal Notes and Observations—Frank E. Gorrell, genial Secretary of the National Canners' Association, was visiting friends in the local trade today.

S. E. Comstock, well-known canner, of Newark, N. J., was in the market this week, making headquarters with Butler & Sergeant, Inc.

W. F. Leonard, of the Leonard Packing Co., of Portland, Me., was making the rounds of the trade during the week.

Norman J. Griffith, sales manager of the Stittville (N. Y.) Canning Co., was visiting his brokers, W. D. Breaker & Co., Inc., this week.

Col. Wm. R. Roach, leading Michigan canner, with headquarters at Grand Rapids, was here during the week, stopping with North & Dalzell.

E. S. Wangenheim, of the California Conserving Co., canners, with headquarters at San Francisco, was visiting his brokers, Arnold & Montgomery, during the week.

Walter B. Timms, of Warmington, Timms & Co., was visiting his office this week, this being his second visit to the office since its recent operation.

V. C. Lord, sales manager of the Curtis Corporation, canners, of Long Beach, Cal., was in the market this week, making headquarters with T. J. Groth & Co.

Ralph Brown, general manager of the Rochelle (Ill.) canneries, was in the market during the week, making his headquarters with Bacon & Trubenbach, Inc.

F. S. Price, Jr., of the Price Sales Co., of Baltimore, was visiting along the Streeet during the week.

CHICAGO MARKET

Buyers Show Disposition to Take Goods—P eas and Tomatoes Scarce in This Market—Most Heavy Packing Corn States Have but Small Surplus of Spot Corn—Pumpkin Is Again Active — Jobbers Unconcerned About Swells Discussion—Canned Pumpkin.

By "Wrangler,"
Special Correspondent "The Canning Trade."

Chicago, December 6, 1923.

THE Market—The market for canned foods is rather quiet on the surface, but beneath the surface there is a disposition on the part of the wholesale grocers to buy any bargains which may be obtained in canned corn, peas and tomatoes and some other articles that are scarce.

Both peas and tomatoes are scarce in the West. Corn cannot be said to be scarce, but it is nevertheless selling well.

The announcement by the National Canners' Association of the compilation of the statistics of the output of canned corn for 1923, aggregating 14,000,000 cases, has had no demoralizing effect upon the market.

The output is larger than that of last year about 2,500,000 cases, but buyers remember that at the beginning of last year there was a surplus taken over from the previous year, 1921, of more than 2,000,000 cases, whereas this year no surplus whatever was carried over and the canned corn pack of 1923 arrived on a bare market.

Iowa and Nebraska announce that their unsold part of the 1923 pack of canned corn is 353,000 cases, and Ohio announces her unsold part of the 1923 pack of canned corn is 260,000 cases. Wisconsin has very little canned corn unsold, but Illinois and Indiana have considerable of the 1923 pack unsold, but have not announced the quantity held in first hands. Careful estimators who are well posted state that the unsold portion of canned corn in the hands of canners at present will not aggregate more than 2,000 000 cases. This quantity must supply the demand now for nearly nine months, and it will not be sufficient.

The Iowa-Nebraska Canners' Association held a fine meeting at Omaha this week on the 4th and 5th of December. The meeting was well attended. The statistics of the total pack of canned corn for the United States were announced, and the statement in relation to the unsold part of the pack was made, and the effect upon the canners who still hold some unsold stock seemed to strengthen their views in relation to prices, and to make them feel confident that higher prices will prevail after the first of January.

Some sales of Western canned tomatoes have been made during the past week wherever they could be found. One sale heard of was for 2,000 cases No. 2 extra standard, f. o. b. Ohio, at $1.00 per dozen. This canner, we learned, really held his goods at $1.05, but was anxious to close them out in order to avoid putting them in winter storage. Quite a number of canners of Wisconsin have named prices on canned peas for future delivery of 1924 pack, and I understand that important sales have been made.

There is an impression among buyers that the opening prices were figured before the canners realized that the price of cases and cans would be advanced on January 1, 1924, making an arbitrary difference of about 5c per dozen in the cost of packing No. 2 canned peas, and some buyers who were inclined to place their orders early were actuated or influenced by that fact.

Wisconsin has begun business for 1924 pack early, and some have already named prices on canned beets for 1924 and canned graded stringless beans for 1924. Prices on these articles are a little higher than those that were named for 1923, but not much higher.

Canned pumpkin, which has been taking a rest or recess for a while owing to the fact that the demand for Thanksgiving trade had been supplied, has now become active, and the wholesalers are looking around for supplies for Christmas and the holiday trade, during which period many millions of pumpkin pies will be consumed.

In conversation with some well-informed retail grocers, I find that they are not troubling themselves about regional warehouses or the zonal system for the collection and destruction of swells. They are not disposed to make any fuss about the method in which the swells or spoiled canned foods are disposed of so long as they receive their reparation for any canned foods that spoil on their hands. They state that they want to obey the law, and if there is no legal obstruction or prohibition, they are indifferent as to whether they ship them back to the jobber or ship them to the zonal warehouse, and seem inclined to think that they will obtain prompter consideration of their claims if the goods are shipped to the zonal warehouses, where they will be promptly and adequately inspected and paid for.

They state that they frequently have considerable difficulty in trying to obtain consideration for their claims for swells and returned goods when they send them back to the wholesalers, and believe that putting the claims up direct to the canners for allowance, by shipping to the zonal warehouses, will give them better results.

The inquiry for canned salmon, sardines, shrimps and tuna is very limited. The season for the largest consumption of these goods is the spring and summer. The wholesalers are not disposed to carry large stocks of them through the winter, thereby losing interest and storage. Consequently they keep their holdings at the lowest point.

There is very little demand for canned fruits of any description. The wholesalers seem to be well supplied, and retailers have considerable stock of which they have not had a chance to dispose. The great abundance of green fruit on the market all during the fall season has had a deterrent effect upon the sale of canned fruits, as the housewife will not often resort to canned fruits when the fresh fruits are so cheap and abundant as they have been this season.

The report of the Agricultural Department of the United States in relation to the crop of canned apples states that the yield of this fine fruit on the Pacific Coast, Washington and Oregon, has been especially large, but a great deal of the fruit will be used for export and is now being held in warehouses on the Pacific Coast and the Eastern and Atlantic warehouses largely for that business.

ST. LOUIS MARKET

Market Quiet—Little Buying of Tomatoes—Not Much Activity in Corn—Needed the Big Pack of Corn—Future Peas Selling Slowly—Fruits Show Strength.

By "Missourian,"
Special Correspondent "The Canning Trade."

St. Louis, December 6, 1923.

MARKET Quiet—The canned foods market here continues quiet. Distributors continue to buy only for their immediate requirements. Spot goods in small quantities only are being taken. There is always a quietness at this time of the year, but this season it is more noticeable than usual. Buyers are not in the market for general lines, because inventory time is so near. Only small lots are being picked up to piece out holdings. Most of the distributors are pretty well covered for their immediate needs, and from now on until the season ends but little business is expected. It looks now that after the first of January considerable buying will take place. Just at the present time the distributors are giving more attention to taking in staples shipped on contract by canners and arranging for their storage. There is a little buying ahead. As distributors know that they have made money on what goods they have bought and with no surplus in sight, they are of the opinion that they will make more money later on on goods they have purchased at the prevailing price. It is reported here that private label distributors and packers have come to an agreement on methods of adjusting swell claims. From information given out by local buyers, this method is said to be on a percentage allowance.

Tomatoes—The Southern tomato market remains unchanged. There is little buying being done. Once in a while a car or less is put on the market and sold for factory shipment. There is but little of a demand even when some shading is being done. Most of the call for Southern tomatoes is for No. 3 standard sizes. Little interest is being shown in 1924 pack. Jobbers are shutting down on their purchases of spot tomatoes because of the nearness of January 1st. Canners are not forcing their sales. They are waiting for buyers to come to them when they need the goods. The same conditions prevail with California packers. Canners believe all sizes will go higher after the first of the year. The lower prices now prevailing are attributed to a wish to liquidate some stocks to get some ready money.

Corn—There is not so much activity as there was, owing to existing conditions, such as inventory time, etc. Standard and fancy rule firm, but not very active for replacement. The retail

movement is active, which is a pleasing feature to the distributors having holdings. Fancy corn is wanted right along and is scarce. According to a statement made on the corn situation, a broker stated to the writer: "The 1923 corn pack has been unusually large this season, totaling 14,106,000 cases, expressed in terms of No. 2 cans. This is the second largest output on record. The large bulk was produced by five States, ranging in the order of their importance: Illinois, 2,382,000; Iowa, 2,392,000 cases; Maryland, 2,356,000 cases; Ohio, 1,390,000 cases, and Indiana, 1,208,000 cases. The Maine output was 923,000 cases, and that of Minnesota 898,000 cases. The big pack was rather a surprise, but it has caused no apprehension because corn is selling well and has for several months. The scarcity and high price of peas has been a factor in the retail field, while corn has depended also upon its own merits. Standards have been held firm, while fancy has been wanted right along."

Peas—Futures in peas are being offered in standard sweets and Alaskas, but not being pushed. It is the opinion of some that it is too early to make contracts when canners are making reservations as to percentage of desired grades they will allow. Spot peas, particularly standards, are scarce. There are no free sellers. Some carloads of Wisconsins are being booked.

Miscellaneous—On the canners' side all vegetables are in a splendid condition. Asparagus is scarce. String beans are wanted. Spinach is high and the Southern pack restricted. Squash and pumpkins have been selling well.

Fruits—Spot prices are showing strength on all goods, and there is not too many in the market. Peaches are steady on low grades. Apricots are quiet. Cherries are selling in a small way. California lines are broken, and the independents are not competing as strongly with their competitors as they did. Buying by grades is getting more difficult.

Milk—There is a quiet market in milk, and orders are mostly small. Prices remain steady.

CALIFORNIA MARKET

The Rains Have Come—All Work Has Been Held Back by Their Delay—Better Demand for Canned Foods Expected—Two Zonal Warehouses Established—Pacific Coast Backs This System—No Formal Opposition Is Expected From Buyers—Opening Prices on Spinach—But Few Sweet Potatoes Packed Here—Coast Notes.

By "Berkeley,"

Special Correspondent "The Canning Trade."

San Francisco, December 6, 1923

THE Rains Come—Following six weeks of phenomenal Indian Summer weather, with warm days and clear nights, the San Francisco Bay district received the first real rain of the season on Thanksgiving Day. The rain was badly needed, since the precipitation to date is only about one-third of the normal and less than one-sixth that of last year. Farmers have not been able to commence plowing, and work is fully a month behind schedule, with some crops in bad shape. The lack of frosts in this district has prolonged the growing season for such items as tomatoes, and these are still to be had in the markets in quantities, although canners have ceased packing operations. The abundance of fresh fruits and vegetables is interfering with the local movement of canned foods, but now that the stormy season has set in, a better demand for the latter is anticipated.

The Zonal Warehouses—Preliminary arrangements have been made for the establishment of two zonal warehouses in California for the handling and testing of swells under the plan worked out at the meeting of the Board of Directors of the National Canners' Association, held at Chicago in November. One of these warehouses will be established at Los Angeles, and the other either at Oakland or San Francisco. The latter is in the nature of a distinction without a difference, since Oakland is San Francisco's largest suburb and a part of the parent city in all but name. The zonal warehouse plan has been formally approved by the Canners' League of California, the Northwest Canners' Association, the Association of Hawaiian Pineapple Canners and the Western Canners' Association and other organizations are expected to step into line shortly. Some buyers are already advising California canners that they will insist on a flat allowance for swells, rather than on the allowance proposed under the warehouse plan, but no great amount of opposition is anticipated.

The Market—While the market for California canned fruits and vegetables is rather quiet and sales are confined to small lots, prices are being well maintained and the situation is firm. In some lines a clean-up has already been effected, and in no line is the surplus such that it cannot be moved by spring, under normal conditions. The retail trade is showing a desire to purchase goods only as they are needed, and no efforts are being made to push sales. Prices have advanced since opening prices were named, and further increases are expected by spring to cover the cost of carrying goods.

Opening Prices on Spinach—At least one concern has named opening prices on the 1923 pack of spinach, and others are expected to step into the market at an early date. Walter M. Field & Co. are quoting spring pack goods as follows: No. 1, $1.10; No. 2, $1.20; No. 2½, $1.45, and No. 10, $4.85. These prices are about the same as the future prices named a year ago. The 1923 pack amounted to 1,383,831 cases, as compared with 1,180,525 cases in 1922, but was much smaller than was anticipated, the acreage planted suggesting an output of more than 2,000,000 cases. The pack is moving out steadily, with the outlook that it will be absorbed in good shape.

Sweet Potatoes—But few sweet potatoes will be canned in California this season, according to leading members of the trade. It is held that packing costs are such that retailers must sell for twenty cents a can, and this price does not appeal to consumers. One large packing concern recently closed out its stock at $1.25 a dozen, taking a loss of about 50 cents a dozen.

Warehouse Financing—The field warehousing plan indorsed by the War Finance Board and the Federal Reserve Bank has been placed in operation by the Lawrence Warehouse Co., and its working was discussed at a recent conference of fifty bonded agents of the company, held in San Francisco. The plan, as it works out, practically permits the warehousing company to take a lease on a portion of the canner's plant in which is stored unlabeled and uncased canned foods under the care of a bonded agent. The agent notifies the warehousing company that a certai quantity of canned foods is in storage, an appraisal of the value is made, and the warehouse company issues receipt which the canner can use as security for bank loans, thus securing early returns on his pack. With his products thus financed, the canner is in a position to hold his pack until market and transportation conditions are favorable, eliminating the necessity of sacrificing a portion of the pack to meet immediate expenses. The plan also helps solve the transportation problem and makes the canning business an all-year proposition, instead of a seasonal business. The San Francisco concern has sixty-two field warehouses in Northern and Central California.

Coast Notes—Secretary Herbert Hoover, of the Department of Commerce, has announced the appointment of Lincoln Hutchinson, of Berkeley, Cal., to take charge of the investigation into the transportation difficulties which confront Pacific Coast shippers of perishable products. The Canners' League of California will co-operate with the Department of Commerce in this investigation, and is soliciting suggestions from its members.

The Pacific Pea Packing Co. will shortly enlarge its plant at Oakdale, Cal., and plans to handle peaches, pears and figs next year, as well as tomatoes, cucumbers nd other vegetables.

Coykendall, Inc., canners and handlers of California fruits, have moved their offices from San Francisco, Cal., to their plant in the east-bay suburb of Berkeley.

The recent rains will greatly benefit the olive crop in Northern and Central California. Rain and cooler weather has been needed to fill out the fruit and hasten its maturity. The crop in these districts is a heavy one.

The California Sea Food Distributing Co. has opened offices at 214 Front street, San Francisco, Cal.

At a recent meeting of the directors of the California Peach Day Association, held at Yuba Cit,y, Cal., it was decided to unite with the Sutter County Chamber of Commerce in a demonstration to growers and canners of the value of advertising to increase consumption of cling peaches. The plan is to send a representative to some live market in the East to conduct a newspaper advertising and general publicity campaign, to feature the Sutter county peach girls, arrange for window displays, and in other ways to make people want peaches for their tables. Sales will be compared with sales in other cities to show the value of the work.

MAINE MARKET

Maine Canners Meet—Association Will Have Exhibit at Buffalo—A Few Holdings of Fancy Corn Found—Apple Canning Coming to an End—Notes of This Section.

By "Maine,"

Special Correspondent "The Canning Trade."

Portland, Me., December 7, 1923.

CONVENTION—The annual meeting of the Maine Canners' Association was held in Portland on the 5th, with a very nice attendance. Election of officers resulted in the reappointment of Dr. W. E. Elwell to succeed himself as President, and Mr. J. W. Lanigan was continued in the office of Secretary. A dinner was enjoyed, and was followed by remarks from A. M. G. Soule, of the State Pure Food Department, on matters pertaining to the bureau; by Dr. Elwell on the subject of cans and tinplate, and by Dr. Sax, of the University of Maine and a representative of the E. B. Clark Co., on seed selection and cultivation. The Maine Association will be represented at Buffalo by a canned foods exhibit, and members are taking hold of this movement with much interest.

The passing days are bringing to light small holdings of fancy Maine corn, there being probably five blocks of around a thousand cases each, some of Crosby and some of Golden Bantam. In one or two instances there are offerings of a carload of both varieties together. These lots have been offered in various markets and heard of again and again, until reports would indicate that large stocks were being held. Crosby corn is being held at about $1.60 and Golden Bantam at $2.00, with a proviso that these prices carry immediate shipment. This is because cold weather is due in Maine and canners wish to get their goods moved out altogether or make arrangements for winter storage. After the corn once goes into storage it will doubtless be held until spring and valued at consequent higher prices.

The apple-canning season is already waning, several factories having completed their work. Those still operating are shipping out goods as fast as produced, and there is evidence that the new year will see the local market practically bare of spot apples. $3.50 for regular grade apples has been the price for several months, and is applying on business done today.

E. W. Marble, of Farmington, who replaced his former buildings with a new and up-to-date cannery this season, closed down last week, after a very successful run. Appreciation of Mr. Marble's management was shown in a surprise given by his employees, at which time he was presented with flowers and smokes in token of their esteem.

Mr. H. B. Bird, of the Medomak Canning Co., is among those working for an improvement in the factory and market conditions in the Maine blueberry industry. New methods of cultivation in the fields, of process in the factories and of marketing are now being studied out, and it is predicted that this branch will soon be one of the most important on the Maine canning industry. The market is bare of goods and the demand still unsupplied, which promises a good reception for 1924 offerings when they are placed before the buyers. Since practically all of the blueberries of the country are packed in Maine, there is no reason why this line should not be developed extensively.

MAKING "GEORGE" DO IT

IN quoting the address of Mr. George W. Cobb, of the American Can Co., in last week's issue, "The Prices of Cans in 1924," we made him say:

> "In my opinion the canned foods business has never entered a year under more 'suspicious' circumstances."

Just replace the "s" in "suspicious" with an "a" and you will have what he really said—"auspicious." And we will all agree that he is right.

COSTA RICAN PINEAPPLE DAMAGED.

FUNGUS diseases are causing serious damages to the pineapple crop of the Port Limon District of Costa Rica, practically one-third of the crop being rejected at the fields. It is said that from 25 to 75 per cent. of the fruit actually shipped is being lost because of the diseases developing in transit from Port Limon to American markets. Consul John J. Meily informs the Department of Commerce that the most vigilant precautions, which include fumigation with formaldehyde gas after the fruit is graded and loaded in railroad cars for transportation to vessels, are taken. Effective control of the diseases is rendered difficult on account of the wet climate of the Port Limon District and if the large losses cannot be controlled it is believed that the future of the pineapple growing industry in Costa Rica is very discouraging.

TRACY TO BE WITH LANDRETH COMPANY.

THE D. Landreth Seed Company, of Bristol, Pa., takes pleasure in announcing that John E. W. Tracy, the youngest son of the late Dr. W. Tracy, has resigned his position with the U. S. Department of Agriculture at Washington to enter their employ. He will act as manager of the Landreth Bloomsdale trial grounds, seed crop breeder, and inspector of contract crops. Let us add here, the Landreths have raised

garden seeds for one hundred and forty years.

Mr. Tracy was born in Michigan, educated in the Detroit public schools, and later graduated from the Michigan Agricultural College, having specialized in botany and plant breeding. After leaving college he obtained expert knowledge of the seed trade by spending a year in each of several well-known seed establishments in eastern United States. He entered the Department of Agriculture in 1901 as seed tester and manager of their extensive testing gardens, which are now situated in Arlington. Mr. Tracy has traveled extensively throughout the United States inspecting seed crops and doing special work in sugar beet seed production. Besides making more than twenty trips across this country he has spent two summers in Europe, as United States seed agent, inspecting the raising of vegetable, sugar beet, and flower seeds. During these trips he also acted as seed explorer, which required his traveling extensively from northern Africa to Norway, Finland and Russia.

An interesting incident is that over sixty years ago Mr. Tracy's father raised seeds in Michigan for the father and grandfather of the present generation of Landreths.

PERSONAL CHECKS ACCEPTED

Famous Arabol Adhesives

TINNOL

For Hand Labeling

By actual test this is the only strictly neutral paste for labeling tin. It sticks any kind of label on lacquered or plain tin; positively prevents rust spots and does not affect the most delicate colors; does not warp or wrinkle paper; keeps sweet in any weather. Ready for use as we ship it.

This famous product has been used by food packers for 35 years, and is indorsed as the most satisfactory adhesive on the market for labeling tin containers.

SMILE AWHILE

A NEW WAY OF PUTTING IT

The atmosphere of the smoking-car lent itself to reminiscence.

"Captain," asked the hardware salesman, "would you mind telling me how you lost your arm?"

"Not at all," replied the bronzed officer with the empty sleeve. "It happened this way: We were due for another turn in the trenches the next day, so they were giving a dance for us that night back in the rest camp. A few welfare workers were there, and among them was the cutest little girl I ever met. I managed to dance with her most of the evening, and toward the end we wandered out into the moonlight. 'Captain,' she said, after a while, 'please remove your arm.'

"And you know, she was such a sweet little girl, I just couldn't refuse her."—Judge.

MISTAKEN IDENTITY

Barber—You say you have been here before? I don't seem to remember your face.

Victim—Ah, it's all healed now.

GREEK

Teacher—What are the three important Greek orders?

Small Boy—Cups skuffey, rroas bif sanwhich, and peas cocoanut pie.

NOT SO DUMB

Joe—I tell you, old Bill Gurk knows his stuff.

Jo—What makes you think so?

Joe—Didn't you hear how he broke the record in the backstroke the other day?

Jo—Yes, yes!

Joe—Well, the cagey guy put his suit on backward and swam the crawl.—Tiger.

DEFINITION

A widow—The luckiest woman in the world. She knows all about the men, and all the men who know anything about her are dead.—Widow.

Britisher—I say, old top, who won the world's series?

American—The Yankees.

Britisher—Naturally, I—er—knew that, but what was the name of the blooming club?—Virginia Reel.

TACTFUL TALK

The Judge—This lady says you tried to speak to her at the station.

Student—It was a mistake. I was looking for my room mate's girl, whom I had never seen before, but who'd been described to me as a handsome blond with classic features, fine complexion, perfect figure, beautifully dressed and—

The Witness—I don't care to prosecute the gentleman. Any one might have made the same mistake.—Punch Bowl.

HOW ABOUT A SEXTETTE?

Teacher—Johnny, stand up and tell us how many sexes there are.

Johnny—Three.

Teacher—What are they?

Johnny—Male sex, female sex and insects.—J. P. Eckerser

NOT TODAY, PLEASE

"Please, ma'am," said a domestic, "there's a poor man at the door with wooden legs."

"Why, Bridget," answered the mistress in a reproving tone, "what can we do with wooden legs. Tell him we do not want any."

EDITORIAL

HYSTERIA—Mr. Hannigan, President of the Tri-State Wholesale Grocers' Association, is a young man of forceful personality and no mean ability as a speaker. His appeal to the Tri-State canners to save themselves and their industry from ruin, to save the fair name of canned foods from the public disgrace of teeming warehouses filled with spoiled goods, and not to outrage public decency by hauling over the country the trainloads of swelled canned foods, leaves one who has been honestly studying this very important question in a quandary. When the Pure Food Law was first enacted we found it necessary to scold the tomato canners about dumping the skins and cores from the cannery along the railroad tracks at the side of their plants. You know it used to be the custom to make the "skin pile" alongside of the tracks, and, of course, it looked bad to passing travelers. But what are a few tons, more or less, of garbage of that kind compared to the picture which Mr. Hannigan paints of the Zonal warehouses and their filling?

We want to believe that the wholesale grocers who are opposing this Warehousing Plan are honest in their opinions, but it is mighty hard to retain that opinion in face of the nonsense they are parading as arguments. We can hardly help but think it is mere hysteria, and that this hysteria is caused by an over-anxiety to gain a point which seems financially very important to them. The wholesale grocer has not usually been at all concerned about the financial welfare of the canners; in fact, at times when canned foods have sold below cost and the canners were so puerile as to appeal to the buyers that to take care of the industry and to pay a price that would enable the canners to continue in business, the only response we ever noted was a shrug of the shoulders and a curl of the lip, as much as to say: "Look you to it." And the buyers were entirely right. It is very nice to talk about high ideals, the welfare of the public, and the good of your fellow-man, etc., etc., but in business there is really very little of such ever found. We like to think otherwise, but it is not done, and it is not Nature's law. Nature's law is the survival of the fittest, and all the humanitarianism preached by deluded pastors or socialistic ranters will not change it one iota. When they can teach the big fish to listen to the plea of the little fish, not to be eaten, they will be able to put into force their Utopia, and not before. So the wholesaler was right—the canners had the task of looking out for their own skins. But now these same wholesalers seem actually tearful in their eagerness to protect the canners against themselves. We wonder why?

The Warehousing Plan has been adopted by the canners as their method of solving the swells question. The National Canners' Association adopted it; the Western Canners' Association adopted it; the Wisconsin Canners' Association adopted it; the Indiana Canners' Association adopted it; the Minnesota Canners' Association adopted it; the Iowa-Nebraska Canners' Association adopted it; the Tri-State Packers' Association adopted it; the New York State Canners' Association adopted it; the entire Pacific Coast and Hawaii have adopted it; the American Wholesale Grocers' Association Conference Committee expressed its approval of it, and that their Association would adopt it, and wholesale grocers and chain-store companies in nearly every section, except New York City, have given it their approval. It is time, then, that the canned foods brokers and the National Wholesale Grocers' Association realized that it is in force and here tostay. The Pure Food authorities—State, National and municipal—have given it their endorsement and are eager to try it out. Can any man or set of men afford to defy the food authorities? Certainly the canners cannot, and that is why they have adopted this Warehouse Plan.

A great many of the brokers are talking against the Plan, which means that they are talking against the canners and in favor of a few buyers whose favor they seek. We trust, however, that the brokers will not put themselves in the line of fire again as they were but a few years ago, and that they have not forgotten their assertions that in fact the broker is the canner's agent. Expediency cost them dear the last time, and will again this time. The Plan is fair to all parties—fair to the buyers, to the canners, to the food officials and, last, but not least, to the consumers, as it offers the only sure and certain means of removing really

spoiled foods from the possibility of further use. When they are sent to the warehouse they come under the supervision and control of the food authorities, and that is where spoiled canned foods belong, until they are destroyed. So the brokers should be back of this Plan, instead of opposing it.

GOOD WORK OF THE TRI-STATES—When the Tri-State Packers' Association set out two years ago to improve the yield and quality of tomatoes, it was not just sure where it was going or how it would get there. But it knew what it wanted, and the results of the 1923 crop prove that it got what it went after. Some have mistakingly thought that the purpose was to increase tomato production. Such was not the case. The idea was to increase production per acre, it is true, but rather to produce the same amount of tomatoes from fewer acres, and to produce them of better quality. The Community Plant Bed idea has accomplished both of these desires, and to a very marked degree. Last year's tomatoes were always spoken of as the best quality the 'Shore had ever seen. That is the main point, and in addition they produced better yields by from two to four tons to the acre. Where both quantity and quality are accomplished there is surely reason for congratulations, and we congratulate the Association and its efficiency tomato-man, A. D. Radebaugh. And we further congratulate the Association and the generous American Can Company for increasing the appropriation this season so that more of this good work can be done.

Work of this kind ought to attract the membership of every canner in this section, and we trust it will. They are going to try to duplicate in corn what has been done, and what they know they can do, in tomatoes. And sweet corn needs it just as badly as tomatoes did. There is a crying need for a good, really sweet corn, one which will can without such additions of sugar as to make the canned product almost a preserve. If the crop experts can solve that problem, and bring back the old, deliciously tender and naturally sweet grain of corn, all the world will rejoice.

AUTHORITY

IF you stepped into the middle of a busy street and attempted to halt traffic, you would be run down.

However, if you took the same position, clothed in an officer's uniform and vested with authority, traffic would immediately halt.

Nationally advertised merchandise, bearing the manufacturer's trade-mark, constitutes goods with authority. Buy, properly price, and properly display merchandise that has the authority, and get the immediate attention of the buying consumers.—Brown Mercantile Company, Denver.

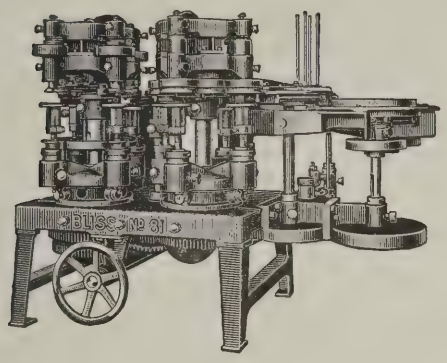
AMERICAN SALMON LOSING OUT IN FAR EAST.

FORMERLY an important market for American chum salmon, the natives of Singapore and the Straits Settlements have almost entirely given this up as an article of diet. Importers of this commodity have met with severe reverses and it is believed that until such time as American chum salmon is offered on an equitable basis with other canned fish, Singapore may be considered a lost market, says Vice Consul Hugh S. Miller in a report to the Department of Commerce. What business is passing is being obtained by the Canadian packer. At one time the Singapore market was a fair bidder for Alaska chums, handling in the neighborhood of 100,000 cases annually. The Alaska packers have just announced the 1923 prices in the Singapore market, which show very slight reductions in comparison with quotations on spot stocks held in this country. If the new prices remain at the opening level, the consul believes that this market will not consume over 10,000 cases of the coming season's pack. Even at the best, it is very doubtful whether chums will be able to regain this market in competition with sardines, even though chum prices are considerably lower. Within the last few weeks, attempts made by several American sardine packers to enter this market entailed a loss with the result that some of the dealers have come together with a view to obtaining a larger portion of their sardine supplies from Norway.

A MERRY CHRISTMAS

THE check administered to the inflationary tendencies that were becoming evident last Spring, together with continued liquidation in the securities market, produced a collection of croakers that make the Frog Chorus from Aristophanes sound like a puddle-full of polywogs.

It is one of our national characteristics that we are forever seeking one extreme or the other; forever buttoning up or unbuttoning. We crave either to float among the glory-clouds of prosperity or hole-in in the nether gloom of an over-played depression.



But now we find ourselves facing neither grandeur nor despair. Fundamental conditions, however, serve to warrant a reasonable optimism. Stocks in nearly all classes of merchandise are admittedly light after months of cautious buying. Wages of labor represent the highest purchasing power in history.

Crop values are more than a billion dollars above the figures of 1922, which, in turn, were one billion and a half dollars above the total of 1921. Carloadings—at rates remunerative to the transportation companies—have been smashing records for months.

And so, despite the banshees of impending grief, the fates have decreed a Merry Christmas for all of us. Business is still going strong. Good conservative buying is likely to continue through the Holidays and into the New Year.

It is up to all of us to make the best possible of a very good situation and to pitch in and work constructively to conduct our respective operations along conservative lines and as fully as conditions warrant. From Campbell's "The Optimist."

Dependability

Patented

"BLISS PACIFIC"
No. 81 Double Seamer

THIS MACHINE embodies important features representing the latest and best developments in double seaming. It has the essentials of a successful sealer — correct design, rigid construction and *absolute dependability*. It is continuous running. It operates without jams. Moving parts revolve slowly, which means minimum wear. The only fast thing about the machine is its production of 100 to 150 tightly sealed cans a minute. *Its dependability* is important, assuring you as it does of a machine ready to operate successfully — whenever needed.

LANDRETH GARDEN SEEDS

THE LANDRETH

SPOT OR 1923 CROP SEEDS

We have for spot delivery, a few Alaskas, Green Admirals, Advancers and White Admirals. These are all short. Sweet Corn is short. We still have some however. Write us for prices.

We also have the following for spot delivery——

Peas	Okra	Cabbage	Cucumber
Corn	Tomato	Spinach	Snap Beans
Beet	Squash	Pumpkin	Cauliflower

Dwarf Lima Beans

Or any other varieties you may want.

FUTURE OR 1924 CROP SEED

When ready to place your Contract order for delivery after 1924 crop is harvested, write us for prices.

If we had not grown good seeds, given fair prices and careful attention to business, we would not be the oldest Seed House in America, as this is our 139th year in the business.

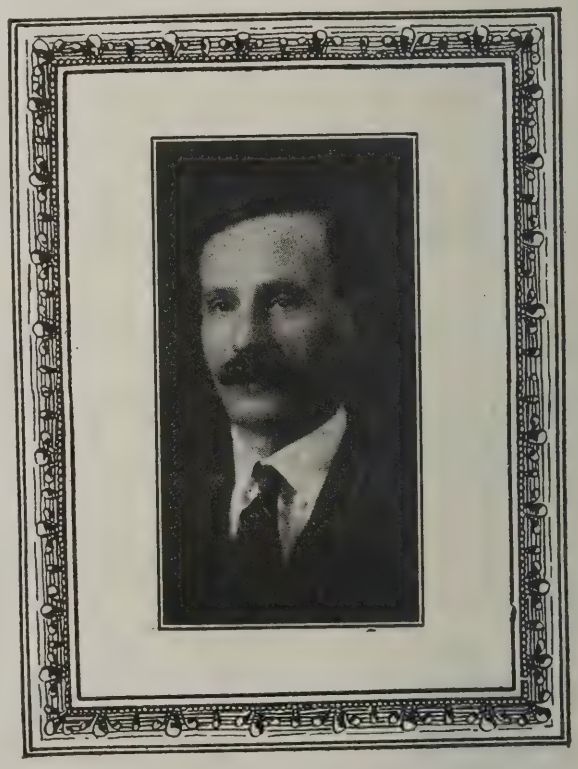
THE TRI-STATE PACKERS CONVENTION

Philadelphia, December 10th and 11th, 1923
Hotel Adelphia



Dr. Symons and Mr. Radebaugh report progress on Better Tomato Growing—Mr. Hannigan draws fire on Swell Question—Association votes increased amount for crop improvements —Warehouse Plan Adopted—Tomatoes to be bought on U. S. Grading.

IT cannot be said that the attendance at this annual Convention of this old Association was a record in point of numbers, but it might well be said to rank high with any convention of recent years in point of quality attendance. Most of the big guns of the industry, canners, machinery and supply men, brokers and others, were present and took part, including a quite full roster of the officers of the National Canners' Association.

No doubt all the canner members of the Tri-State were present, because not 25 per cent of the canners in the territory covered by the Association are members. This is not so much of a reflection upon the Association as it is upon the canners. The only list of canners published, worth a moment's consideration, is the Directory of Canners published by the National Canners' Association, and that list shows for the Tri-States of Delaware, Maryland and New Jersey, including parts of Pennsylvania and Virginia from which this Association draws, just about 700 canners. The vast majority of these canners have not learned that their success in the canning business depends upon their fellow-canners, and so many of them have never thought of joining their Association. Others have thought about it, but prefer to sit on the side lines and criticise whatever is attempted, forgetting that the failures they criticise are caused because they are sitting idle instead of being in the middle of the battle trying to help towards the success which affects themselves as well as members. They cannot learn that the canning industry is a business and that they are but just one small atom of it, and that if they want to see that business progress each atom of it must do his full part. It is not that they want someone else to do the work and stand the expense for them; it is that they do not recognize that they are each a cog in the big machine, and that all the cogs must be working together smoothly if the machine is to run smoothly. They criticise its thumpings and dumpings, forgetting that the cause is that they, as important cogs, are missing, and not helping it towards successful progress. It is not complimentary to these men that this can be said in this year 1923, and each one of the non-members should hasten to clear his name by joining, and at once.

It may be said that the Tri-State Packers' Association has not offered the kind of service that will attract all canners; that aside from a social good time during the annual Convention, there is little else to its meetings. An Association can only be what its membership makes it, and if it is lacking it is your fault, and not its fault. It can be of the greatest possible benefit to every canner in the business, large and small, if the canners make it so. As it is, it has done splendid work for all the canners of its territory. This is largely a tomato Association. It was the Tri-State which fostered and financed the better tomato growing movement, resulting in the establishment of plant beds supervised by tomato-growing experts, and which in one season—and that a very unfavorable growing season—gave this territory the finest quality tomatoes ever seen here, and increased the yields from two to four tons per acre. Here is a benefit to both growers and canners, which if it had done nothing else would entitle this Association to the support of every canner. We have not the room to recount the good things this old Association has done for all canners in its long life, and certainly we have no patience whatever with the prevailing spirit of fault-finding-inactivity which is the characteristic of too many in this locality. But it might be well to point out some of the things which this Association could easily do, if it were properly supported and financed.

In the first place, it should have a full-time business or field Secretary, as they are called. This is no reflection upon Secretary Dashiell, who has been its only Secretary now for nearly thirty years. He has done all that any man could have done with the tools at hand, and he should be continued as Secretary-Emeritus, as the guide and counsellor of the young, hustling, energetic Field Secretary upon whose shoulders the hard work should fall. With such a Field Secretary—and we prefer the term Business Secretary—he could make the Association so all-important that no canner could afford to remain outside. Handling in a businesslike way all those big general matters, he could, also, get right into the business of the canner. It would be his duty to visit and ascertain the exact amount of acreage contracted, planted, lost or abandoned; how the crop is progressing, and the experienced possible yield and pack from it; then the amount of futures sold and delivered; the stock on hand each month, and act as a balance wheel between the man who has a surplus over his futures and the man who is short on his future deliveries. Would such a man be worth

E. M. RECORDS
Retiring President

his salary? Could any canner afford to try to run without such assistance? This is not a dream. It is being done, and it is worth many times what it costs. It is not cheap service. But every canner would then be working in the light; would know what he is doing; would be acquainted with actual conditions, and the gamble would be taken out of canning. Other sections are doing this, and this section will have to fall into line. The newly elected officers and the Executive Committee should get to work on this at once.

The Meetings—The meetings were a little slow in starting, but once begun, it may be said that they went off with a bang. Mr. Hannigan, representing the wholesale grocers, as President of the Tri-State Wholesale Grocers' Association, opened up the Warehousing Plan and started things. "Roy" Clark was there to enter the joust, and he tilted a wicked lance. Ex-President Hoffecker took his part; Ex-President of this and of the N. C. A. H. P. Strasbaugh, likewise entered the fray At the banquet Ex-President James Moore dissected the whole argument against the Plan with a master hand, and President Anderson added his experience and logic to the discomforted wholesalers. Little wonder

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

that when the resolution to endorse the Warehousing Plan came before the meeting it passed unanimously.

Professors Symons and Woodbury. Messrs. Radebaugh, Hauck and others presented the Plant Bed proposition and the standardization of crops as a means to better tomato quality in a way that held close attention, and brought about an added appropriation not only for a continuance of the work, but added attention to sweet corn and tomatoes. All in all, the meeting was a most fruitful one, and one with which everybody seemed to feel perfectly well satisfied.

THE OPENING SESSION—MONDAY AFTERNOON
Hotel Adelphia, December 10th, 1923.

CHAIRMAN, Mr. Record, presiding—We will open by having our Secretary's report—Mr. Dashiell.

SECRETARY DASHIELL—There have been a good many things done by the association which probably don't appear on the surface. As you probably know, we changed our dues from $5.00, that magnificent and munificent sum from some standpoints, to $10.00, which I think is a right thing to do, because if we are worth anything, we are worth $10.00, and that has been a change that has been acceded to and recognized, I am glad to tell you, by largely all of our membership. A few have not paid the additional $5.00, but they are very, very few. I am glad to tell you that because it has been a great pleasure to me, as I am sure, it is a great pleasure to you. They have done it and done it willingly, and I hope they will derive some benefit from it, because, as the president will tell you directly, we have inaugurated some things, originating in our meeting the first part of this year, January 4th and 5th, which I think have been of benefit to the canners at large. The president will tell you all about that as well.

I believe the next address on the program was to be made by Mayor Moore, of this city, but I have a letter from him—of regret from Mayor Moore, who was unable to welcome the members of the convention.

I have great pleasure to introduce to you as a substitute for the Mayor our good friend, Mr. Cattell, whom you all know.

E. J. CATTELL—I am going to ask the privilege of standing down here, for I like to talk on the level. I like to get a little nearer to you good men who make these great officers possible. I am happy to have this opportunity—although I haven't been connected with the city for a year and a half; I, however, served under seven mayors (that is why they call me the old horse, I suppose), but I realize that you stand for a great factor in our American life, as the letter of His Honor the Mayor put it.

I love the men who do things. I feel that we are on the edge of the greatest development that this or any nation ever enjoyed. I am more bullish on America today than I ever was before in my life. I am more firm of faith in our form of government today than I ever was before in my life, and I believe that labor and capital, real labor and real capital, are closer today than they have been before in the history of America. Now I think that is a pretty good basis for optimism, and when, as I have seen it, the wealth of America has grown from seven billion to three hundred billion, and when during that period something has happened that never before happened in the history of the world—that the wealth increased in this nation ten times as fast as the number of people to divide it—you have got a fact that you cannot ignore. * * * I have no use for a pessimist. He reminds me of when Noah was putting the animals in the ark and the elephant turned around to the flea and said, "Who are you shoving?" (Mr. Cattell then extended a very hearty welcome to all.)

CHAIRMAN—I take pleasure in introducing as the next speaker Mr. Hannigan, president of the Tri-State Wholesale Grocers' Association.

GREETINGS FROM TRI-STATE WHOLESALERS
President of That Organization, Mr. Hannigan, Addresses the Canners.

I BRING to you greetings and best wishes of the Pennsylvania, New Jersey and Delaware Wholesale Grocers' Association, which I have the honor of representing.

Your Association needs no eulogy from me. Its success and the position it holds in the food industry—not only in the Eastern States, but in the country at large—speaks for itself.

Even in the short life of your Association, your accomplishments have been noteworthy, and yet, when we stop to think, even your past successes convince us that you have only scratched the surface of the probabilities of the canning industry. To those conservative, yet thinkers ahead, one is tempted to feel that, notwithstanding the tremendous growth of the canned foods industry in the past 10 years, it is still in its infancy.

If figures are to be our guide, then such figures prove this statement. We have a population in this country of over 110,000,000 people. They say that the average family is four, meaning between 27,000 000 and 28,000,000 households. The record pack of tomatoes of any year would not mean a sale of two cans of tomatoes per month to each household. It is rumored that the pack of peas this year was the largest on record. Some intimate it to be in excess of 13,000,000 cases. And yet, even with this record pack, it means only the sale of one can of peas per month to each household. Time was when we considered a pack of 4,000,000 cases of peas a large pack. Today we are packing three and one-half times that number, and before the season of distribution and use is started canners are claiming bare floors. And what is true of peas is true of every other canned vegetable.

If there has been one factor that has created an increased consumption of canned foods, it has been the constant desire on your part to pack the best foods that it is possible to pack, and the better foods you do pack in the future, the wider and more constant will be your distribution.

The best and wisest legislation our lawmakers passed was the Pure Food and Drug Act of 1906. This Act has been responsible in no small measure for an increased consumption of canned and package foods, because it was responsible for better foods, and, above all things, responsible for the elimination from the public mind of the fear of the use of any canned or prepared foods other than what the housewife prepared herself. And, yet, there is still room for vast improvement in canned foods, and your National Association is doing a very high, commendable work in establishing laboratories for the purpose of giving its members help in the right direction—better foods and less waste.

But I cannot help but feel that in all this broad land there are no canners that have the opportunity of packing a higher grade of canned tomatoes, corn and other vegetables than you have, because you operate on the richest and finest soil that can be found any place in this broad land, and that is in the district of Maryland, Delaware and New Jersey. God has given you the land to produce the quality. It is up to you, the individual canner, through the knowledge your Association disseminates, to preserve that quality in the can, and you are, in no small measure, accomplishing this.

I feel at home in talking with you, because you are part and parcel of my business, but I would be remiss if I failed to overlook one factor that is very essential to your business and mine—the tongue of your business; the eyes of mine, and the ears of both. I refer to the merchandise broker—your salesman and our buyer. He is a very valuable adjunct to your business, but no more so than he is to ours. He renders a service that you and I could not produce at the same rate of compensation as he charges. As long as I am a wholesale grocer and you are a canner, I hope that we will work together to retain the merchandise broker. And let us prevent any attempt to eliminate him from our negotiations. Bear in mind, I refer to the merchandise broker. I DO NOT REFER TO THE MERCHANDISING BROKER. If there is one curse on your business and mine, it is the merchandising broker. The man who steals the profit that should be yours and puts it in his own pocket as an overage charge, and at the same time steals a like amount from me—the buyer who is helping him to a livelihood. In years of prosperity he makes me pay the toll. In years of depression he makes you pay the toll. The merchandising broker is a parasite, clinging to your business and mine. These are strong words, but they are true. The blessing of it is that there are few merchandising brokers and fewer still of the type of curbstone overage brokers, and this type will be fewer still because that very highly regarded Association—the National Canned and Dried Fruit Brokers' Association—is taking every measure that it is possible for them to take to stamp out this insidious practice, and I daresay woe will befall any of its members caught practicing such despicable and unethical trade manners. And I say to you canners, that any canner who will knowingly sanction a broker collecting overage on any sale is not any better than the merchandising broker who commits this act.

If you have a price, stick to it. Bear in mind that the constant buyer of your goods is the distributor of them, and if you desire to build up a market for your products, then see that your price goes to the legitimate distributor and not the illegitimate one. This is a matter, gentlemen, that should receive your consideration. Bad practices, like bad habits, grow unless they are stamped out in the beginning. Be watchful. When the head of this evil rises, crush it, or you will pay the penalty. This is a consideration that you owe us—one of the most important factors in your business—one who distributes 80 per cent of your product—your salesman and distributor—and, need I remind you, your banker as well—we wholesale grocers.

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

The canner and wholesale grocer represent two very vital, important units in the welfare and destiny of this country. You and I have the health of the nation, in no small part, in our keeping. And in the measure of service we render the public, just in that measure can we count our success. We wholesale grocers are the economic links between your business and the public. We are bankers to you by virtue of our purchases of future and at the same time bankers to the public through the credit channels of the retail grocer and on to the consumer. And just in the measure that we succeed and the independent grocer succeeds, just in that measure shall you succeed.

The wholesale grocer and canner have so much in common—each so dependent upon the other—that every possible safeguard should be adopted to prevent any but amicable business relations between them. And, yet, here are two great industries unable, after repeated conferences, to settle the question that has been for years distasteful to the master minds of each of our industries.

Oh! If something could be done to eliminate the swells in canned foods, our industries could live peacefully together. Or, if some Moses could be dragged out of the bulrushes to lead us to the Promised Land of no complaints. Or, if we could submit this question to some wise Solomon—how happy we would all be. And, yet, how grateful we should be to our Government. It has finally taken the question and settled it, and settled it the only way it should be settled—that of practically enforced destruction of impure, unfit for sale, canned foods.

I cannot refrain, on this occasion, from warning the National Canners' Association that in their back-to-warehouse plan they are playing with fire. They are creating a condition through this plan that will tear down the one great factor that has beeen responsible for the growth in the consumption of canned foods during the past years, and the higher development of which will be the most potent contributing element in increasing future distribution, i. e., PUBLIC CONFIDENCE IN CANNED FOODS. It is inconceivable to suppose that warehouses, no matter where they are distributed throughout the country or how limited their number, can escape public notice, especially so when such warehouses are filled with nothing but spoiled canned foods.

What a disastrous effect—the hundreds of thousands of packages from all different arteries of transportation all over this country leading into these warehouses, whether it be by railroad, parcel post, express or any method of transportation. Every single package distinctly labeled and marked damaged, swelled or unfit, spoiled canned foods. Do you think that these innumerable shipments will escape public notice? A car of canned foods would pass by unnoticed, but a single can of spoiled foods labeled in accordance with regulations will incite public suspicion. The public will see, know and hear more about damaged canned foods than they have ever heard before, and the press will not be slow or backward about disseminating this information to the public. When the public mind has been saturated with advertisements of this kind, what good will be your Canned Foods Week? All of your efforts to promote public good will to your product will go for naught.

The back-to-warehouse plan will do more internally to disrupt the National Canners' Association than any other agency, for the reason that is already being evidenced—disloyalty. If the most influential packers openly or surreptitiously refuse to live up to this plan, and I can say to you that such is the case even now by contracts already made, both from New York, Wisconsin, California and Alaska packers, then it cannot be expected that the smaller packer will be loyal. The impracticability and unfairness of the plan will eventually strike at the fundamental foundation of your organization.

Let me illustrate this more forcibly.

[Mr. Hannigan here told of a high-class retailer who had bought 100 cases of very fine peas at $2.75 per dozen, and that because two or three cans had been brought back by customers as spoiled, wanted to return the whole purchase. Mr. Hannigan persuaded him that that would not be fair to either the canner or the jobber, because all the 100 cases could not possibly be bad. We explain this, because in Mr. Hannigan's original copy of his address he has merely the words "Insert incident of spoiled peas." —The Editor.]

And, yet, this illustration is what will happen, not in a single instance, but in the entire public mind. As I stated earlier, one of the most potent factors in the development of the canned foods industry in the last 10 years has been the growth of public confidence in canned foods. I remember as a boy what a great stench went over this country following the Spanish War. What a terrible, disastrous effect this congressional investigation into unfit canned foods—"embalmed beef" the public knew it as—meant to the canned foods industry as a whole. Gentlemen, the canned foods industry is only now recovering from the blow dealt it by this investigation over 20 years ago.

Gentlemen, if I were a canner I would be opposed to the warehouse plan because of its impracticability, expense and multiplicity of details in carrying out its program, and because, sooner or later, it would react against the best interests of the development of canned foods.

It was my pleasure last June to sit in a conference of a committee from the National Canners' Association and the National Wholesale Grocers' Association held in Washington. We spent an entire day discussing swells, with the hope of arriving at a solution of the question. This conference was very hopeful. Later on in Chicago a similar conference was held and everything pointed toward an adjustment of this question on a graduated percentage allowance basis. Then suddenly, as a bolt from a clear sky, came the proposal of the warehouse plan.

Gentlemen, this plan is obnoxious, not only to we wholesale grocers, but to food commissioners in practically every State, and the plan will never create anything but an atmosphere of unfriendliness between our two great industries.

Your national body seems to think they can handle the swells at an expense of $50,000 a year. I am inclined to think that they figured up to this amount and then the pencil wore out. It can't be done. Probably your National body is figuring on the wholesale grocer standing for the major expense. By that I mean that the retail grocer, through a resolution passed at the convention of National Retail Grocers in their last meeting, plainly stated that they looked to the wholesale grocer to reimburse them in full for all swells. Possibly the National Canners' Association figures that, rather than go to all the expense and the multiplicity of red tape, the wholesale grocer will stand the loss of possibly 75 per cent of the swells. Well, this is good figuring. We wholesale grocers have been classified in many instances as unwise and foolish, but if this is your Association's guess, then I can say very plainly, and I think I am speaking for every wholesale grocer, they have made the wrong guess this time. As an individual I propose to exercise my right as a buyer. By this I mean that every contract for canned foods I make I will have something to say about that contract, and I think that will be the attitude of every red-blooded wholesale grocer.

The National Wholesale Grocers' Association proposed to the National Canners' Association three plans:

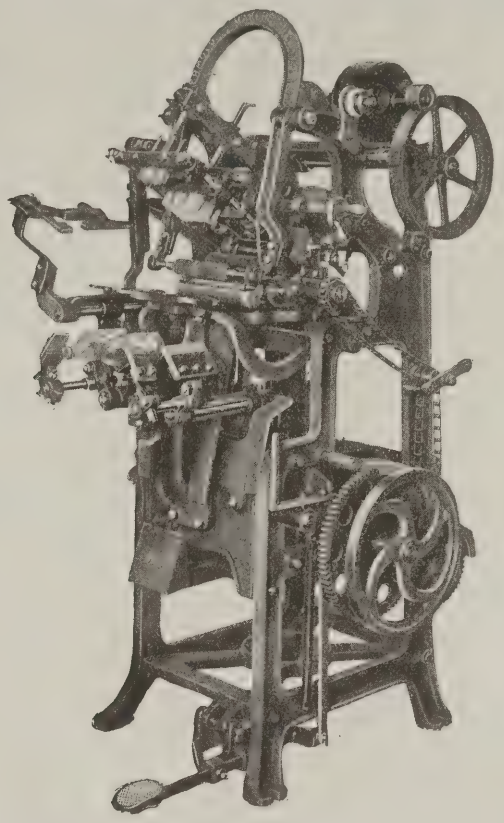
First—Graduated percentage allowance plan.

Second—Label return plan.

Third—One-half of one per cent flat allowance plan.

Any one of these three plans will accomplish the purpose that the Government seeks to accomplish, and any of which will be for the betterment of your business and mine.

We all admit that swells should be destroyed. They jeopardize public health and the knowledge of them on the public mind reflects upon and retards your business and mine.



Is the warehouse plan predicated on distrust? Are we distributors, as a class, to be considered untruthful and dishonest? Then, why the objection to the label allowance Are our records of swells, compiled from years of actual experience, so unreliable that they cannot be used as a basis for a direct allowance on the percentage basis, whether it be flat or graduated?

We wholesalers are not familiar with the real, true reasons for the warehouse plan. We know it is impractical. It is not workable. And why the master minds of your industry should seek to promote this plan is beyond our humble comprehension. Please be reminded that I am not blind to the advantages that the warehouse plan affords the National Canners' Association. I know what a great leverage it would be to almost force non-members to join the Association—that is, if it ever functioned as it has been planned. I can see its advantages from the laboratory standpoint, but why, for the sake of research, do you seek to destroy, through the warehouse plan, public good will—your most valuable asset—when your Association already maintains research laboratories? And, pray tell me, cannot much of this eagerly-sought knowledge of spoiled canned foods be obtained at the canning factories without all this red tape and burdensome expense?

Gentlemen, whatever advantages there are in this plan are so outweighed by the disadvantages, it is a cause of wonderment to me what has prompted the master minds of your industry to propose such a plan. Lay aside the small, temporary advantages. Look, as I said before, at the crushing effect this warehouse plan would have in destroying the one great factor that the future development of your industry depends upon, and that is the faith and good will the public has in your canned product.

Under the old plan of swells adjustment, no one but the buyer, broker and seller had any knowledge of a transaction involving spoils. Under the warehouse plan the entire country might become aware that large warehouses in many sections of the country had to be maintained. Think of it, gentlemen—warehouses maintained to take care of spoiled canned foods! These ware-

houses would be an advertisement to destroy public confidence in your product.

I am not arguing this matter from a selfish standpoint. I feel that I am able to take care of my own business and make contracts that are fair and equitable, and when I make that statement I am making it for every wholesale grocer, because there is no business that requires keener judgment and stronger policies than the wholesale grocery business, if it is to be conducted successfully.

As I said before, I am not speaking for myself. I have in mind your business—not of today, but I see, in vision, your business of tomorrow. You have only scratched the surface. The development of your business will depend in no small measure on the future development of public confidence in your product. When each household in this country will have sufficient confidence to use an average of one can of peas per week or one can of tomatoes or corn per week instead of less than one a month, you will then have made the progress that you are capable of making.

Public confidence helped to build your business from insignificant numbers unto unheard-tell-of packs as of today. Destroy this public confidence by your warehouse plan and you go backward.

The National Canners' Association, through your contributions, are spending thousands of dollars each year to build up public confidence in canned foods. Please do not be a party to any legislation of your body that will destroy the one essential and potent factor that you are spending money to develop.

Gentlemen, think over this warehouse plan as it relates to the public mind—not as it relates to pennies and dimes. The greatest asset of business, as I said before, is public confidence and good will in your product. Please, for your own good, and the future development of your business, do not make any mistake today that will cause you regrets tomorrow.

CHAIRMAN—I am very glad to announce as the next speaker Prof. Thomas B. Symons, of College Park, University of Maryland.

PROFESSOR SYMONS EXPLAINS WORK DONE

IT wasn't my purpose, as your Secretary said, to make an address to you today, but I felt that the invitation of your officers was one that I could not let go by without taking this opportunity of expressing our appreciation to the Tri-State Canners' Association for the splendid work and effort they have helped us to accomplish during the past year. I believe the project that was launched by this Association in co-operation with our service and the farmers and the growers is going to mark an epoch in the development of the industry in the Tri-State territory. I am sure that the effort that has been given to this project by the county agents of Maryland, and I presume the representatives of the other States will speak for them, both in Delaware and New Jersey, was a response that, while we have every reason to expect to be enthusiastic, it has even gone beyond that in their devoted efforts to carry through this splendid piece of work. Mr. Torsch will undoubtedly report to your committee, or to the business session, the report for Maryland. I might say as an introductory to that report that in conference with the committee, plans were laid for devoting our efforts to the tomato plant project in Maryland. There were about thirty-five plant beds established. Twenty-eight of them were conducted in places where the canners took part in the co-operation and developing of these beds. Mr. Radebaugh tomorrow will tell you some of the details of carrying out that large project. It was an inspiration to me, and I believe it has been to everyone that has been close to the work, to see the impetus that has been given to the production of good plants by this general project that was launched in the Tri-State territory.

Obviously when county agents or investigators start a project in any community there are always those who feel that they know how to grow plants and probably could grow them better than an educational agency in co-operation with the growers. Be that as it may, the impetus that these community beds gave to all growers —and, I expect, Mr. Chairman, to all canners—I am convinced was one of the reasons that has given the Tri-State territory the splendid product during the past year, and while we would not for one moment lay all of the results to the community plant bed project, the inspiration that came from centering attention on a good plant, I believe, is going to mean much for the industry in the future.

I am just wondering if we realize quite fully the remarks of Mr. Cattell, so far as our immediate possibilities are concerned. Certainly we have every possibility in this territory, and if you gentlemen and the farmers with your educational agencies use your brains to the fullest extent, we will be able to command and to continue to command a big section of the canning industry in this next year. I was wondering, in the city here—I don't know how many canners we have in this section all told, or of the number of farmers, but supposing we could imagine all of us moving out of this territory, and suppose that the California growers would be placed in this section, and the California canners would be placed here—can we visualize what the California growers and the California canners would do with this territory? I can tell you that so far as the growers are concerned, and I have no doubt so far as the canners are concerned, they would utilize our possibilities to a greater extent than we are using them today. Certainly with the transportation advantages, with the fact that we are within two hundred miles of fifteen million people, our big job is to grow food to feed human beings, and while in our territory on the Eastern Shore the slogan of the cow, the sow and the hen has saved many farmers during this strenuous time, the canning industry is the one industry that is going to put direct money in their pockets, as well as yours, when it is conducted in a businesslike way. And I think that both the growers and the canners have had during the past three or four years experiences that have been crucial, experiences that have cost us dollars, hundreds and thousands of dollars, and now that we are hopefully looking to the future, we have come back to the source, you might say, in starting with the plan that if we can fundamentally believe and really try to get good seed and produce a good plant, and follow it up, as a great many farmers did this year, with proper cultural methods, and then to have the co-operation of you canners, we have got an industry that will stay by us and with which you can compete with the canners and growers of this country.

We had a conference of the agents some time ago, that was called unofficially, for the purpose of ascertaining ourselves just how the county agents and those interested in the project felt about the results of the work, and it was very gratifying, my friends, for us to learn from each county agent, one after the other (thirteen of them in our territory), that the canners, they said, in their sections were sold to this project, that the growers were sold to it—in fact, the great problem has been to hold down the number of community beds, and while I believe that at our first meeting we promised, with the splendid contribution your Association made to us, that we would have but three beds—and as I tell you, we had thirty-five. The great difficulty in a movement like that is to not let it get away from you. But aside from that, the holding of the meetings—45 of them in one territory, of canners and growers—has done more in 1923 to cement the interests of the canners and the growers behind the industry than anything I have observed in the last twenty years' experience in this work in this territory. I believe there is a better feeling existing between canner and grower today than there has been for a number of years, and that is a very helpful, a very beautiful and a very satisfying thing for the Tri-State territory. And I hope, Mr. Chairman, that your Association will be able to cooperate further. I know it has cost money from your Association, and I am presented this next year with a problem—in fact, when Mr. Woodbury, who has given us every assistance and aid in this improvement work in the conference of agencies, came in with their report of recommendations for 1924, the thing that was uppermost in their minds was where Mr. Symons, or how Mr. Symons was to furnish specialists' assistance in the conducting of these community beds over the counties and over the State. Now, of course, we are handicapped in the Extension Service for funds, and will be handicapped during this next year, and I trust the Association will be able to see its way clear to furnish me with sufficient funds to enable Mr. Radebaugh to leave his work in Cecil county and go out and assist the other county agents and assist the growers and canners in the respective sections in carrying this work further. We have requests in now for forty community plant beds, and when you consider the details that are involved, the fundamentals we must drive home and the fact that we don't want them to be a failure in any case, it requires good supervision and expert care. I will say this: I don't believe that all of us could have started a movement under more unfavorable circumstances than was the case last spring in the State of Maryland. I am told that by the most experienced plant growers in our region, that they had a harder time in getting their plants going last spring than for many years past. It was a cold spring, and after the plants were started in the beds, in some cases they had heavy rains, or in other cases had unfavorable weather, so that I believe that under these conditions we can feel gratified with the results in the field, because there is the net thing we are looking for, in the yield, in the field, between the community plant beds and the others where the results tell in the net returns, and I will leave it to Mr. Radebaugh to tell you the details of the results from these different plant beds; but all of us observed a substantial increase in yield. And after all, my friends, if we are going to keep in the tomato game in the East, if the farmers are going to be able to furnish you with first-class product, there are

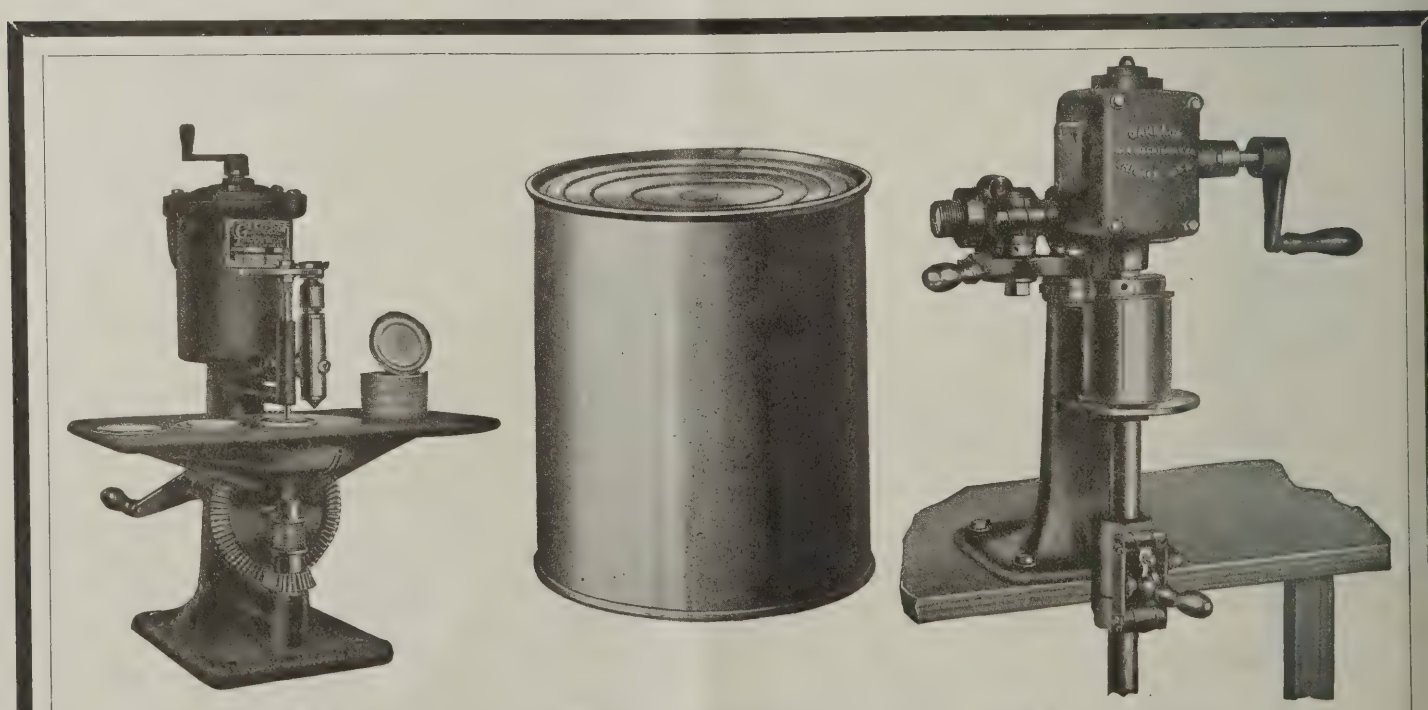
these fundamental things which we must do, and I believe we have made a start toward them, and that is, first, getting good seed which we haven't made adequate provision for yet, although in Harford county they have saved enough seed in the past year for seventy-five per cent of the acreage next year. In Kent county, for instance, when heretofore the number of plant beds that have been sprayed was about 5 per cent for the beetle, this year we were able to have 75 per cent of them sprayed. The attention to details that has been driven home to the producers is a factor that we cannot overestimate.



We moreover are studying the question of disease, the question of mosaic that have appeared in a number of fields in the State of Maryland, and I assume in the adjacent territory, and were able to put a specialist right on that problem to see if we were starting a community plant bed project, and disseminating disease by that means. We were fortunately able to determine that was not the case, but I say that these are big problems that we must solve.

Grades—Now I assume that your Association in your business meeting will discuss another fundamental that the farmers discussed here some time ago and that is the question of grades. Fundamentally, we must be able to get the farmers to apperciate the quality of the goods that they are raising. They have adopted the Department of Agriculture's standards and I hope your association will adopt the same grading and that there will be enough public spirit, enough earnestness, so that we at least can have illustrations and demonstrations on the part of the canners and groups of growers to try out this system of grading tomatoes in 1924. When we can think of the possibility of having a community plant bed demonstration followed up by an arrangement with the canner where the tomatoes that will be delivered are grades according to quality, I tell you, we will be making rapid strides in the improvement of the industry.

Another matter I wish your association would earnestly consider is this. As you know, in the state of Maryland, we have a forty million dollar industry, and as yet there has been no money appropriated directly for the encouragement of work in that industry. This year we are placing in the budget for the University of Maryland Extension Service, an item of $10,000 as a canning fund for the purpose of the improving of canning crops and I should hope that the canners from Maryland will aid us, as far as possible, in securing that budget through our present Legislature and with the Governor's budget. That $10,000 will only be a starter of course, but I feel that is will enable us to put some men on this work, put some specialists on it, to study the problem, placing both canners and the growers that will enable us to develop not only the community bed plant project but other big projects, of fighting those diseases that are now exacting a toll from the canning industry. And so I trust that your Association will see fit to back up our budget in securing a direct fund for the developing of the canning industry.

And now, in conclusion, I want to speak to the men in this room. We have here as I say the territory. We have the crops, and all we want now is some earnestness and determination for us to utilize our resources to their greatest utility. And in this it means both the canners as well as the farmers.

The first man in this audience I want to speak to is the man of sixty or sixty-five. We usually look to those men for inspiration, for advice, for leadership. The man of sixty-five in this audience has lived a happy life. He has done a great deal perhaps for his community. He has perhaps made considerable money. He has perhaps been a leader in civic improvement, but that man now has reached the point where he is not going to push things on. He is looking backwards rather than looking forward. It is natural that his work has been largely done. What can he do for the canning industry in the Tri-State territory? I say to this man of sixty or sixty-five whether he be a canner or a grower, that he is presented with the greatest opportunity for helping his fellow farmers or fellow canners and the industry that he has ever had in his life, and I would ask that man to advise his canning associates in the first place to organize your industry because I don't believe that the canning industry is organized like it ought to be in this territory. He ought to be the man who would give advice towards these progressive movements for the improvement of crops, for the standardization of crops and for the cooperative marketing of crops, and if the man of sixty-five will pass a word down and say. "Well, now, here I have lived through my years with the difficulties we have encountered

but I see we should do just a little different from what we have been doing in the past," that man can be of great help to those of us who are following in the development of this industry in this territory. I ask him if he can't leave as his heritage that one of the few things in the passing years of his life was that he started a fundamental industry, that he started a movement that will mean much for those who are to follow.

The second man I want to speak to in this room is the man of forty or forty-two. He is the fellow I want to get real next to, because he is the man that must carry the burden of the day. If the Tri-State Canners' Association is to go forward, it is the man of forty that is going to carry it. We are the men that must do things. We are the men that must take the lead in these movements, and I don't know, friends, whether there is a greater opportunity of service for the man of forty or forty-five today than to take up the splendid project for the conservation and development of the canning industry of the Tri-State territory.

The man of twenty or twenty-two. There are not many of them in this room, but they are looking for inspiration from us. It is how we give to the young men that are coming on their inspiration whether they will be food canners or whether they will be good growers, whether they will be good citizens for that matter. At any rate, my friends, those young men are imbued with enthusiasm, they are just looking at the horizon of life. They want to be guided right, and it is up to us to lead the way, and I hope, M. Chairman, that this movement, starting small as it is, will really organize the industry in a business way. Let's do that. Let's take steps so that we will have the very best seeds. Tomato seeds, corn or peas in this territory better than any territory in the United States. That is a fundamental requirement. Then, let's develop this plant idea and the development of a standard product. When you have a standard product from the farm, it will follow with improving the standard product on the grocer's shelf, and that is needed today as much as it is on the farm. So I hope, Mr. Chairman, that you will feel that the extension service, county agents and specialists of the University of Maryland stand ready to back you up in every movement. We are ready to take off our coats in this laudable enterprise, because we believe that it is fundamentally right, that it is fundamentally best for the industry for us to encourage the grower to increase his yield, improve his product, and then to work with you in marketing it to the consumers in this territory.

[Mr. Royal F. Clark was next called upon, and made one of his most forceful, though temperate, addresses on the swells question. He answered Mr. Hannigan on most every point, it seemed to us; but Mr. Clark particularly requested that the reporter not take down his address, and, we may add, later told the writer he regretted that request, and so do we.—The Editor.]

MR. HOFFECKER—I want to say I am very pleased, indeed, to have heard this splendid address from Mr. Clark. I sat here and listened very attentively to the address of the representative of the Tri-State Wholesale Grocers' Association, and I was very sorry that there seemed to be in that a threat when the gentleman said that he thought he spoke for the wholesale grocers, and that he himself would not write a contract that don't contain this provision of one-half of one per cent, and that he thought he was speaking for the wholesale grocers. I say, I was very sorry to hear that statement, because it looked to me like a threat, and that is not the way to get together. The objections that were lodged by the gentleman in that address did not appeal to me very strongly. I think the greatest advertisement of swells comes not in warehouses, from any observation of cars going to warehouses, but it comes in the retail grocery store where your customer comes in and hands back a spoiled can. People are not looking at warehouses and trains going by the road with swelled canned foods to warehouses, and we have had that return of canned foods, as Mr. Clark says, for years. For my own company I want to say this: We sold some canned tomatoes a few years ago to a wholesaler in a city quite a good many miles from my home town of Smyrna, Del., rated very high in both Bradstreets and Duns, and we got a swell claim from that house for some 11½ cases of tomatoes on a delivery of a thousand cases. We ordered the goods back, and when they came back (we sold that party only canned tomatoes under our own label) when those goods came back that 11½ cases consisted of pumpkin, apples and peaches and tomatoes of three or four packers other than our own. The whole shipment, as far as our goods were concerned, contained just 11 cans, instead of 11½ cases, out of a thousand.

Now, here is another thing I want to say. It has been my observation, and I have been around a canning factory since 1868, and, therefore, ought to have a little bit of experience as far as observation goes, at least, that when we don't find spoilage when we are labeling, we don't get very many claims for swells when the goods go out to the wholesale grocer. We finished up labeling a few weeks ago, and we had not one-fifth of one per cent of swells. Now I submit this, gentlemen: Is it a fair proposition for the wholesale grocer to exact one-half of one per cent on a canner who doesn't have—and our average for the past fifteen years has been less than one-fifth of one per cent of swells—I submit in all fairness, is it a fair proposition to the canner who does not have one-half of one per cent, whose average is down to one-fifth of one per cent, to tax him with a claim of one-half of one per cent?

Now, this question question of bad advertising to me is a bugaboo. There is nothing to it, and it looks to me very much like the gentleman states that it is merely a trade discount, and if we are going to have anything like an equitable proposition, let us have it, so that the canner stands on his own feet and not resting the bad ones or the poor ones on the good ones.

MR. HANNIGAN—Mr. Chairman, I guess Mr. Cattell was right when he spoke about the flea and the elephant. I realized that I was putting my head in the lion's jaws, but I want to say this: The gentleman who just spoke certainly couldn't have followed my paper very closely. The Secretary has that paper, and if he will produce any line in it wherein I stated that I would not sign a contract unless I got one-half of one per cent, I couldn't read my own words.

I said that I felt competent of making a contract. I made no stipulation. This is not the time for argument, but I will say this: I will be very glad at any time and any place to argue the question of warehouses with Mr. Clark.

MR. STRASBAUGH—The thought first crossed my mind in helping to make up the program for this meeting that it would be most advantageous to hear from the Tri-State Wholesale Grocers' Association, and I consulted the Program Committee and requested Mr. Hannigan to make an address to this Association this afternoon and be our guest. I want to assure Mr. Hannigan that he will be extended all the courtesies that are due a guest of this Association, and anything Mr. Clark has said or that any member of the Tri-State Canners' Association may make is certainly said because we feel that it is necessary that this question, which has been approached by Mr. Hannigan, be given a thorough discussion at this time, regardless of the other speakers that have to appear on the program this afternoon. And I want Mr. Hannigan to feel that I feel as kindly toward him—in fact, I am glad that he came here and spoke his mind this afternoon as he did, as he thought was right. He tells us that he has given every consideration to this question, that he has attended the conference in Washington, and he believes he thoroughly understands this question, and he has a perfect right to that view, and I am only too glad that he was willing to express that thought to this assemblage this afternoon, so that we might know what is in the minds of the wholesale grocers of the United States.

However, gentlemen, there are just one or two thoughts here. I do not say this in an antagonistic way to Mr. Hannigan. When he debates this with Mr. Clark, or when anyone debates this question, I would like to call their attention to two or three things I have noted here in the last three minutes.

In the first place, when I was a youngster in the business—and that was a good many years ago—I subscribed for the American Grocer. My good old friend, Frank Barrett—I revere his memory, and I feel most kindly to his son who has succeeded him—always saw fit to print on one of the pages of every issue of the American Grocer "Count, measure and weight everything that you buy." Gentlemen, I feel that when I pay for swells I am buying them back, and I have a right to count, measure and weigh those swells, and I don't agree with the action that has been taken in the city of New York by the health authorities, no matter who may have instituted these rulings, that the New York grocer can take my swells, which may contain, as Mr. Hoffacker says, pumpkin, peaches and apples and other things, when I have shipped tomatoes, condemn them, send them to the dump and send me a bill and expect me to pay that bill if I am not in position to count, measure and weigh them.

Now, as Mr. Clark has told you, quite rightfully and truly, we are endeavoring to work as closely with the Bureau of Chemistry as possible to protect the consumer in this matter, because we are trying to protect the industry that must protect the consumer if we expect to succeed. Mr. Hannigan, my friend, has told you that if we proceed in this plan that we will stop or interfere in a great degree with the consumption of canned foods and scare consumers. I would like to know why. I have never been able to decide in my life that a Republican was more dishonest than a Democrat; I have never been able to decide whether a canner was more honest than a wholesale grocer, or vice versa, and I think if the canner cannot be given the privilege of counting his swells in his own warehouse for fear he might go out and sell those swells after he has counted them and paid the grocer for

them, I fear there is as much danger that they will get into consumption from the wholesaler's warehouse as from the canner's warehouse. For that reason, when a wholesaler calls in a health commissioner and says these goods are condemned, dump them, get rid of them, I am not sure they are my swells. Neither am I sure that Mr. Health Commissioner will dump those, and be able to tell whether he is destroying all swells or possibly some good food.

I sat in a conference with the Bureau of Chemistry at one time with Mr. Messenger over there, and Mr. Campbell at that time made it perfectly clear to Mr. Messenger and myself that if food was food, it could not be destroyed by the Bureau of Chemistry for economic reasons, even if it were poor food. It is only unhealthy food that we can condemn, said Mr. Campbell at that interview.

I am inclined to think that there have been cases—in fact, I heard Dr. Geiger say in Chicago that there were something like six million pounds of canned foods destroyed in Chicago in three years. I think every canner in this room has had more or less experience at some time where flippers have been called swells, and if the canner has no opportunity to inspect those swells without traveling from Maryland to Texas in order to inspect them, a good bit of good food will be destroyed, and is destroyed every day, and I think the Bureau of Chemistry recognizes it. For that reason the Bureau of Chemistry says the old plan that was in vogue is not satisfactory.

Now, Mr. Hannigan—my friend, my invited guest, the gentleman that is in our midst at this time, and I am only too glad that he is here—has expressed his opinion in the manner that on swells we should give them one-half of one per cent. I would like to ask Mr. Hannigan if he really believes the percentage of swells that is purchased is over one-fifth of one per cent.

MR. HANNIGAN—I have made no statement asking for anything.

MR. STRASBAUGH—Then I misinterpreted you.

MR. HANNIGAN—And on these different plans there were four questions sent out. If you don't mind, I will just give you the vote on those plans. The vote on the graduated percentage was 225; label return allowance, 194; half of one per cent, 343; warehouse inspection plan, 27—27 votes out of 859 total.

MR. STRASBAUGH—I would like to say only this: that under the proposition of allowance of either one-eighth, one-fourth or one-half of one per cent, or whatever is decided upon, we do not have a chance to be assured that those cans will be destroyed any more than it has been possible to see that every canner would see every swell disposed of rather than sold to the consumer in some other way at a cut price in the past. Then I only want to say that this whole warehouse proposition, big as it seems, this afternoon, to my mind, is a very small proposition after all. It has been the custom for a great many years, and even up to the last two or three years, that swells would be returned to the canners if they wanted them. There was never any hardship imposed upon anybody for the return of those swells, and the canner was allowed to count them before he paid the bill, and also to recognize them as his own, and if they were swells, what kind of swells they were. Today what are we proposing? Merely that they be shipped to some central warehouse instead of to the canner to be examined. Gentlemen, there is the only difference in this plan from the old plan.

MR. HOFFACKER—I have absolutely no purpose to do injustice to anyone given the privilege of the floor, and I want to apologize to Mr. Hannigan for saying he said they would not sign a contract. I understood Mr. Hannigan to be arguing for this trade allowance—this graded allowance.

MR. HANNIGAN—I was only talking against the warehouse plan.

MR. HOFFACKER—I, like Mr. Strasbaugh, assumed that he was arguing for this allowance or graded allowance, and I think what the gentleman did say was that he would have something to say when the contract was written.

MR. HANNIGAN—That is certainly my privilege.

MR. HOFFACKER—I apologize for having charged you with something you didn't say.

CHAIRMAN—I am afraid if we talk much more on this subject of swells that we will not be able to enjoy the banquet tonight, but I would like to see some interest taken in this matter and a suitable resolution drawn, so that tomorrow we can either be for or, at least, show a decided conviction one way or the other and get somewhere.

MEMBER—If the President will make this in the form of a request to the Resolution Committee, the committee could see that such a resolution be framed.

CHAIRMAN—I would not like to request it, but will put it as a suggestion.

(Continued Next Week.)

DEPARTMENT OF COMMERCE MOVES TO PREVENT FOREIGN PRICE RAISES.

NOTICE given by the American Government of its intention to thoroughly investigate the activities of foreign combinations controllng raw materials of vital need to American industry and for which our manufacturers are predominantly dependent on imports, has resulted in stemming the tide of advancing prices, according to the annual report of Secretary of Commerce Hoover for the past fiscal year, which will be made public shortly in accordance with the law.

In discussing the situation Secretary Hoover says: "There are a number of necessary raw materials for the supply of which we are predominantly dependent on imports from foreign countries. Possibly as a result of the war, but more particularly during the past 18 months, there has been a growing tendency for producers of these commodities to combine in control of prices as against the American market. This is particularly the case in nitrates, tanning extracts, quinine, rubber, sisal, tin, cork, mercury, tungsten, and various minor minerals."

"The effect of these price combinations in the consequent higher cost to American consumers presents a most serious problem," Secretary Hoover declares, pointing out that while we are vigorous in control of price combinations in respect to our own industries, we are, of course, powerless to reach these foreign combinations through our anti-trust laws.

"Under authority of Congress, the Secretary's report says, an exhaustive examination of such combinations was undertaken by the department before the close of the fiscal year to determine—first, the character and extent of the combinations themselves; secondly, whether alternative sources of these raw materials could be stimulated and therefore natural competition induced; third, what relief could be obtained by stimulation of synthetic or substitute materials within our own borders; and fourth, what protective or retaliatory legislation could be undertaken.

SHRIMP CULLS A VALUABLE FERTILIZER.

Corpus Christi, Texas.—G. C. Palmer, Agricultural Agent for Nueces County, has made a discovery that will be very valuable to truck and fruit growers in this section. Mr. Palmer found out that the shrimp canning factory and the shrimp shippers were throwing into the bay each day more than 10,000 pounds of shrimp heads that are a valuable fertilizer, and which contain a considerable quantity of that most costly of fertilizers, that is nitrogen. Mr. Palmer is having analyses made to find out the actual worth per ton. He has also interviewed the canning factory managers and shippers, and they told him they would be glad to give the fertilizer to the farmers. The canners will give their shrimp heads to the farmers to fertilize tomato lands, the crop to be bought for canning by the Crockett & Maddrix Canning Factory here. The price offered for tomatoes is $15.00 per ton, it is said, and tomatoes, like onions, can be planted on the same land that cotton is planted on.

DOING THE JOB RIGHT

First Dentist—How is it that you offered to fix Mr. Peck's teeth free of charge?

Second Ditto—He sold me a second-hand car last winter.—Judge.

THE SIGN OF QUALITY

STURDY MACHINERY BACKED BY SERVICE

SPRAGUE-SELLS and Peerless Canning Machinery will be the staunchest—the most efficient, durable and dependable that fine materials, experienced workmanship and sincere purpose can make them.

Every machine bearing our name will be backed by an unequivocal guarantee of complete satisfaction—or money refunded.

Field service—unstinted and gladly rendered will be constantly available to the users of our equipment—with a corps of experts at their command to aid in the solution of any problems that may arise.

The prices of our machines will be kept preeminently fair at all times by adjustment to conform with labor and material costs.

Our prices will be standard—one unvarying price to all. You purchase our machines with the satisfying knowledge that your investment is precisely the same as that of each and every other purchaser—no higher or no lower.

This is the platform upon which Sprague-Sells and Peerless Canning Machinery is offered. We believe it will win the instant and sincere commendation of everyone intimately associated with the Canning Industry.

From our two plants, at Buffalo and Hoopeston, we can supply practically every item of canning equipment.

Write us today for quotations on any equipment you may need, addressing your inquiry to:

BUFFALO CONVENTION NEWS

ANNUAL CONVENTION, WEEK OF JANUARY 21st, 1924

National Canners Association—Canning Machinery & Supplies Association
National Food Brokers Association

BIG MACHINERY EXHIBITION BIG CANNED FOODS DISPLAY

EVERYBODY WANTED——EVERYBODY WELCOME

BUFFALO WILL WELCOME NATIONAL CANNERS IN JANUARY

Proximity to Niagara Falls Makes Buffalo Ideal City for Convention.

WITH the eyes of the nation focussed on Buffalo, because Buffalo today is making more progress than any city of its class in the United States, the selection of Buffalo for the National Canners' Convention, January 21st to 26th, inclusive, was indeed a most fortunate choice.

Other cities have had their booms—and now the word has gone the rounds "Buffalo is booming! It is the coming city today!" People naturally like to visit such a city because when a city "steps out" there is something about the very spirit of its people and its developments that is exhilarating.

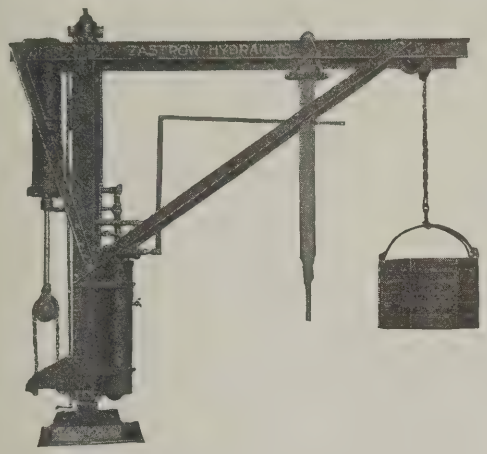
Not only is Buffalo the most logical city for a visit today, but its proximity to the world-famed Niagara Falls, one of the seven wonders of the modern world, makes it a doubly delightful city for a week's sojourn. A great many people have visited Niagara Falls in the summertime. To those and the many others who have never visited Niagara Falls, "Niagara" in the wintertime will be a revelation.

McKinley Monument and new Hotel Statler, Buffalo, where the business meetings of National Canners Convention will be held January 21 to 26, 1924

The world does not know another spot of such great, joyous beauty as Niagara in winter. As soon as the winter's winds send their cold breath across the great clouds of spray which for hundreds of feet in the air enshrine the face of the Falls and blow down the Gorge and over the neighboring landscape, the marvelous transformation which makes Niagara unique in the winter begins—nor does it cease until a wonderland of ice and snow has been created such as human eyes may nowhere else behold.

Niagara in the winter time is a treat which in itself is worth many times the cost of attending the Convention.

Of course, there will be the business meetings of the convention, held in the new Hotel Statler, ascribed by many who have visited the finest hotels the world over as being the last word in hotel construction. Mr. Statler, who is the outstanding figure in the hotel world, operating as many know the world's largest hotel, the Pennsylvania, in New York, proudly points to the new Hotel Statler in Buffalo as his greatest achievement—a monument to himself in the city where he lives, and where he first started his hotel enterprises.



Niagara Falls in winter--a wonderland of ice and snow.

While those who attend the convention will be well repaid in useful knowledge, new ideas and the broadening influence of contact with the fellow-men of their industry, there are very few of us who don't go to a convention expecting a good time as well. These people—and who does not belong to this class—will not be disappointed.

There will be luncheons, theatre parties, dances and sightseeing trips galore—doubtless colored by many little informal conventings of the visitors for pleasures of their own making.

Many special entertainment features have been provided for the ladies—and the committe in charge are very anxious to have a big attendance of wives and daughters of the canners. "This is a convention for the entire family," said a chairman of one of the committees. "Come and bring the whole family."

The Department of Raw Products

"Quality" cannot be produced in the can unless quality products are produced on the farm. This Department will, therefore, seek the best thoughts of the country on better crops, and how to produce them, and ways and means of combating the enemies of such crops.

The assistance of all agricultural experts is sought and heartly invited, a way offered them here to reach the entire canning industry of all States; and we likewise extend to all our readers an invitation to explain their troubles and ask remedies. And by all means let those who have devised ways or descovered remedies give the benefit of their experience to those less fortunate.

"Quality" canned foods can only be attained by the co-operation of all canners towards the production of quality crops.

THE PRODUCTION OF BETTER TOMATOES AND PULP.

By O. C. Zinn, Purchasing Agent Campbell Soup Co.
Before the Indiana Canners Association Meeting,
November 20-21, 1923.

AT your meeting last year at Evansville your Secretary read a letter from me on the subject of packing tomato pulp during the season 1922. This was based upon observations made during the packing season. You will all recall the splendid Indiana tomato crop of 1922 and quite fresh in your minds is the poorer crop of 1923. Seasons like 1922 are a business creator whereas 1923 is just a filler between the good seasons.

With these two years in mind it is well to call attention to the statistics of Indiana tomatoes:

Year.	Yield per acre.
1919	4.8 Tons
1920	3.4 Tons
1921	5 Tons
1922	5.5 Tons
1923	2.9 Tons

This means the average of good crops is three in five years or six in ten years. This low average creates a handicap that is hard to overcome. The Tri-States have nine good crops in ten. Utah and California do not know what a crop failure means—so you see Indiana has to step forward in the matter of crop regularity.

A great deal can be done along this line by the canner and grower through proper selection of seed and proper methods of plant production. Some attention has been given to Southern plants with various results. Some growers will say they are fine and better than native plants, and others will discourage their use. I hold no brief for the southern plants, but do believe from experience in Camden that they are worthy of attention and that some southern plants should be grown to insure a source of plant supply in case of some disaster to native plants.

Another way to enlarge and improve the pack is to increase the length of the season. This can be done by growing two varieties, one a tomato which will mature in sixty days and the other in seventy days after setting. In New Jersey we have been successful in growing two varieties known as "Bonney Best" and "Greater Baltimore." The Bonney Best requires good soil to produce, but it is a quick grower and good producer. The Greater Baltimore compares with your variety here known as Indiana seed.

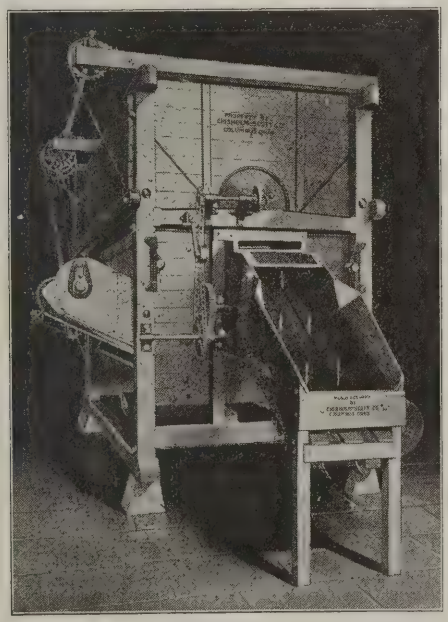
The way to increase yields is to encourage the grower by paying the price for good tomatoes; keeping the price low is not always the best policy. The grower will not put forth much effort and neglects the fields; leaves them to be overtaken by weeds and other pests. He is inclined to back away from any crops which threaten extra work. He has heard of the many-named diseases that are contagious with tomatoes and it is like reading a patent medicine circular—they suffer with every ailment mentioned. He reads the remedies and becomes discouraged and disgusted with the thought of becoming day-and-night nurse to a lot of diseased tomato vines. Sprays and chemicals sound to him like medical terms. A little effort directed to the correction of these impressions will help a lot.

The land should be mellow and well prepared and ridged as for sweet potatoes and the plants should be set in the ridges. This will prevent wet weather from ruining the plants. If the season turns out very dry it will not hurt in any way. The Bureau of Plant Industry, Washington, D. C., is ready and glad to furnish data on seed, plants, soil, fertilizer, setting, cultivation, spraying and picking. This bureau will supply all the information, but not the physical labor—that is the trouble. The whole plan is simple enough if there is someone to carry it out with physical effort.

Growers become pickers at harvest time and this feature should be discussed in a general way at the contract time and then be followed closely thereafter. Teach them to pick red, ripe and fully sound tomatoes.

A close co-operation between the grower and canner is always desirable and cannot be overdone. If the grower understood your problems he could devise ways to help you. Just think of the time that the grower has to think of tomatoes while you are thinking of something else. These association meetings are intended for the good of the industry and men's minds should meet on the fundamental principals involved. We should discourage the grower from bringing to our canneries tomatoes which are unfit for his own table. Quality is ever the watchword and it should be backed with sincerity. Two dollars a ton more may seem a lot on the contract sheet, but it is a good investment if you can recover it all and more in good yield and good quality in the can.

Years like 1923 bring a lot of speculation in the tomato game. The growers had low yields and income the same as the canners and if you both get discouraged and disgusted at once the resistance is hard to overcome. There is a market for your goods and it can be increased without fear of overproduction. Heavy production will not stop consumption, but instead may be expected to increase it largely. Underproduction means high prices and underconsumption. It is bad for the grower, the canner, the distributor and the consumer. Tomatoes are not a necessity; no one cries for them, not even the baby; therefore, you are confronted with the necessity of creating a desire for tomatoes by the consumer. This is another phase of the problem on which I will not speak except to say that a quality product is its own best advertisement.



The season of 1923 presented many problems. In the pulp plants we find that washing equipment was

Surer of Results

No matter what you sterilize there's always one outstanding advantage in using A-B Continuous Agitating Cookers and Coolers—you are surer of results.

Quick uniform cooks insure quality in the can—sturdy, simplified construction eliminates delays producing quantity output.

Write for Catalogue.

ANDERSON-BARNGROVER MFG. CO.
San Jose, Calif.

taxed to its limit and in too many cases the equipment was inadequate for the task of washing and sorting.

The soil is of such a nature in a wet season that it adheres to the outside and cracks of the tomatoes, making washing difficult. The most effective way is to dump the tomatoes in a tank of cold water, allowing them to soak for a time, long enough to soften the dirt, then run them out of the tank on a conveyor equipped with water sprays, which removes the worst dirt, then pass them through a rotary washer, such as a Peerless, running at a fair rate of speed, then over the sorting belt, through steam box to final washing sprays at the end, drop them into cyclone or pulper and continue the movement without interruption to the finish in the can.

Too much care cannot be given to the washing and sorting equipment, as it may be badly needed to keep down high mold and bacteria and to remove excess dirt.

I have been called a pulp critic and buyer for the big Campbell soup house. That is a credit, but I want to bring to your minds in a forcible way the meaning of a "pulp buyer." I am the pulp buyer for millions of of homes in the U. S. A. While working for Campbell the effect of my buying is directly for the benefit of the individual home table, and it is a proud privilege to be represented there. Campbell's Soup is the product in which this buying is introduced into the home. Keeping this thought ever in mind, I can never sacrifice quality for quantity or price. We feel it is a creditable thing to be one of the packers who can meet our requirements and go along with us to the millions of homes we supply.

Our specifications are explicit and not hard to accomplish with the proper equipment and effort. The general outline of these specifications are:

Quality of Whole Tomatoes—Seller agrees in making said pulp to use only whole, red-ripe, sound tomatoes, thoroughly washed, under pressure, cleaned and sorted; also free from sand, dirt, black specks and all foreign material.

No salt, added sugar, artificial color, grease or preservatives shall be used; and in making said pulp the Seller agrees that it will not use tomato trimmings, skins or cores, produced as refuse from tomatoes, or use tomatoes from the first or last of the picking season when tomatoes generally have a pale color or at any other time when tomatoes are not of fancy red-ripe quality.

Seller agrees that Buyer shall have access to Seller's factory while the pulp to be delivered under this contract is being manufactured; also, that Buyer shall have the privilege of making inspections of said pulp and whole tomatoes at all times during the manufacture of said pulp, but such inspection is not to be construed as constituting an acceptance of the pulp being manufactured.

Quality and Grade of Finished Fancy Heavy Tomato Pulp—Seller agrees that said fancy heavy tomato pulp must have a bright red color (such color is to be determined when the pulp has been brought to a uniform specific gravity of 1.022 at 20 degrees centigrade) and a good tomato flavor, free from bitter, flat, sour or scorched taste, free from all seeds or broken seeds, that same shall be guaranteed to comply with all State and Federal food laws, and to be within the limit of bacteria, yeasts, spores and molds, as provided in the Federal Regulations; that same shall be finished through a twenty (20) mesh screen having 1/40 inch diameter holes, and shall contain no reprocessed or recooked pulp. Each can shall be properly processed and *properly cooled* after processing; and shall be stacked in such a manner that the pulp will not stack burn and the cans will not rust. The fancy heavy tomato pulp, without the addition of salt, must contain not less than ten and one-half per cent (10½%) of tomato solids determined by drying in vacuo at 70 degrees centigrade.

The outlook for the coming year looks good enough now to encourage every effort. Indiana canners did not make enough money during 1923 to afford long winter trips to Florida, as it will afford them a good opportunity to stay at home and fix up the cannery this coming winter and spring. There are many little changes around the cannery that will help, and you will forget them if not attended to promptly.

TENTATIVE U. S. GRADES FOR CANNERY TOMATOES

By Bureau of Agricultural Economics, United States Department of Agriculture.

(Numerals in parentheses refer to definitions of terms employed in these grades.)

U. S. NO. 1.

U. S. No. 1 shall consist of tomatoes which are firm (1), ripe (2), fairly smooth, well formed (3), free from molds and decay and practically free from damage (4) caused by growth cracks, worm holes, catfaces, scars, sunscald, freezing injury or by mechanical or other means.

The diameter (7) of tomatoes of this grade shall be not less than two inches.

In order to allow for variations incident to proper grading and handling, not more than 3 per cent (by weight) may be below the prescribed size, and in addition not more than 5 per cent (by weight) may be below the remaining requirements of this grade.

U. S. NO. 2.

U. S. No. 2 shall consist of tomatoes which are firm (1), ripe (2), free from molds and decay and free from serious damage (5) caused by growth cracks, worm holes, catfaces, scars, sunscald, freezing injury or by mechanical or other means.

The diameter (7) of tomatoes of this grade shall be not less than two inches.

In order to allow for variations incident to proper grading and handling, not more than 3 per cent (by weight) may be below the prescribed size, and in addition not more than 5 per cent (by weight) may be below the remaining requirements of this grade.

U. S. NO. 3.

U. S. No. 3 shall consist of tomatoes which are fairly well ripened (6), and free from molds and decay.

In order to allow for variations incident to proper grading and handling, not more than 5 per cent (by weight) may be below the requirements of this grade.

Definitions of Terms

As used in these grades:

(1) "Firm" means that the tomato is not puffy, shriveled or water soaked, that it is meaty and will retain its shape and solidity during the ordinary processes of washing and scalding.

(2) "Ripe" means that the tomato shows at least 90 per cent good red color.

(3) "Well formed" means that the tomato is not so curved, angular, flat or otherwise misshapen as to cause a waste in the ordinary process of preparation for use in excess of that which would occur if the tomato were practically perfect in shape.

(4) "Practically free from damage" means that any damage from the causes mentioned can be removed in the ordinary processes of trimming and peeling without a loss of more than 10 per cent (by weight) of the tomato.

(5) "Free from serious damage" means that any damage from the causes mentioned can be removed in the ordinary processes of trimming and peeling without a loss of more than 20 per cent (by weight) of the tomato.

(6) "Fairly well ripened" means that the tomato shows at least two-thirds good red color

(7) "Diameter" means the greatest dimension at right angles to the longitudinal axis.

U. S. NO. 2.

U. S. No. 2 shall consist of tomatoes which are firm, means that the tomato is not puffy, shriveled or water soaked, that it is meaty and will retain its shape and solidity during the ordinary processes of washing and scalding.

Ripe, means that the tomato shows at least 90 per cent good red color.

Free from molds and decay, and free from serious damage caused by growth cracks, worm holes, catfaces, scars, sunscald, freezing injury, or by mechanical or other means, means that any damage from the causes mentioned can be removed in the ordinary processes of trimming and peeling without a loss of more than 20 per cent (by weight) of the tomato.

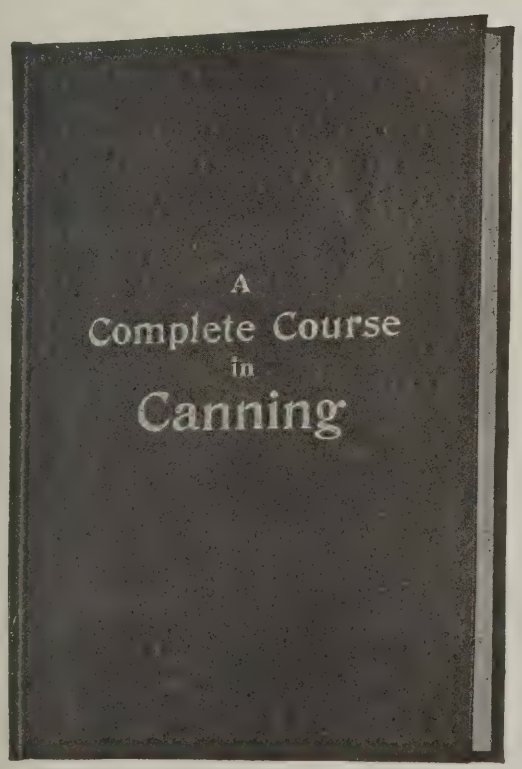
The diameter of tomatoes of this grade shall be not less than two inches. ("Diameter" means the greatest dimension at right angles to the longitudinal axis.)

In order to allow for variations incident to proper grading and handling, not more than 3 per cent (by weight) may be below the prescribed size, and in addition not more than 5 per cent (by weight) may be below the remaining requirements of this grade.

U. S. NO. 3.

U. S. No. 3 shall consist of tomatoes which are fairly well ripened, and free from molds and decay, means that the tomato shows at least two-thirds good red color.

In order to allow for variations incident to proper grading and handling, not more than 5 per cent (by weight) may be below the requirements of this grade



A Splendid

Xmas Gift

For Sale—Machinery

FOR SALE—100,000 No. 2 Southern Pine Box Shooks, 5-8 x 5-16, a carry-over from our spring contracts. Will sell for less than today's market. Price delivered your station on application.

W. E. Robinson & Co., Bel Air, Md.

FOR SALE—Several No. 2 Max Ams Double Seamers, in good condition; price reasonable.

Address Box A-1123 care of The Canning Trade.

FOR SALE—

We have on hand at bargarin prices for quick shipment the following, all being in first class condition and subject to inspection:

2 Sprague Inspection Tables as shown on Page 93 of Sprague's late catalog.
1 No 14 Disc Exhauster
1 Westcott Washer about 20 ft. long
2 Sprague Goose-neck Elevators for Peas, Beans, etc.
3 Variable Speed Pulleys
3 Kraut Cutters
1 Large lot of chain, Sprockets, etc., for Corn Conveyors
5 40x72 Retorts
1 Harris Hoist
2 Emerson Dicing Machines
3 Monitor Pea Washers
2 Boiler Iron tanks 18 ft. long, 6 ft. wide, 2 ft. high

and other miscellaneous bits of canning machinery in A-1 condition, We are willing to dispose of this material at exceedingly low prices for prompt shipment and will give reasonable terms.

A. K. Robins & Company, Baltimore, Md.

FOR SALE—Having decided to discontinue packing peas, we offer the following pea machinery; all machines in good order:

1—Ayars 12-pocket Rotary Pea Filler.
3—Hansen Pea Fillers.
2—Huntley Blanchers, 12 feet long.
2—No. 6 Huntley Cleaners.
1—No. 3 Huntley Cleaner.
2—4-screen Colossus Separators.
2—Nested Separators.
6—No. 147 Clipper Cleaners.
2—10-inch Cup, Ferrell Elevators, 18 feet long.
3—Fairbank's Platform Scales.

Address Box A-1118, care of The Canning Trade.

FOR SALE—

1—16-foot Monitor Steel Frame Blancher.
1—Style X Monitor Washer.
1—Monitor Pea Picking Table.
1—Elgin No 375 Type Plunger Filler with tartaric acid-ing attachment and roller capper.
1—Wonder Continuous Cooker, Style F.
1—Burt Labeling Machine for No. 3 cans.
1—No. 1 Monitor Scalder.
5—40x72 Retorts.
1—35 H. P. Buckeye Horizontal Engine.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, DECEMBER 17, 1923

WEEKLY REVIEW

Confidence in Better Conditions Rules the Market—Some Market Price Reductions Noted—All Goods in Strong Position—Other Sections Have No Tomatoes and Other Items Are Growing Scarce—Corn Improving in Tone—Future Peas Largely Sold Up—Check-up On Advocates of the Flat Allowance—Advance in Can Prices Justified.

THE MARKET IS CONFIDENT—This market has witnessed a rather quiet week, most of the canners and not a few brokers being away at the Tri-State Convention the first part, and all of them waiting for the turn of the year to bring the better conditions which everyone seems to consider certain then. This feeling of confidence in the goods is causing all holders to keep away from the market, and as a result the goods which are being traded in are called out only at full prices and for prompt shipment. This is particularly true of tomatoes, but it is just as true of other items, as all are on the scarce list.

Making the rounds of the brokers and canners one finds that prices are holding very firmly, as a rule, but as if anxious to make the exception so that the rule may be proved, we find reductions in No. 2 sweet potatoes from $1.05 to $1.00; No. 3 tomatoes temporarily quoted at $1.37½, instead of $1.40, as formerly, and very temporarily and very narrow in its extent, because most holders of good tomatoes consider them worth very much higher prices than this. But we quote it as we find it. No. 1 and No. 10 tomato pulp are both quoted slightly lower than last week, a weakness not easy to explain, and which unquestionably is merely temporary. No. 10 apples might be added to this list of lower prices, as a quotation of $3.40, replacing $3.50 as before, can be found. It is a little hard to assign a cause for these lower quotations, unless it be that some sellers wanted to clean out, and the buyers not being any more eager to buy than are most holders to sell, could not be interested except with a concession.

On the other hand, the rest of the country seems to consider canned foods in a very strong position. They have no tomatoes elsewhere, and the jobbers are reported buying from each other until they have completed their inventories. Corn is reported cleaned down to a low point and to be getting stronger in tone, if not in price. The heavy corn-canning States cleaned out on futures, very largely, and what surplus they had has also gone almost entirely, leaving the canners independent and carefree.

In the world of canned peas it is said that futures have been sold as far as the pea canners care to go, and that the buyers have been taking them as if the season was nowhere near the holidays and as if there was no such thing as inventory. In other words, the buyers know that peas are always good property and they must have their supply for next season, and have taken no chance of getting left. The New York City buyers are contending loudly that they are buying these future peas and other items on the flat-allowance basis, though not at half of one per cent, and are jeering the rest of the canners with the folly of their Warehousing Plan. We know the canners well enough to believe that there may be some canners, and some of the larger ones, too, who are taking contracts upon this basis. It is unfortunate that it should be so, because the opponents of this Plan will herald their actions to the tree tops, to make all canners believe that the Plan is being avoided by the canners. On the other hand, let the canners who have subscribed to the Warehouse Plan, because they are members of an Association which has adopted this Plan as the system for the sale of all canned foods, let them not be mislead, we say. The largest and best canners are not selling upon the flat-allowance basis. The great bulk of the 1924 pack will go out sold under the Warehouse Plan, and the canner who is being lulled away from it now is being deceived. They dangle a contract signed with the flat allowance before the canners' eyes and try to make him believe that all canners are so signing—"everybody is taking business that way." That is the age-old market rigger which sought to get some fairly prominent canner into a sale at a low price, under the belief that a competitor had quoted goods at the low price, and when the sale was made, then to rush out with the announcement that the market had been cut to the new low price by the prominent canner victim. Times without number the market has been broken in just that way, and it is actions of this kind that brought the brokers into bad light in the industry and made trouble for them Many brokers are busy now trying to help the wholesalers beat this Warehouse Plan, and they will do well to watch their step. It would be a good time to make a list of the brokers spreading the reports of sales under the flat-allowance plan and of those brokers who advocate the system of flat-allowance selling. If you get literature of that kind, save it, as it will come in very handy. The canners intend to know who are their friends and who are not, and this is the time to make the list.

As we said last week, most of the oposition to the Plan lies in that stretch of country on the Atlantic between Baltimore and New York City. West of New York, in the Central West and clear out to the Pacific the Plan is being supported and made a part of all contracts. There were contracts made on future peas with the flat-allowance feature, but they were made before the Plan had been formerly adopted. Don't mislead on this.

CAN PRICES—A good many canners have felt much aggrieved over the impending advance in can prices, which Mr. George W. Cobb, of the American Can Co., has explained is inevitable, because the tinplate basic price has been advanced from $4.75 to $5.50.

Mr. Cobb at the Tri-State Convention explained that he could not find fault with the advance on the part of the tinplate people, because all knew that the price of tinplate had ranged during the war to as high as $7.75, and then dropped back last year—that is, until early in 1923 to $4.75, but has been $5.50 for many months. Considering the trend of all other commodities, the price of tin-

plate is not out of line, and we agree with him. The canmakers have stood the losses since the early advance on the part of the tinplate companies, and they cannot be expected to go on absorbing such losses. Therefore, they say the advance in can prices must take place with the making of 1924 contracts. This must be taken into account when figuring future costs, and the price named must include it. And there are other costs that must be so included, and we trust will be included.

NEW YORK MARKET

Warehouse Plan Discussion Goes Merrily On—Canners in New York Must Not Be Association Members — Tomatoes Steady—Corn a Good Seller—Coast Tomatoes Strong—Fruits Higher—Notes of the Trade.

By "New York Stater,"
Special Correspondent "The Canning Trade."

New York, Dec. 13, 1923.

WAREHOUSE Versus Percentage—Canned foods trading continuing quiet in the New York market, the swells controversy continues merrily on its way. The Iowa-Nebraska Canners' Association, at its meeting last week, endorsed the warehouse plan, and the Tri-States Packers' Association, meeting in Philadelphia this week, took the same action. The canners, it would appear, are fairly uniform in their convention actions regarding the swells clause in their contracts, yet it is difficult to reconcile these resolutions with the facts as they are seen locally, unless, of course, the canners who are now operating in New York are not affiliated with the canners' organizations.

As One Canner Saw It—One prominent mid-Western canner was in the market this week, and the topic of swells guarantee was brought to his attention by one of his New York buyers. This canner ventured the remark that he considered one-half of 1 per cent on his pea pack excessive, and appeared very much surprised to learn that the wholesale grocers, members of the National Wholesale Grocers' Association, were asking only one-quarter of 1 per cent. He agreed to do business on this basis, and approved of the graduated percentage plan of the Association.

Others Selling On Flat Allowance—Several other large canners have booked business in New York on the percentage basis, following refusal of the buyers to book warehouse plan. In view of these facts, the question naturally arises as to whether the smaller canners will be left "holding the bag" or whether the large canners selling on percentage are doing this only in New York to retain the private label business which they have here. Of course, the views outlined above are those which are secured from brokers and wholesale grocers here, and it is possible that these conditions are applicable only to New York City.

Still Against Warehouse—The National Wholesale Grocers' Association is still firm in its stand against the warehousing plan and reports that its members in many parts of the country are standing behind the organization, and will book canned foods only on the graduated percentage basis.

Anticipating Convention—The local trade is anticipating with a great deal of interest the convention of the canners and brokers in Buffalo next month, and a large delegation of the New York trade will make the journey. The brokers' dinner will be a feature of the convention again this year, and many local brokers are planning to have their canner principals as guests at this affair. Added interest attaches to the canners' convention this year because of the swells controversy.

Tomatoes About Steady—Southern tomatoes continue to show a steady to strong tone on all sizes. There has been a little shading done during the week, brokers quoting about 2½ cents off on 2s and 3s to clear out one-car carry-over holdings of a few canners. The number of such offerings, however, is considerably less than normally at this time of the year.

Standard Corn Good Seller—Standard corn at 90 to 95 cents per dozen, cannery, has been a good seller, particularly with the chain stores. The chain store organizations are featuring standards at 10 cents per can retail, some of them selling at 3 cans for 25 cents. Fancy corn is scarce in the local market, and commands a premium.

Early Opening on California Lines—California canners are getting under way on futures rather early, two or three packers having already named prices on spring pack spinach. The trade, however, is rather indifferent to these offerings.

Coast Tomatoes Strong—There is a strong market on canned tomatoes for shipment from California, and available stocks are light. Standard 2½s are quoted at $1.15 f. o. b., with the market on 10s standard $3.85 and up. Puree made from trimmings is quoted at $3.50, with puree made from whole tomatoes at $4.00 to $4.25, both prices being f. o. b. cannery.

Canned Fruits Higher—In normal years, California fruit canners are pressing for sale carry-over stock at this season of the year. This year, however, conditions are entirely reversed, and instead of cutting prices the canners are now advancing them. The market on No. 10 pie fruits has been particularly strong during the past few weeks, and prices have been advanced on several grades and varieties. The carry-over is light on all grades and canners are looking for a higher market on table sizes and grades next spring.

Canned Fish—This is the dull season of the year for canned fish, and the market has been quiet for two or three weeks past. The Maine sardine market is nominal in the absence of any important offerings, and but few canners have supplies to offer. California sardines are reflecting the strong position of the Eastern pack and the shortage of the imported varieties. Salmon trade is quiet on spot, but it is reported that there is a fair business being done on the Coast for shipment and billing after the first of the year. Tuna is strong, with offerings greatly curtailed by the scarcity of stocks here and on the Coast.

Open Cleveland Office—The Berne Salinger Brokerage Company will open an office in Cleveland on January 1st, specializing in canned foods and dried fruits. The firm is made up of Milton M. Berne, who has been in the brokerage business in San Francisco for the past 15 years, and I. Salinger, head of the Salinger Brokerage Co., of St. Louis, both of whom are very well known to the food trade in all parts of the country.

Notes of the Trade—The local office of Warmington, Timms & Co. was closed on Tuesday morning during the funeral services for the mother of Edward J. Skiffington, well-known canned foods salesman associated with Warmington, Timms & Co.

Melville F. Taylor, of the Seacoast Canning Company, is on a trip to Southern markets this week.

James Shriver, of B. F. Shriver & Co., of Westminster, Md., was visiting on Hudson Street this week.

Harold Deshon, of the Smithfields Pure Food Co., of Rochester, was visiting his local broker, "Archie" Clark, of A. C. Clark Co., yesterday.

CHICAGO MARKET

Buyers Geerally Have Withdrawn From Market—Some States Nearly Cleaned Out of Corn—Unlabelled Tomatoes Wanted—Some Good Sales of Peas—Only a Few Offering Futures—Pineapple Speculators Letting Go—Merry Christmos

By "Wrangler,"
Special Correspondent "The Canning Trade."

Chicago, Dec. 13, 1923.

GENERAL—The regular buyers for wholesale grocery houses have practically withdrawn from the market for canned foods, and are telling the brokers that they will make no more purchases either for spot or future goods until after the first of the year.

There are a number of houses and buyers in Chicago, however, who do not take inventory on the first of the year and who really take inventory once a mnth. Several of these houses are buying canned foods in a speculative way, and quietly closing purchases for choice bargains, which are pressing the market, on account of avoiding putting the goods in winter storage by the canners.

Canned Corn—Ohio and Iowa-Nebraska are nearly closed out of canned corn, and I have heard of some good sales of choice blocks of extra standard and fancy grades by Illinois and Indiana canners this and the past week.

Canned Tomatoes—There is a disposition on the part of buyers to try to find canned tomatoes in the Western canneries, from the fact that most of them want extra standard grades for their own labels.

Eastern canners have not paid much attention to grades of canned tomatoes above standard this season, and seem unwilling

to put on buyers' labels or to sell firm for subject to approval orders. Consequently the private label business goes to Western canners, wherever they can be found holding any, and at prices much higher than is asked in the East.

I am inclined to think that the attitude of Marvland and Delaware tomato canners in refusing to submit samples promptly, or to sell canned tomatoes except subject to "confirmation by seller when samples are approved" is losing them some profitable business.

A buyer certainly should have the privilege of seeing samples of the canned tomatoes he is paying his money for, as there is no such thing as buying on grade for no two parties will usually agree as to the grade of a sample of canned tomatoes.

Canned Peas—I have heard of some sales of considerable lots of canned peas this week. Several canners who were a little delayed in filling their future orders have placed their unsold canned peas on the market this week and have instructed their brokers to close the lots out.

The lots so offered were not large and the prices asked were high, but I understand that the brokers found but little difficulty in placing them. The sale of canned peas for future delivery from the 124 pack has slowed down a little.

Only a few pea canners are offering futures. Many of them will not do so until after the National Canners' Association annual convention, January 21 to 26, at Buffalo, New York, and some of them claim that those who have sold early have sold at too low a price, as they forgot to figure the advance in prices of cans, cases, etc., and say that they prefer to hold back until the low price sellers close out, as they want higher prices.

Canned Fruits—Very much to the surprise of holders, canned pineapple is offered at lower prices than prevailed a week or so ago. The reason is that speculators outside of the canned foods business who bought heavily and borrowed money with which to do so, are finding that the profits they anticipaed are not promptly forthcoming, and that their paper which is coming due in the banks must be paid. They are, therefore, quietly offering their holdings at prices lower than the market.

It is also reported that the exportation of canned fruits from the Pacific Coast, so far this season, has been small, and that the large canners and operators are carrying heavy unsold quantities, which they cannot move through the wholesale grocers, who have been stocked up by the smaller canners, who sold early in the season at lower prices than the large canners were willing to accept.

There is no information current about any offerings of California canned fruits at cut prices, but it is known that the very large ounut of dried fruits, raisins prunes, apricots, peaches, etc., produced on the Pacific Coast is much demoralized as to prices and must be sold, and that it has been moving very slowly so far this season, and that it is looked upon by canners of fruits as a threatening and overhanging danger to the distribution of canned fruits.

Canned Fish—Salmon and all other kinds of canned fish are stagnated at this time of the year, and I can hear of no important or regular demand or sales.

There is some inquiry for canned oysters, but Baltimore prices are said to be so much higher than South Atlantic Coast and Gulf Coast prices that Baltimore is really not considered when purchases are being negotiated, there being a difference of about 25 cents per dozen in favor of the Southern canneries on 1s five-ounce, and a proportionate difference on other weights and grades.

I desire to wish a Merry Christmas and Happy New Year to all the readers of The Canning Trade, as the next issue after this comes out on Christmas Eve Day, and to thank those for their patience who have read after me, and to congratulate those who have not on having saved their valuable time.

CONVENTION DATES

January 8-9, 1924—Utah Canners' Association, Utah Hotel, Salt Lake City. Annual convention.

January 21st to 26th, 1924—National Canners, Canning Machinery and Supplies, National Food Brokers, Machinery Exhibit, etc., Buffalo, N. Y.

ST. LOUIS MARKET

Market Dull—Hard to Find What Is Needed—Stocks Are Low—Canners Not Forcing Offers—Corn Firm—Buying Tomatoes From Tach Other—Peas Quiet—Sweet Potatoes Selling Fairly Well.

By "Missourian,"

Special Correspondent "The Canning Trade."

St. Louis, Dec. 13th, 1923.

MARKET DULL—A continued dullness prevails in the canned foods market. Distributors are not on the open market, except when they need some stock, and then they buy, as usual, only in small quantities. Jobbers have, as a rule plenty of working stocks of their own and are not in a mood to buy in a speculative way to provide for future needs. In case they are short on any particular brand, they scurry around and buy as the occasion requires.

When a particular brand is desired, the broker finds that there is no large surplus of staples. This is the first season that it is hard to find what is needed. In past seasons it has been comparatively an easy matter. This indicates the existing conditions. It shows a tight market later on. This condition does not seem to worry the distributor, however, for no matter what he may have to pay later on, he will make the profit just the same by adding it on to the price paid for the goods. Meanwhile the jobbers are taking advantage of the dullness and are getting ready for their stocktaking.

Canners are not forcing matters this season as they did in the past. They seem perfectly willing to carry their goods over until next year, as they realize that when the spring demand begins the market will be short of many lines, particularly those wanted badly, and that higher prices will prevail, and that they will reap the benefit.

Vegetables—Corn—There is not much corn moving, but what is, is firm in tone. Fancy and standard are both scarce. While stocks are being purchased by the retailer, the jobbers are buying in a very conservative way Canners will not shade their prices, because they look for advancing prices later on, and consider the present dullness as seasonable and a forerunner for a better business after the first of the year.

Tomatoes—The tomato situation is steady and quiet, all the business being done by jobbers is usually among themselves jobbers are not replenishing their stocks. Occasionally a canner will make a slight concession in order to secure some ready cash. As a rule, however, most canners had rather hold their stocks until they can get full prices. This is particularly true in regard to the Southern packers. They are not free sellers California conditions are about the same.

Peas—There is not much doing in peas. A quietness prevails in the market. Business in futures continues at last year's opening basis, the demand among buyers being confined wholly to jobbers. Chain stores recently have shown little or no interest. Spots and futures are selling to some extent, but the buyer wants to control the market. If he can not get futures at the price he wants, he pulls out.

Miscellaneous Vegetables—Sweet potatoes are selling pretty well, but market is quiet. Asparagus is showing a steady tone for spot goods. Factory offerings are limited to spring quotations. New pack California spinach is attracting some attention and future prices have been received.

Canned Fruits—Distributors as a rule have enough to last them until after the first of the year. Peaches are steady on all grades. There is no demand whatever for California fruits. Spot business is confined entirely to small quantities. Distributors report that there is much trouble in picking up wanted grades Those holding them are not inclined to let go of them. They want to hold them until next spring, when holders believe they will be able to realize better prices than if they disposed of them now.

Fish—There is not much interest in salmon, but a fair business is anticipated later. All grades of sardines are wanted.

An increase in the amount of farm products shipped from the Ozark section of Missouri during 1923 is indicated in the record of the agricultural department of the St. Louis-San Francisco Railroad. Among the products shipped were $630.000 worth of canned tomatoes, and canned apples valued at $50.000. Forty eight cars of grapes. 3 100 cars of apples, 998 cars of strawberries 636 cars of watermelons. A 25 per cent increase in the amount of milk and milk products shipped in various ways from the Ozark counties is also estimated.

CALIFORNIA MARKET

Business Quiet and Waiting Turn of New Year—Stocks in First Hands Not Large—Prices on Futures Expected Earlier Than Uusual—Spinach Prices—Olive Prices—New Fig Prices Announced—Peach Growers Hold Convention—Coast Notes.

By "Berkeley,"

Special Correspondent "The Canning Trade."

San Francisco, Dec. 13th, 1923.

BUSINESS QUIET—Business in California canned fruits and vegetables is light and of a routine nature and sales are expected to be very limited until after the first of the year. Goods being sold now are largely for immediate delivery to replace stocks that are at a very low ebb. In general, business has been quite satisfactory since the opening of prices and stocks in first hands are not large. In some lines they are very limited, in fact, and the prospects of a close clean-up are excellent. Opening prices on such items as spinach have been made by various interests, and it is expected that prices on all fruits and vegetables will be named earlier than usual. This will likely be the case with fruits particularly, since high prices are definitely a thing of the past, and selling the finished product has become the problem, instead of purchasing the raw stock.

Spinach—Several concerns have announced opening prices on new spring pack spinach and are making a strong bid for business. The Warmington-Duff Co., San Francisco, is the latest to come out with prices and is offering the output of the Isleton Canning Company at the following prices: No. 2s, $1.20; No. 2½s, $1.45, and No. 10, $4.85. It is announced that only goods of the finest quality will be packed and that a limit has been placed on the acreage of growers from whom supplies will be purchased.

Olives—The packing of ripe olives is under way, and Libby, McNeill & Libby have come out with opening prices as follows:

Mammoth—Buffet tins, $1.60; Tall cylinder pints, $3.15; Tall cylinder quarts, $6.25, and No. 10, $19.

Extra Large—Buffet tins, $1.40; Tall cylinder pints, $2.75; Tall cylinder quarts, $4.25, and No. 10, $16.

Large—Buffet tins, $1.25; Tall cylinder pints, $2.10; Tall cylinder quarts, $3.85, and No. 10, $12.50.

Medium—Buffet tins, $1.05; Tall cylinder pints, $1.75; Tall cylinder quarts, $3.40, and No. 10, $10.50.

Small—Buffet tins, 90c; Tall cylinder pints, $1.40, and No. 10, $8.50.

The cool weather which has followed the recent showers has been of great value to the olive crop still on the trees The crop in the northern part of the State is of good proportions, while a short crop will be harvested in the southern section.

Figs—Opening prices on California canned figs have also been announced by Libby, McNeill & Libby for delivery from its Sacramento warehouse. These are as follows: Kadota figs, No. 1s, small size figs, $2.00; medium size figs, $1.90; large size figs, $1.80, and fig jam, $2.25. Calimyrna figs, No. 1s, medium size figs, $1.90; large size figs, $1.80; No. 2½s, $3.75, and No. 10s, $13.25. The acreage devoted to figs is being increased at a rapid rate and the output will soon be of large proportions. This year's pack was cut into by the cool weather.

Peach Growers Hold Convention—The second annual convention of the California Canning Peach Growers' Association was held at the St. Francis Hotel, San Francisco, on December 4, with more than one hundred growers in attendance. Better standardization of products, an extended advertising campaign in 1924 and the election of officers featured the topics considered. The officers chosen follow: President, R. W. Skinner, of Yuba City; vice-president, E. R. Williams, Modesto; secretary, G. C. Galbraith, Yuba City; treasurer, L. C. Day, Loomis; manager, A. D. Poggetto, 244 California street, San Francisco, and directors, R. W. Skinner, G. C. Galbraith, E. R. Williams, C. A. Blakeley, H. E. Kleinsorge, Frank T. Swett, B. M. Hooper, Ross Denison, F. H. Wilson and L. C. Day.

The association went on record as favoring some plan of standardization whereby the ultimate consumer will know what he is buying. The indiscriminate use of labels without a word to guide the purchaser was flayed and it was urged that the grade of the fruit be placed on all labels, whether those of canner or private distributor. A nation-wide advertising campaign was approved and tentative plans for carrying out the work were adopted. The Mediterranean fruit fly was the subject of considerable discussion, the talk being led by L. C. Day, who recently conferred with horticultural experts at Washington, D. C., following a tour of the Hawaiian Islands, New Zealand and Australia, where a study of preventive measures was made. A more stringent quarantine on the fly by the Government was urged. Dr. E. S. Moulton, of Yuba City, was made an honorary member of the board of directors in recognition of his faithful work for the organization. The plan of the Sutter County Chamber of Commerce to transfer its annual California Peach Day to some Eastern city was told by E. C. Littleton, of Yuba City, president of the chamber.

Coast Notes—The Klute-Fleming Packing Co., of Manteca, Cal., has been reorganized and General Manager H. L. Klute announces that it will be known in the future as the Sun Valley Packing Corporation. This plant has combined with the Food Products Company, of Sultana, and capital is available to enlarge the plant. It is planned to handle figs, peaches, apricots, tomatoes, string beans and spinach.

The Pacific Mail liner President Cleveland recently cleared from the port of San Francisco for Manila with 60,000 cases of canned milk aboard, the largest single shipment of this commodity ever made from here.

Harry Balfe, president of the Austin Nichols Company, New York, was a visitor at San Francisco early in December.

The California Packing Corporation, San Francisco, Cal., is having plans prepared for the erection of a huge addition to its canning plant at Sacramento, Cal.

Several meetings of fruit and vegetable growers have been held at Sebastopol, Cal., of late to discuss the proposition of erecting a co-operative cannery.

Members of the Canners' League of California have been advised by Secretary Preston McKinney that the traffic attorneys retained to secure the payment of reparations for the collection of excessive charges on carload shipments of empty boxes during the period of Federal control of the railroads, report the payment of $51.239.64, the collections being made for twenty-two concerns. The claims amounted to $40,593.31, but interest swelled the total by $10 646.33. Many other claims are on file and a larger sum is expected to be returned by way of reparation on shipments of fresh fruits and vegetables during the same period.

THE RAILWAY CONSOLIDATION

Extract From the Forthcoming Annual Report of the Secretary of Commerce.

THE past year's experience of the department in its relations to transportation has shown even more emphatically than ever before the necessity for the consolidation of the railways into larger systems under private ownership, the principles of which were established in the transportation act of 1920. The difficulties of reorganizing the rate structure so as to secure simplification and to give relief in primary products—agricultural, coal, etc.—by a fairer burden upon finished and LCL goods are almost insuperable until the different systems are possessed of more diversified traffic and until the weaker roads have been absorbed. The necessity to establish railway credit and finance on a broader foundation than sole reliance upon the issue of mortgage securities; the necessity of provision for common utilization of terminal and other facilities; the impossibility of providing adequate rolling stock and particularly specialized cars so long as the burden falls solely upon the strong roads, the difficulties of more definite control of car service to meet seasonal demands and routing; the insuperable problems of equalization in car interchange; the slow progress in standardization and maintenance of equipment all point to the imminent desirability of early progress with consolidations, if we are to have a transportation system adequate to the necessities of the country and containing in itself the strength for annual increase.

The policy of control of rates is fixed by national and state legislation. This policy has superseded the theory that reasonable rates are to be obtained through

competitive action. The idea of protection against excessive rates through the maintenance of competition is now dead. We should therefore secure the largest possible benefits from consolidation into larger systems securing consolidation in such fashion as will protect and advance public interest.

The urgent importance of the early consummation of consolidation warrants consideration of methods to expedite it. Under the present provisions for wholly voluntary action subject to the Interstate Commerce Commission, many consolidations are likely to be long delayed. The difficulties of negotiation between the members of the groups that will be established by the Interstate Commerce Commission; the complications arising from carying priorities of securities affecting the determination of terms of purchase by one railway line of the property of another; the unwillingness of some lines to acquire or to sell others; the questions of individuality; the difficulties of establishing by negotiation the relative value of one property to another; the necessity of holding capitalization within the limits of the actual property values; the complexities and conflicts of State regulation and laws—all these problems would find a great measure of solution if the consolidated systems were allowed Federal incorporation and if after a lapse of some appropriate period for voluntary action the Interstate Commerce Commission were given authority to create definite organization committees for each system including representation from the public and from the component roads. It should be the duty of such committees to develop and perfect a plan of consolidation either through the exchange of securities of the consolidated systems directly with the security holders of the component roads or by some other method. I believe that under such auspices the security holders would be willing voluntarily to make such an exchange. If a minority should refuse, it would be entirely feasible to invoke condemnation and purchase of their securities for the consolidated system at an established fair value. Such a method would permit the determination of the relative value of the different railways considering both the physical properties and the often lower total of their securities, and due account could be taken of future as well as present conditions.

The ownership of some roads or terminals jointly by two or more consolidated systems could be provided for, as there are cases where such a solution would be most advisable in creating more efficient transportation. The public interest could be safeguarded by limiting the total capitalization of consolidated systems to an amount not exceeding the physical value of the railways as determined by the Interstate Commerce Commission under the transportation act as of June 30, 1914, plus actual capital expenditures and deducting abandonments and depreciation since that date. The total capitalization of many of the consolidated railways would probably be less than the Interstate Commerce Commission physical valuation and certainly less than their present nominal capital. An approach to the problem through organization committees is in accord with common business practice, and if it were made possible it should result in greatly expediting consolidations and in their perfection on terms soundly protective of public interest and with an equitable adjustment of relative values between the component roads.

NORWEGIAN CANNERY FIRM CELEBRATES SEMI-CENTENNIAL.

ON the occasion of its fiftieth anniversary this fall the Stavanger Preserving Company issued a handsome booklet in English, giving an illustrated review of the concern during the half-century of its existence.

The Stavanger Preserving Co. is the oldest firm of canners in western Norway, and is actually the founder of the Norwegian sardine industry. After six years' woking it took up a new aticle which was destined to be of the greatest importance to the firm and the country. This article was smoked Brisling in olive oil, the Norwegian sardines. Brisling had already been used for a long time back for anchovies, but only very small quantities could be utilized in this way. The bulk of the brisling catch was salted or spiced in barrels and exported to the Baltic ports, Germany and Denmark. Brisling was sold cheap, the price at the fishing places being 2 kroner a barrel at most. The revolution in the canning industry caused by the new method of treating the smoked brisling as other canned foods is illustrated by the fact that the price of brisling has risen now to 20 kroner a bushel.

It is a rapid development which the Stavanger Preserving Co. has experienced during its first half century. It holds now a powerful and leading place in the Norwegian canning industry. During the sardine season the number of hands at all the firm's factories totals 600, and 150,000 tins of sardines can be produced per day. During seasons when raw material was abundant the firm has packed up to ten million tins of brisling and small herrings. Placed in a row side by side this number of tins would reach about 1100 kilometers (nearly 700 miles). Further there have been packed up to 500,000 kilos of fish preserves (fish-balls, carbonade of coal-fish. etc.), 300,000 kilos of preserved meats, 300,000 kilos of anchovies and spiced herrings of various kinds, besides herring in tomato sauce and bouillon, mackerel in tomato sauce, and kippered herrings. Of the last named article the firm packed during 1922 over two million tins, and in the course of seven weeks in the present year between four and five million tins. The raw material consumed amounted to 15,000 hectolitres of spring herrings, or about one-third of the total spring herring pack in Stavanger.

As an illustration of the rapid increase in the firm's production of brisling and herrings, it may be stated that the output was double from 1904 to 1907; in 1910 it was four times, and in 1912 six times as great as in 1904. The total turnover was trebled in the same space of time.

The firm itself disposes of all its production, having its own sales and export organization with agents all over the world. Practically the whole output is sent out under Stavanger Preserving Co.'s own brands, with the firm's name printed on all tins.

Stavanger Preserving Co. started in 1873 with the modest capital of 5000 specific dollars (about 20,000 kroner). In 1891 the capital was increased to 100,000 kroner, in 1900 to 300,000 kroner, in 1911 to 360,000 kroner, in 1917 to 720,000 kroner, and is now 1,800.000 kroner. These increases are chiefly due to capitalization of accumulated profits.

SMILE AWHILE

"AS SHE IS SPOKE"

Three gentlemen from Welsh Wales walked into a Manchester establishment and asked for three glasses of vintage port.

After smacking their lips, the first one said: "Look you! that's the finest glass of port wine I've neffer tasted!" The second remarked: "So did I also!" And the third capped it with: "Neither did I, too."—London Morning Post.

HE KNEW

Sweet Young Thing—Let us go into this department store until the shower is over.

Suffering Husband—I prefer the undertaker's. You won't see so many things you want.—Brooklyn Life.

A DISCOVERY

The traveler had returned to his native village after being abroad for 20 years. He stopped as he saw a little boy with a small baby coming down the road.

"Ah! a new face, I see!"

"No, it isn't, sir," replied the boy, looking at the baby. "It's just been washed, that's all!"—Philadelphia Inquirer.

"WHY NOT NOW?"

"I'd be much better off if they'd put that sign on the mail box."

"What sign?"

"Post no bills."—Virginia Reel.

"ALL ABOARD!"

Old Colored Mammy—Ise wants a ticket fo' Florence.

Ticket Agent (after 10 minutes of weary thumbing over railroad guides)—Where is Florence?

Old Colored Mammy—Settin' over dar on de bench.—Princeton Tiger.

FACING FACTS

One morning while the children were eating breakfast Milford put two heaping spoonfuls of sugar in his cocoa.

"I should think one spoonful would be enough," objected his sister.

"I should think so, too," he replied; "but it ain't."—Farm and Fireside.

EDITORIAL

REPORTING ASSOCIATION MEETINGS—Some of our good friends in the State Associations have felt slighted that we did not attend their meeting and report the proceedings in full, as, for instance, we did with some of the others. There was no intended slight in this, and we did not "pass up" their meetings because we did not consider them as important or as impressive as any other. The whole trouble is that we have not the extensive and numerous reportorial staff that would be necessary to permit attendance at every meeting. The writer would ask nothing better than to be able to pass his entire fall and early winter attending these State and local Association meetings, because he knows what a dandy, congenial crowd is always present. But it just can't be done, friends—that's all.

Where we can't "make it," we ask the Secretary to furnish us a report, because every one of these meetings is important, and not alone to its members, but to the entire industry; and it would, therefore, be reported that the other branches of the industry may know what is being done. That is the only way to secure co-operation in Association work. Unfortunately, the Secretaries are always busiest at this particular time, and that makes it hard for them to comply; but, be it said to their credit, they always try, and if they do not get out as full a report as some of their members think should have been done, let all remember that the task is a bigger one than many realize. Just as an example: The recent Tri-State meeting covered, actually, one day's full meeting. It met on Monday at at the banquet at 7 P. M., where the speechmaking 2 P. M., adjourned for a short time, and reassembled continued. Next morning 10 o'clock found it in session again, and it adjourned at 1:30, and the members went home. In that one full day's meeting our reporter transcribed 30,000 words, which does not include several addresses which were prepared ahead of time, and one or two—three actually—which were not taken down. Just keep that in mind when you think your Secretary ought to have covered the meeting more fully.

HERE'S BREVITY FOR YOU—Secretary C. L. Austin, of the Iowa-Nebraska Canners' Association, reported their annual meeting, held at Omaha, to members as follows:

ECHOES—ANNUAL MEETING
OMAHA, NEBRASKA

1. Best yet:
   (a) Attendance.
   (b) Entertainment.
   (c) Constructive Sessions.
2. Endorsements:
   (a) Canned Foods Week.
   (b) Zone Warehousing.
3. Election:
   President—George W. Kirtley, Merrell Canning Co., Harlan, Iowa.
   Vice-President—A. E. Stewart, Norfolk Packing Co., Norfolk, Neb.
   Secretary—C. L. Austin, Des Moines, Iowa.
   Treasurer—J. W. Hill, Grimes Canning Co., Des Moines, Iowa.
   Director (New)—M. W. Jones, Sac City Canning Co., Sac City, Iowa.
4. Next Meeting:
   By call of President—probably January.
5. Watch for further announcements from this office.

A LEADER IN THE INDUSTRY—In all great industries, and at all times, some one man usually stands out with the greatest prominence, because of his unusual ability and merits. Now, and for some time past, it has been James Moore, of the New York Canners, Inc., and until recently President of the National Canners' Association. A trained and skilful lawyer, circumstances brought him into business, and he has measured up to the highest demands of that exacting profession, an accomplishment not often recorded. He is not only one of the best, but he is one of the most careful, most honest thinkers in our industry, and he has vision and ambition for the canned foods industry second to none. And with it all he is the most modest of men. He has never sought to force his opinions on the industry; on the contrary, it has been difficult to induce him to speak, unless he be stirred by some hap-

pening out of the ordinary, as last year, for instance, in the broker aggitation, and again this year in this Warehousing Plan discussion. And those on the other side of these arguments will long remember his expressed opinions. The broker matter and his address at Chicago on that occasion are history, but not forgotten, and we respectfully recommend a careful reading of Mr. Moore's remarks at this Tri-State meeting by every opponent of this Warehousing Plan, and more particularly do we call the attention of the Chairman of the Conference Committee of the National Wholesale Grocers' Association to these remarks.

To those canners who may be sitting in doubt in this important question we recommend a careful reading of Mr. Moore's and President Anderson's remarks at the Tri-State Banquet.

THE READER'S PLEASURE AND COMFORT OUR GUIDE—Did you ever think of the miracle of the human voice? Let a speaker of good voice address a huge auditorium full of people, and his voice will carry into every corner, and every individual present will take from it a satisfying amount, and yet diminish it not one bit nor rob his neighbor of his full share of it. If there were but one listener, he would take it all; and yet if there were one thousand listeners, each one would take from that voice just as much as the one.

And so it is with a trade journal like "The Canning Trade. Its big family of readers, spread out over the entire United States, Canada and much of the globe where canning is pursued, embracing practically every wide-awake and alert canner and a very large proportion of the smaller, and less aggressive ones, takes from each issue the things they want, and yet leave for all else whatever they may care for.

We know no better time to acknowledge our responsibility to this big family than this Christmas season, nor any better occasion than the beginning of a new year to thank them for their loyal support, and to promise them more devoted attention than ever before. Usually there is an ebb and flow to a subscription list—one drops out and another new reader comes in—but for the past year the only ones dropping out seem to have been those who have gone out of the business, and the additions, due to the recommendations of our friends, have exceeded the withdrawals in a steadily increasing volume. And not alone in numbers, but in closeness of touch and an increase in interest. The closeness of this reader interest in every section of the country, and even in foreign lands, not only brings home to the Editor the seriousness of his task, but it is heartening and encouraging and most appreciated. We have a great, big, closely-knit-together family, with a common interest, that it is a pleasure as well as a privilege to serve, and if we can serve you better in 1924 than you were ever served before, you bet we will do it. We are going to try to be worthy of the confidence you repose in us, and to give you even a little more than you expect. That is our resolve for 1924.

You will note that we have changed the size of the type in which most of the reading matter is now set, as compared with the way we formerly set it. This is in response to a request from many quarters. The smaller types are a little hard to read; therefore, we are setting the paper in larger, more easily read type. And be assured of this: We are always ready to make any changes or additions or improvements our readers want. It is your paper, and we are going to see that it suits you.

Some advertisers seem to lose sight of the importance of this reader-interest and to stray off after false promises. It reminds us of President "Jimmy" Anderson's story of the suckling calves and the stampede of steers. You know the calves left their mothers and joined the rushing steers, and the two boys herding them tried to head them off, but were not able to do it. One of the boys was far from home, and when he could run no further, yelled to the calves: "Go on, you darn fools, but when you get hungry you'll wish you hadn't gone."

God rest ye, merrie gentlemen, and may this Christmas bring you the peace and joy the Angels sang about on that first Christmas morn; and may your every effort in 1924 be blessed with success, your home and dear ones with health and happiness.

TRIBUTE TO EDMUND C. WHITE

President of W. W. Boyer & Co., Inc., Canners and Can Manufacturers and Former President of the Baltimore Canned Goods Exchange, Who Died at His Home in Baltimore, Md., on December 14th.

ON Friday morning, December 14th, at his home, in Baltimore, died Edmund C. White, president of W. W. Boyer & Co., Inc., and former president of the Baltimore Canned Goods Exchange. In the death of Mr. White closed a canning career that had continued during a period of more than forty years. In early manhood Mr. White became associated with the firm of W. L. Ellis & Co. Here he began that splendid, highly useful canning career that continued until his death a few days ago; and it was just that—a splendid highly useful canning career that remained stainless and unblemished unto the end. And who will say that it wasn't—who will say that the public and the private life of the admirable "Ned" White was not stainless and unblemished from very beginning to very end? In the death of Mr. White the canning industry of Baltimore and of Maryland has suffered a severe loss; the richer because of his presence in it, it has become the poorer because of his going away.

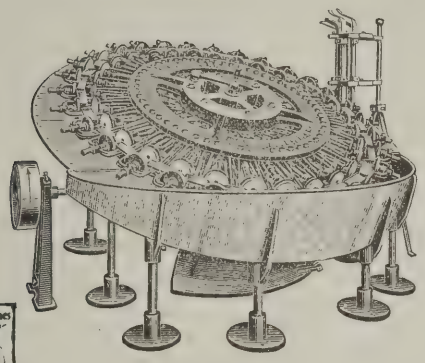
Were all canners imbued with the same high principles and the same high resolves which animated the life of Edmund C. White, the best hopes of the industry to which he dedicated his life and its best energies had long ago been realized.

"Ned" White was stubbonly and uncompromisingly honest. He never wavered in his belief that "honesty is the best policy," a maxim that had vigorous expression in all his personal and in all his business relations.

In the councils of canners he played a useful but not especially conspicuous part. His judgment, the outgrowth of a ripe experience, was usually sound and of wholesome quality; and his opinion in matters having to do with canning was often sought and deferred to. It may be said that he enjoyed well-nigh universal respect. He was particularly well regarded by fellow-canners, as he well deserved to be. Says Channing, "every man is a volume, if you know how to read him." Who knew how to read "Ned" White found him absorbingly interesting.

We read the last chapter of this interesting life regretfully and with feeling that it was written all too soon. But, from first chapter to last chapter, it was a fine life, remarkable for faithfulness to duty and for loyalty to friends but especially remarkable for its steadfast and unwavering adherence to the best traditions of the great industry to which he dedicated, yea, ever consecrated, the effort of more than forty years.

AMERICAN CAN OFFICE MOVES



We are in receipt of the following notice:

We beg to announce the removal of our district sales office from Maryland Trust Building to the new Citizen's Bank Building Light and Redwood streets (one block west of our present location). However, due to the fact that our offices in the Citizen's Bank Building are not yet completed, from January 1st, 1924, we will be temporarily established at our Maryland Factory on Boston Street.

We expect to get in our permanent quarters in the Citizen's Bank Building on or about February 15th.

AMERICAN CAN CO., Baltimore, Md

A Positive Test

"BLISS" No. 14-K Automatic Water Tester

THE better your tester is, the better are your cans. It enables you to keep the rest of the machines in the can line right up "to the mark." The large number of pockets in our machine and the smooth and uniform travel of the carrier wheel reduces the agitation of the water in the tank to a minimum, making it easy to detect leakers.

LANDRETH GARDEN SEEDS

THE LANDRETH

SPOT OR 1923 CROP SEEDS

We have for spot delivery, a few Alaskas, Green Admirals, Advancers. These are all short. Sweet Corn is short. We still have some however. Write us for prices.

We also have the following for spot delivery——

Peas Okra Cabbage Cucumber
Corn Tomato Spinach Snap Beans
Beet Squash Pumpkin Cauliflower
Dwarf Lima Beans

Or any other varieties you may want.

FUTURE OR 1924 CROP SEED

When ready to place your Contract order for delivery after 1924 crop is harvested, write us for prices.

If we had not grown good seeds, given fair prices and careful attention to business, we would not be the oldest Seed House in America, as this is our 139th year in the business.

D. LANDRETH SEED COMPANY

BRISTOL, PA.

Business Established 1784
139 years in the Seed Business.

THE TRI-STATE PACKERS CONVENTION

Philadelphia, December 10th and 11th, 1923
Hotel Adelphia

Dr. Symons and Mr. Radebaugh report progress on Better Tomato Growing—Mr. Hannigan draws fire on Swell Question—Association votes increased amount for crop improvements —Warehouse Plan Adopted—Tomatoes to be bought on U. S. Grading.

(*Continued From Last Week*)

RELATION OF PRODUCTION CONDITIONS TO RAW PRODUCTS QUALITY

By C. G. Woodbury,

Bureau of Raw Products Research, National Canners' Association, Washington, D. C.

THE future of the canning industry belongs to the quality packer. The consumption of canned foods may be increased indefinitely if every can is what Harry Strasbaugh calls a "trade booster."

Educational work and selling effort will induce people to try a given kind of canned foods once—or, perhaps, again—after that the question of whether the industry has gained another family for a regular customer depends solely on the appeal of the can of food, or whether this final and silent salesman has convinced the housewife that he is thereafter to be welcomed or avoided. The answer to that question is being given hundreds of times every day in the kitchens and on the dining tables of the world.

A year ago at Wilmington there was an exceedingly frank family discussion among the Tri-State packers. The conviction was there generally expressed that the greatest step which could be taken for the advancement of the Tri-State industry would be the general improvement of the quality of the pack. The same could doubtless be said about other important canning regions as well.

High Quality Raw Products the First Essential—If it is true that increased demand and a growing industry depend on quality of output, it is equally true that the point where improvement must and should begin is with the raw product.

It was with the conviction, based on abundant evidence, that the application of more scientific methods of production would result in improved quality of raw product, and hence of improved quality of finished product, that the National Canners' Association established the Raw Products Research Bureau.

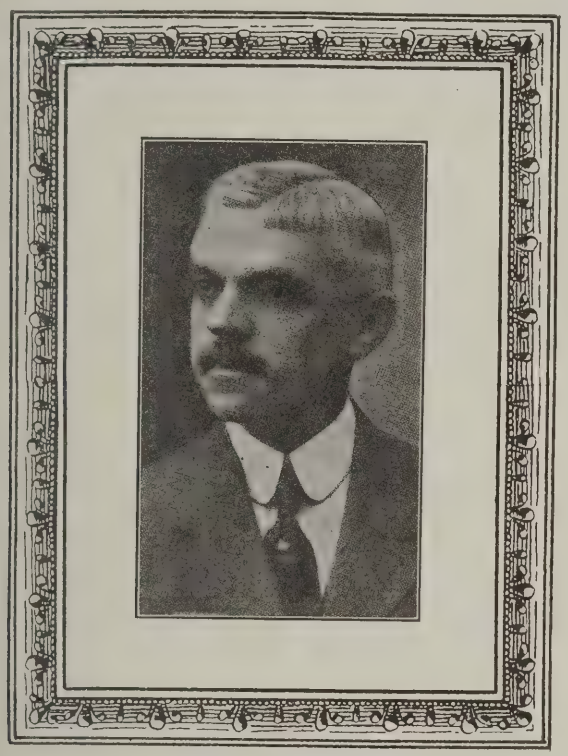
We are interested in rendering every possible service to canners which will result in better production practices, in improving quality and increasing yield per acre, and in reducing the hazards of production from insects and plant diseases. We recognize that a high quality raw product cannot be produced from a weak plant, devitalized by plant diseases or insect pest or starved through poor soil management or lack of fertility.

Not More Acres, But Better Acres of Canning Crops—We are not interested in a bigger acreage of canning crops except as the demand compels expansion, but in *better acreage*, producing the highest possible quality of food products. Rather than depending only on more acreage if we need to increase production, let us, by more efficient production practices, by a better canning crops agriculture if you please, produce our pack from fewer acres. With more efficient and more scientific production methods, along with a better canning crops agriculture, will come a quality which makes it possible to pack products which spell satisfaction to the consumer and prosperity to the canner and grower.

How Canners May Help Bring About More Efficient Production—What is the procedure by which we can influence production practices, develop more effective control of insect and plant disease, find improved varieties, develop better strains of seed and bring about through all these and many other means a better canning crops agriculture? The procedure, of course, depends upon the problem, and the problems are as diverse and complex as the canning industry.

Among the most effective agencies through which we may work to promote the improvement needed are the State Agricultural Colleges and Experiment Stations and the United States Department of Agriculture. These institutions are great service agencies not only for the farmer in the narrow sense, but their function is to apply the findings of agricultural science to food production industries generally, and we have found them without exception willing to do everything in their power to solve the problems we have brought to their attention. These institutions are generally undermanned and underfinanced, and we should do everything we properly may do to enable them to carry on their researches on the most efficient scale.

The Educational and Research Institutions Invaluable to Canning Industry—Dean Symons will probably tell you something of the problems of the University of Maryland and the plans he has in mind to render greater service to the canning industry of Maryland. I wish only to emphasize the fact that in the Universities of Maryland and Delaware, and in the College of Agriculture of New Jersey the canning industry has an asset, a source of help and service which has never been utilized fully because the industry has never taken the trouble in any organized way to become thoroughly acquainted with these institutions and with the men who make them. We are now beginning to do that, however, and we are recognizing more fully than ever that the canning industry rests on an agricultural foundation, and that the canners' business is affected directly by the skill and efficiency which go into crop production.



What Was Done in Tomato Improvement in 1923—One phase of the work of the colleges was illustrated in a remarkable manner in connection with the tomato situation in the Tri-States this year. Partly as a result of our own field investigations and of many conferences with the agricultural experts of the Tri-States, and very largely as a result of the co-operation and financial backing of this Association, a plan was worked out last year for a tomato improvement campaign. A feature of this effort to increase the quality and the yield of Tri-State tomatoes was the operation of community plant beds. Mr. Radebaugh,, who was detailed by Dean Symons to take a large part in the carrying out of this work, will tell his own story tomorrow better than I could tell it for him. I am not going to trespass on his subject. There is one point, however, to which I should like to call attention. The Government figures on yield per acre in 1923 show that in nearly every tomato-growing State there was a decided falling of from the yield of 1922. In marked contrast to this general condition three States showed increased yields per acre in 1923. One of these was Michigan, but Michigan is credited with less than 3,000 acres of tomatoes grown for manufacture. The other two States showing increased yields were Maryland and Delaware. It was in Maryland that the most general effort was put forth to teach and demonstrate better production methods and to get the grower to put these methods into practice. The figures show an increased yield per acre for Maryland in 1923 of over 50 per cent from the 1922 yield. They show an increased yield for Delaware of 33 per cent. For New Jersey the figures show, to be sure, a slight decrease—about 10 per cent—but this is a much smaller decrease than is recorded for most other States. To be sure, seasonal conditions and weather played a part in this Maryland triumph, but even in Maryland the conditions for growing plants and for getting a favorable start in the spring and early summer were the worst experienced in years. The community plant beds, the use of better seed, and the interest aroused among the growers certainly helped materially to turn the trick and gave scores of canners a raw product this season from which it was possible to put up the best quality pack.

Only a Beginning Has Been Made in Improvement in Crop Production—Only a start has been made in the improvement of tomato growing in the Tri-States. Much remains to be done. But the method of approach to the problem has been shown to be sound. Among other things which need additional study is the protection of tomato beds from disease and insect attack.

Tomato Mosaic—There are some diseases, such as mosaic which live over winter on hardy weeds. If these weeds, such as horse nettle and ground cherry, are allowed to grow near a plant bed, the infection may be carried by insects to the seedling tomatoes, and in a few days diseased plants are being sent out broadcast. Arrangements have been made whereby Dr. Norton, of the

Maryland Experiment Station, and Dr. Manns, of the Delaware Station, will make a special study of this mosaic disease next season. Much valuable information was gathered by Dr. Norton through preliminary studies he was able to make during the latter part of the past season. While not reducing the crop materially in all sections, there were many fields in which mosaic, especially that resulitng from early infection, was the cause of serious loss.

Tomato Wilt—The wilt or fusarium is another tomato disease which is probably more serious than mosaic. This fungus lives from year to year in the soil, and when the soil is once infected, the disease-producing organism enters the tomato plant through the roots and the characteristic wilt develops in mid-season. This wilt may often be recognized by the brown discoloration of the tissues of the stem through which is carried on the plant circulation of sap and water. Fusarium wilt is widespread in several Maryland counties. Dr. Norton has bred some varieties which are commercially immune to the disease, and the U. S. Depart-

CHAS. S. STEVENS
President

ment of Agriculture has likewise developed and introduced several. These include Norton Norduke, Arlington Columbian and Marvel. The wilt-resistant tomatoes which have been tried most extensively, however, are a strain of stone which ripens too late to be of greatest value. Plans are being made now to test all the promising wilt-resistant tomatoes on infected soil in one of the Eastern Shore counties. It is hoped that seed selection may be carried on locally to develop a strain which will meet the need not only for wilt resistance, but for type, yield and season of ripening.

Control of Leaf Spot—The control of the destructive leaf spot by fall plowing is an important new development of the year. It has been shown by Dr. Pritchard, of the U. S. Department of Agriculture, that the leaf spot fungus overwinters on dead tomato-plant refuse and on certain dead grass and weed material. The fungus will survive on material which is exposed; it will be killed if the material is turned under. Fall plowing, which is a feasible farm practice in many sections, is one excellent means of reducing the sources of infection for the following season.

Better Plants—Much remains to be done in developing further the best methods of growing and handling plants. The increases in yield from the plants grown in the community plant beds have been truly remarkable. There are, however, still better methods of growing plants than the open plant bed. Some communities have already made sufficient progress to be ready for the next step in improvement.

Improved Seed Strains—Developing of local strains of improved seed is another line of effort which is certain to yield results of great practical value. Such qualities as evenness of ripening from blossom end to stem, smoothness, uniformity of type and ability to stand up well after picking are all exceedingly important. Community effort in the careful selection of seed, with the proper co-operation between canner and grower, will do much to develop locally adopted strains having these qualities. Such work is planned for at least two important tomato-growing counties for next season.

Other Important Canning Crops—We have spoken in some detail of the problems surrounding tomato production and the means which are being employed toward their solution. Through the co-operation of research scientists, county agricultural agents and other forces connected with the colleges and experimental stations, progress in tomato improvement is being made with increasing momentum. It is a pleasure to add that this co-operation, so vital to success in effecting permanent improvement, is being extended to us in increasing measure.

There are other important canning crops in the Tri-States, however, and each has its need for study and research. Each offers opportunity and incentive for raw products research. There is opportunity for improvement in beans, peas and sweet corn, as well as with tomatoes. I do not wish to weary you, however, with too detailed a discussion of all the angles of the raw products research interest of the National Canners' Association in the Tri-States.

Sweet Corn Improvement—With sweet corn the matter of improved seed strains and the best sources of seed are of outstanding importance. The U. S. Department of Agriculture is carrying on some very interesting studies, as yet unpublished, on the relation between variety of sweet corn and canning quality. The University of Maryland has made valuable contributions to our knowledge of the influences which determine the duration of the canning stage, and especially of the precise effects of temperature on that duration. A means of forecasting the probable date of duration of canning stage with relation to planting date has also been carefully worked out and should be tested more fully by canners.

Important progress has also been made in our understanding of bacterial blight, or Stewart's Disease, of sweet corn, including the effects of soil moisture and soil temperature on susceptibility to the disease. This trouble has caused large losses in the Tri-States in certain seasons, especially in Golden Bantam.

Pea Root Rot and Seed Inoculation—With peas we have the problems of root-rot, seed supply, and aphis control. Every advance in the understanding of root-rot emphasizes the importance of starting pea growing with a fairly long rotation. Peas should not follow peas. Where peas are put on land which has not grown them before, the seed should be heavily inoculated with a reliable bacterial culture. There are many worthless, or, at least, unreliable cultures on the market and a few trustworthy ones. With proper inoculation the pea plant is enabled to obtain much of its nitrogen requirement from the air through the bacteria which inhabit the nodules on the roots. If inoculated peas show abundant nodules on the roots, there is no need for inoculation.

The root-rot organism is very likely to become established in the soil if peas are grown two or three years in succession. The disease, like the fusarium of tomatoes, persists in the soil, constituting after it becomes established a continuing hazard. An effort is being made to breed Alaska peas which will be resistant or immune to root-rot. Results are encouraging, although on too small a scale as yet for practical application.

Danger From Poor Seed—With the alleged shortage in seed, there seems to have been a marked tendency this year, according to information which has come to us to put on the market so-called farmers' stocks of Alaska. Some of these degenerate strains are said, also, to contain a mixture of the purple-blossomed Bangolia, which causes the liquor to turn black in the can. The National Canners' Association Laboratory has developed a chemical method for determining the presence of this pea in seed samples. We will be glad to receive samples which may be suspected. While always important, it is, perhaps, this year more important than usual for the canner to satisfy himself regarding the history of his pea-seed stock.

Pea Aphis—Valuable progress has been made this year looking to control of pea aphis. While a sure cure cannot be announced, a machine has been developed on an experimental basis by Mr. Dudley, of the U. S. Entomological Laboratory, of Madison, Wis., which will be given thorough trial in at least two localities in the Tri-States next season. The machine collects the aphis from the peas without the dust, spray or other insecticide. It is comparatively inexpensive, is drawn by one horse, and costs only the driver's time to operate.

Canners' experience in Wisconsin and elsewhere shows very definitely that the attack of aphis lowers the quality as well as the yield of peas. An inexpensive and practical control for pea aphis will remove one of the serious hazards of production of this crop.

Raw Products Improvement Important to Grower—Let me repeat that the purpose of the National Canners' Association Raw Products Bureau is to develop and promote methods for improving the quality of the canner's raw product. The breeding of better varieties, the control of diseases and insect pests, the more intelligent use of fertilizer, the effort to develop a better canning crops agriculture all along the line are means to this end. There are many advantages to the grower as well as to the canner in effort in this direction. The improvement in quality and yield are objectives for which the canner and the grower may well work together in whole-hearted co-operation, and with mutual advantage. The increased yield which is associated with high quality reduces the grower's production costs. Our friends who figure these things out now generally realize that it is cost per ton or per basket and not cost per acre which is significant to the grower. The first and most direct method of reducing that cost is to increase the yield.

Bringing Home the Bacon: Increasing Consumption—For the future of the canning industry quality must be emphasized all along the line. Quality of pack begins with quality of raw product. Canners are helping materially to make possible improvements in the raw product by increasing their co-operation with the research and extension groups in the colleges. The results of the work of these men are making the growing of canning crops an object of interest to a better class of farmers, who by their skill and intelligence and by their use of the most efficient methods are able to obtain the maximum in both yield and quality. Through the raw products work, therefore, we start a chain of circumstances, of action in reaction, which carries improvement right through to the consumer. When that object is obtained, the chain of progress begins all over in the increased consumption of the canner's products.

This completed the first session of the Convention. There was such a wealth of important addresses at the banquet in the evening, when both President Anderson and Ex-President James Moore made further answer to the wholesale grocers' contention regarding the Warehouse Plan, addresses that will live long as notable ones; and there were in addition splendid addresses by popular "Bob" Sindall, in charge of the entertainment; of George W. Cobb, of the American Can Co., and whose utterances we are growing afraid to attempt to report, because of the liberties the types take with him; and many others, to say nothing of the big and important meeting of Tuesday morning, that it is impossible to get all the report in this one issue. We are going to reserve these latter for our next issue, but that your curiosity as to the new officers and the action of the Convention as expressed in its resolutions may not be kept waiting, we give the list of elected herewith, and likewise the resolutions as passed:

THE ELECTION

President—Chas. S. Stevens, Cedarville, N. J.

V. P. for N. J.—G. S. Diament, Cedarville, N. J.

V. P. for Md.—R. H. Saulsbury, Ridgely, Md.

V. P. for Del.—V. Clyde Carroll, Georgetown, Del.

Sec.-Treas.—Cassius M. Dashiell, Princess Anne, Md.

Executive Committee—New Jersey, H. H. Hankins and Samuel Watson; Delaware, H. L. Cannon and C. L. Record; Maryland, H. P. Strasbaugh, W. H. Kilian, Dr. A. S. Cover, W. K. Leatherbury and A. W. Feeser.

THE RESOLUTIONS

Resolved, That this Association extends its heartiest thanks to the members of the Allied Industries for the splendid entertainment and banquet tendered us, and also to Mr. Edward J. Cattell, Prof. Thomas B. Symons, Messrs. Hannigan, Clark and Woodbury; President James A. Anderson, Messrs. James Moore and George W. Cobb, C. W. Hauck and A. D. Radebaugh, the speakers who have so earnestly and instructively addressed our meetings.

Resolved, That this Association, believing that the Zonal Warehouse Plan of the National Canners' Association for dealing with spoilage in canned foods, is efficient and thorough, just and fair, economical in its administration, and will prevent trafficking in spoiled canned foods, does hereby endorse the plan and pledge its hearty support to same.

Resolved, That as every canner is vitally interested in increasing the distribution of canned foods, and believing that Canned Foods Week is an efficient factor to that end, we recommend the support of this movement by all canners in the Tri-State territory, both by personal and financial aid.

Resolved, That recognizing the splendid results secured in the season of 1923 from the work conducted by the State Extension Service, in promoting Community Tomato Plant Beds, with their attending educational features, we recommend that these same agencies be urged to continue this work during 1924; and, further, that the Tri-State Packers' Association contribute the sum of fifteen hundred dollars from its treasury or from individual subscriptions of its members and others for the carrying on of this work; and, further, that a sum of one thousand dollars be similarly raised and appropriated for special work on sweet corn.

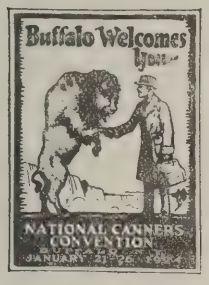
Resolved, That this Association record its appreciation of the valuable work by the Bureau of Raw Product of the National Canners' Association, under Dr. G. C. Woodbury, in co-operation with the State Extension Service.

Resolved, That the Tri-State Packers' Association, 70 per cent of whose membership are citizens of Maryland, and this Association being the only organization outside of Baltimore City which can speak for them, earnestly endorse the appropriation of $10,000 by the State of Maryland for the improvement of canning crops and thus assist the Extension Service of the University of Maryland to furnish further aid to growers and canners in the producing of canning crops, also in the control of insects and diseases, and in better standardizing these crops and canned products in this territory.

Resolved, That this Association approves of the effort of the United States Department of Agriculture to establish grades for cannery raw stocks, which may be put into use between grower and canner, to the end that the grower may be encouraged to produce a higher and more uniform quality, and be compensated for same, as against the indifferent grower of inferior produce; and, further, that the grades proposed by the department known as U. S. Grades, No. 1, No. 2, No. 3, as amended, making minimum size for No. 1 grade 2½ inches, be adopted; and, making grade No. 2 the basis of price and paying a premium for grade No. 1 and a reduction in price for grade No. 3.

THE BIG BANQUET

THE Get Together Committee—Harry Krebs, who broke into harness again for this occasion, after a long vacation and rest; James A. Cole and R. (Bob) A. Sindall—always treat the Tri-Staters as if nothing was too good for them, and had provided for four hundred guests—and they needed every seat and more. The great gold banquet hall of the Adelphia was crowded to its capacity, and a mighty fine dinner was served. Apparently most of the diners had imbibed, or inhaled, or in some way or some how acquired their before-dinner cocktail before coming into the banquet hall, and so all seemed in a merry mood when the feast opened. The famous Senator Orchestra, with its irrepressible song-leader, kept things on the move. But this crowd needed no urging to sing the songs which were provided; in fact, there was a continuous demand for encores.



After the inner man had been well taken care of, President Records asked popular "Bob" Sindall to open the festivities, and he did so, making a very neat and to-the-point address of a few minutes. The President thereafter called upon the speakers whose addresses are given below.

The cabaret, or vaudeville, or "show," was reserved for the last, and we could not help but feel sorry for the entertainers. The aforementioned cocktails had gone "stale"—every banqueter had sat patiently and interestedly drinking in the words of the many speakers until about 11 o'clock, and the entertainers faced a sober, well-fed and thoroughly contented throng, too comfortable to exert itself to applaud the performers. These performers were not particularly good, but they strove hard to please, and really deserved more of a "hand" than they got.

The Convention was the guest of the following supplymen and brokers:

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

THE ORATORY

CHAIRMAN—Gentlemen, you may think you are hearing quite frequently of the National Canners' Association, perhaps, but I think it is well that we are. I don't think any of us can afford not to be members of the National Association, and I want to encourage all of you to listen carefully to what the officers of the National Association have to say to you.

It gives me pleasure to introduce President Anderson.

ADDRESS OF MR. JAMES A. ANDERSON
President of the National Canners' Association

EVEN though I am from way out in the West and from a country town, yet I appreciate the splendid hospitality of the East and appreciate the splendid friendship that I have met here, and you know I used to think that all there was to live for was out in the West, but I have learned that this big, old world of ours has its advantages everywhere. I am going to recite you a little poem which will illustrate my point as to what I think we ought to feel toward each other, no matter what part of the country we may come from. This little poem may sound rather crude—I don't claim to be a poet, but it just expresses my sentiment the way I feel tonight:

When you ask what place I love the best—
There is no East, there is no West—
It's just one big, broad land to me,
With a host of friends and opportunities.
North and South both have their charm:
One is cool, the other warm.
Then, why not take the broad view
That God intended all for you.

I love the East and old Broadway,
From the Wall Street Church to the cabaret;
I love the West, with its broad expanse,
Where rich and poor all have a chance.
I love the North, with its frost and snow—
There's pep and vim wherever you go.
Though keen and shrewd in their dealings with you,
They're honest, industrious, sturdy and true.
I love the South, with its sunny clime,
The Mardi Gras and the gay old time,
And the bathing girls in their modest glee,
And that fine old Southern hospitality.

Then there's just one place I think the best,
Deserving praise above all the rest,
It's the place that God intended should be—
That great big United States to me.

After all, you can judge the man by the kind of goods he puts out. You can judge his surroundings, you can judge his attitude toward the general public, you can judge whether he is a public benefactor or not, largely by the class of goods that he puts out, and so I want to say, gentlemen, that quality should be our watchword in all our goods. And what I say about quality noobody can take to heart, because I just know that the things you produce down here in the Tri-States and that you ship out to Utah are always good. Of course, we don't let any come out there because we don't allow competition. Do you know that every man who produces a can of poor quality goods is a menace to this great industry, no matter whether he is packing tomatoes, peas or corn or anything else—it don't make any difference what kind of an article—if he puts a poor quality into a can, that quality, when it goes to the consumer, reduces the consumption of canned foods, and it discredits the industry and all kinds of canned foods. And when a consumer gets a good can of peas, tomatoes or corn, fruits or anything else and puts it on the table and the family eats it, do you know, have you stopped to realize that that one can of goods is likely to call for a case and that case of goods is likely to be yours?

And do you know, too, that most of the people who call for peas when they go to the store ask just for a can of peas, especially if they have not been in the habit of using peas right along, and it may be yours and it may be mine. The same is true with every other canned product, and if that is a poor can, as I say, they are off on peas. They say "No more peas," and you have spoiled the consumption, and you have also affected the industry all around because it prejudices that housewife against the use of all canned foods. But, as I say, when she gets a good can she orders a case, and if it is a good case of peas, the next time there are likely to be four or five cases. And I want to tell you gentlemen that if you put up quality goods, you don't need to worry about fourteen million cases of peas glutting the market, nor fifteen or sixteen million cases of corn or tomatoes or anything else. I want to tell you, gentlemen, if you put up the right kind of an article and keep it up, it is the best advertising in the world, and every can acts as a medium of advertising until we won't be able to furnish enough canned foods to supply the consumer and his demands.

And, too, I want to tell you, gentlemen, that you can't afford to leave out association work. You can't afford to go it alone. I want to tell you that the man who feels that he can get along without his neighbor, and that it is nobody's business what he does—that man had better move unto an island by himself, where it won't be anybody's business what he does. As long as you are living in a community, that community is contributing to your welfare, and it is your duty, it is your privilege and your opportunity, to contribute to the welfare of that community. There is one way in which you can do it, and that is, first, to set your own home in order—set your own home organization in order—set your own business organization in order, and see that that business organization has such loyalty in it as your own home has, your own children to you, your own family to you. Make your business organization just like your family organization, an organization of loyalty and support and good-will, and if that is true in your business organization and at home, it is equally true in your State Association work. I hope that there is no one here that doesn't contribute to your State Association, that which he should contribute in the way of membership and bolstering up every good thing that is in your Association. I want to tell you, if there is anyone here that doesn't belong to this Association, the quicker he gets in, the quicker he will get the benefits. And if you stay out you are getting the benefits, too, but are you going to take them? You can't stay in the business and do without them. Gentlemen, there is just one thing to do, and that is to get in and support yourself by supporting your neighbor. The day has passed that we say "Live and let live." Oh, that was on old adage of years ago, but now it is "Live and help live." No matter what part of the country we may be from—that makes no difference. Let's join hands in this great industry and make it what it is deserving to become. And some—I have heard of some—of course, not in the Tri-States, but there are a number of States—who have men who are in the industry and don't take advantage of the opportunity of joining their State Associations, and sometimes they criticise the action of the Associations and what they are doing, because they are looking at it from the outside and not the inside. And, let me tell you, that every time they do they are making a big mistake in not understanding just what they are doing themselves in the non-support of that Association.

There is one question that I understand has been thought of occasionally by the jobber, and now and then the buyer brings it up, and I believe that it was slightly touched on this afternoon. It is the swell business.

You know, sometimes I just wonder where the jobber stands. I heard the other day that Henry Ford would not be a good President for certain reasons, and the main reason given was that it wouldn't be very becoming to have a Ford in the White House and a Lincoln in the garage. Well, I am wondering if the jobbers are trying to step into the wrong place in the canning industry. But this plan that we have inaugurated, as explained by Mr. Clark today, is the result of the jobbers asking us to furnish them a plan. They weren't satisfied with the flat swell allowance. They differed among themselves as to the feasibility of this, and said it didn't work out right, and they recognized the evils in it, and down at St. Louis, and also in Washington last spring, they asked us—I was in the Conference Com-

mittee when they put it up to us—they said: "You get a plan. You formulate a plan. It is your business. You are producing the goods, and you should follow those goods to the consumer. You make a plan. You submit it to us." And that is exactly what we have done. And the simplicity of that plan is that it doesn't change the old method of handling goods, which you have worked under for a period of thirty or forty years, in which you simply had in your contracts the right to call for those spoiled goods, when you thought it was necessary to call for them. You called for them and had the privilege to do so, and they were returned to your warehouse, if you saw fit, for examination, for inspection, and to determine what was the matter; and, last, but perhaps least, to find out whether you had been properly treated in the transaction. And so this plan—why they would have you think it is so complicated and so involved that the whole country was in danger of ruin from the inauguration of this plan. Why, it is the plan they have been working under for years and years, excepting the one change, that you ship the goods to a Zone Warehouse instead of to your own warehouse. Why, it isn't so bad after all, is it? It's so doggone simple that they can't see it. It is like getting up against a mountain and getting so close to the mountain that you can't see it. For heaven's sake, why don't they get on top and look down at the valley below and see the beauties of it?

And then let me refer to the justice of this plan. I want to ask any jobber, and canner, or any consumer or food official or anyone else if we haven't the right, and justly the right, to know what is the matter with our goods when they are spoiled. The difference in the result of shipping goods back to our own warehouse and shipping them to a Zone Warehouse is that after they get to the Zone Warehouse they are inspected by men from the National Canners' Association's laboratories who are trained in the work of inspection and examination of canned foods.

And, gentlemen, did it ever occur to you that it might be the tinplate from which the can was made that is causing those swells, those spoiled goods? Did that ever occur to you? Did you ever examine it from that standpoint in your own warehouse? Could you determine yourself, with a limited knowledge—I can't—whether it is the tinplate that the can is made from? Can you tell that in your own warehouse? I can't; but let me tell you the technical men from the National Canners' laboratories will be able to tell you whether that tinplate is right or not, and I will tell you, gentlemen, whether the tinplate is right or not, we are going to have it right when we get this system inaugurated. And if it is perfect now, all well and good—we will have the stamp of approval on it, and we will know that it is good. Then, we don't stop there. It might be the fault of the making of the tin can. It might be the fault of the canmaker in his factory, and how many of us determine whether or not it is the fault of the tin can? I venture to say that the goods that are shipped back to our own warehouses—we seldom examine them for some of these defects which it is likely to have, but the trained men from our National laboratories will be able to tell you whether that is the cause or not. But, perhaps, the most general cause of the spoilage has been caused through faulty processing, and I want to ask who of you today have the facilities and have the laboratories in your own warehouses and factories to determine what is the matter with your swelled goods when it is the fault of the processing? Do you know whether those goods have been properly sterilzied in every particular, and whether the proper procedure has been followed all the way through the factory, and can you determine from the examination of those goods just what is the matter? I can't in my warehouse. My organization hasn't the facilities and I can't afford to employ technical men for this work for my factory alone. But the National laboratory men will inspect these goods from these various standpoints and will be able to tell you, and tell me, whether it is faulty processing, whether it is faulty tin, whether it is faulty canmaking, or in any way will be able to tell us just what is the matter with the spoiled goods. And, after all, isn't that what we want? And, can any association, can any man, can anyone deny us the right to the examination, and proper examination, of these spoiled goods? I want to tell you that we not only owe it to ourselves, we owe it to the genral public, we owe it to everybody to whom we sell canned foods, that we will make the article as perfect as human mechanism can make it.

I just want to refer a little, which may seem sentimental, to our obligation to the consumer, and this refers to quality and to spoiled goods, and all along the line. I want to say to you gentlemen that when you ask the good mother to buy your canned foods, you should know that that can is fit for consumption. When she trusts you with her own flesh and blood to feed those canned foods to her little babes, I want to tell you that the responsibility rests upon you, and upon me, to furnish the very best product that human intelligence can afford to put out and can put out. I want to tell you that we have a grave responsibility to put forth, and I want to tell you, too, that the inspection of these goods by the best men in the world is none too good. And so, that is one of the reasons why we want this plan. That is one of the reasons why we are going to have this plan.

I am just going to tell you, too, of one incident: They say that these canned foods when found should be destroyed on the spot. Well, let's see whether they should or not. How many food officials throughout the United States know just what a swelled can of goods is? How many men whose duty it is to destroy these goods can tell the difference between a real swell and a flipper? How many can tell just whether that can is a good can or a bad can, and how often has it been in the past that rusty cans, perfectly good inside, have been destroyed as a result of those destroying them who didn't know just what was the matter? Why, in Chicago in three years—I believe, from the years 1919 to 1921 or 1922—it is reported that six million pounds of canned foods were destroyed, and I wonder if about half of those goods were not flippers, or, perhaps, rusty, or, perhaps, in some way the inside of the can was perfectly good.

I had occasion to ship a car of kraut down into Texas at the time of the year when it was real warm down there, and when they got it they telegraphed back that about half the goods were swells—what could they do with them? I immediately told them to unload the car, to avoid demurrage, and express back a case of the worst of them. And when they got back, sure enough into a cool climate, they had all gone back and behaved themselves properly and were good stuff when they reached my place. But I immediately knew, of course, what was the matter. I hadn't had proper vacuum in the can, and in a warmer climate they became flippers. And, by the way, just let me state what is a flipper. Some people may not understand just what a flipper is, but I have understood that a flipper is a flapper who had been out the night before with a swell.

But, anyway, I ordered these misbehaved flippers back into a northern climate, and when the car was shipped back up into the North, where it was cool, why they all went back, repented of their sins and were perfectly good, and the consumers were happy in eating them.

Now, what would have been the result if we had followed out the plan that they propose as to destroying them on the spot?

But, gentlemen, all the better if we had had a zone warehouse to ship that case to. I could have sent it to the nearest Zone Warehouse, saved that big expense of express, and have gotten an immediate reply as to what was the matter, and have had the matter adjusted right there and then on the spot.

Is there anything wrong with such a plan? I want to tell you that it is honest and just and right and proper, and as one I am going to stand for what is right, and don't give a damn who's against me.

Every food official throughout the country who understands the plan is for it, because they expressed themselves as wanting to co-operate with our National laboratory and learn what are swelled goods, what are spoiled goods, what is the cause of it, and they want to know for their own protection and for the protection of the public—and aren't they entitled to know? They are entitled to this education, and isn't it our duty to help them to get it? And, too, we want spoiled goods destroyed when they are found.

Now, I want to dwell just a little bit more on Association work. I want to tell you, every one of you, we want you in your State Association. We want you to take part in it, and we also want you in the National Association. Do you know that if it hadn't been for the National Association that this country would have been suffering today from overproduction of every article of canned foods there is? All you need to do is join hands with us. Come on and let's together make this the greatest industry in all the world and place it on the plane where it is entitled to be—respected by every consumer in the world.

We can sometimes compare our lives with the railroad train coming up the track. It is steaming and puffing and blowing, and it is doing the best it can, but if that train isn't properly organized, and if the engineer or the conductor disobeys orders, or if anything goes wrong in the organization and the proper methods are not applied all along, you are likely to have the disastrous result that was experienced just a day or two ago between here and Chicago. Our lives might be compared to that train coming up the track.

I observed a locomotive
In the railroad yard one day.
It was waiting at the roundhouse,
Where the locomotives stay.
It was panting for the journey,
Coaled and fully manned,
And had a box the fireman
Was filling full of sand.

It seems that locomotives
Cannot always get a grip
On their slender iron paths,
For the wheels are apt to slip,
And when they strike a slippery spot,
Other tactics they command;
And to get a grip upon the rail
They sprinkle it with sand.

If your track is steep and hilly,
If you have a heavy grade,
Or if those who passed before you
Have the track quite slippery made;
If you ever reach the summit
Of the upper table land
You'll find you'll have to do it
With a liberal use of sand.

If you strike some frigid weather
And discover, at your cost,
That you're liable to slip
On a heavy coat of frost;
Some quick decided action
Must be brought to your command;
For you'll slide clear to the bottom
If you haven't any sand.

But you can get to any station
That is on life's schedule seen
If there's fire beneath the boiler
Of ambition's strong machine,
And you'll reach the place they call success
At a speed that's simply grand
If for all the slippery places
You've a good supply of sand.

CHAIRMAN—We will now hear from our good friend, Mr. Moore.

MR. MOORE—I want to be considered as a member of the Tri-State Packers' Association. Our company, during the past year, has had the privilege of operating four plants in the territory described as the Tri-States, and if the quality is under discussion, I think I may say for the Tri-States, especially for our company, that I have never seen a better quality of green lima beans, of beets, of spinach, of tomatoes, than we saw packed in the Tri-States this past season. There isn't an item of pack that we are ashamed to describe by location or afraid to sell in competition with the fanciest brand of the same item packed anywhere in the United States.

I listened with you this afternoon to the work that is being done by the Tri-State Packers' Association in its efforts to improve the quality of the canning crops. I hope it will be our privilege, as a member of your Association, to contribute more liberally, through some adjustment of dues, to work of this character during the coming year and in years to follow. The future of the industry in the Tri-States must depend largely upon the prosperity of the growers of canning crops. The quality of our production must depend in great measure upon the quality of raw material. Through your associational activities I am satisfied that you have already made substantial progress not only in increasing the yield of crops, but in providing a better quality of pack.

Years ago the pea canners of this country were confronted by something of a problem. They were anxious to increase the popularity of canned peas. Canned tomatoes were then the leading item. Their lead was so great that it seemed impossible that a comparatively new item like peas could ever attain the popularity of canned tomatoes. There was a little conference among the pea canners, and among the things discussed was how to promote the good will of the consumers toward canned peas. One suggestion was made which, I believe, is entitled to the credit for the wonderful development of the pea-canning industry. It

Black Discoloration in Corn.

Mr. Corn Canner :-

If you are troubled with Black Discoloration in your corn here is a remedy- use our Corn Shaker.

This thoroughly mixes the contents of the can and the black disappears.

Shaking also gives the corn a rich, creamy appearance.

AYARS MACHINE COMPANY --- SALEM, NEW JERSEY.

Brown Boggs Co. Ltd., Hamilton, Ont. Sole Agents for Canada.

was a practical suggestion. In substance it was to advance the price on fancy grades of peas, on fancy quality peas, and lower the price on standard grades and qualities. To make the spread between the fancy and the standard wide—to make it wide enough so that there would be a practical compulsion on the part of the canner to pack the fancy grades and qualities of peas. With the exception of the war period, when the demand for volume on the part of the Government with its policy of pricing fancy and extra standard peas closely together, that spread between the low grades and qualities and the high grades and qualities of peas has continuously widened. Gentlemen, the result has been that the quality of the peas that have gone to the consumer at large has been such as to win and hold the consumer's favor, probably to a greater extent than the favor of the consumer has been won and held by any other item of canned foods. It is for you to say, and I express it merely as my opinion, that that policy of making a wide differentiation between the fancy grade and quality, thereby rewarding the efforts and skill of the canner of peas who cared to put his money into equipment, who cares to take all those measures that will assure quality, has resulted in the tremendous advancement of the pea-canning industry.

There isn't a man in this room who is conversant with the corn-canning industry but what will agree with me that a wider spread between the fancy grades of corn and the standard grades of corn would result in increasing the pack of fancy quality corn —decreasing the pack of standard quality corn, and thereby winning in greater measure the favor of the consuming public. That is only one of the practical ways of bringing about the results that we all desire so much, namely, to give to the consumer a quality of goods which will create in his mind an appetite for those goods in the days that follow.

As an association you have done much. You listened this afternoon to a very able address by a representative of an associated industry. I think possibly I use the term correctly, for I am not referring to our allied industries, who in times of peace and times of war have always stood with the canning industry, helping to put into effect every measure for the good of canned foods. By "associated industries" I refer to the distributing industries—the wholesale grocer and the retail grocer—just as honest as the canners in their efforts to better the canned foods industry, but oftentimes without exerting the same perspective. I have been connected with the industry for only a relatively short period of time. Almost my first experience in the industry was of a controversial nature over the pro rata delivery clause. At that time "the master minds" of the associated industries told us that the pro rata clause was a thing of the past. I remember when circular after circular went out from one of the great distributing associations, urging their members never to sign a contract that contained a pro rata delivery clause. My company had the distinguished honor of being the subject of a special circular, describing us by name, and characterizing our pro rata delivery clause as being the forst pro rata delivery clause that had ever been submitted to the distributors of this country. Well, I am not prepared to justify that clause particularly. That clause had grown up with the canned foods industry of the United States. It had been used by some of our factories under their original management for more than forty years, and it had given reasonably good satisfaction, for it hadn't been changed. In spite of that attack, made in the utmost good faith, although at the time we probably received it with a little bitterness—in spite of that fact, I cannot recall of a single wholesale distributor who refused to distribute our goods because of that clause being in our contract. I cannot recall a single wholesale distributor who refused to sign our contract with that clause in it just as it stood. I speak about that because I believe that an industry is not easily subject to revolutions. The distributors at that time proposed to revolutionize the industry, and they agitated that revolution for several years, and it all dropped. The pro rata delivery clause now is spoken of as one of the foundation stones of the industry. It is all a thing of the past.

This industry has grown up upon the theory of personal responsibility. You gentlemen have improved the quality of your goods because of your feeling of personal responsibility to the consumer of those products, for their quality. You are interested intensely in the quality of those goods, and you have, by usage at least, for 40 years or more earned the right to examine those goods before you make payment on the ground of their being unfit for human consumption. We must confine our aspirations, as was said this afternoon, within the limits of the practicable.

I haven't used the exact word that I should have used. I remember the thought, but I haven't the command of language of the eloquent speaker this afternoon, but, gentlemen, it is practical and sound to guarantee your product 100 per cent.

N. C. A. Not Prostituting Itself—Now. gentlemen and friends, as a member of your Association, and as a member of the National Canners' Association, I wish to deny the illy-timed charge that was made this afternoon, that the National Canners' Association is prostituting its power and influence throughout this country in order to obtain memberships. Gentlemen, that was a charge unworthy of the man who made it. We will excuse it in the belief that it was made rather hurriedly, and was based upon the circular-communication of the Chairman of the Conference Committee of the National Wholesale Grocers' Association, and did not express the thoughts of the speaker. I have been a member of the National Canners' Association for many years—as many years as I have been in the industry. I have seen it pass through times of stress. I can say to you, as a fellow-canner, that there is no one in the National Canners' Association that would permit for a moment the adoption of a policy in order to influence membership. I will say to you gentlemen that since I spoke to you some time ago the membership of the National Canners' Association has increased three-fold in numbers and in volume of pack. I can say to you that it is truly representative of the best ideals of an honorable industry and that the distributors of this country would resent, as quickly as we resent, any charge that this Association had prostituted its principles and its program for the mere purpose of gaining a temporary popularity and increasing its membership. I believe that I voice the feeling of many a man in this room when I say that if that charge could be spread broadcast throughout the United States, the result would be to bring more members to the National Canners' Association than all the campaigns that could be engineered from Washington and all the inducements that could be offered. For, gentlemen, the canners of this country know what is right and what is honest; they know that their industry is in a position where it must protect its products, and they are not to be frightened by expressions of such character as we heard this afternoon.

I am not going to talk about swells and spoils. I think, possibly, you will pardon me for saying that we are rather conservative in our organization. We are very likely to continue in the future about as we have in the past. We have tried to follow our goods through the hands of the wholesale grocer, through the retailer and to the customer. We have tried to protect them all, and we probably will endeavor to do the same thing in the future; and I can conceive of no circumstance under which we would ever pay a cash allowance in lieu of swells. We propose to sell our goods just as we have sold them in the past. We are not suggesting nor urging that everybody follow that example. Every man must judge for himself, but I believe that the sympathies and the support of every canner in the United States will be behind a program which guarantees the product of the canner just 100 per cent.

Remember the illustration that was made this afternoon. One of the quality retailers in the Tri-States told a wholesale grocer that he had a hundred cases of peas, and that he believed he would return them to the man from whom he bought them, because he had heard complaints of two cans that were sour. And this wholesaler told him, properly, that that would not be fair, to wait and he would cut some of them. Suppose, gentlemen, under the program that has been advanced of knocking every swell on the head as soon as you see it, and billing it back to the canner, this retailer had decided, because he had complaints of two cans of sour peas, he had simply knocked on the head, either with or without the support of a food official, that hundred cases of peas. Would it have been quite fair to the canned foods industry of this country? Is it necessary at all? Why should we seek to revolutionize the industry at this time? Isn't it barely possible that in the buying-consuming centers, the big distributing centers, some of our wholesalers have been unduly influenced by the progress made by their chain-store competitors in obtaining allowances which are essentially trade discounts? Now, those are the allowances which we hope as an industry to stamp out. We hope that every distributor will receive exactly the same consideration as every other distributor. It is utterly unfair to give to one distributor the benefit of a brokerage which he has not earned, depriving the merchandise broker of his compensation. It is utterly unfair to give to one wholesaler a cash allowance of one-half of one per cent, and permit him to go into competition with a small wholesale grocer who has never received the one-half of one per cent. There is no pretense that this cash allowance will ever protect the consumer.

It is with some temerity that I suggest that the complaints that have emanated from the food officials of this country, and particularly from Washington, have all been directed toward the food-consuming centers of the United States; that the con-

plaints of the wholesale merchandising of spoiled goods have been aimed largely at New York, Chicago and the other big centers where the chain stores and the wholesale grocers have secretly been obtaining their allowance of one-half of one per cent for some time past. It may not have been the cause—we certainly can say that the fact that they obtain that half of one per cent did not cure the trouble. I am going to pass along to something a little bit pleasanter, and I am going to take just a moment of your time.

Increasing Consumption—Our industry is really individualistic in character. It is as individuals that we have grown up and prospered in our business. But little by little we are being forced together by the same economic laws that have brought about union in industry throughout the world. Little by little, gentlemen, you are sharing with your fellow-canners some of the burdens and responsibilities of your industry. Don't think for a moment that in doing so that you are giving up any of the privileges of your business. You may properly feel that united you can accomplish wonders for the industry which you can not accomplish as individuals. If we are correct in our surmise that canned tomatoes have not fallen from the favor of the consumer, but that the consumer fails to purchase because her attention is not called to canned tomatoes, then united, on the part of the tomato-canning industry of this country, we could, at a very reasonable expense, increase tremendously the consumption of canned tomatoes.

In the few years that I have been in the canning business I have seen one item of tomatoes—one item of tomato production—multiply not 100 per cent, but probably 500 per cent, possibly 1,000 per cent, until today the total volume of tomatoes used in one item that is sold in canned form is probably one-third as great as all the tomatoes that are put into cans. I am referring to tomato soup. And why has tomato soup become wonderfully popular? Because of the merits of tomatoes as a food and because the merits of tomatoes as a food have been brought home to the consumers. Can you believe for a moment, gentlemen, that if canned tomatoes, either through private enterprise or associational effort had been given the favorable publicity that has been given to tomato soup, that we would now be wondering whether the consumption of canned tomatoes today is actually as great as it was seven years ago or not? Can you believe for a moment, with your knowledge of merchandising, that if canned tomatoes had had even a reasonable amount of publicity that there would not be a consumption of tomatoes in that form which would tax the canning cacapity of all the factories that are situated in the tomato-growing sections of the United States? Gentlemen, I ask you if you are not firmly convinced that the housewife who might know just where she could buy canned tomatoes of the quality that had received her favor —the brand under which she could purchase them—would she not be much more likely to buy than if she were forced simply to ask for "canned tomatoes," with the possibility, and even probability, that the tomatoes she receives on her second request will not be alike in quality or character with the tomatoes that received her favor in the first instance?

Now, those matters are easily worked out. I could talk to you for hours about the different methods and different plans. But it is utterly idle. If the spirit is in the Tri-State canners to work together for the improvement of quality of their goods, for the merchandising of their goods along sound and modern lines, then those results will be obtained and the canning industdy of the Tri-States will continue to prosper in greater and greater fold. If you feel that it is not worth while, you will proceed exactly as you have in the past. No matter what plausible program is outlined, no matter what we say, it all rests with the men in the industry. No matter what we say about swells and spoils, it all depends upon the conscientiousness of the men who are going to put into effect the sales policy of the canners of this section.

I wish, again, gentlemen, to thank you for the privilege of being here today and of listening to the very interesting addresses. I wish to congratulate you upon the program you have made. I wish to assure you that as a member of your Association we will gladly co-operate in any measure which looks toward the advancement of the canning interests of the Tri-States.

Mr. Cattell next addressed the Banquet with one of his very witty and touching discourses.

Address by Geo. W, Cobb

My being over here at your annual meeting is becoming a habit. We have with us today the editor of The Canning Trade. He doesn't know I am going to say this. If he were to say anything, he would say: "All you who have not paid up, I wish you would before the holidays." He would probably follow that by saying: "All you who are not regulars we wish to enter upon our list." At a recent meeting of the Western Canners' Association I was called upon for what they call an address. This so-called address a few weeks later appeared in The Canning Trade, but there were several inaccuracies, of which I will only mention one, which was called to my attention only this morning by a friend who sells tin cans. He sent me the extract, which reads:

> "What has been accomplished along research lines with the National Canners' Association and other agencies has been enormous, but a lot still remains to be done. That includes a more accurate knowledge of resorts and what occurs on the inside."

He took exception to my having referred to resorts and to indicate that any man that sells cans doesn't know what is going on in the inside of all resorts. I will leave it for the Editor to see that resorts is changed to what I am sure I said—"retorts."

Well, I think this afternoon's meeting was one of the best meetings I ever attended anywhere. It made me do what I am sure it made everyone else do that was there—it made me think, and you know when you get to thinking we make some headway.

I want to say that Dr. Symons and the work he is doing down here should be aided and assisted in every way. It seems to me that you cannot realize, as he realizes, how much work there is to be done along the lines of improving the raw goods which you put into your cans. That is the big field, and you have made a most wonderful start, and I am sure that next year and in the years to come there is going to be even more done along that line.

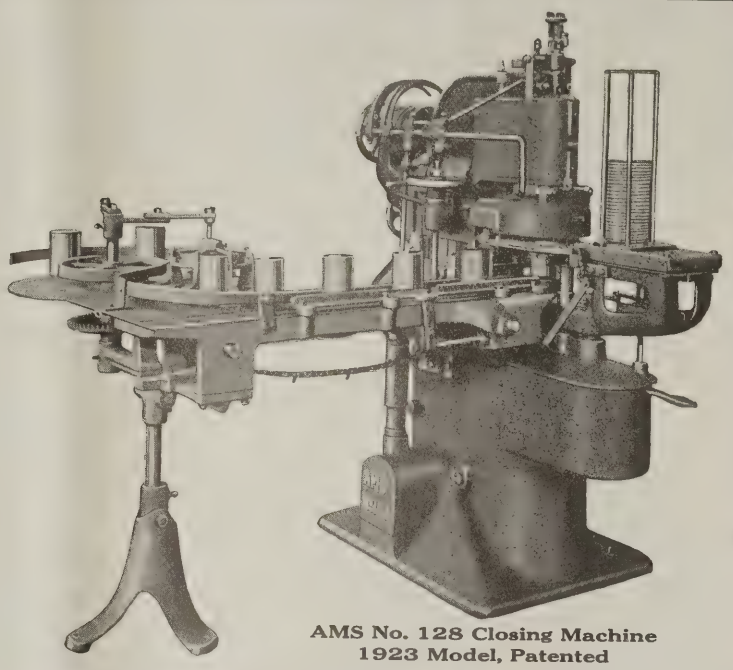
He said he wanted to speak to three men—one 60, one 42 and one 21. He left me out. But I thought that that was a pretty good way of getting at it. I would like to speak to six men, but I won't take but a minute for them all. I want to speak along the lines of better co-operation and understanding of all those who have to do with this wonderful industry. It is not his industry, or my industry, or yours, but it is ours. We all have our share. Now, the grower—we want to understand him a little better, too. Now, he has his troubles. I am reminded of the man down South that drew up to a store and unloaded a lot of cotton, and when he had unloaded it he went into the store to get his money, and the man who had taken in the cotton said: "There really isn't any money due you." The darky said: "How could that be?" "Well," said the storekeeper, "it was so much for storage, so much for insurance and so much for rent, and you are about $1.50 short." "Well," said the darky, "Ah've got no $1.50." "Well," said the storekeeper, "that will be all right. Next time you come in just bring in a chicken." Well, the next time the came in he threw down two chickens on the counter. "Why," said the man behind the counter, "did you bring two chickens—you only owe me one?" "Yes, suh," said the colored fellow, "but Ah's brought another load of cotton."

And, then, you know the canner has his troubles, but you want to just emphasize one thing, and that is this: that I believe that the canner in this section has got one thing to do, which was referred to by Mr. Moore, and that is to grade his goods. Now, you sell Maryland tomatoes. I am sorry to say so, but that means the cheapest thing in the world. Now, why can't you take those same goods and do just the same as they do in every other section of the country—make different grades. When you put them all in one they are going to take a lower level.

And I want to say just a little bit about the wholesaler, and I am sure he is here, because this afternoon I think he was here, and I think he understands you were here, also.

Now, the wholesaler wants to work along with you. His interests are yours, and he can overcome many of his troubles by buying his goods of the canner that knows how to pack his own goods. If he will select the man of whom he is going to buy, he won't have so much trouble with swells and springs.

And the broker—I am sure he is here, because he is everywhre. It seems to me that he represents the interlocutor in the show, and you really can't have a very good show without the interlocutor.



And, then, there is the retailer. Well, I am not going to talk much about the retailer, because you can't say very much to him—it is pretty hard to talk very much to him till we get our labels so that he knows what they mean, and we have first got to know what they mean ourselves. But when you get to the retailer and housewife—we so often are asked: "How can we go to the store and get these goods that you have told us all about?" and I don't know how to answer that.

And, then, there is also a word, perhaps, for the machinery man and the can man and the label man. We want to treat them fair and try always to see their view.

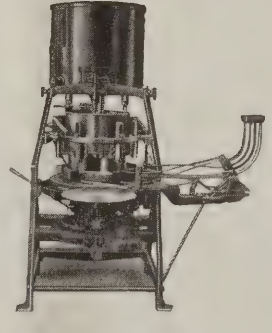
QUALITY

Sprague-Sells Mixer

Each mixing tank has operating capacity of 100 gallons. Brine tank is more than ample. Plenty of capacity in a mixer at last. This machine will keep the rest of your line "humping".



Sprague-Sells Cut Corn Elevator

Universal Elevator for Cut Corn. Now furnished in any length desired, complete with cover hopper and jaw-clutch pulley.

Sprague-Sells Cooker-Filler
(M & S Type)

Used by 95% of the quality packers. Fills at any speed up to 120 cans per minute. Has the only perfect no can — no fill attachment.

Peerless Resilker

Can be attached to any M & S 6 Pocket Filler. Extracts silks, hulls, husk ribbons, etc. by the "Hot-corn silking method". For real quality you need this little device.

S and PEERLESS

Now, I don't like to talk about cans, because that sounds too much like shop; but I believe that all this agitation that you have heard in the last year in regard to swells and leakers, and all those other terrible things, is a splendid thing because it is going to make us all do our job a little better than we ever did. That means, you know, the canmaker is going to do his job, and the tin man, and the manufacturer of steel—they are all going to be a little more alert. But I am in the hope that no one is going to be more alert than the canner himself.

I talk right out in meeting when I say, before this large assembly, that the steelmaker and the canmaker are doing their job a little better than the canner-operator is doing his—that is, the average canner-operator. There is a lot to be learned by the individual canners themselves about how to pack their own goods. I don't mean that knowledge is held as a secret by a few. In fact, it is open knowledge. The Research Laboratories of the National Canners' Association have that knowledge, which is free and open to all; but, gentlemen, you want to get that, because canned foods must be packed with less trouble. I am going to make a very strong statement when I say that any man who has sour peas or sour corn or has flippers and springers, has them because he doesn't know his own job. Now I make that statement. Now, we will always have undoubtedly some swells and springers, because the canning industry is not an exact science, but it can be lessened, and very much lessened. We all have duties along those lines.

There has been a good deal of criticism these days about cans being high—higher than last year. This is because of the higher cost of the raw material. That is a fact. You know the prices have been modified on tin cans since July 1. Gentlemen, we must be fair in our observations and criticism. Let's be fair to the manufacturer of steel. $5.50 is by no means as high as steel has been. During the war and after the war it went to $7.75. It has been as low as $4.75. When you remember the other items which enter into the cost you will realize that $5.50 is fair. We want to be fair to all.

And now it is pretty near the new year, and it is time to make some resolutions. I say a good resolution would be to pack better food—do all you can to make canned foods a better article. Perhaps your resolution should also be to join the National Canners' Association. I don't believe those that are not members want to ride free any longer.

You will also want to make a resolution to try to do something to upbuild our industry. If we are not helping to build it up, we are helping to tear it down. Cattell said this afternoon that he believed in builders. Let us be builders.

TUESDAY MORNING

BUSINESS SESSION

Adelphia Hotel, Philadelphia, Dec. 11th, 1923

SECRETARY—As Treasurer I wish to report that we have on hand, with all debts paid, $746.00 in cash, and we have also a Liberty bond of $500, making $1,246 that the Association has in hand.

We have expended under the order of the Association the funds which were placed in our hands last January for the purpose of encouraging tomato growing in the three States. This allotment was made in proportion to the pack of the respective States. The Executive Committee allotted $600 to Maryland, $200 to Delaware and $200 to New Jersey. The $600 to Maryland has been paid in full to Professor Symons, whose report will be presented here in a few minutes.

The $200 to Delaware I hope Dr. McCue or somebody in his place will make a report.

New Jersey has not called for the money due, except for $12 or $12.50 for seeds. I wrote to the Extension Service, and told them the money was at their disposal at any time. I was informed that all that was needed was about $12 for seeds. That was sent. The balance is in the treasury, a part of the $746.

(Secretary's report was moved to be adopted. Motion carried.)

CHAIRMAN RECORD—I am pleased to announce as the next speaker Mr. A. D. Radebaugh.

RADEBAUGH REPORTS ON TOMATO GROWING

LAST year we came before this meeting and told you of some of our work in Cecil county, Maryland, and gave you an outline of our plans that we hoped to carry forward during the coming year. You don't realize how much we appreciate what the president of the Tri-State Packers' Association, Mr. Silver, did in helping to get this work across, and we want to thank the members for their co-operation in the past year.

Now I think I can best illustrate this story of the tomato canning crops improvement work by taking you back to some of your boyhood days—Dr. Symons nearly touched me when he spoke of the man of 20 or 22 yesterday, but not quite—but probably some of you can remember when you wanted to see a ball game and didn't have a quarter to get in, and you found a knothole in one of the boards and you looked through and could see a little bit of the game. And after a while some fellow came along and said, "Buddy, there's a board off around the corner there. You can get to see a little more of it." And you walked around to where the board was off and got to see just a bit more of the game. And after a while some good-hearted fellow came along and gave you a quarter to get in and you got to see the whole thing.

Well, that is just about the way this tomato work has been carried on over the past three or four years. When we started a few years ago we were just about looking through a knothole. Then we found a board off, and last year I can truthfully say that, due to the help of the Tri-State Packers' Association, we were able to pay admission and get in on the inside and see the whole thing. The way we went about this work was that in the spring we conducted meetings in various parts of the country and outlined our plans of a centralized plant bed; outlined our methods of spraying, of seed, and everything we could do and answered all the questions that came up—and sometimes there were great questions asked. We tried to answer them and give to the people the benefit of our experience as we had had it the year before.

Now you may wonder just how some of that money of yours was spent. I had lantern slides made of the plant beds, showing them in all the various stages of the year before, so that after we told them our story of plant growing we were able to show the slides and actually see them.

I had the question asked me in Chicago the other day, "You have been traveling all over the State and doing this tomato work. How come you didn't go to our place?" I said, "For the good reason that you haven't invited us." We didnt go to any place where we weren't invited by special invitation, if I may go that far, because we didn't want you to feel as canners—we didn't want the growers in our country to fee as growers that we were trying to put something over on you. We weren't doing that. We were merely trying to give you the benefits of our experiences to the best of our ability, provided you wanted it, and that is the way we tried to do it.

When we had that meeting in Wilmington we decided that we were going to conduct six plant beds in Maryland—I think two in Delaware and two in New Jersey. Well, some things can easily get away from you, and we wound up with thirty-five plant beds in Maryland and I don't remember how many they had in Delaware and New Jersey. All of those plant beds were not 100 per cent successful, but the majority of them were a success, and a mighty good success. We had a number of problems—we had rain and we had wind, and if I may tell it—I don't know if the man is present or not—but down on the Shore in one place, the wind came along and practically blew the bed away. They all weren't a success, but we learned a lot, and from these beds we were able to produce 7,500,000 plants that were distributed amongst the growers at a cost ranging from $1.00 to $1.25 a thousand.

I want to bring this fact to you that we are not advocating more acres of tomatoes or more acres of anything else. We are advocating a higher quality production, a larger product on the number of acres than you were already producing.

That is the thing we want to bring to you and the thing we want to try to put across—not go out and plant the whole country in tomatoes, but try to grow more and better on the acreage that we do plant

This centralized plant bed—don't feel that that is the only thing we are thinking about. It was the only method as I saw it several years ago of getting our growers to realize the value and importance of good plants. That was the thing we wanted them to do, and we feel through growing them in this method—properly spraying them, taking care of them—that we are obtaining the results desired. We found in several counties—in one county particularly—where less than 5 per cent of the plants had been sprayed in the plant beds last year, a little over 75 per cent of those were sprayed this year, or as increase of 70 per cent in one year's work.

Now it doesn't make any difference to us whether we grow them in the plant beds at central points or whether the farmers grow them individually. All we want to do is to get the farmer to get good plants and take care of them. We don't feel that we will have to stick to this forever In some counties they are going to use hot beds, so as to get them a little earlier. They are going to have another big job, because when fooling with hot beds you are fooling with something a little worse than centralized plant beds.

This summer we tried to travel all over the State that is in the tomato-growing sections, and we studied your problems from a production standpoint. We tried to find out what were the

limiting factors to the best of our ability. And what was your trouble? In some counties we found that the wilt—and probably all of you know the wilt when you see it—is quite an important factor in great many sections, and our problem was, or is now, to get wilt-resisting varieties that you will be able to grow, and at the same time mature early enough that you can get them canned before frost comes along. So we are working on that problem right now, and we have a lot of those plans outlined for the coming year. And back in my own county I tried a number of varieties this year—taking various varieties and planting several hundred of each, which gives us an opportunity to study the characteristic yields and quality of these various varieties. I will probably have some of that work—some of those records—ready for publication before long. If you men are interested, we will be glad to tell you all about it. From that I have saved considerable seed and we will distribute that seed over the State this coming year to try out these varieties in other sections.

Now, another thing we found this year was the mosaic disease, which all of you are probably more or less familiar with, and we had lots of trouble with that, and through your National Canners' Association, Dr. Woodbury spent nearly two weeks with me, traveling over the Shore. Dr. Woodbury decided that the County Agent has a great life, because one night, after coming back from a trip of a little over 600 miles in two days, I found four farmers camped on my porch waiting for me to come home. That was half-past nine and at one o'clock Dr. Woodbury was asleep on the couch and one of the farmers was aseep in a chair, and I had to be pleasant and talk about cows, orchards and other things.

But I can tell you we found a good many problems, and when Dr. Woodbury went back to Washington he wrote to Dr. Symons, and he got Dr. Norton, who is one of the best plant pathologists in the country, to work on the tomato mosaic problem. Dr. Norton spent months of the summer from then on studying this disease, and he has some mighty good reports that will soon be ready regarding that. Dr. Manns, from Delaware, has done an awful lot of work for the Delaware men in tomato production, and I hope he will permit me to say that any canner in the State of Delaware who will get in touch with Dr. Manns, he will help him to solve any of his problems. He will be glad to work with them. He has a laboratory and that is what the University and our Extension Service is for—to help you in your problems.

Now, in order to find out just where we had gone this year and what had happened, on November 2nd we called in all the County Agents that were interested in this tomato improvement project to a conference in Baltimore, and at that time we discussed the pros and cons and the good and bad and so forth of the tomato project as it was conducted in 1923 and at the same time we outlined plans for conducting the work in 1924. As I said before, we had started out this year with the intention of having six plant beds and wound up with thirty-five—I think they already have forty-two lined up for 1924 Now I don't know how they are all going to be taken care of. That is a big problem. This past year I have traveled over 24,000 miles and tried to hold down a job in my county, to keep the thing going; but, nevertheless, we are going to try to do from the University the very best we can, and we ask all you men to co-operate with us and help put the project across and make it a success.

STANDARDIZING TOMATO GRADES

By C. W. Hauck

Bureau of Agricultural Economics, Washington, D. C.

YOU are all more or less familiar, of course, with the proposal that has been made relative to the purchase of cannery tomatoes on a graded basis I want to say this, that the impetus that has been given to this movement during the past year is largely due to the action that was taken by this Association at your last annual meeting. The committee which you appointed at that time to work with our Bureau at Washington relative to investigating this matter and the officers of this Association have given us some very intelligent and very cordial assistance, and I believe that we, all of us, owe them a vote of thanks as well as a good many of the individual members of your Association.

About a year ago the suggestion was made to our Bureau that we might be of service to the canning industry by formulating standards or grades for cannery crops, along lines somewhat similar to those grades that we have established for the marketing of fruits and vegetables for fresh marketing purposes. It was felt that if such grades could be made amicable to the purchasers of raw stock that a basis would thereby be established whereby the canner and the grower could get together, in their business dealings, and it would render those business dealings more harmonious and more fair and equitable, and it ultimately would result in a marked improvement in the cannery stock, in the raw material, in other words, as it was delivered to the manufacturer. The opinion was expressed that the government, due to its entirely neutral viewpoint, could formulate and get these grades adopted much more advantageously than the canner could possibly do it, or than the grower could, simply due to its neutral viewpoint. In other words, Federal grades would not be regarded with suspicion, and in this connection I wish to say that the attitude of our Bureau is entirely a disinterested one. We are not furthering the interest of the canner at the expense of the grower, and we certainly haven't in mind furthering the interest of the grower at the expense of the canner. We have one motive only, and that is to establish grades for cannery crops which might be of service, perhaps, in stabilizing the industry and promoting better methods of buying and selling raw material.

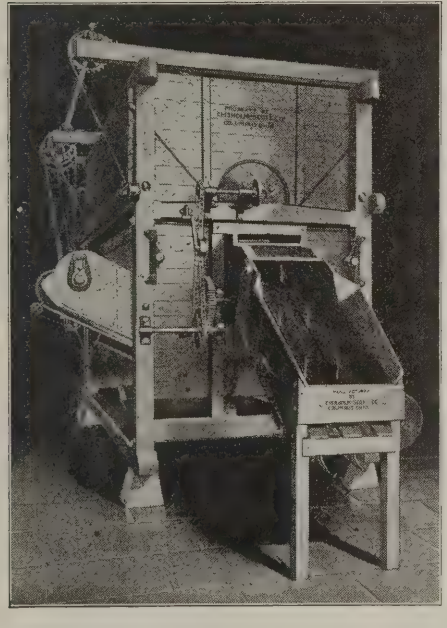
During the past summer we undertook a certain amount of investigational work in the various parts of the East, in those States that are important in the production of cannery tomatoes east of the Mississippi, and our purpose was to determine what basis could be used for drawing up a set of grades, bearing in mind, of course, the actual waste that occurs in the use of tomatoes of different quality through the cannery. The work we have done has been confined entirely to tomatoes. We haven't undertaken any other crops, and the reason is simply because tomatoes constitute one of the most important crops grown for cannery purposes. It has been our aim to so construct the grades that they will dovetail with good commercial practice, and if that is done, they will undoubtedly be of some service. On the other hand, if the viewpoint was not a practical one, they would not be of any service.

There is little question as to the desirability of the standards. I think we are all agreed to that. If tomatoes could be bought by the canner on the basis of grade, and a price paid for them that is commensurate with that grade, or that quality, rather than buying them on a flat average basis, it seems to me that one of the elemental problems of the manufacturer would be on its way to solution.

I believe that each one of you is striving to increase and improve the quality of the manufactured article. If you are to do that, you certainly must have good material to work with. You can't take out of the can better goods than went into it. It is my belief, therefore, that you will welcome any proposition that offers a solution of this vital problem.

I have run across a circumstance this past year that is undoubtedly a very familiar one to all of you, and that is that the canner who has all or part of his product under contract—I mean the tomato-purchasing canner—is called upon to accept delivery of ton after ton of very poor tomatoes, probably because the season is bad and the supply low, as well as poor, and the only resource he has, if he is to continue in business, is to accept that sort of stuff, and then, by very careful and tedious efforts, salvage whatever there may be in it that is usable. That, of course, is a very expensive way to get food to market, and in order to keep his growers in line, he has found it necessary in many cases to continue to pay a price for that sort of goods that is equal to the price paid for the very best tomatoes that he has accepted. That, of course, gives rise to a lot of dissatisfaction, not only on the part of the canner, but on the part of the grower. There is no incentive for the good grower to continue to bring in good tomatoes when he gets the same price for poor tomatoes, and it doesn't seem to me that that is a condition likely to be encouraging better cultural methods among the growers. As long as a ton of tomatoes is merely a ton of tomatoes, with no distinction made as to quality, there will undoubtedly be a continuation of slack growing on the part of growers, and it will be an uphill battle for the improved production of cannery crops. During recent years, grades have come into more or less general use in the merchandising of fresh fruits and vegetables and a great many other farm crops.

In constructing a tentative scale, we have been guided largely by the suggestions and constructive criticisms given to us by representative canners and growers. We don't profess to know a great deal about the canning industry, and the problems the canners have to put up with. Our knowledge is only general and we have looked to men who know and who are familiar with these problems to tell us what basis should be used. We have drawn up a set of tentative grades, and I wish to impress on you that they are only provisional, and are subject to revision as it seems necessary. With further experience next year in various parts of the country, we hope to find whether we have got the right terminology. We may find a good many changes that have to be made, but what we are after now is to get the general principle and the practice in some localities where we can have opportunity by co-operating with canners and State agencies to determine what revision ought to be made.



I have copies of these tentative grades with me, and if you want them, I want you to feel free to take them.

CHAIRMAN—We will now have the report from the Chairman of the Agricultural Committee, Mr. Torsch.

MR. TORSCH—The report of this committee will be based on a report Dr. Symon handed me, and this report goes into quite a bit of detail as to the work done last year after the financial aid had been given by this Association. Quite a little of these details have already been told by Professor Symond yesterday, and Mr. Radebaugh this morning, and that is one reason for not going over them now again. The part which you are interested in which has not yet been reported is the expenditure of the funds. The fund of $1,000 last year was, after consultation in meeting, apportioned $600 to Maryland, $200 for New Jersey, and $200 to Delaware, with the idea that each State would have the use of these respective amounts and use them in about the same way in all States. Now, as for Maryland, the report is this way, and to that extent I will read details.

(Mr. Torsch read a detailed report of expenditures.)

I would ask, Mr. Chairman, that you request Dr. Manns to give the report of the work in Delaware.

DR. MANNS—I regret that I am unable to give you an accounting of the funds. Mr. Pence has charge of that, and he only just got back from Chicago. I know that we had quite a little difficulty at times getting bills over that I thought would go to that fund in the way of spraying, etc. I think you won't have any difficulty getting an account of the money apportioned to Delaware I am going to give you an account of the work done there.

First, we had two one-acre beds to take care of. One acre was planted at Milford, two beds were placed, one at Clayton and one at Smyrna, of one-half acre each. The bed at Clayton was practically a failure, due to the frost. The bed at Smyrna was about 50 per cent a success. The bed at Milford was 100 per cent efficient. Growing out of that demand there were four other beds that were supervised by the department of Plant Pathology none of the expense coming out of the Tri-State funds. The beds were located in and around Newark, being the result of the canners' co-operative plant there—the United Canneries. They located in this vicinity four beds.

The Niagara Sprayer Company loaned us four different dusters, none of the expense coming out of the Tri-State funds. I received a bill just last week for some 300 pounds of dust. They sent the bill to me, and I sent a check. I think Mr. Radebaugh got 100 pounds or close to it that he was short of. None of this came out of the Tri-State Canners' fund.

Out of the six beds we supervised, stimulated by the work of the Tri-State Canners, over two million plants were grown. I want to say that in each case where we put in a bed of an acre, we got about half the number of plants that we thought we could grow on an acre. We thought we could pretty nearly take off something close to a million plants to an acre, and the best, at Milford, which was as successful as any of these beds—I don't recall the exact figures—but it was probably close to 400,000 plants.

Now as to the yields coming from these plants, which were grown earlier and went out earlier, we took no accurate data. If we had the amount of funds at our disposal, we might have done it, but we did not have enough to cover the travel and supervision. I am convinced, though, from what I saw of the plants grown on these beds—grown earlier and anywhere from five to ten days earlier than those from the average farmer's beds throughout the State (and last season was a very difficult season for us to get the plants to grow at all)—that the plants from the field in which these were planted gave anywhere from two to four and five tons per acre more than the average beds grown by the farmers. Now I believe that the stimulus given to the farmers in general, the growers of tomatoes, brought their plants a good deal earlier, gave more emphasis toward dusting and general culture of plants than any effort the Tri-State Canners have put forth in a number of years. I believe the enterprise was a commercial success in every sense of the word.

(The report of the Committee on Agriculture was accepted with thanks.)

MR. COBB—I understood in regard to Dr. Symons, and also from Mr. Radebaugh this morning, that the wishes of the gentlemen were that the extent of their work for the coming year be enlarged. It seems to me it ought not to take any argument from anybody to show how necessary this is. In order to build a house you have got to build your cellar. It seems to me these gentlemen are building your cellar. When you have the assistance and enthusiasm of your Bureau of Agriculture in Washington and the Maryland State College, it seems to me you, yourselves ought to be willing to do something towards it. It is the foundation of the industry. Now our company last year gave to this fund $500, I believe. We believe in this so thoroughly that our company stands ready to double the amount we gave this year, if the Association and its members are willing to extend their support and will double their amount.

We are doing this not as a speculation, not as a gift, but as an investment. I do not believe there is any investment that is going to bring bigger results than this. I listened to the reading of the report, and my only wonder is, how they did so much with so little money. Someone must have got cheated, and it wasn't the canners.

MR. KILIAN—It seems to me that this matter is of such great interest that it ought to be the basis for some discussion. If the program isn't too filled up with fixed items, I believe we could profitably spend a little time discussing the reports of the last four speakers. We could consolidate the discussion I am sure that in the minds of some of us there are inquiries that if they were brought forward would lead to the spread of some information that would be helpful. Now, personally, I have a very vague idea of what this grading means. I wonder if Mr. Hauck has anything he can tell us growing out of experience where he found the grading was actually put into effect—what difference in price the various grades brought—whether a contract was made for the acreage on the basis of a fixed price for the first grade, or a premium for the first grade, and the lower grades were paid at a lesser rate. I think that would be of some interest. Certainly the work that was started last year by the very meagre appropriation, augmented by the help of the can companies, bore good fruit, as has been reported here.

I believe that Mr. Cobb has sounded the keynote that we shouldn't look upon it as a donation, or an experiment or speculation, but he used the proper term—an investment—and surely, if it paid on the small investment last year, such a dividend as has been evidenced, I cannot see why the Association shouldn't consider some plan whereby it could make that fund adequate to make a real business proposition of it.

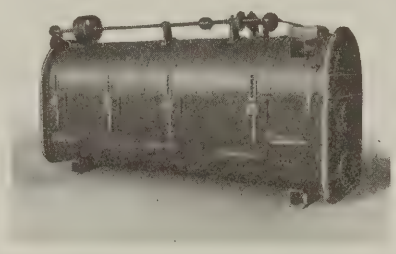
I understood Mr. Silver, I believe, last night to say that in the budget before the Governor of Maryland is an item of $10,000 for some sort of agricultural appropriation. Probably Mr. Radebaugh knows what it is. There might be something in that that we might well do something about, and if it is a move which has been recognized in Maryland to the extent of seeking aid, I wonder if Delaware and New Jersey might not be able to further strengthen the hands of their agricultural colleges, so that the joint work in this Tri-State Section in connection with this improvement won't go along with a little more volume now, since it has proven that it is not an experiment, but something that is really a vital factor in the business.

MR. HAUCK—I don't believe that there is going to be any great difficulty in selling that idea to the grower. We have discussed it at some lengths with the Cannery Crops Committee of the National Farm Bureau Federation. We have also discussed it with a committee of the Maryland Farm Bureau, which consisted of a representative grower from each of the important tomato-producing counties in the State of Maryland, and in each case the general principle of buying cannery tomatoes on grades received a hearty endorsement from those committees. Furthermore, in each case the committees voiced their approval of the tentative grades, keeping in mind all the time what I just said awhile ago, that they are only provisional. The grades may be revised considerably. The principle, of course, is simply that of buying an average crop for an average price, as against that of bying two or three gradations in quality for two or three gradations in price. There certainly are variations in the quality, and variations in the value of tomatoes to the canner in the different deliveries.

In Southern Indiana this past season I found a lot of canners had banded themseves together into a sort of local organization, aside from their State-wide association, and had agreed to buy tomatoes upon the basis of inspection, and they had their own inspectors right at the platform, and as the tomatoes were brought in, the inspectors would go through sample crates of tomatoes from each load He usually took about three crates, holding 50 or 60 pounds of tomatoes, and he would select those at random from the loads, and would sort them over onto a little table that he had and pick out the culls, the ones that showed decay or were too green to be of use, and usually he would take three samples from each load and take the total weight of the rejects in that particular load, and the farmers were to be docked on the basis of what he had picked out They were allowed a pound and a-half to two pounds in each crate In other words, they gave the grower a tolerance, and if he did not exceed that pound and a-half or two pounds, which amounted to about 3 per cent, if he didn't exceed that, he got paid for the total weight of the tomatoes in his load If, on the other hand, he had two and a-half or three pounds in each one of those samples that were selected, then he was docked for the entire amount of culls figured on the basis of the total number of crates in the load.

(Continued Next Week.)

We Manufacture for Canner:



VERTICAL PROCESS KETTLES
HORIZONTAL PROCESS KETTLES
AGITATING PROCESS KETTLES

Wanted and For Sale.

This is a page that must be read each week to be appreciated. You are unlikely to be interested every week, in what is offered here, but it is possible you will be a dozen times in the year. If you fail to see and accept your opportunity your time is lost, together with money. Rates upon application.

For Sale—Machinery

FOR SALE—100,000 No. 2 Southern Pine Box Shooks, 5-8 x 5-16, a carry-over from our spring contracts. Will sell for less than today's market. Price delivered your station on application.
W. E. Robinson & Co., Bel Air, Md.

FOR SALE—Several No. 2 Max Ams Double Seamers, in good condition; price reasonable.
Address Box A-1123 care of The Canning Trade.

FOR SALE—
We have on hand at bargarin prices for quick shipment the following, all being in first class condition and subject to inspection:
2 Sprague Inspection Tables as shown on Page 93 of Sprague's late catalog.
1 No 14 Disc Exhauster
1 Westcott Washer about 20 ft. long
2 Sprague Goose-neck Elevators for Peas, Beans, etc.
3 Variable Speed Pulleys
3 Kraut Cutters
1 Large lot of chain, Sprockets, etc., for Corn Conveyors
5 40x72 Retorts
1 Harris Hoist
2 Emerson Dicing Machines
3 Monitor Pea Washers
2 Boiler Iron tanks 18 ft. long, 6 ft. wide, 2 ft. high
and other miscellaneous bits of canning machinery in A-1 condition, We are willing to dispose of this material at exceedingly low prices for prompt shipment and will give reasonable terms.
A. K. Robins & Company, Baltimore, Md.

FOR SALE—Having decided to discontinue packing peas, we offer the following pea machinery; all machines in good order:
1—Ayars 12-pocket Rotary Pea Filler.
3—Hansen Pea Fillers.
2—Huntley Blanchers, 12 feet long.
2—No. 6 Huntley Cleaners.
1—No. 3 Huntley Cleaner.
2—4-screen Colossus Separators.
2—Nested Separators.
6—No. 147 Clipper Cleaners.
2—10-inch Cup, Ferrell Elevators, 18 feet long.
3—Fairbank's Platform Scales.
Address Box A-1118, care of The Canning Trade.

FOR SALE—
1—16-foot Monitor Steel Frame Blancher.
1—Style X Monitor Washer.
1—Monitor Pea Picking Table.
1—Elgin No 375 Type Plunger Filler with tartaric acid-ing attachment and roller capper.
1—Wonder Continuous Cooker, Style F.
1—Burt Labeling Machine for No. 3 cans.
1—No. 1 Monitor Scalder.
5—40x72 Retorts.
1—35 H. P. Buckeye Horizontal Engine.
Canning Machinery Exchange, Marine Bank Bldg., Baltimore, Md.

FOR SALE—Two Steam Chests – One 8 feet long and one 10 feet long with cars, at $100.00 each.
The White Packing Company, Moultrie, Ga.

FOR SALE—Hansen Filler for peas and pork and beans. In first class used condition.
Acme Preserve Co., Adrian, Mich.

FOR SALE—8 No. 68 A. T. Max Ams Seamers in splendid mechanical condition. These seamers are automatic in every respect, being arranged for cover feed and body feed. at $275.00 each.
The Heekin Can Company, Cincinnati, Ohio.

FOR SALE—1 No. 7 Clipper Cleaner – $50.00
3 Monitor style "Y" washers – $200.00 each.
1 Plummer blancher, just the thing for a No. 1 line, rebuilt last year; good condition $250.00.
1 Sprague Gravity Tramrail system 70' of straight track – 40c. per foot.
3 Track loops 5' 6" for end of lines – $3.00 each.
19 Trolleys with 2' hooks – $3.00 each.
50 Hangers – .30 each.
13 Switches – $2.50 each.
Address Box A-1127 care of The Canning Trade.

FOR SALE—No. 89 Max Ams locker with automatic feed and notching and soldering devices.
1—No 4 A. Slaysman power press
1—Max Ams automatic roll flanger
1—No. 134 Max Ams power press
3—dies for No. 10 covers
2—Max Ams curlers for No. 10 covers
1—No. 74 Max Ams compound liner
1—Stevenson No. 4 power press
1—Stevenson foot power retester for No 10 cans
1—Mitchell slitter with 5 prs. cutters, takes stock 30 in. wide (in fair shape)
1—Ayars slitter with 6 prs. cutters, takes stock 26 in. wide (in fair shape)
1 set foot power, square shears 22 in. wide
1 baleing press No. 12 Handy.
These machines can be inspected at our plant at Ridgely.
Saulsbury Bros. Inc., Ridgely, Maryland.

FOR SALE—1 Special Adjustable Burt Labeling Machine, made to take six assorted sizes of round containers, four to sixteen ounces. Equipped complete with motor and in excellent condition. Machine can be rebuilt for any size can required. For quick sale will dispose of this machine at a very low price. Liebenthall Bros. & Co., 1436 W. Ninth Street Cleveland Ohio.

FOR SALE—Thirty-five double deck Iron Beds with good springs. Also ticks for same.
The Illinois Canning Co., Hoopeston, Ill.

FOR SALE—17 Hamachek Feeders, in good condition
2 Giant Feeders in good condition
6 No. 7 Clipper Mills, used only short time and in good condition.
Wausau Canning Company, Waukesha, Wis.

For Sale Seed

FOR SALE—200 bushels Rogers Winner Seed Peas. Very finest quality, 1923 grown by Rogers Bros. Price on application. Lock Drawer A. Bridgeville, Del.

FOR SALE—We have a small surplus of Golden Bantam, Crosby Early, Large Late Crosby, Improved Hickok Country Gentlemen and Evergreen Sweet Corn all grown here by ourselves for seed purposes, from belated stock seed which was carefully tested for disease and vitality by the rag doll testing system which eliminates disease and unfertile barren stalks. We have been growing and improving this corn for a number of years under the above system. This work has been done by our Mr. Skinner with the assistance of Dr. Woodbury and the Department of Agriculture. We are offering this and will be pleased to receive your inquiry.

W. R. Roach & Company, Grand Rapids, Michigan

FOR SALE—2500 bushels Guaranteed Alaska Pea Seed, grown by well known seed growers. Price and particulars on application to

Box A-1132 care of The Canning Trade

FOR SALE—Limited amount of 1923 crop Country Gentleman seed corn. High germination. Very carefully selected, butted and tipped, and all hand shelled. Price $18 cts. per lb. subject to price sale.

The Illinois Canning Co., Hoopeston, Ill.

FOR SALE—500 bushel Winner Pea Seed grown by Rogers Brothers Seed Company, 1923. Price, upon application.

Stittville Canning Company, Utica, N. Y.

Machinery—Wanted

WANTED—Complete line of canning machinery for Peas, Corn and Tomatoes - must be in first class shape.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, DECEMBER 24, 1923

WEEKLY REVIEW

Christmas of More Interest Than Market Considerations—Huge Christmas Spending Will Help All Business—Market Offers Bait for Low Prices—Orders for Delayed Shipment and Billing Not Being Accepted—The Public Becoming Interested in Flat-Allowance Discussion—Tomatoes Holding Well —Corn Also—The Lesson Taught by Peas.

MERRY CHRISTMAS—The World and his wife are more busy on this eve of Christmas, considering the comfort and pleasure and enjoyment of the family and friends than in studying market conditions as they affect the canned foods industry. There is some justification in the complaint that Christmas has degenerated too much into a commercialized occasion; but at the same time this means a decided business advantage to every line of industry. Money has been poured out in a torrent this season, and it has gone into circulation, and its benefit will be felt by everyone. During the war we were urged to give until it hurt, and this season many may have spent until it hurt, but that has made business good for the retailers, cleared up immense stocks and opened the market for renewed buying in 1924—and canned foods will feel the full effect of these good conditions. Pessimism has been very largely replaced by optimism, and not so much optimism as the realization that the pessimistic fears were all groundless and idiotic, and we should more properly say, therefore, that the replacement has been through a contented certainty and confidence that means to go on without the old hang-back that characterized progress for a long while. That should make for a Merry Christmas for all in this industry, and we hope it does; and it certainly portends a very busy and prosperous—and, we hope, a thoroughly happy, New Year.

We do not have to tell the canners to throw off the cares of business and go in for the pure enjoyment of the holidays; they have done that. They have locked their warehouses, knowing that the goods they hold will gain in value during their owner's holiday, and while they inquire, from force of habit, how the market is going, they really don't care much.

THE MARKET—Judged on the few price changes shown on our market page, one would seem justified in concluding that at least all canners have not been taking the present quietness of the market in a calm way, but that some, at least, must have been forcing their goods on sale; but we do not believe that. We look upon these price reductions more as a bait to buyers than anything else, for no canner seems willing to admit that he ever offered to accept less for his goods than prices very much higher, as a rule, than those quoted in this market. But the bait is being taken by the buyers, and they have been trying to get the goods at these lowered prices, but for deferred shipment and billing. If they are succeeding, it is in very few instances and with some very small, uninformed canners, and as such not of any material consequence in the market trend. On the contrary, old operators are commenting upon the wonderful strength of the market in face of the unusual quietness, and that canners will not listen to sales except for immediate delivery and spot cash. In other words, the lowered prices are bargains for cash and carry, as it were.

Practically every holder of spots expects prices to be better after the new year's buying begins, and with everyone feeling that way, it is more than likely that we will see that result when the time comes. In the meantime the "foxy" buyer, who would like to cover his wants before this advance, is having his troubles. There is no weakness in the canned foods market in any section of the country that we can learn of, and none likely from now on.

The National Wholesale Grocers' Association is making use of every moment to spread the propaganda of the Flat Allowance plan on futures advising its members to write that clause into all contracts. On the other hand, the canners are more and more clearly seeing the danger in such a contract. That gift of about a million and a half dollars to the buyers, by the canners, under this flat allowance plan is looming larger and larger in the minds of the canners, and they want to know why. They have never had to pay such an immense loss on swells before, and they want to know why they should begin now. Even the public is becoming interested, and this week one fairly good consumer of canned foods said to the writer that he liked the idea of having some compulsion behind the retailer to make him send the spoiled goods to a warehouse; because if he were merely paid for them, and allowed to keep them, he, the consumer, could not feel sure that they had been removed. The consuming public will certainly not like a plan which pays the distributors for the swelled goods, but allows them to stay on the market; the food authorities ought to and undoubtedly will demand that the swelled goods be gathered up and destroyed after being paid for or not, but in any event destroyed. And the flat allowance is in direct opposition to this. On the other hand, the warehousing plan provides for this very thing, and that is why the food authorities are so much in favor of it

TOMATOES—Everyone seems to agree that the tomato market is holding up remarkably well in the face of almost no market inquiry. It is not right to say that there is no market for canned tomatoes, because there are always quite a few trades being made, and a rather steady shipment of goods in small lots, but constituting a steady drain upon the supply. The market operators call it no market because there is not snap or ginger to the inquiry and buying. The wholesaler comes in for such amounts of tomatoes as he needs at once, and it is a very steady coming, be it said; but the big buyers in big lots are waiting until they close 1923 and open 1924. If they have to pay more money for tomatoes in 1924, they will pay it and simply add it to the price. It is quite generally recognized that for

any blocks of tomatoes the buyers must come to the Tri-State territory; and the goods here are in strong hands.. The bottom of the tomato market is quoted as follows: 1's, 62½c to 65c; 2's, 87½c to 90c; 3's, $1.30 to $1.35; 10's, $4.75 to $5.00, all f. o. b. respective factory, with Baltimore prices ranging 5c and more higher.

CORN—Some canners are naming future corn prices, but not many of them, as all realize that it is better to wait; first, until they can more accurately gauge the costs of the 1924 pack, and, secondly, because under improved marketing conditions in 1924, future prices will be better and easier to maintain. There has been a fair demand for corn this week, and it is beginning to be said that the better qualities are growing scarce. This is true not only here, but throughout the Central Western corn-canning States. The corn canners there feel very confident on what holdings they still have. Standard crushed corn is selling at 90c to 92½c, with extra standard quoted at 95c to $1.00. Standard whole-grain corn is quoted at $1.25 to $1.30, with extra standard Shoepeg quoted at $1.40 and up to $1.50 and $1.60 for fancy.

Sweet potatoes, kraut, pumpkin and some other items are attracting some attention and are holding firm as to market prices. Stringless beans long have been displaying strength and there may come a sudden cleaning up on these that will leave some needy buyers without. The packing of sweet potatoes was not heavy this season, and it will not take a great deal of attention to this item to put it in the scarce and high column.

Peas have been quiet and mainly talked of as futures. The spots have worked down to a point where they are traded in between jobbers. There is a real strength to this article which market conditions do not seem to affect. When a leading Wisconsin pea packer can stand before the Tri-State canners and say, in early December, that it is not possible to buy a thousand cans of peas of average quality from first hands, after a record pack of peas, it can be realized to what position canned peas have arisen. Last season's pack is almost a closed story, and yet we have not turned into the normally heavy consuming months of the year. It is all a question of quality here, and canners of other items are not overlooking that fact. They want to see their goods in the same condition and they intend to make quality pull them out, just as it has done with peas.

Once more, our hearty good wishes for a Very Merry Xmas to all our big family of readers.

NEW YORK MARKET

Bill to Compel Name of Canner on Each Can—Jobbers to Fight the Bill—Wholesalers Have Sent Out Their Flat- Allowance Contract, Advising All Their Members to Use It—Future Corn Being Offered—Spot Business Dull—Some Mergers Announced—News of the Trade.

By "New York Stater,"
Special Correspondent "The Canning Trade."

New York, Dec. 20, 1923.

BILL in Congress Aims at Private Brands—Canners who have long been opposed to the distribution of the cream of their pack by wholesale grocers under the private brands of the latter will be pleased to learn that a bill has been introduced into Congress to amend the Federal Food and Drugs Act so as to require food packages to indicate the name and address of the manufacturer, canner or packer. The bill, H. R. 742, is now before the House Committee on Interstate and Foreign Commerce. The amendment proposes to amend Section 8 of the Food and Drugs Act to provide that food shall be deemed misbranded "if the name and business address of the manufacturer, canner or packer be not plainly and conspicuously marked on the outside of the package. * * * Provided further, that nothing herein shall be construed so as to prevent placing the name of the distributor on the package."

Grocers to Fight Measure—Wholesale grocers and chain-store distributors using private labels are naturally up in arms against the bill. The National Wholesale Grocers' Association, in presenting the bill to its members, says in regard to arguments in opposition: "To compel manufacturer's name branding would mean destruction of the private brands of food products packed for, and popularized by, wholesale grocers whose effort, time and money are spent in establishing and perfecting food products. The housewife is familiar with the distributor's brands and his reputation gives assurance that the product is pure and wholesome. The fact that the manufacturer's name appears on the container would not afford greater protection. The wholesale grocer's private labels are registered trade-marks; valuable property rights have been built up through long use of these labels; this good-will would be destroyed by placing the name of the manufacturer on such labels. Under the provisions of the pending bill peas packed in Wisconsin under the private label of a New York wholesale grocer would be required to bear the packer's name. To brand the names both of manufacturer and distributor is impracticable and serves no useful purpose. Neither packer nor distributor would be inclined to devote effort to popularize a product bearing both names."

The American on Swells—E. L. Adams, in a wire published in today's New York Commercial in answer to an inquiry from that publication regarding the position of the American Wholesale Grocers' Association (of which Mr. Adams is secretary) on the warehouse plan for handling swells, says: "Telegram received. President McLaurin absent. Association has taken no official position respecting zone warehouse plan. This was discussed at Chicago recently with certain individual members and our conference committee, who expressed themselves as believing plan worthy of trial."

Suggested Clause on Swells—The National Wholesale Grocers' Association is today sending to all members a leaflet entitled "Write This Clause in Canned Foods Contracts."

> "SWELLS—Except as hereinafter provided, the seller shall make the buyer a flat allowance from the contract price in full consideration of all swells and spoilage computed according to the following percentages:
>
> "FOR GOODS IN ALL SIZES OF TINS, EXCEPTING NO. 10—One-quarter of 1 per cent allowance on peas, string beans, corn, pumpkin, spinach, beets, succotash, lima beans, red Alaska, pink and chum salmon and tuna fish; 1 per cent allowance on all vegetables and fruits packed with seeds or pits, excepting tomatoes; one-half of 1 per cent allowance on all other fruits, fish and vegetables, including tomatoes.
>
> "FOR FOODS IN NO. 10 TINS—Three-eighths of 1 per cent allowance on peas, string beans, corn, pumpkin, spinach, beets, succotash and lima beans; 1½ per cent allowance on all vegetables and fruits packed with seeds or pits, excepting tomatoes; three-fourths of 1 per cent allowance on all other fruits, fish and vegetables, including tomatoes.
>
> "BUT IF THE SHIPMENT contains goods that are found to be spoiled by reason of hidden defects and the buyer so notifies the seller within sixty days after notice of arrival by transportation company, the buyer, in addition to his other rights, under this contract, shall be entitled at his option, either to reject the shipment or to obtain from the seller an allowance for all the spoilage caused by said hidden defects.
>
> "THE SAID PERCENTAGE allowance above specified shall be made to and accepted by the purchaser, in full settlement, for all losses caused by hidden defects, as hereinbefore provided, but subject nevertheless, to the further provision that if there be development of swells or spoilage or both on or before August 1st of the year following the pack in excess of double the above mentioned percentages, the matter shall be settled by mutual agreement or arbitrated under the rules of the National Wholesale Grocers' Association of the United States, the National Food Brokers' Association and the National Canners' Association."

Offer Future Corn—Minnesota canners are offering corn on future contracts at the following prices: Fancy Golden Bantam, $1.60; fancy early Crosby, $1.30; extra standards, $1.15; standards, $1.00; narrow grain Evergreen standards, 95c, all prices f. o. b. cannery.

Spot Business Dull—As might be expected during the week before Christmas, trading in the local canned foods market has been exceedingly quiet during the week. Wholesale grocers, as well as the chain-store buyers, are operating only on a hand-to-mouth basis on canned foods, pending stock-taking early in January, and are concentrating on their holiday lines.

Williams-De Grof Merger—R. C. Williams & Co., Inc., have bought out the business, stocks, brands and good-will of Lewis

de Grof & Son, local wholesale grocers, and the de Grof business will be merged with the Williams business at the main plant of R. C. Williams & Co., Inc., on Hudson Street on January 1st.

Another Merger Possible—Another merger of local wholesale grocers is possible during the next week or so, it is hinted along Hudson Street. This second merger involves one of the "Big Four" wholesale grocers here and a large wholesale grocery concern operating in the Wallabout Market section of Brooklyn. No details of this rumored amalgamation are available, however.

Personal News of the Trade—A. L. North, of North & Dalzell, prominent canned foods brokers, returned from an extended trip to the Coast this week, and reports canned foods in a strong position all along the line.

P. C. Gatley, of H. L. Forhan Co., canners of Portland, Maine was in the market during the week.

Fred Dutton, well-known canned corn specialist of Columbus, Ohio, was visiting on Hudson Street during the week.

Wholesale grocers, manufacturers and brokers turned out in full force tonight for the annual dinner of the New York Association of Specialty Manufacturers' Representatives. held at the Hotel Pennsylvania.

Henry H. Ashenfelter, local broker, is on the way to California for a visit with Coast canners whom he represents here.

Wm. H. Nichols, well-known Chicago canned foods broker, was here during the week.

Several members of the local trade journeyed to Portland, Maine, last week as witnesses in a damage suit brought by W. R. Roach & Co., prominent Michigan canners, against the Saca Valley Canning Company, of Maine.. The suit involved quality on a delivery of 10,000 cases of fancy corn sold by the Saco Valley Canning Company to W. R. Roach & Co., in 1919. The suit was settled outside of court in favor of W. R. Roach & Co., it is understood.

Grocerymen and canners all over the country have been saddened to learn of the death of Tom Lyle, president and founder of the Tom Lyle Grocery Co., of Meridian, Miss. Mr. Lyle was one of the pioneers of the Southern jobbing trade.

Several leading members of the Maryland canned foods fraternity were in New York late last week, including Wm. Silver, of Aberdeen; Col. A. W. Sisk, of Preston, and N. H. Fooks, of Preston.

CHICAGO MARKET

Market Takes a Holiday—The Year Has Been a Profitable One—Larger Buying Looked for in 1924—Some of the Larger Houses Quietly Buying Tomatoes—Corn Will Be Cleaned Out Soon—Better Pea Prices.

By "Wrangler,"
Special Correspondent "The Canning Trade."

Chicago, December 22, 1923.

MARKET Holiday—The general market for canned foods is stagnated on account of the nearness of the holidays and the first of the year, wholesale grocers having determined not to add to their stock until after the first of January. However, quite a quantity of canned foods has been purchased for shipment after the first of January, so that the goods will not appear in the inventory.

Wholesale grocers generally feel that the year 1923 has been profitable. They have traded conservatively and bought carefully, but they have turned their stocks over rapidly and have thereby multiplied their percentage of profits several times more than usual.

The volume of their sales has probably not been as large as for several years past, but their percentage of profit has been better, and their expense for carrying heavy stocks and interest and storage charges have been much less than usual.

It is doubtful whether the policy of hand-to-mouth buying, which has been in vogue during the past year, will continue as rigidly as during 1923. The banking credit of wholesale grocers has improved during 1923, and they are in position to borrow money more freely than for several years past.

Bank deposits have heavily increased in the checking departments and in the savings departments, attributable, so many bankers state, to the saving of money which used to be spent for whiskey and beer, and the banks, having more money to lend, are soliciting good business from reliable lenders rather than exerting themselves to discourage lenders, as has been the case for several years.

It is quite likely, therefore, that the former policy of buying futures in canned foods will be, to a certain extent, resumed, and that canners, also being able to secure more liberal accommodations from the banks, will not hesitate to pack a good output of a good quality. It can, therefore, be hoped and anticipated that there will be an excellent and active business in canned foods during 1924.

The output for 1923 will not be more than sufficient to supply the demand until the new or 1924 pack is available, and the packing season of 1923 will, therefore, enter upon the season of 1924, when canning begins, free of surplus in nearly if not quite all lines of canned foods.

The purchasing power of consumers is larger at present than it has been for many years before, and the campaigns of education which have been waged by the canners, wholesale and retail grocers has so popularized canned foods that people are consuming them more freely than ever before in the history of the industry.

This writer, therefore, congratulates the canners and wholesale grocers of the United States, as well as the retail grocers and all distributors, upon the present situation and future prospects during 1924 for good business, and avails himself of this opportunity to wish each and all of them a Merry Christmas and a Happy and Prosperous New Year.

Canned Tomatoes—The market for canned tomatoes is not as quiet as one might suppose from the general report, for some of the large houses, realizing the fact that extra standard and fancy tomatoes are exceedingly scarce in the United States, are quietly buying up all desirable lots that are presented to them at reasonable prices.

This is especially the case in houses that use private labels, for they have not bought heavily and are now realizing that the supply for private label use in the hands of canners is very limited.

It is hardly worth while for the brokers to look for canned tomatoes in the Central West, canning districts or States, as supplies in first hands of all sizes are about closed out. Where any are to be found at all, they are in odd sizes or broken lots less than carloads and available only for local shipment.

Canned Corn—The report from the Iowa-Nebraska Canners' Association is to the effect that the remainder of the pack of 1923 now held in those States is very small, about 200,000 cases, and will be cleaned out during January, in all probability.

The holdings of canned corn in Illinois and Indiana are said to be considerable, but there is no reliable report or information to that effect, and it is merely an estimate that there is still considerable canned corn in first hands in these States.

The report from Ohio is that the surplus in the hands of canners of corn is now down to less than 200,000 cases, which will all probably be sold and shipped out by the middle of February. Wisconsin is practically sold out of canned corn, as is Michigan and Minnesota, and these facts in detail tell the story.

Good standard corn can still be bought, where to be found in the States mentioned, at 90c, f. o. b. cannery, and under the circumstances it would seem to be a good buy.

Canned Peas—Several canneries in Wisconsin which have been delayed in disposing of their output of canned peas for 1923 for various reasons are now letting a few go at prices that are considerably higher than the opening prices.

This is probably one of the reasons why the peas have been held, as several shrewd canners realized earlier in the season that the rapidity with which peas were being sold almost made it a certainty that they would be scarce, and that a better price would be obtainable toward the conclusion of the season.

I have heard of the closing out of several considerable blocks of peas so held by canners during the past week to large Chicago buyers. As soon as these lots are disposed of, which will be by the first of January, the supply of peas in Wisconsin will be exhausted.

The sales of future peas of the 1924 pack have been small. Several canners have named prices and several brokers have exercised their imaginations in exaggerating the quantity sold, but the actual sale of futures so far of Wisconsin peas, 1924 pack, will probably not aggregate a half million cases, or about 5 per cent of the expected pack.

The quality of canned peas packed in Wisconsin during 1923 has averaged fine, and this fact will put them into rapid consumption, and though the pack for 1923 was the largest in the history of that State, it is practically gone, and canners are confident that even a much larger pack next year can be readily sold.

ST. LOUIS MARKET

Buyers Busy on Inventories—Most Lines of Canned Foods Will Show Very Light—Future Peas Have Been Bought Quite Freely—Corn Buying Is Light—Market Generally Quiet.

By "Missourian,"
Special Correspondent "The Canning Trade."

St. Louis, Dec. 20th, 1923.

THE Market for canned foods is unusually quiet for this time of the year. Distributors are getting ready for their inventories and heads of the majority of the canned foods distributing concerns have given instructions to their buyers not to add to their stocks until after the first of the year.

This means that the stocks of many distributing concerns will be almost nothing on some items of canned foods. This also indicates that because of the holding down of buying there will be some very active purchasing soon after the first of the year, and if it starts off with a rush, and it is generally believed that it will, higher prices on nearly everything will be the result, as nearly all concerns are very light in their holdings, and so are the canners. Even offerings which are considered bargains are not readily taken, the buyers preferring to take a chance later on, rather than tie up his money.

VEGETABLES—Peas—Jobbers generally have not bought largely of peas, although some have purchased rather heavily. It is hard to say how many futures have been bought. Some say quite a satisfactory volume of business has been done, while others state business has been small. Some Wisconsin canners do not care to make definite contracts. They are waiting to see what their packing costs will be. Interest in futures has started early. It indicates a willingness to buy for future use. Spot peas are firm and spot peas are scarce. Considerable spot peas could be sold if they could be had more readily from first and second hands. Opening prices on 1924 Wisconsin pack are available here, although the majority of the packers have not made their announcements.

Corn—Buying of corn is light, as naturally expected, and only for immediate requirements. Both fancy and standard are firm. The latter grade has been made popular by the chain stores.

Tomatoes—Factory buying of tomatoes has been light, as dealers do not require goods for prompt shipment, and many canners do not care to sell at present prices. Southern prices are continuing firm.

Stringless beans of Southern pack are strong. There is a limited volume of buying of asparagus. Prices are firm. Spinach demand is unchanged.

Fruits—The fruit market is unsettled, because some operators are ready to make concessions in order to get rid of their surplus. The demand is limited. There is not much spot trading, only enough being done to fill up holdings. No. 10 pie fruits are developing some interest. Peaches are firm. The demand for apricots is quiet.

Fish—Business in salmon, sardines, etc., is quiet.

Milk—The market for canned milk continues to be quiet. Prices are unchanged. Large lot inquiries are conspicuous by their absence. Most buyers are holding to their policy of buying only for their immediate requirements.

CALIFORNIA MARKET

Frosts and Rains Set In—Market in Quite Satisfactory Condition—Opening Prices on Future Peas—Salmon Getting Low in Stocks—Canners' Short Course on January 7th and 8th—Coast Notes.

By "Berkeley,"
Special Correspondent "The Canning Trade."

San Francisco, Dec. 20th, 1923.

FROSTS and Rains—Winter has finally made its appearance in California, with frosts and rains in many sections. A cold wave swept the State about the 10th of the month, causing some damage to olives and oranges, but the loss is not expected to be heavy. It was followed by a general rain, the first real storm of the season and farming operations, which had been held up because of the long dry spell, will soon be under way. The rainfall is still far below normal, but is sufficient for immediate needs, and may be heavy before the season is at at end.

General market conditions in canned food lines continue quite satisfactory. No heavy buying movement is on, but goods are moving all the time, and canners are viewing their steadily decreasing stocks with genuine satisfaction. Stocks of low-grade fruits are getting very small and all grades are being held firmly. Opening prices are being named on early vegetables, such as spinach and peas, and considerable business has been booked on these.

Peas—The California Packing Corporation has named opening prices on the 1924 pack of canned peas of its own pack and for account of the Utah Packing Corporation. The Utah peas are sold f. o. b. Utah factory, with the seller reserving the option of filling sales from their California pack, equalizing the price and freight rate. Pending installation by the National Canners' Association of the zonal warehouse system "for swells," the California Packing Corporation will make no "flat swell allowances" on 1924 pack canned peas. The opening prices follow:

Colton or Eagle Brand—

	Cala. Pack.			Utah Pack		
	No. 2	No. 1	No. 10	No. 2	No. 1	No. 10
Del Monte Brand—No. 1 sieve:						
Tiny size sugar peas.....	$2.75			$2.60		
Del Monte Brand—No. 2 sieve:						
Very small size sugar peas	2.35			2.25		
Del Monte Brand—No. 3 sieve:						
Small size sugar peas....	1.92½	$1.50	$9.00	1.85	1.45	8.75
Del Monte Brand—No. 4 sieve:						
Medium size sugar peas..	1.62½	1.25	7.75	1.55	1.20	7.50
Mt. Hamilton or Mission Brand—No. 5 sieve:						
Standard sifted	1.25		7.00	1.25		6.75
No. 6 sieve: Standard...	1.20		6.50	1.15		6.25

Prices on 2's run a little lower than those of last year, while 10's are about 25 cents higher.

Salmon—Pacific Coast canned fish is being very firmly held, and stocks of some varieties and grades are getting low in first hands. The California Packing Corporation, which controls Alaska Packers' Association, is entirely sold up on pinks and chums, and its stock of red fish is being firmly held at $2.35. Stocks of pinks can be picked up from Seattle operators, however, without much trouble. The tuna market has taken an upward turn of late and canners are asking and getting $25 a case for white meat packed in No. 1s, $14 for halves and $12 for quarters. It is possible to fill orders fairly complete for yellow fin fish at $7.50 for halves.

Canners' Short Course—The Agricultural College of the University of California has announced a short course for canners to be held at Berkeley, January 7 and 8. The course is not intended for those interested in home canning and will be largely technical in nature. The effect of cultural methods, such as cultivation and irrigation, upon fruits intended for canning will be discussed and research work in the spoilage of canned foods will be given attention. It is announced that special attention will be paid to figs and olives, since these fruits have become of particular interest to canners in recent years. Those desiring to take the course will be charged a registration fee of $1. A number of canning firms around San Francisco Bay have arranged to send a number of their employees.

Preliminary arrangements are being made for the annual convention of the Canners' League of California, which will be held at Del Monte. A three-day gathering is planned and February 28-29 and March 1 are the dates selected. Last year the annual meeting was held at Del Monte for the first time, and it was decided that the plan of holding the convention away from a large city and from business surroundings was a complete success.

Coast Notes—Jas. D. Dole, president of the Hawaiian Pineapple Company, Ltd., and Harry E. MacConaughey, vice-president and head of the sales department, returned to San Francisco on December 11 from a business trip to Europe, where a careful survey was made of the field with an idea of extending the distribution of Hawaiian canned pineapple. While no formal statement of their findings has been made, it may be stated that they are not enthusiastic over the outlook for business of any kind in Europe for the immediate future. Mr. Dole plans to sail for Honolulu in time to reach home for Christmas.

Joseph A. Bisceglia, a prominent orchardist and canner of San Jose, Cal., passed away there on December 6, following an illness of several months. He was born in Donnici, Cosenza, Italy, and came to this country in 1888, at first operating a small banking business in New York. Later he came to the Pacific Coast and engaged in the railroad contracting business for several years. In 1894 he located at Morgan Hill, Cal., and in 1902 organized a canning company, extending his operations to Gilroy. The plant was moved to San Jose in 1913 and soon became one of the largest in theSanta Clara Valley.

THE MEETING OF THE NEW YORK STATE CANNERS

Hotel Powers, Rochester, December 12th and 13th, 1923—Adopt the Warehousing Plan—Call for Use of No. 2½ Cans as Standards—Adopt Standard Definitions for Peas and Corn—A Businesslike Session.

THE New York State Canners' Association, Inc., met at the Powers Hotel, Rochester, on the morning of December 12th, as scheduled, and carried out its program like a well-organized business, as, indeed, this body of canners is, incorporated and working like a unit.

President Meulendyke called the meeting to order and reviewed the successful year, much as a president addressing his board of directors. Treasurer Roy W. Hemingway reported the financial condition as quite healthy and promising. Business Secretary John P. Street gave a detailed report of his activities during the year, and it constituted a formidable array of important statistics, sanitary inspection, crop consideration and watchfulness toward a dozen things of importance to his members.

After appointing several committees, the President introduced Mr. Mark A. Daly, Secretary of Associated Industries, New York, who spoke upon some of the legislative activities of the past year and their influence or possible influence upon the industry. He likewise forecasted some of the legislation likely to appear, and pointed out the kind which seeks to hamper the industry.

Wednesday afternoon was taken up by addresses of President Anderson along the lines just quoted in his address at the Tri-States, and of Mr. Philip A. DePuyt, President of the National Retail Grocers' Association.

Mr. W. R. Olney, Chairman of the Committee on Standardization of Can Sizes, reported in favor of the No. 2 can, and advocated the retirement of the No. 3 can. As will be seen under the resolutions, this action was concurred in by the Convention.

Mr. Jay D. Fuller, Chairman of the Committee on Vegetable Standards, reported on the agreed-upon standards for peas, and likewise for corn. These standards were thoroughly considered and finally adopted as given below.

Wednesday evening the entire Convention went to Keith's Temple Theatre for a fine vaudeville, the guest of the Association.

Thursday morning was a better-crop feast, participated in by the crop experts—C. G. Woodbury; R. W. Thatcher, Director of Research, State Experiment Station; R. A. Emerson, of Cornell University, and Mr. B. C. Olney, Chairman of the Agricultural Relations Committee. The Association has succeeded in interesting the State authorities in the improvement of canners' crops, and great results are properly expected from this.

Thursday afternoon was given over to the annual meeting of the Corporation, which means that it was a business, or closed, session, in which the Association threshed out its real problems and laid plans for the season of 1924. Officers and directors were elected as given below, and no little time was given to the study of better apple canning, for which purpose samples of canned apples were cut and commented upon. The virtues and faults of these apples were freely commented upon, and members came away with better ideas as to what constitutes the best manner of canning apples.

On Thursday evening, having completed its work, the entire Convention attended a dinner dance and entertainment given by the machinery and supply men and brokers, and it was a real genuine jollification of refinement and pleasure.

The officers elected were as follows:

THE ELECTION

President—J. D. Fuller, South Dayton, N. Y.

Vice-President—R. W. Hemingway, Auburn, N. Y.

Treasurer—E. O. Shuster, Rochester.

Secretary—Jno. P. Street, Rochester.

The pea grades adopted were the same as those adopted at the meeting of the Executive Committee of the National Canners' Association in Chicago in November, and published at that time.

STANDARDS FOR CANNED CORN

Canned Corn is the canned vegetable prepared from kernels of fresh sweet corn. The corn is husked, trimmed or sorted, thoroughly washed, cut from the cob, and silks, pieces of cob and husk removed. It is packed with potable water, with or without the addition of sugar or salt.

STYLES

Cream Style is the product prepared from sweet corn re moved from the cob by shallow cutting through the grain an subsequent scraping. It has a more or less creamy consistenc

Whole Grain Style is the product prepared from sweet cor and cut from the cob in such a manner as to leave the grain sub stantially entire.

QUALITIES

Fancy Quality is packed from selected stock of young an tender sweet corn while fresh, and has the distinctive flavor o young corn. It is free from specks and discolored kernels, and practically free from pieces of cob, silk and husk. It has a brigh color, and, unless packed Whole Grain Style, has a creamy cor sistency.

Choice Quality is packed from reasonably young and tende sweet corn while fresh, and has the flavor of young corn. It reasonably free from specks, discolored kernels and pieces o cob, silk and husk. It has a reasonably bright color.

Standard Quality is packed from fresh sweet corn, and ha less attractive flavor, color or appearance than the higher grade It is free from any considerable amount of cob, silk, husk an discolored kernels.

THE RESOLUTIONS

Warehouse Plans—Resolved, That the plan proposed by th National Canners' Association for the examination, identificatio and destruction of swelled or spoiled canned foods, and the pay ment to buyers of just claims therefor, be, and the same is, ap proved; and that food officials—Federal, State and local—ar hereby respectfully petitioned to co-operate with the officers o the National Canners' Association in making the plan effectiv

No. 2½ Cans — Whereas, the Department of Commerc through Mr. Hoover, has recommended a reduction in the numbe of sizes of canned food containers;

Whereas, the use of tin containers so nearly of a size as a the No. 3 and No. 2½ cans is uneconomical, and contrary to th best interests of the canning industry;

Whereas, the No. 2½ size is rapidly supplanting the No. can as indicated by the fact that only the No. 2½ size is bein packed by Pacific Coast States—Utah and Colorado—as well a Canada,

And, Whereas, the adoption of the No. 2½ can would sho some economies, which would be reflected in the price of canne foods packed in this size can;

Be It Resolved, That the Association of New York Sta Canners, Inc., hereby recommends that the use of the No. 3 ca be discontinued in 1924, or as soon as possible, by its member and that the No. 2½ size be adopted in its place.

That we respectfully ask the can manufacturers to co-ope ate toward this end.

And that a copy of these Resolutions be sent to the Nation Canners' Association, National Food Brokers' Association, an to the various State Canners' Associations.

Sanitation—Resolved, That reasonable compliance with th Sanitary Code of this Association be a requisite for membershi and, be it further

Resolved, That the Sanitary Inspection of the plants of o members be continued by the Secretary of this Association, an that he be authorized to report habitually offending members the Executive Committee.

CONVENTION DATES

January 8-9, 1924—Utah Canners' Association, Uta Hotel, Salt Lake City. Annual convention.

January 9-10, 1924—Missouri Valley Canners, Hot Colonial, Springfield, Mo. Annual Meeting.

January 21st to 26th, 1924—National Canners, Cannir Machinery and Supplies, National Food Broker Machinery Exhibit, etc., Buffalo, N. Y.

SMILE AWHILE

THE BOY HERCULES

He—Yes, my great-grandfather planted this grove when he was a boy!

Sweet Thing—You expect me to believe that?

"Of course. Why not?"

"How could a boy plant such big trees?"—Judge.

PERHAPS

After all
There are only three things
That are worth while:
To be good,
To do good,
And always to smile.

THE NATURAL OUTCOME

Mother—The kid will be wearing long pants soon.

Father—It won't be long.

Mother—And why do you always contradict me?—Virginia Reel.

JAZZ?

"Did you see Oliver Twist, Auntie?"

"Hush, child. You know I never attend those modern dances."—Panther.

QUITE RIGHT

She—I can tell a lady by the way she dresses. Can't you?

He—I never watched one dress.—Widow.

A SAD CASE

Gee, I'm the hard-luck guy. I was twenty-one yesterday and caught my fourth case of seven-year itch today.—Voo Doo.

? ? ?

Girl (looking at dog)—He has spots on his stomach just like Bobby.

He (absently)—Who's Bobby?—Moonshine.

A WISE COP

The traffic policeman had made a mistake. He had ordered a car to stop when there was really no reason. The driver, a middle-aged woman, was justly indignant.

"Pardon me, madam," said the officer, "but I thought at first you were too young to drive."—Giblin.

THE WAY IT BLOWS

There was a young fellow from Kent,
Whose nose was so long that it bent,
As the old saying goes,
He would follow his nose,
And instead of coming he went.—Mercury.

EDITORIAL

NEW YEAR'S WISHES—Here's that the canning industry may have another 1923! And to that end: Here's to good, old, ever-faithful Dame Nature, and may she ever continue to be the friend of the canners.

RESOLUTIONS—First and before all else, the bedrock upon which you must found every action of the year; kept constantly before your eyes and never to be forgotten for one instant—pack quality.

Second—Having planted that resolution so deeply in your consciousness that nothing can possibly make you overlook or forget it, then take one other resolution, write it in red ink, and place it before the eyes of everyone in the factory or having to do with the production of your goods—pack QUALITY.

Third—And if you expect to sell your goods without trouble and to the limit of your ability to pack, and wish to see the kind of demand that drains your warehouses of goods, and makes the consumer want more, and more, then take this third resolution: TO PACK QUALITY.

And nothing but quality.

But make this more than a mere New Year's resolution. Make it a principle of your life. Determine at all hazards to stick to QUALITY during 1924; and if you do we promise you that you will never permit anything to ever take its place in all the years of the future. If we could persuade you to do this, just this year; to turn a deaf ear to the "man with a price;" to let the competitor who is packing the "truck" for a truck buyer, we would not be afraid to promise you a continuation of the excellent demand of 1923 for many years to come. Never mind how the other fellow is hoeing his row; just you hoe your own row nice and straight, and then you will find all the other rows are nice and straight.

AND JUST ONE MORE—The industry is pledged to the Warehousing Plan as the proper means in the settlement of all claims for swells or spoiled canned foods. Don't be a traitor. Stick to your fellow-canners, and refuse to sell goods except with that clause in your contract. Print the Warehouse clause in your contracts, as the vast majority of canners are doing, and so help protect your rights. Every association of canners to whom it has been presented has adopted it unanimously, and the members have pledged themselves to use it. As it is said that more than 50 per cent of the jobbers are in favor of it, it can be said that a majority of the jobbers approve it. Then do not let the few loud wailers distract you. These jobbers say that the canners will not stand together. We don't believe that. Let's show them that the industry is a unit on this.

AT LAST THE BUREAU OF CHEMISTRY STIRS—Ever since the first effort to put into force the rulings of the Food and Drugs Act of June 30th, 1906, the Bureau of Chemistry, charged with its enforcement, has realized that its wings were clipped short when the clause requiring the name of the manufacturer of all food or drug articles on each package was stricken from the original draft of this pure food law. The framers of that food law were aiming at fraud and deception and unfair competition, by which elimination they knew they would be protecting the public's food and medicines; and they were wise enough to know that if they could compel every producer of foods or drugs to father the product by placing his name and address on each package, that the work of cleaning up would be practically done by this one provision. No man in his senses would place his name on a package of food or drugs, if that package were such as would bring discreit upon him ond his business; and so that requirement was a very large feature in the pure food law as first drafted. But it did not stay there; at least, while not exactly eliminated, it was rendered inoperative or ineffective by the addition of the words "or the name of the distributor" in case any name was used. Every man who has had a hand in the enforcement of a pure food law has long recognized that with that provision he could do more towards correcting the evils for which the law was made than could be done with all the balance of the regulations. And for the reason assigned, that it definitely fixes the

blame and makes the manufacturer responsible. Who is there that will say that this is not right and proper? But who was it, then, who knocked out this provision of the law, and why?

Credit is usually given to the wholesale grocers and the strong lobby they have always had at Washington; but they are not solely to blame. There were other distributors of drugs, etc., and not a few manufacturers who were very anxious to keep the name off the label—and be free of this direct responsibility. Dr. Wiley and others fought hard to prevent this emasculation of the law, but he was beaten, and the law was passed as it now stands. The Bureau of Chemistry has always wanted this provision, but not until just recently have they ever made a decided effort to have it passed as an amendment. It is to be hoped that this time it is a decided effort, and that the Bureau will bring to bear upon Congress every possible weight to have this amendment passed.

Representative Johnson, of Washington, has introduced the measure, known as H. R. 742, and it has been referred to the Committee on Interstate and Foreign Commerce. It must not be allowed to sleep or die in that committee, and we trust that canners will join all other bodies of food producers in demanding its early and speedy passage.

The wholesale grocers are lining up to oppose the measure, and they are parading the same old set of excuses as to why it should not be passed, chief of which is that their name upon the label is a guarantee and that there is no benefit to the consumer in having the maker's name there also. The world has progressed so far in matters of pure food since those days of 1906 that this old set of excuses appears very thin and threadbare, and ought to cause only a laugh. Much is made of the tremendous expense to which distributors have gone to make known their private brands, and it is claimed this name on the label requirement will kill all that. It most surely would not, and for this very good reason: No one knows the canners! There are just about as many good advertisers among the distributors as there are good advertisers among the canners—and you can count either of the sets upon the fingers of one hand. And the canners who advertise do not sell for jobbers' labels. How, then, would the consumer, seeing the canner's name as the producer of the goods, know how to buy that canner's goods except by buying the private label brand again?

The canners, as a class, are provincial; but if we admit that, we will have to admit, also, that the wholesale grocers are archaic. Modern business is done in the white light of publicity, above board and in plain view of all the world; with sleeves rolled up and with a total absence of all tricks. The big successes of the world are those that have taken all the people into their confidence. The wholesale grocers, however, seem unduly fearful that the world will learn that they are not producers as well as distributors.

The old, well-known private brands of jobbers are a guarantee to the consumers, because the goods put out under them, whether they be canned foods or any others of the long list of groceries, are carefully bought by experts; but what proportion of the whole of manufactured foods are these? A very small percentage, and the troubles come in that other, and larger percentage, as everybody knows, and nobody better than these wholesalers. In other words, nobody fears about the finer grades, but everybody—canner and wholesaler—is scared stiff about those lower and off grades when a name on the label law is proposed, and that is the best kind of evidence of its dire necessity.

Will we have a name on the label amendment this year? Is it of any advantage to the consumer? Just let any food inspector answer and he will tell you that there is nothing they need so much. If you want to know how badly it is needed, just observe the strength of the opposition to it!

THERE WILL BE NO "COLBERT" THIS YEAR

ONE of the best-known brokers in canned foods, at least during the past two years, has been James A. Colbert, familiarly known as "Jimmy"—a rotund, jolly little chap, with his office in Preston, Md., but who "got in bad" because of his connection with a purchasing company, and the efforts to break the tomato market in 1922. "Best known," but not "best liked," it should be added, for Jimmy was roundly cursed by every tomato canner, and by some others, because of the nature of his activities. Jimmy always protested that he was honest in his opinions as expressed, but that nature tricked him and proved his prophecies all wrong.

It was neither to condemn nor to condone that we began this, but to record that Jimmy has crossed his heart and spit that he will never do it again—that he is done with prophecies and in the future will leave that to us. As he speaks of tomatoes, and as we gave up prophesying about tomatoes before we ever began, we will accept the buck and not even attempt to pass it.

We have his signed repentance, or, rather, resignation, in a letter dated December 7th, in which he says:

Preston, Md., December 7th, 1923.

Mr. A. I. Judge,
Care of Canning Trade,
Baltimore, Md.

My Dear Mr. Judge:

With further reference to our letter of the 5th, the writer takes this opportunity to advise you that he does not intend in the future to offer any expressions or prophecies regarding the tomato crop, pack or price, as the realizes that by doing this some people could take a double meaning out of anything we might do.

Now, regarding the letter we wrote you: Several canners have talked to the writer along these lines, and he was adverse to getting any more unnecessary publicity, and he thought if their side had any merit to it at all, you would be a better judge and the one to sponsor same, and that was one of the reasons why I wrote you this letter.

Now, I have had my lesson and cut my eye teeth, and in the future you will find an entirely different change of policy, for the one ambition of my life is to redeem and re-establish myself in the good will of the trade, and I have reasons to believe that I can do this by careful attention and hard work during the next few years.

In the future if anyone comes to us with any propositions or schemes to pass out, we will simply leave the matter to you.

With kindest regards, I remain,

Respectfully yours,
COLBERT BROKERAGE CO.
J. A. COLBERT.

THE MORRAL CORN CUTTING MACHINE
Either Single Or Double Cut

THE MORRAL CORN CUTTING MACHINE is the most durable, simple and efficient cutter you can buy. It has the most positive feed of any cutter in use.

The Moral Cutter will cut large ears, nubbins and pieces of ears, without clogging like other cutters and for this reason you can secure a larger yield of cans per ton with the Morral Cutter than with any other type of cutter.

We furnish special attachments for the Morral Cutter for cutting Golden Bantum Corn and with these attachments the Morral Cutter will cut the Golden Bantum Corn more satisfactorily than any other cutter in use.

If you have any cutters that you would like to replace with new and up to date machines let us know what you have and we will make you a liberal allowance for your cutters on the price of new cutters.

We make the MORRAL CORN HUSKER, either single or double and we also make the MORRAL LABELING MACHINE.

Our machines are guaranteed to do satisfactory work, or money back if they fail to do so when set up and operated in accordance with directions furnished.

It will pay you to write at once for prices and further information.

BUFFALO CONVENTION NEWS

ANNUAL CONVENTION, WEEK OF JANUARY 21st, 1924

National Canners Association—Canning Machinery & Supplies Association
National Food Brokers Association

BIG MACHINERY EXHIBITION BIG CANNED FOODS DISPLAY

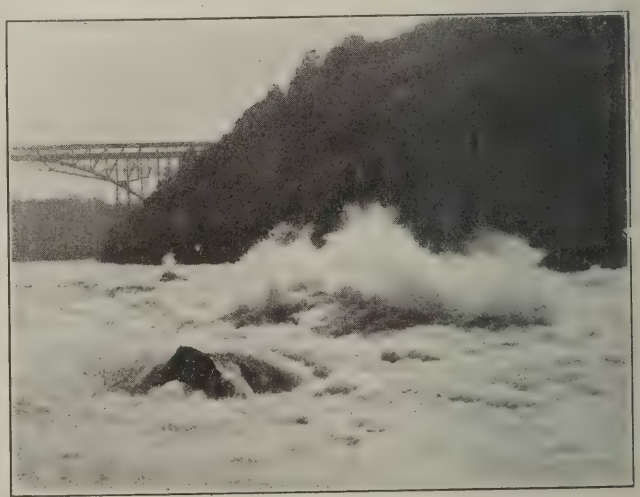
EVERYBODY WANTED——EVERYBODY WELCOME

Special Trains—The Canned Foods Exchange will run a special train to the Buffalo Convention, and wishes to extend a hearty invitation to all who may be traveling this way to join the party and enjoy the trip from the first moment. Reservations may be made by applying to the Exchange or to any of the Committee in charge. There will be no extra charge on this train. It will be a solid Pullman of the finest type, and entirely belong to the canners and their friends. In other words, it will be a Convention train, and everybody on it will know everybody else, and that means a jolly good time. The present plans are that the train will leave Baltimore Sunday morning, January 20 at 8 A. M., arriving in Buffalo that night. The Committee representing the Exchange is as follows, with their addresses, in case you prefer making reservations through any one of them in particular: Harry W. Krebs, American Can Co.; Robert A. Rouse, Continental Can Co.; James F. Cole, Atlantic Can Co., and Robert A. Sindall, A. K. Robins & Co., Chairman. The main thing is to get your reservation in early, the details will come along later.

Areoplane View of Buffalo. Niagara Square just below left center

The Brokers' Special Train, in charge of the National Food Brokers' Association, will leave Chicago, January 19, at 11:55 P. M. (C. T.), via the Michigan Central Railroad, going by way of Detroit, and passing Niagara Falls on the way to Buffalo. It will leave Detroit at 9:05 A. M. Sunday, January 20, and arrive at Buffalo that evening at 5:20. It, too, will be of the finest Pullman service throughout, loaded with canners and their friends, as well as the brokers, and there is no good reason why the industry of the Central West should not take in this enjoyable manner of traveling to the Convention. But don't expect to walk down to the station and board the train without having made your reservations in advance. Write to Secretary Paul Fishback, Fletcher Trust Building, Indianapolis, and tell him you are going with the crowd. You will then be assigned your berth and told the amount of your check, which can then be forwarded. This is always an enjoyable crowd, and the only real way to go to the Convention.

CANNERS TO CONVENE WHERE INDIAN CAMPFIRES BURNED!



Over a doorway of the Historical Building in Delaware Park at Buffalo is engraved the phrase: "Other Council Fires Were Here Before Ours."

Interpreted literally, this, perhaps, means that the grounds where the Historical Building now stands once rang to the calls of the Senecas; that in the dim yesterdays the air was redolent with the fragrance of burning campfires—and vibrant with the beat of the Indian drum.

Here where the canners of America will gather to discuss the problems of their business—the Senecas once held congress to argue the wisdom of peace or war.

Here where the Canners will make merry for four days lie the merry-makers of gone yesterdays; red-skinned sons of the soil, whose playgrounds were the woods and streams in and about Buffalo, who hunted and fished where the great city now stands.

Many of the Conventionites while in Buffalo will doubtless visit the burial place of Red Jacket in Forest Lawn—whose loyalty and devotion to the Americans was exceeded, perhaps, by that of only one other of his people—the noble farmer's brother, who gave unstintedly of his service in the cause of the Americans during the War of 1812. He, too, lies in honored ground at Forest Lawn, and about him the bodies of hundreds of his tribe.

The Whirlpool Rapids, Niagara Falls,—one of the interesting places which the visiting canners will view on their trip to the Falls

Somehow it is difficult to clearly comprehend the steady transformation that has converted this forest land into a city of over half a million people in less than a hundred years. Among the older residents of Buffalo are many whose fathers have told them of the days when Indians tramped the streets of Buffalo or pictured, vividly, the years when Buffalo's main thoroughfare was paved with nothing more than common dirt, and cows roamed the streets at their own free will.

Perhaps, too, he may have mentioned the busy commercial section of old Buffalo—now the Terrace. Or his reminiscences may have embraced the social activities of those early days when Buffalo was the center of gaiety in Western New York drawing visitors from all nearby towns—Niagara Falls, Lockport, Williamsville, and even as far as Batavia.

All throughout Buffalo may be found tablets marking spots of historical interest. On the Public Library in Lafayette Square is an inscription telling that here have stood two courthouses—the first built in 1810 and destroyed at the burning of Buffalo in 1813; the second one enduring until 1876. Two citizens of Buf

falo, who became Presidents of United States—Millard Fillmore and Grover Cleveland—practiced law in the old courthouse.

Where the magnificent Statler Hotel rears its twenty-two stories skyward once stood the home of Millard Fillmore. Of later years it has served the purpose of a hotel under the name Castle Inn. And, doubtless, many travelers were lured to the castle from the greater pretentiousness and comforts of Buffalo's big hotels simply to tread the same rooms and live under the same roof which had sheltered a great and beloved figure in American history.

Of unusual historical interest, too, is the vicinity of Court and Main streets. Near here stood the Eagle Tavern, where Lafayette stayed during his visit to Buffalo in 1825. It was in his honor that the old Court House Square was rechristened to Lafayette Square—the name it has borne ever since.

To the canners who will visit Buffalo these things will undoubtedly hold rich appeal, for there is under the surface of our commercialism a strong current of red blood which responds to the call of romance as vividly as a schoolboy.

What is more inspiring than the knowledge that this generation of which we are a part is today writing history in the growth of our nation of today! And what could be more interesting than the picturesque existence of those upon whose foundations we are building!

Today Buffalo and the Canners' Convention is the big stirring idea among the canners all over the country. Get out your travel sack and prepare to go. You'll be repaid a thousand times over for every minute spent and every dollar invested.

BUSINESS SESSION MINNESOTA CANNERS' ASSOCIATION

St. Paul, Minn., Nov. 27th, 1923

Reported by the Secretary, C. D. Geidel (Delayed in Mails)

AT the business meeting held on November 27th at 4 P. M. the following resolutions were presented by the Resolutions Committee:

Whereas, thanks is due the management of the Minnesota Canners' Association for the able work it has performed this past year and the able program it has promulgated;

Resolved, That we, the Minnesota Canners' Association, extend our sympathy to Mr. F. W. Douthitt and his family on account of Mr. Douthitt's recent illness, regretting very much that he was unable to attend our annual meeting.

Resolved, That we, the Minnesota Canners' Association, recommend the appointment of Mr. Chris. Heen to the office of State Dairy and Food Commissioner, being a well-qualified man to fill the position, he having taken a very active and deep interest in the canning industry.

Resolved, That the thanks of the Minnesota Canners' Association be extended to all those who so ably addressed our Association at this annual meeting, also those who acted as judges in the Scoring Contest.

Resolved, That we, the Minnesota Canners' Association, thank the management of the St. Paul Hotel for courtesies extended them during this Convention.

Resolved, That we, the Minnesota Canners' Association, extend our thanks to the can companies, machinery and supply companies and other allied industries for the entertainment furnished by them.

Resolved, That we, the Minnesota Canners' Association, thank the officers and members of the Ladies' Auxiliary for their co-operation the past year.

Resolved, That we, the Minnesota Canners' Association, thank the brokers and wholesale grocers for their kind co-operation the past year and especially during the Canned Foods Week.

Resolved, That we, the Minnesota Canners' Association, thank Mr. Shaw and his trade paper, "The Canner," for the assistance they have given us in the past and present conventions, that he has always been present at our meetings and has been a great inspiration.

Resolved, That we, the Minnesota Canners' Association, thank Mr. A. J. Anderson and his able assistants for the active part they have always shown in the interests of the industry.

Resolved, That we, the Minnesota Canners' Association, object to the proposed increase in the price of cans for 1924, as we feel that this advance in price is not warranted on account of present prices of steel products.

THE RESOLUTION COMMITTEE.
Mr. J. E. Barr,
Mr. C. M. Cosgrove,
Mr. J. C. Lucas.

Mr. Barr moved they be adopted as read, seconded by Mr. Vaux. Passed.

Mr. Barr moved, and it was seconded by Mr. Vaux that the report by the Auditing Committee, including the audit of the books, be received and referred to the Executive Board.

Report of Nominating Committee:
Mr. W. H. Taylor, President.
Mr. Frank Douthitt, Vice-President.
Mr. C. D. Beidel, Sec. and Treas.

Mr. Edward Cosgrove moved, and it was duly seconded that the report be received. Carried.

Mr. Edward Cosgrove moved, and it was seconded by Mr. Barr that the names of the officers submitted by the Nominating Committee be declared elected. Passed.

Mr. Edward Cosgrove moved, and it was seconded by Mr. Barr that the Minnesota Canners' Association endorse the action of the National Canners' Association Conference Committee on spoilage and Warehousing. Passed unanimously. Referred to Conference Committee of the National Canners' Association.

Moved by Mr. Will Smith, and seconded by Mr. Barr to be referred to Mr. Chris. Heen, Dairy and Food Commissioner, that in the opinion of the Minnesota Canners' Association it is unwise to have a son or relative of a canner on the inspection force.

Report received from the Labor Committee, Mr. Will Smith, Chairman.

Mr. Barr recommended that next fall the President appoint a strong committee to go before the Legislature and get labor laws straightened out.

General discussion of Canned Foods Week. Paper passed around for signatures of all Minnesota canners for contribution to the National Canned Foods Week. Paper given to Mr. Barr, Chairman of that Committee.

The President asked the Nominating Committee to hand to him names for the Executive Committee in addition to the officers of the Association. The Nominating Committee complied with the request. The following names were given to President Taylor and were appointed by him to serve on the Executive Committee.

Executive Committee—Mr. J. E. Barr, Mr. Edward Cosgrove and Mr. Lee Douthitt.

Mr. Edward Cosgrove moved, and it was seconded by Mr Barr, that the matter regarding advertising in the newspapers brought up by the Secretary be referred to the Executive Committee.

Mr. Barr moved and it was duly seconded that the Secretary investigate matters brought up by Mr. Fenton regarding advertising in a separate booth at the State Fair, also radio talks over WLAG on canned foods. Passed.

Meeting adjourned.

Results of the Corn Contest held at the Hotel St. Paul, St Paul, Minn., at 10 A. M. on November 26, 1923:

Crosby Corn—The first prize was awarded the Faribault Canning Co., Mr. Lee Douthitt, Superintendent.

The second prize was awarded the Minnesota Valley Canning Co., Mr. George Winter, Superintendent.

The third prize was awarded the Olivia Canning, Preserving and Manufacturing Co., Mr. B. A. Brown, Superintendent.

Golden Corn—The first prize was awarded the Olivia Canning, Preserving and Manufacturing Co.

The second prize was awarded the Montevideo Canning Co. Mr. A. L. Jacobson, Superintendent.

The third prize was awarded the Barr Pickling and Preserving Co., Mr. W. H. Smith, Superintendent.

The first prize for the highest of all averages sent into the laboratory was awarded the Cokato Canning Co., with a score of 95.66.

The second prize was awarded the Sommers Canning Co. at Lakeland, the score being 94.33.

The third prize was awarded the Minnesota Valley Canning Co., the score being 93.66.

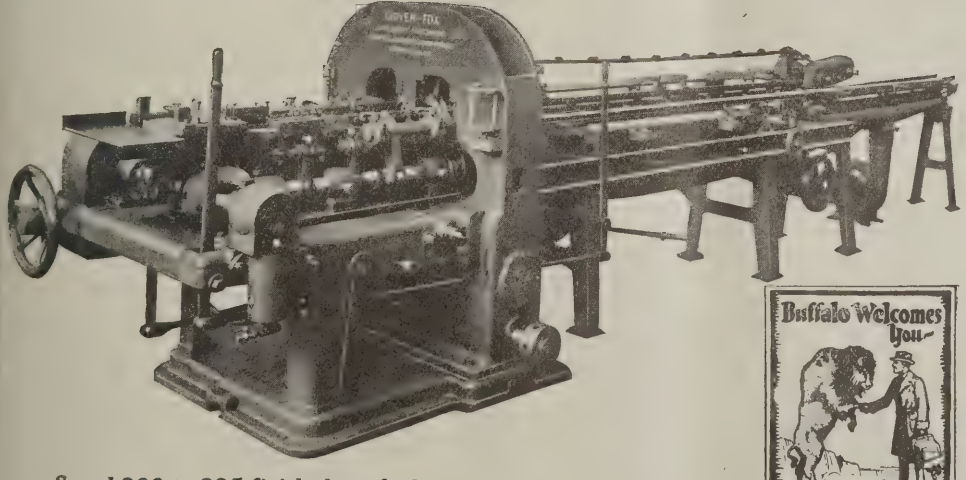
Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

Southern Can Company



Baltimore, - - Maryland

NEW YORK OFFICE: 17 Battery Place.

Manufacturer of newly developed "SOCOCAN" for Coffee, Peanut Butter, Lard Substitutes, Dry Milk, etc.

Troyer-Fox

High speed Body Forming Machine, with side seam Soldering Device.

Speed 200 to 225 finished can bodies per minute.

SPEED GETS "EM"–

Two–hundred–twenty–two finished cans per minute, over a period of many weeks, with no repairs and no change in adjustments, is the record for the TROYER-FOX, at the Seattle Can Company's Plant, Seattle, Washington.

To prove that high speed is not gained at expense of steady operation, weekly reports show less than 5 minutes lost time to the line per day. Better than 99% efficient.

THE TRI-STATE PACKERS CONVENTION

Philadelphia, December 10th and 11th, 1923
Hotel Adelphia

Dr. Symons and Mr. Radebaugh report progress on Better Tomato Growing—Mr. Hannigan draws fire on Swell Question—Association votes increased amount for crop improvements —Warehouse Plan Adopted—Tomatoes to be bought on U. S. Grading.

(*Continued From Last Week*)

That system, as far as it went, was fine. It enabled the canner to buy more nearly on a basis equivalent to the value he was receiving. However, it didn't go quite far enough, in my opinion, because of the fact that the 95 pounds or 97 pounds of tomatoes in the 100 received in one load might not be nearly the same quality as the 97 pounds received in the other load. One load might be exactly what the canner wanted and another might be just good enough to get by.

I was told that they were paying a difference of about $2.00 for the different grades. They had only two grades; their "A" or No. 1 brought about $2.00 more than their "B" or No. 2. That was on the basis of $12 or $13 for the "B" and $14 to $15 for the "A's."

MR. KILIAN—The point I would like to bring out is this: It is all right to dock the farmer—it is proper that he should be docked for unmerchantable stuff; but does the grading comprehend any bonus to him for growing and delivering a better grade of tomatoes? And is that bonus a contractural figure, or is the contract to be made, or was it made where the matter was so handled on a flat price and an increase given him, as is often the case with the delivery of milk, where the milk of higher butter content brings the producer a premium?

MR. HAUCK—The thing I have in mind is that a No. 2 as we have it drawn here would represent about the average delivery. Number 1 would be a little better than the average. If a man could deliver No. 1, he would get a better price than he would on No. 2, which was the average price. On the other hand, if through misfortune or carelessness he deivered a load of tomatoes that was U. S. No. 3, for example, there would be a material discount for that grade. That is the theory I based those three grades on.

MR. SILVER, Jr.—Do I understand that in contracting and buying these tomatoes that you would contract at an average price for what you call a No. 2 grade, and then you should give the grower who who brought you a higher percentage of good tomatoes—that a premium would be paid in proportion to the weight of that delivery? and the weight of unmerchantable and unusable tomatoes should be deducted from the payment?

MR. HAUCK—If I understand you correctly, I believe you mean that in order to arrive at the price that you would pay a given grower, you would first have to determine the proportion of a delivery of what you would call No. 1, and the proportion of No. 2 and No. 5. Now that has been suggested to me, but it is my belief that it would be too complicated. I believe you would have to have too high class a man on the receiving platform. Believe me, he would have to be a higher paid man than you usually find in the average receiver. It is possible that it might work out—I rather believe it would not.

MR. SILVER, Jr.—I had occasion of grading some tomatoes that, due to heavy blight, had come in half green and half red, and the man on the wagon and myself graded the mover, sorted three baskets, and we sat down and poured the baskets out and the tomatoes which were green and unfit to use at all were put on one side, and we averaged the amount they came to and deducted that percentage of baskets from the total load, and paid him only for the average of good tomatoes. We made no distinction of No. 1 and No. 2 grades.

MR. HAUCK—In other words, you were applying a docking system, and that, of course, is all right as far as it goes; but the word "docking" arouses a lot of antagonism as a rule, and don't go far enough.

CHAIRMAN—It seems to me that these are two very important topics, and I don't want to pass over them without some action being taken and having a full discussion.

MR. JUDGE—Might I suggest a plan somewhat as Mr. Silver mentioned? I know how one of the largest pea canners in the West solved his problem. They have a grading machine, and the peas are sorted out as they are brought in. It just struck me that you might be able to use some similar method, not throwing out the third grade entirely, which would antagonize your grower, but basing it on this pea-grading system, I would say, pay $5.00 a ton for No. 3, $10 a ton for No. 2, and $15 a ton for No. 1. This would put the grower in the position of bringing one ton of No. 1 tomatoes and getting as much for it as he would for two tons of poorer kinds. Don't throw out entirely your third grade, and give a fair price for the second. This canner told me, I think, he was able to raise his average quality up to 93 per cent of fine stuff.

MR. TORSCH—I would like to state at this point there is a little difference between the grading of peas and tomatoes, in that peas are generaly nearly all good, or at least are not decayed; but some of these tomatoes brought in are practically worthless and ought to be sent out on the dump and not paid for.

I like those pictures. I think if we had plates like that to get around to canning houses and publish in places in canning districts, they would appeal to the farmer as showing just what we are trying to get at. If he brings in stuff like that lower row, it should be thrown out. He should leave them back on the farm and not spend his money hauling them in. I still think we can endorse this plan of Mr. Hauck's and put it into operation in our contracts for 1924. We may want to put it in a little different language from what Mr. Hauck has, possibly, because we want to make it a little shorter to get it into the contract.

I want to suggest that while Mr. Hauck has these papers describing the grades on the table, that he read them—they are not very long—so that we may know just how far he has gone into the matter. (Mr. Hauck reads.)

MR. WRIGHT—I would like to know how we could get that supervision. Should we furnish it from our own warehouses? Are we to use our own individual judgment as to how we are to carry on the grading?

MR. TORSCH—This plan of the department which Mr. Hauck has presented can be better carried out on contract tomatoes than in the open market. You cannot even argue with a man if you are buying from a man with whom you have no contract; but where you have a contract in good faith and where you are working together, I think you can get him to do almost anything within reason, and if there is in your contract these grades or any grades, simply stated in the printed definitions, I don't think you will drive anyone away from you if you say, Well, here is the contract; let's try to carry it out.

MEMBER—We mustn't lose sight of the fact that the grower must be taken into consideration. I am a grower and am also interested in the canning industry. You know if we are going to discriminate against the size of the tomato, then you are going to have trouble with your grower in this respect. I may have a piece of land on one side of a fence where the tomatoes have been planted late in the season, and on the other side tomatoes that have been planted earlier, and on one side I would get smalleer tomatoes, say a three inch, and on the other I would get a larger tomato. Now, if I had a contract at $15 a ton for my tomatoes, when I take in my best, then when I come with smaller tomatoes, you say, "I can't give you that"—you will find a difficulty, gentlemen, when you begin to make a contract with the farmer when you discriminate as to the size of the tomato, as long as it is in perfect condition, if it is right, you are going to have trouble.

SENATOR TOWERS—I believe we ought to go on record as favoring the grading of tomatoes as laid down by the Bureau of Agricultural Economics, but with a 2½-inch diameter in a No. 1 grade instead of 2 inches.

MR. TORSCH—Do you mean that we should go on record in a general way, or do you mean to adopt those three United States grades?

SENATOR TOWERS—Well, let us adopt these grades subject to amendment.

Motion made, seconded and carried.

CHAIRMAN—Mr. Cobb, I think, started us in the right direction on this plant bed project, and I would like to know the

feeling of the Association as to what action we are going to take. Perhaps our secretary can go further into details and explain the conditions as they exist today.

SECRETARY—I thought possibly you may not understand the situation as it stands on the appropriation that was made at our last meeting. The appropriation made toward this better tomato growing project was $500 from the Association, and then there were three can companies who made up $500 more. The American Can Company contributed $250, the Southern Can Company $150 and the Atlantic Can Company $100, making the additional $500.

MEMBER—They offered $500 and withdrew that offer so that the other can companies could help to make up the amount desired—$500.

MR. TORSCH—When Professor Symons yesterday was talking about the matter of finances for 1924, he mentioned this item in the Maryland budget of $10,000, and by the way the Committee on Resolutions will have a resolution on that, and then he said, even if they could succeed in getting that $10,000, it wouldn't be available until the latter part of 1024, and we would like the canners to come again to our aid and tide us over until we can reach that State appropriation—if we get it. And he said that with the increased amount of work that is to be done and the need of more men, we would like very much if you could let us have $1,500 to go ahead with this work on the same plan as last year, only a little more of it; so I mention now $1,500 as the amount he asked for and the Committee on Resolutions have a resolution recommending that that work go on and we ask the State University and the Extension Service to go on with that work and that we from our treasury appropriate $1500 either from the treasury or from private subscriptions of canners and others—"and others" meaning, of course, our good friends, the can companies. So now you see what we are asking for, and those who want to contribute, if that amount meets with your approval, you can make it up in any way you like.

CHAIRMAN—It seems to me, then, we may as well proceed with the report of the Committee on Resolutions, and we can take it up on this resolution.

MR. RADEBAUGH—If the Legislature does not give us the money, we will have another problem; and if it does, it will not be available until October. That brings the question of what you are going to do this summer. Are you going to drop all the work done and let a year lapse and wait for the appropriation until you are through packing and start all over again in 1925? Or are you going ahead and carry on the work that has been started, and as outlined now? Now, if the appropriation is made, I have two suggestions to Mr. Symons: One is that he can either put somebody in my county and I will go out and do the work, or he can let me stay in the county and put somebody else on the work, and I will be perfectly satisfied to stay in my county and live with my family. I want you to understand that. It is merely to carry on the work and keep the thing going and give you men the service we feel you should have, and the growers. We are not only rendering you a service; we are rendering a service to the growers. It is working out both ways. It is a poor game that don't work both ways, and that is what we are trying to do. As Mr. Cobb says, we don't want to give you any more than you want and that is a good way to put it. You won't get what you want unless you ask for it, and if you go right out after it, you will get what you do ask for.

MR. COBB—I would like to ask Mr. Radebaugh how much money he feels he ought to have to enable him to go on with the work that he feels ought to be done outside of this legacy which you haven't got yet. It seems to me you are not quite sure of getting the legacy unless you are willing to do something yourselves. You know there might be some State Senator who might foolishly ask how much the members of the Tri-State Association are giving. I think you would hate to answer only $500. Gentlemen, money talks.

MR. RADEBAUGH—It seems to me you have started something that is going to have a wonderful effect on the industry. You are doing extremely well this year, because other sections were poor, but perhaps another year the other sections will not be poor, and then all you will have to sell is something better than somebody else.

SENATOR TOWERS—Mr. Chairman, I move that we accept Mr. Cobb's $1,000 from the American Can Company.

MR. COBB—That's fine—but how much are you willing to do yourself? I want to say I feel it is an insult to your industry for our company to give you only $1,000. We are ashamed to offer you any less. (Laughter.)

CHAIRMAN—Before taking final action, I think a little variety might be well, and Mr. Clark has a very pleasant message for us.

CANNED FOODS WEEK

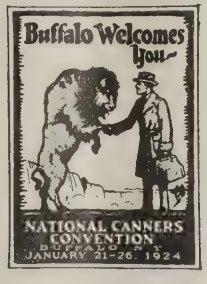
MR. ROY CLARK—The subject that I woudl like to present to you is "Canned Foods Week." It ought not to be necessary for me, a fellow-canner, to have to talk to you about Canned Foods Week. As a rule, when any campaign has been successful twice, you don't have to go out and sell a proposition a third time to those who have been benefited; but, nevertheless, as chairman of the Canned Foods Week Committee of the National Canners' Association, I do find it necessary to go out and sell the old proposition a third time. Now I said something to you yesterday about interesting yourselves in the distribution of your own products, and that is what Canned Foods Week calls for. It calls for co-operation on the part of every canner in the distribution of his own products. It calls for co-operation in carrying the message of purity, wholesomeness, convenience and economy of canned foods to the consumer.

Now I am absolutely convinced that if we are to expand and grow in this great canning industry, we must interest ourselves more and more as the years roll by in the distribution of our product. Time was when we felt that all that was necessary for a canner to do was to produce, pile up his goods in the warehouse, sell them if he could to the wholesale grocer, and let him take care of the entire problem of distribution. We didn't know whether the wholesale grocer was able to sell to the retailer and clear his warehouse; neither did we interest ourselves in the distribution by the retailer, and the result was that oftentimes our warehouses became crowded with canned foods and we didn't know what the trouble was. Now Canned Foods Week was prompted in 1922 by the fact that our warehouses were loaded with canned foods. It was also prompted by learning from the railroads that the tonnage and movement of canned foods had fallen off and a general cry came from the canners throughout the country to do something to move canned foods into consumption.

Well, we put on a campaign in 1922, a small campaign, it is true. You have the results. A pamphlet was sent out to every canner, showing that result. Wholesalers reported that their sales during the week in some cases increased 100 per cent. The retailers reported that their sales in some instances increased as high as 300 per cent. So, in 1923, that is in this year, in March, we put on another campaign. You have that report. It showed just twice the interest or more in the campaign by the distributor, and it also showed that the results were threefold over that of 1922.

Now we are going to try it again in March, 1924. We have been criticised for having Canned Foods Week in March, or in the spring months. Some feel that we ought to hold this campaign in the fall; but, nevertheless, it is a campaign for your benefit, and the majority of the distributors seem to feel that it ought to be conducted in the spring, and I think the canners feel, after giving the subject some thought, that it ought to be conducted in the spring, for the reason that it serves to clean up the warehouses of the wholesalers before the new crop comes in.

Now this campaign is being conducted at a very small expense to the canner—$10 per line of machinery will pay the whole bill, together with the contributions, the liberal contributions, of our allied industries. The brokers have taken their part in the game. They act as distributors of the advertising material, and they also raise large funds in the cities to carry on a local campaign.



Ten dollars per line of machinery. That is all it costs to send the message of your product from the Pacific to the Atlantic Coast. Some of you think, perhaps, the results are not as I have stated. Perhaps some of you feel that it is too much of a flash and oftentimes canners get up and say, "Well, listen, why don't we put on a real campaign—an all-year-round campaign—then I would be with you." Well, I wonder how many would be with us on a proposition of that kind? In 1923 only 10 per cent of all the canners in the United States contributed a single nickel. We have about 4,000 canners and only about 400 feel themselves interested in the distribution of their products. Now, gentlemen, we have arrived at a stage in this industry when we should go to the public and tell them something about our product. We have spent thousands and thousands of dollars in the laboratories of the National Canners' Association, as well as in the universities of this country, proving that canned foods are not ony safe, but the safest food that people can buy.

Now our foods are hidden by the tin can. Ought we not to go out to the world and tell the consumer something about it? Now you all say, what does Canned Foods Week have to do with that? It has this: We send banners out announcing the week throughout the country. Last year we sent out something like a million and a half. It is estimated already that there will be a demand on the part of the distributors for at least three or four

million of these streamers. The distributors are already organized. That is, the wholesale grocers are already organized. They have a chairman, by the name of Leslie Lever, of St. Louis, representing the National Wholesale Grocers' Association. The American Wholesale Grocers' Association has a chairman, committees have been appointed in every city of the United States. The Brokers have appointed their committees, so that the entire country is covered, and they are ready to go to work in March, spending ten days telling the consumer about our product. In addition to that we should have all of the canners of this country and all the men interested in the allied industries, and the salesmen of the wholesalers, and the 400 000 retailers, together with their clerks, devoting their entire time for ten days this March, 1924, telling the consumer about the convenience and economy of canned foods, and apparently it isn't worth $10 per line of machinery to the canners of this country.

There isn't any question in my mind at all but that the large increase in the demand and the consumption of canned foods has been due to the advertising inspection plan that was put on some years ago by the National Canners' Association, and was followed up by these two campaigns of Canned Foods Week.

Why, I told you yesterday about the wonderful increase in the consumption of canned peas—fourteen million cases packed in 1923, and they just moved out like a flood. You couldn't buy today a thousand cases of fancy No. 2 Alaskas in the United States from a canner. You couldn't buy a thousand cases of fancy No. 5 sweets, which is about 50 per cent of the production of sweets, from a canner in the United States. They are gone, not only from the warehouses of the wholesaler, but they have gone out into the stores of the retailer and gone into consumption. Just think of that rapid increase in the consumption of canned peas.

Where has your corn gone? Here just a few months ago canners of corn sat around with long faces. Prices were low; they didn't know which way to turn. The 1923 pack, I guess, was the largest, or rather it was next to the largest, in the history of the country, and the corn has gone out into consumption and the warehouses of the wholesaler and retailer are rapidly being cleaned up.

I don't know so much about tomatoes, but I would say from the raise in price that there has been a wonderful increase in the consumption of canned tomatoes.

Now, there are your three principal items—vegetable items—and you can take the whole field of canned commodities, and you will at once see that there is a tendency on the part of the housewife to use more and more canned food. Now that is optimism, but you can't expect to keep up with the increase in production. You cannot expect to keep on building canning factories year after year, unless you keep pace with the growth by some system of advertising, calling the attention of the consumer to the article that you put up and offer for sale.

Now I am not going to take any more of your time. I want to tell you that it is a shame that the canners don't kick in with $10 per line of machinery—an absolute shame. It is so small—one-line plant $10—two-line plant $20. It is so small compared with the results that will be obtained in 1924.

Now we need this money and we have got to have it right away, because we are not going to buy any of these streamers unless we have the money to buy them with. That is handled as you might say on the side by the National Canners' Association, and the committee will not purchase any streamers or other advertising material unless the money is forthcoming. We need it right away, in order to be ready for the demand which will come from the whoesale grocer immediately after the first of the year. Now you ought not to go away from this convention without subscribing your amount. You will never regret it. But if you don't back up this movement, and keep it up year after year, you will have just as you have had before, your warehouses loaded with goods, and then what a cry we always hear from the pea canner, the tomato canner and the corn canner, when their goods aren't moving. "What are we going to do?" and they immediately blame the distributor and say he isn't functioning any more. "We ought to have some new system of distribution." Well, you have it all in your own hands right here. Get back of this movement and subscribe this small amount before you leave this convention, and if you do, I will promise you a campaign in 1924 that will ring from the Pacific to the Atlantic, and I will promise you that the results that will be reported coming from the distributors throughout the land will make every one of you ashamed if you don't kick in at $10 per line.

CHAIRMAN—Next in order will be the report of the Committee on Resolutions.

MR. TORSCH—I wish to submit the following resolutions: [The Resolutions were published last week.]

A MEMBER—We pride ourselves, I believe, in representing a district or having an association which used to be second only to the National Association. I don't know whether it is now or not; but, nevertheless, that was the general idea that prevailed, that we were second only to the National Association, but we have less than 200 members. In my mind there should be some campaign to increase our members, but I don't know that I have any good idea to offer. But I have this proposition. If we could outline to our neighbors who are not members with us the advantages that this Association offers, and the work that we have been doing at this meeting, or this year and last year, along certain lines, it is certainly one of great advantage to everybody. I have felt that the Centralized Plant Bed as expressed has done a lot to give the Tri-State the big yield per acre that we had here last year. I have this proposition to make, that every one of us who is a member pledge himself to bring in another member. I have two or three in mind from whom I feel I can at least get one member, and I am willing to guarantee one member in addition to my own membership, and I would like to know how many there are here who will match me in that. If I fail to get the extra member, I will pay his dues and try to get him to come here.

CHAIRMAN—Lest we forget this, let all who are willing to go on record, as the speaker has expressed himself, raise their hands.

MEMBER—I suggest that the secretary take the names of all who raise their hands, and follow it up and see that they do it, and if they don't, send them a double bill.

SECRETARY—But I don't think that is necessary. If a man holds up his hand, I take it he means what he says and does it. But what I will do. I will send out a letter to every canner in the three States, asking him to join our Association, and try to tell him what we are trying to do and have been trying to do in the past two years.

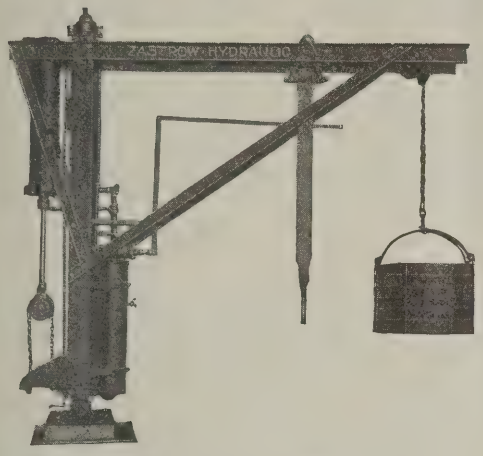
MEMBER—Wouldn't it be a good idea instead of saying "Every Member Get A Member," let's name one month and have every member get a member in that month, and we will know where we are standing, like the automobile clubs and other organizations do. They set a week or two weeks, and they do it in a time.

It would be a good idea, too, to send in the money at the same time the name is sent in.

MR. SILVER—I would like to suggest on the idea of grades that in making a price for tomatoes, we take the grade No. 2 as a basis, and then have a premium for grade No. 1 and discount for grade No. 3, so we don't give the idea that you are paying a certain price for the best and always taking off.

MEMBER—I think Mr. Hauck has tried to explain to all of us that the matter of price and payment for the different grades is entirely up to the canner and grower themselves, and I think that is a matter we have to take up at the time we enter into contracts with the growers.

CHAIRMAN RECORD—Before adjourning this meeting I would like to say a few words in appreciation of the co-operation of the members of this Association, and of the officers of the Association. It has been a great pleasure to me to work with them, and I think that what little I have done has been largely offset by the pleasure it has afforded me, and I feel I am a better canner and a better member of the Tri-State Association than I ever was before, and I want to carry that a little further and urge you all, not only be enthusiastic about the Tri-State work, but to extend it to the National Association. We are only a branch, as you might say, of that large organization, and could do very little without them. Their membership is very effective, and their work is for all of us, for the State Association, and for the individual canners.



I had the pleasure of attending one of the directors' meetings at Washington last spring, and there I found canners from almost every State in the Union laboring, sweating, for every canner in the United States. Our problems are their problems. They came many miles and, gentlemen, we should support them heartily.

At the Chicago directors' meeting it was suggested that each State have a representative to encourage membership in the National Association. I have taken the liberty of selecting for the Tri-States Mr. D. H. Stevenson as chairman of a committee of three, Harry Cannon, from Delaware, and Mr. Charles S. Stevens, representing New Jersey.

I am not going to inflict on you by giving you my address, which I have written out at some length, as I am sure you are all tired, and I would like you to leave this meeting with the idea that we represent, our Association represents, a body of canners who are trying to improve the quality of their pack and stand for right principles in the trade, and be in a class second to none in the United States of America.

If there is nothing further, we will adjourn.

The Department of Raw Products

"Quality" cannot be produced in the can unless quality products are produced on the farm. This Department will, therefore, seek the best thoughts of the country on better crops, and how to produce them, and ways and means of combating the enemies of such crops.

The assistance of all agricultural experts is sought and heartly invited, a way offered them here to reach the entire canning industry of all States; and we likewise extend to all our readers an invitation to explain their troubles and ask remedies. And by all means let those who have devised ways or descovered remedies give the benefit of their experience to those less fortunate.

"Quality" canned foods can only be attained by the co-operation of all canners towards the production of quality crops.

THE PROPOSED STANDARD HAMPERS OR BASKETS

The Bill To Be Offered Congress

Present Sizes of Hampers: 2, 4, 8, 10, 13½, 14, 15, 16, 20, 24, 27, 28, 30, 32, 40, 44, 46 and 48 quarts.

Proposed Standard Sizes of Hampers: 8, 16, 24, 32 and 48 quarts, or 1, 2, 3, 4 and 6 pecks.

The adoption of the proposed series of standards means the elimination both of the ⅝ and ⅞ bushel hampers, which have prevented for three years the passage of standardization legislation. Users of the ⅞-bushel hamper will accept the 24-quart or ¾-bushel size as a substitute. Will its acceptance by the users of the ⅝-bushel hamper work a hardship on them? Let's look at the arguments on both sides.

Arguments in Favor of the ⅝-Bushel Hamper.

1. Is of convenient size and weight. (Holds 33 1-3 lbs. net weight of tomatoes.)
2. Is a strong package, being made with six cross braces.
3. Is a return package.
4. Wagon beds and racks are built to handle this package.
5. Fits freight cars.
6. Figures 60 to the ton.
7. Large stocks on hand.

Arguments in Favor of the ¾-Bushel Hamper.

1. Is of convenient size and weight. (Holds 40 lbs. net weight of tomatoes — a tighter field package than is used for many crops.
2. Is a strong package, and can be made with sx cross braces.
3. Can be used as a return package.
4. Made with the same size top and bottom as the ⅝-bushel hamper, it will fit length and width of trucks and racks.
5. Fits freight cars equally as well.
6. Figures 50 to the ton.
7. Proposed bill allows sufficient time to dispose of stocks on hand, and short life of ⅝-bushel hamper—5 to 7 trips—would make it possible to permit using up of any stocks on hand even after manufacture was forbidden.
8. Fewer packages needed to handle crop.
9. Fewer packages would mean less cost to handling loads.

A BILL

To Fix Standards for Hampers, Round Stave Baskets and Splint Baskets for Fruits and Vegetables, and for Other Purposes.

BE IT ENACTED BY THE SENATE AND HOUSE OF REPRESENTATIVES OF THE UNITED STATES OF AMERICA IN CONGRESS ASSEMBLED, That the standard hampers for fruits and vegetables shall be the one-fourth bushel hamper, one-half bushel hamper, three-fourths bushel hamper, one bushel hamper, one and one-half bushel hamper, and two bushel hamper, which, respectively, shall be of the capacity and conform to the specifications set forth in this section. For the purposes of this Act a bushel standard dry measure has a capacity of two thousand one hundred and fifty and forty-two hundredths cubic inches.

(a) The standard one-fourth bushel hamper shall contain five hundred and thirty-seven and six-tenths cubic inches, and conform to the following specifications: The inside diameter between staves at the upper edge of the inside top hoop shall be ten and three-eighths inches; the inside diameter of the bottom shall be six and one-half inches; the inside length of the staves to the upper edge of the inside top hoop shall be nine and five-eighths inches.

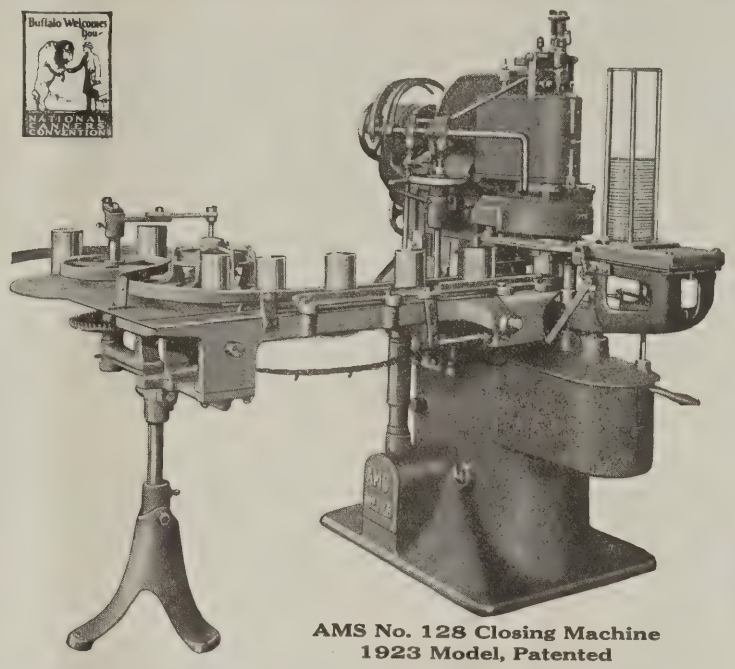
(b) The standard one-half bushel hamper shall contain one thousand and seventy-five and twenty-one one-hundredths cubic inches, and conform to the following specifications: The inside diameter between staves at the upper edge of the inside top hoop shall be thirteen inches; the inside diameter of the bottom shall be eight and one-half inches; the inside length of the staves to the upper edge of the inside top hoop shall be twelve inches.

(c) The standard three-fourths bushel hamper shall contain one thousand six hundred and twelve and eight-tenths cubic inches and conform to the following specifications: The inside diameter between staves at the upper edge of the inside top hoop shall be fourteen and one-fourth inches; the inside diameter of the bottom shall be nine inches; the inside length of the staves to the upper edge of the inside top hoop shall be fifteen and one-half inches.

(d) The standard one bushel hamper shall contain two thousand one hundred and fifty and forty-two one-hundredths cubic inches, and conform to the following specifications: The inside diameter between staves at the upper edge of the inside top hoop shall be fifteen and one-eighth inches; the inside diameter of the bottom shall be nine inches; the inside length of the staves to the upper edge of the inside top hoop shall be nineteen inches.

(e) The standard one and one-half bushel hamper shall contain three thousand two hundred and twenty-five and sixty-three one-hundredths cubic inches, and conform to the following specifications: The inside diameter between staves at the upper edge of the inside top hoop shall be sixteen and one-fourth inches; the inside diameter of the bottom shall be nine inches; the inside length of the staves to the upper edge of the inside top hoop shall be twenty-six inches.

(f The standard two bushel hamper shall contain four thousand three hundred and eighty-four one-hundredths cubic inches and conform to the following specifications: The inside diameter between the upper ends of the staves shall be eighteen inches; the inside diameter of the bottom shall be thirteen inches; the inside length of the staves shall be twenty-two and three-fourths inches.



Section 2. That the standard round stave baskets for fruits and vegetables shall be the one-fourth bushel basket, one-half bushel basket, three-fourths bushel basket, one bushel basket, one and one-half bushel basket, and two bushel basket, which, respectively, shall be of the capacity and conform to the specifications set forth in this section.

(a) The one-fourth bushel round stave basket shall contain five hundred and thirty-seven and six-tenths cubic inches and conform to the following specifications: The inside diameter at the upper inner edge of the inside top hoop shall be ten and seven-eighths inches; the average inside depth shall be not less than six and three-fourths inches; the web shall consist of twenty intersecting staves of such length that they will form the side and bot-

tom of a basket which shall contain one-fourth bushel standard dry measure.

(b) The one-half bushel round stave basket shall contain one thousand and seventy-five and twenty-one one-hundredths cubic inches and conform to the following specifications: The inside diameter at the uuper inner edge of the inside top hoop shall be fourteen inches; the average inside depth shall be not less than seven and five-eighths inches; the web shall consist of twenty intersecting staves, of such length that they will form the sides and bottom of a basket which shall contain one-half bushel standard dry measure.

(c) The three-fourths bushel round stave basket shall contain one thousand six hundred and twelve and eight-tenths cubic inches and conform to the following specifications: The inside diameter at the upper inner edge of the top hoop shall be seventeen inches; the average inside depth shall be not less than eight and one-fourth inches; the web shall consist of twenty intersecting staves. of such length that they will form the sides and bottom of a basket which shall contain three-fourths bushel standard dry measure.

(d) The one bushel round stave basket shall contain two thousand one hundred and fifty and forty-two one-hundredths cubic inches and conform to the following specifications. The inside diameter at the upper inner edge of the inside top hoop shall be seventeen inches; the average inside depth shall be not less than ten and one-half inches; the web shall consist of twenty intersecting staves of such length that they will form the sides and bottom of a basket which shall contain one bushel standard dry measure.

(e) The one and one-half bushel round stave basket shall contain three thousand two hundred and twenty-five and sixty-three one-hundredths cubic inches and conform to the following specifications: The inside diameter at the upper inner edge of the inside top hoop shall be nineteen and three-eights inches; the average inside depth shall be not less than twelve and three-fourths inches; the web shall consist of twenty-four intersecting staves of such length that they will form the sides and bottom of a basket which shall contain one and one-half bushel standard dry measure.

(f) The two bushel round stave basket shall contain four thousand three hundred and eighty-four one-hundredths cubic inches and conform to the following specifications: The inside diameter at the upper inner edge of the inside top hoop shall be twenty-one inches; the average inside depth shall be not less than fourteen inches; the web shall consist of twenty-four intersecting staves of such length that they will form the sides and bottom of a basket which shall contain two bushels standard dry measure.

Section 3. That the standard splint baskets for fruits and vegetables shall be the four quart basket, eight quart basket, twelve quart basket. sixteen quart basket, and twenty-four quart basket, standard dry measure. For the purpose of this Act. a quart standard dry measure has a capacity of sixty-seven and two-tenths cubic inches.

(a) The four quart splint basket shall contain two hundred and sixty-eight and eight-tenths cubic inches and conform to the specifications in one of the two following numbered subdivisions:

(1) The approximate inside dimensions of the top across the center shall be seven inches by twelve inches. The approximate inside dimensions of the bottom at the corners shall be five and three-fourths inches by ten and one-half inches. The inside depth at the corners shall be four inches.

(2) The inside dimensions of the square-cornered splint baskets at the top shall be six inches by twelve inches. The inside dimensions of the bottom shall be five and one-half inches by eleven and one-half inches. The inside depth at the corners shall be four inches.

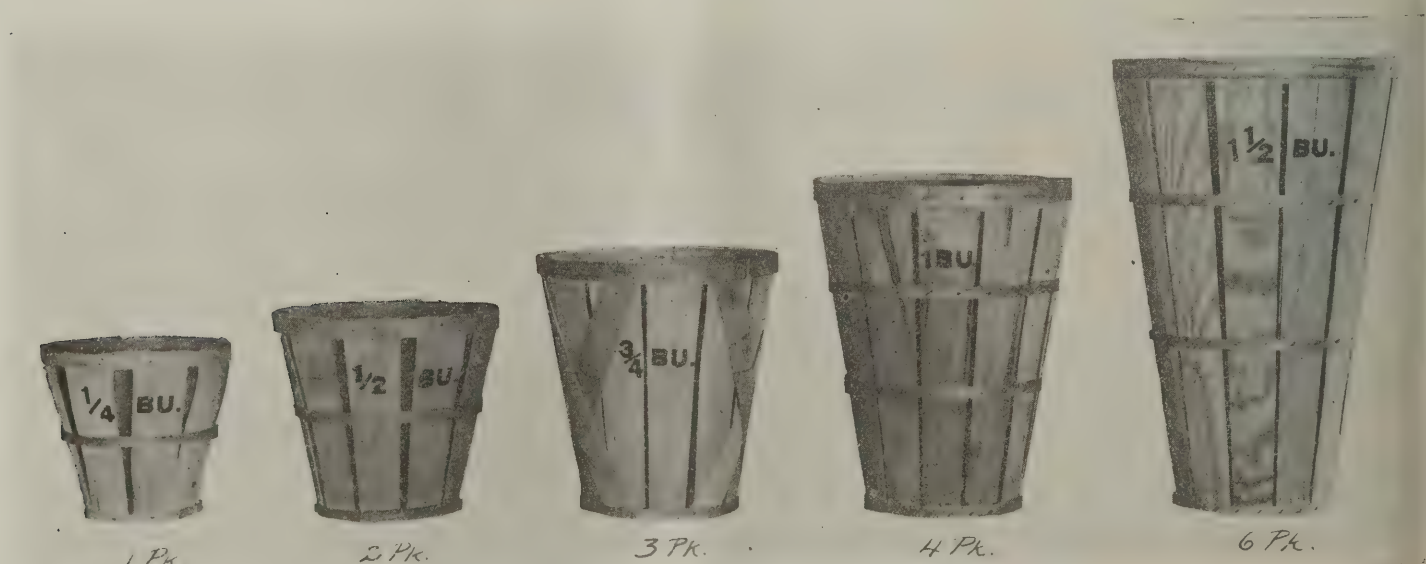
(b) The eight quart splint basket shall contain five hundred and thirty-seven and six-tenths cubic inches and conform to the specifications in one of the three following numbered subdivisions.

(1) The approximate inside dimensions of the top across the center shall be eight inches by fourteen inches. The approximate inside dimensions of the bottom at the corners shall be seven inches by twelve inches. The inside depth at the corners shall be five inches.

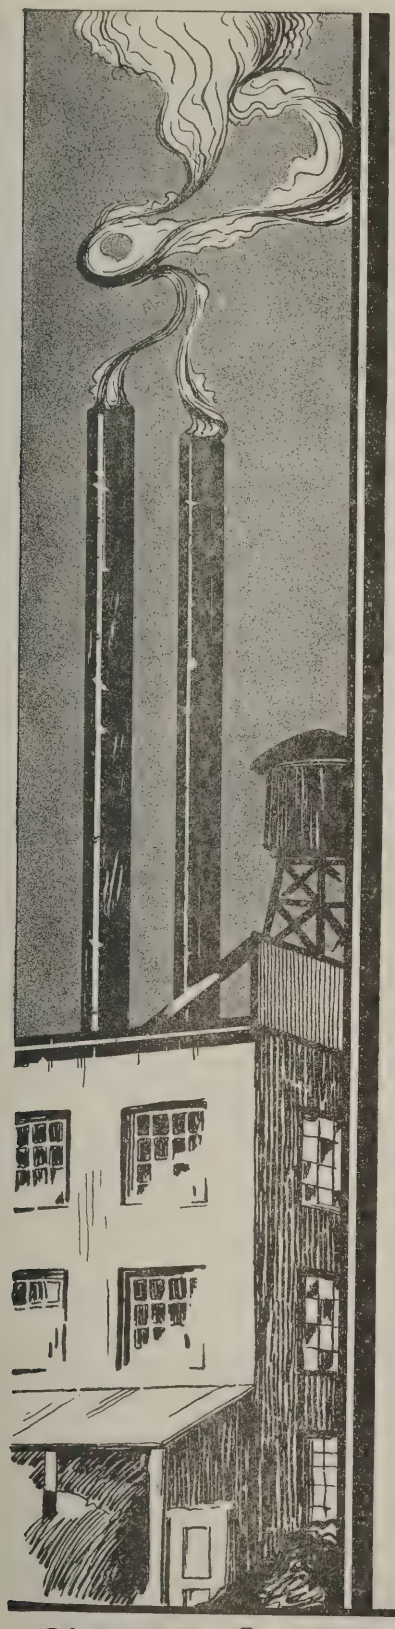
(2) The approximate inside dimensions of the top across the center shall be nine and one-half inches by sixteen and one-half inches. The approximate inside dimensions of the bottom at the corners shall be seven and one-half inches by fourteen and one-half inches. The inside depth at the corners shall be four inches.

(3) The inside dimensions of the square-cornered splint basket at the top shall be seven and three-eights inches by fifteen and one half inches. The inside dimensions of the bottom shall be seven inches by fourteen and one-half inches. The inside depth at the corners shall be five inches.

(c) The twelve quart splint basket shall contain eight hunhundred and six and four-tenths cubic inches and conform to the specifications in one of the three following numbered subdivisions:



(1) The approximate inside dimensions of the top across the center shall be nine and one-half inches by sixteen inches. The approximate inside dimensions of the bottom at the corners shall be eight and one half inches by fourteen inches. The inside depth at the corners shall be five and one-half inches.



(2) The approximate inside dimensions of the top across the center shall be eleven and one-half inches by seventeen and one-half inches. The approximate inside dimensions of the bottom at the corners shall be eight and one-half inches by fourteen and one-half inches. The inside depth of the basket at the corners shall be five inches

(3) The inside dimensions of the square-cornered splint basket at the top shall be eight and five-eighths inches by seventeen and one-half inches. The inside dimensions of the bottom shall be eight inches by sixteen and three-eighths inches. The inside depth at the corners shall be five and three-fourths inches.

(d) The sixteen quart splint baskets shall contain one thousand and seventy-five and twenty-one one-hundredths cubic inches and conform to the specifications in one of the three following numbered subdivisions:

(1) The approximate inside dimensions of the top across the center shall be ten and one-half inches by eighteen and one-half inches. The approximate inside dimensions of the bottom at the corners shall be eight and one-half inches by sixteen inches. The inside depth at the corners shall be six and one-half inches.

SPRAGUE-SELLS and Peerless Canning Machinery will be the staunchest—the most efficient, durable and dependable that fine materials, experienced workmanship and sincere purpose can make them.

Every machine bearing our name will be backed by an unequivocal guarantee of complete satisfaction—or money refunded.

Field service—unstinted and gladly rendered will be constantly available to the users of our equipment—with a corps of experts at their command to aid in the solution of any problems that may arise.

The prices of our machines will be kept preeminently fair at all times by adjustment to conform with labor and material costs.

Our prices will be standard—one unvarying price to all. You purchase our machines with the satisfying knowledge that your investment is precisely the same as that of each and every other purchaser—no higher or no lower.

This is the platform upon which Sprague-Sells and Peerless Canning Machinery is offered. We believe it will win the instant and sincere commendation of everyone intimately associated with the Canning Industry.

From our two plants, at Buffalo and Hoopeston, we can supply practically every item of canning equipment.

Write us today for quotations on any equipment you may need, addressing your inquiry to:

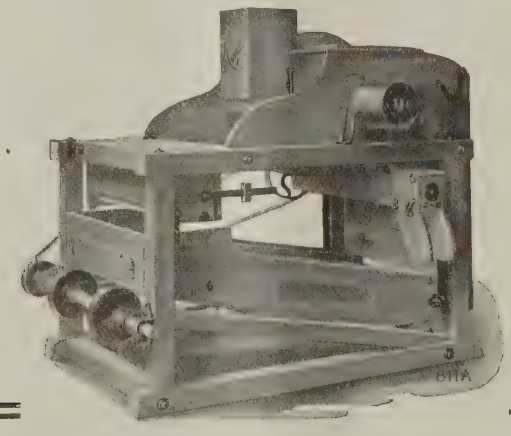
SPRAGUE-SELLS and PEERLESS CANNING MACHINERY

(2) The approximate inside dimensions of the top across the center shall be eleven and one-half inches by nineteen and one-half inches. The approximate inside dimensions of the bottom at the corners shall be eight and one-half inches by sixteen and one-half inches. The inside depth at the corners shall be six inches.

(3) The inside dimensions of the square-cornered splint basket at the top shall be nine inches by nineteen inches. The inside dimensions of the bottom shall be eight and one-half inches by eighteen inches. The inside depth at the corners shall be six and five-eighths inches.

(e) The twenty-four quart splint basket shall contain one thousand six hundred and twelve and eight-tenths cubic inches and conform to the specifications in one of the three following numbered subdivisions:

(1) The approximate inside dimensions of the top across the center shall be twelve inches by twenty inches. The approximate inside dimensions of the bottom at the corners shall be ten inches by seventeen and one-half inches. The inside depth of the basket at the corners shall be seven and one-half inches.



(2) The approximate inside dimensions of the top across the center shall be twelve inches by twenty-three inches. The approximate inside dimensions of the bottom at the corners shall be nine inches by nineteen inches. The inside depth of the basket at the corners shall be seven inches.

(3) The inside dimensions of the square-cornered splint basket at the top shall be ten and five-eighths inches by twenty-two and one-fourth inches. The inside dimensions of the bottom shall be nine and five-eighths inches by twenty and one-half inches. The inside depth of the basket at the corners shall be seven and one-half inches.

Section 4. That the Secretary of Agriculture shall in his regulations under this Act prescribe such tolerances as he may find necessary to allow in the capacities and specifications for hampers, round stave baskets, splint baskets and parts thereof set forth in sections 1, 2 and 3 of this Act, in order to provide for reasonable variations occurring in the course of manufacture and handling. If a cover be used upon any hamper or basket mentioned in this Act, it shall be securely fastened or attached in such a manner, subject to the regulations of the Secretary of Agriculture, as not to reduce the capacity of such hamper or basket below that prescribed therefor; provided, that the provisions in Sections 1, 2 and 3 of this Act, covering specifications and dimensions, shall apply only to hampers and baskets made of wood or of which wood is the principal material; but hampers and baskets which are not made of wood or of which wood is not the principal material shall not depart from the respective capacities therein prescribed.

Section 5. That in order to provide for the more economical use of space in packing or transportation, or for the greater conservation of material or labor in manufacture or handling, or of the contents in course of shipment, or for developments in construction and design of hampers, round stave baskets, and splint baskets for fruits and vegetables, the Secretary of Agriculture, whenever he finds it necessary, may in his regulations prescribe specifications with respect to the dimensions thereof for such hampers, round stave baskets and splint baskets, in addition to those set forth in Sections 1, 2 and 3 of this Act, but not departing from the respective capacities therein prescribed, and shall prescribe such tolerances as he may find necessary to allow with respect to such specifications in order to provide for reasonable variations occurring in the course of manufacture and handling.

Section 6. That it shall be unlawful to manufacture for sale or shipment, sell, offer for sale, or ship, or to import, or cause to be imported into the continental United States hampers, round stave baskets, or splint baskets for fruits or vegetables, either filled or unfilled, or parts of such hampers, round stave baskets, or splint baskets that do not comply with this Act; provided, that this Act shall not apply to climax baskets, berry boxes and till baskets which comply with the provisions of the Act approved August 31, 1916, entitled "An Act to fix standards for climax baskets for grapes and other fruits and vegetables, and fix standards for baskets and other containers for small fruits, berries and vegetables, and for other purposes" (Thirty-ninth United States Statutes at Large, page 675), and the regulations thereunder. Any individual, partnership, association or corporation that willfully violates this section shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding $500; provided, further, that no person shall be prosecuted under the provisions of this Act when he can establish a guaranty signed by the manufacturer, wholesaler, shipper or other party residing within the United States from whom the hampers, round stave baskets, or splint baskets, as defined in this Act, were purchased, to the effect that said hampers, round stave baskets, or splint bas-

Without Fear or Favor.

The MONITOR Pea Recleaner faithfully through every minute of the run, takes out splits and skins. Forenoon or afternoon or late night runs, its there on the job doing its work. *It gets them.* There is no question about it. *It gets them.* Maybe your hand pickers do and maybe they do not. On the start, perhaps they do but how about it when they get tired and careless. Can you afford to take the chance. You know what it means when a bunch of splits and skins show up in the can. They need not. Its up to you.

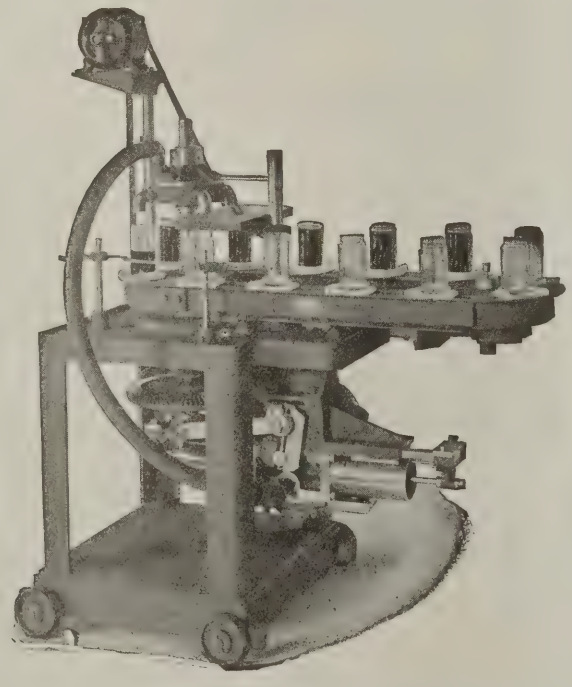
kets are correct within the meaning of this Act. Said guaranty, to afford protection, shall contain the name and address of the party or parties making the sale of the hampers, round stave baskets or splint baskets to such person, and in such case such party or parties making such sale shall he amenable to the prosecution, fines and other penalties which would attach in due course under the provisions of this Act to the person who made the purchase.

Section 7. That any hamper, round stave basket or splint basket for fruits or vegetables, whether filled or unfilled, or parts of such hampers, round stave baskets or splint baskets, not complying with this Act, which shall be manufactured for sale or shipment, offered for sale, sold, shipped or imported, may be proceeded against in any district court of the United States within the district where the same shall be found and may be seized for confiscation by a process of libel for condemnation. Upon request, the person entitled shall be permitted to retain or take possession of the contnts of such hampers or baskets, but, in the absence of such request or when the perishable nature of such contents make such action immediately necessary, the same shall be disposed of by destruction or sale, as the court or a judge thereof may direct. If such hampers, round stave baskets, splint baskets, or parts thereof be found in such proceeding to be contrary to this Act, the same shall be disposed of by destruction, except that the court may by order direct that such hampers, baskets, or parts thereof be returned to the owner thereof, or sold, upon the payment of the costs of such proceeding and the execution and delivery of a good and sufficient bond to the effect that such hampers, baskets or parts thereof shall not be sold or otherwise disposed of or used contrary to law. The proceeds of any sale under this section, less legal costs and charge, shall be paid over to the person entitled thereto. The proceedings in such seizure cases shall conform as near as may be to the proceedings in admiralty, except that either party may demand trial by jury of any issue of fact joined in such cases, and all such proceedings shall be at the suit and in the name of the United States.

Section 8. That this Act shall not prohibit the manufacture for sale or shipment, offer for sale, sale, or shipment of hampers, round stave baskets, splint baskets or parts thereof to any foreign country in accordance with the specifications of a foreign consignee or customer not contrary to the law of such foreign country; nor shall this Act prevent the manufacture or use of banana hampers of the shape and character now in commercial use as shipping containers for bananas.

Section 9. That it shall be the duty of each United States district attorney to whom satisfactory evidence of any violation of this Act is presented to cause appropriate proceedings to be commenced and prosecuted in the proper courts of the United States in his district for the enforcement of the provisions of this Act.

Section 10. That the Secretary of Agriculture shall prescribe such regulations as he may find necessary for carrying into effect the provisions of this Act, and shall cause such examinations and tests to be made as may be necessary in order to determine whether hampers, round stave baskets and splint baskets, or parts thereof, subject to this Act, meet its requirements, and may take samples of such hampers, baskets, or parts thereof, the cost of which samples, upon request shall be paid to the person entitled.



Section 11. That for carrying out the purposes of this Act the Secretary of Agriculture is authorized to co-operate with State, county and municipal authorities, manufacturers, dealers and shippers, to employ such persons and means, and to pay such expenses, including rent, printing, publications, and the purchase of supplies and equipment in the District f Columbia and elsewhere, as he shall find to be necessary, for which purposes the sum of $10,000 is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, available immediately and until expended.

Section 12. That Sections 6 and 7 of this Act shall become effective at but not before the expiration of one year following the first day of November next succeeding the passage of this Act.

AUSTRALIA BIDS FOR FAR EAST CANNED FOODS TRADE

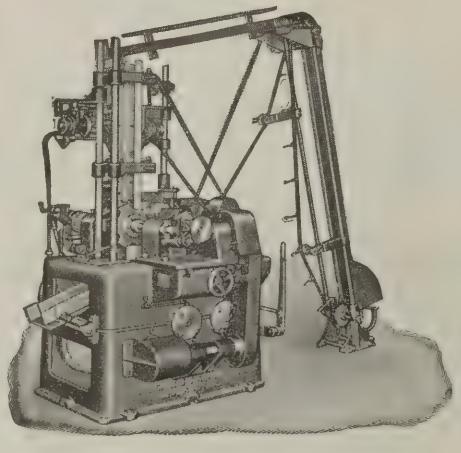
HOW the Far East regards American canned fruit is strikingly illustrated in a report of the Australian Trade Commissioner at Singapore, a copy of which has been received by the Department of Commerce from the American Trade Commissioner at Melbourne. The Australian Commissioner states that the greatest difficulty which Australia will have to encounter in the attempt to reach the preserved fruit markets is the strong position held by American canners. "I doubt," he asserts, "if there is a city in India, Malaya or Java where their brands are not on sale." He states that in Singapore, at all events, Australia can compete with America on the question of price, and that a small Australian-British firm has compelled American exporters to Singapore to send special grades to counter their bid for the trade there, though he adds that it is doubtful whether this firm, single-handed, can make any impression on the well-organized American trade over any considerable area. To win, he states, Australia will have to pack and price attractively and come level on credit terms and spend money liberally on advertising, and that if Australian private concerns are not strong enough individually to put up an effort to establish Australian fruit trade in the Far East, it might be possible for the Victorian and New South Wales Government canneries to do so. He also advocates the establishment of a purely Australian brand.

FRENCH OYSTER MORTALITY RATE HIGH

THE French oyster industry is passing through the most turbulent period it has experienced since its development in France. During the past three years, in spite of the efforts of the Government, there has spread through the oyster beds a disease which has been impossible to check and which threatens practically to destroy the entire French oyster fields. Commercial Attache Chester Lloyd Jones, Paris, France, informs the Department of Commerce that various explanations for this disease have been given, such as the neglect of the oyster beds during the war, the alteration of water currents, and the existence of a destructive mushroom growth in the beds. Between 1919 and 1922 the officials estimate that between 50 and 60 per cent of the oysters in the French beds died. In addition, in 1922 and early spring followed by frosts destroyed large numbers of young oysters. The re-establishment of the industry will, it is estimated, take at least three years. The French Parliament, before its dissolution in the summer of 1923, made an appropriation of a million and a half francs for this purpose. It is planned also to request legislation to regulate the granting of concessions for the exploitation of the beds. In replanting, Dutch stock is to be used.

DUTCH FIND BIG PROFIT IN CANNED FOODS

IF the proper kind of distributors are secured, it is believed that American caaned foods would enjoy a more extensive sale throughout Holland, according to Philip E. McKenney, of the Department of Commerce staff at the Hague, Netherlands. Many Dutch dealers demand so great a profit on these products as to boost the retail price out of reach of the majority of consumers. For instance, canned American peaches are retailing in the Hague at 1.25 florins, or approximately 50 cents a can, and canned apricots and pears of American origin are selling at 1.25 to 1.40 florins, respectively. These prices seem to be too high, in McKenney'e opinion, even after taking into consideration various factors of freight, insurance, commission, etc., that enter into the price.



DEWALCO PRODUCTS ON THE COAST

THE Dewey and Almy Chemical Co., Cambridge, Mass., has recently purchased a site at East 8th street and 40th avenue, Oakland, Cal., where it is now erecting a branch factory, which will be in operation early in January. Mr. J. R. Smith is leaving the home office shortly to take entire charge of sales for the Pacific Coast territory.

The Dewey and Almy Chemical Co. is already favorably known to the Western packers and can manufacturers through its Dewalco Lining Compound, used for sealing sanitary cans. It is now establishing this branch factory in order to give still better service to its large and constantly increasing list of friends.

The Dewalco products manufactured by Dewey and Almy Chemical Co. include rubber cement lining compound, seam dopes, crystal and liquid soldering fluxes, cork-tex liners, pick-up gums for Burt or Knapp labeling machines, dry cold water paste and gold seal tin paste.

ATOMATIC DOUBLE SEAMING MACHINE WITH END FEED.

This completely automatic machine double seams or crimps ends on all types of round tin or paper cans at a rate of 60 to 75 per minute. It is equipped with automatic feed for ends either straight or curled flanges and has a range of adjustment for 1-½'' to 4¼'' in dia. by 1-¾'' to 6'' in height. The seaming rolls and chucks may be universally adjusted with housings, thereby maintaining perfect alignment when changing for sizes.

This Seamer is equipped with brake which is applied automatically when the drive is disengaged. The chuck spindles are equipped with a positive device which prevents bodies or ends from being double seamed over the chuck. The high speed bearings are fitted with bronze bushings and all parts subject to wear are of hardened tool steel.

The machine is not only adapted for sanitary cans, but also may be used for general line work and operated in connection with our automatic Beader and Flanger. Our No. 20 Double Seamer is furnished for gallon cans and other larger work.

McDONALD MACHINE CO.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, DECEMBER 31, 1923

WEEKLY REVIEW

The Market Quiet—Efforts to Buy Tomatoes at Below Market Prices Fail—The Best Year the Industry Ever Had, to Be Followed in 1924 by a Better One—Quality the Proven Friend of Canners.

THE TIME OF RECKONING—We were asked today why all business seemed to be marking time— taking it easy, as if waiting for something—and we replied that that is just what all hands are doing—putting off everything that can be put off until the new year comes. Not only in canned foods, but in every line of industry only such orders as are imperative are being placed, while the rag-tag ends of the old year are being gathered together and accounting made of all that has been done. The only comment we could induce upon the canned foods market was to the effect that some buyers seemed anxious to get No. 2 standard tomatoes at 90c, but that no canners seemed willing to meet the price. There are probably some quiet deals being made, taking over blocks of tomatoes at market prices, to be billed and shipped after the first, but it is hard to find anyone willing to admit it—that is, among the sellers. They all say they are not doing it. The week has been a short one, most houses having closed down from Saturday to Wednesday, and the balance of the week might as well have been made a holiday, for it has been spent pretty much after the fashion of the "stenog's" vacation—one week in preparation, when no material work is done nor expected; one week of vacation, and the following week to rest up and recover from the vacation.

WHAT OF 1924—On this last day of the old year we should, possibly, cast up all that has happened during the past 364 days; but somehow or other we have never been able to enthuse over that game of "past history." Possibly this is because we are intensely busy compiling these statistics for the annual almanac, where they are always handy at any time of the year, and in their most serviceable form. We should, of course, guide our course in 1924 upon the wisdom learned through the experiences of 1923, but if you have not learned, through dint of hard knocks, you will have small chance of learning through a recounting in type.

A look back upon the year's activities, however, is most encouraging in its promises for business in 1924. Secretary of Commerce Herbert Hoover, in speaking of the economic prospects of 1924, will say in his January 1st message to the world: "In 1923 the United States has witnessed the highest total productivity and movement of commodities since the war, with full employment, high real wages, greatly increased savings, large additions to home buildings, and the largest increase in railway equipment since the war. The whole has been accompanied by a remarkable absence of speculation, consequent over-accumulation of consumable goods, or dangerous expansion of credit. As we are not in a boom, we can expect freedom from a slump." And * * * "Taking the country as a whole, we never in history have enjoyed a higher standard of living and comfort, nor so great a degree of commercial and industrial efficiency as today, or so wide an understanding of the forces which control the ebb and flow of business. As severe as the situation is in the worst of the agricultural States, yet the disparity between agricultural prices, as a whole, and industrial commodities is gradually lessening, and the economic balance is tending to right itself." And the Secretary goes on to show that the production in 1923 surpassed that of 1922 by 40 per cent in iron and steel, 50 per cent in copper, 60 per cent in automobiles, 15 per cent in rubber tires, 10 per cent in lumber, 20 per cent in cement, 20 per cent in sanitary ware, and by about 10 per cent in leather, while textiles remained just about the same. On the other hand, agricultural products showed but a very small increase in 1923 over 1922, cotton and cereals about 3 per cent, pork products 20 per cent, and beef but 5 per cent, with only a slight increase in dairy products. Considering the wonderful increase in almost every line of business, and the evident added expenditures, it is astounding that the farm products should have found themselves in such poor condition, with only such slight increases in production. As the Secretary says, the scales are beginning to balance, and we may expect to see the farmer moving up onto a more equal basis with other producers of the country during 1924; and this merely adds to the brightness of the prospects.

To complete this pleasant picture and bring the matter more nearly home, we have merely to mention that the canning industry has been through its most prosperous year. The year began with clean decks in canners' warehouses, and, almost without exception, the packs of all articles were of good size, if not records, and yet the end of the year saw them moved out into consumption and at fair prices. In fact, no year may be found when the goods moved out more rapidly or more steadily, and with less unfavorable fluctuations in the price market, or with less trouble to the canners. We are not unmindful of the war years and the feverish demand; but in those years, while prices were running riot, so were costs and the trouble of Governmental interference. The year 1923 was a whole lot more satisfactory in every way than any of those war years, and it leaves the industry facing 1924 with every prospect of continued satisfactory conditions and no serious doubts or disturbing possibilities, as were the case during the war. So the year may be written down as the best the canning industry has ever seen, only exceeded by the prospects for 1924. The result is mainly ascribable to the packing of quality goods, and this fact should be written large in the mind of every canner. You have been shown how the trick can be done—now do not forget it. Pack quality in 1924 and you may rest easy as to the results. Neglect this all-important feature, pack for a price—pack as was done during the war on the basis of "anything will sell"—and you will find the goods packing up in your warehouse, sales falling off and the prices with them, and, because the production in 1924 promises to break all records, a worse demoralization than we have yet seen in the industry.

The case is clear cut and unmistakable, and the canners hold their destiny in their own hands. They can pack quality and go on to heighths yet unreached, with demand overlapping demand and the prices showing good profits. Or they can throw quality to the winds, pack the goods in a careless, indifferent manner, and see demand go off, prices drop down below costs, and troubles without end beset them. Resolutions are not necessary in a case like this—it merely requires common horse-sense, and we have confidence in the canners that they will choose the better course.

THE MARKET—As we have said at the beginning, there has been little or no market this week. The jobbers do not care to add to their holdings until they have made their inventories; some buyers would cover their wants of the future if they could induce the canners to part with the goods now, at concessions, and to be billed and shipped later. But the canners, seeing better demand and better prices in the early months of the new year, are determined to wait for them. They are making no mistake in this. They should employ the same tactics in the selling of their futures—first know the costs, then name a price which will net them a profit, and do not be stampeded by the reports that this and that canner is selling at lower prices. Just tell such buyers to buy from those canners because you are not giving your goods away. They will buy futures quite liberally, and you will find the buyers pay your prices if you can show that you mean them. The buyers are always willing to pay fair prices for futures if they could only feel that the canners mean to maintain the prices.

We close the year without price changes in our market page and with all lines of canned foods quiet, but firm, and the feeling very hopeful. May your New Year be a happy, prosperous, contented and blessed one is our wish to each one of you.

NEW YORK MARKET

Quiet Market This Week—Light Holdings Expected From Inventories—Tomato Offerings Very Limited—Fancy Corn Well Sold Up—Practically No Spot Peas in This Market—Lower Grade Fruits Very Scarce —Name on the Label and Swells Question Keeps Interest Alive—Notes.

New York, December 28, 1923.

HOLIDAY Quiet — There was a quiet market in the local canned foods trade throughout the week, and the situation showed no material change. Distributors generally were out of the market for canned foods, owing to the nearness of the inventory period. The market was closed on Monday and Tuesday.

Expect Light Inventories—Among well-posted observers in the local market it is confidently believed that inventory this year will show jobbers with unusually light stocks on many items of canned foods. Distributors bought only in small quantities out of the 1923 packs, many of them buying just enough to fill their own future orders and carry them until the end of the year. After they have taken stock next week they will find themselves confronted with the necessity of acquiring further stocks, and they will find:

Tomatoes—In generally limited supply for shipment from both Southern and Western canneries, with prices firmly held. Remaining stocks controlled by financially strong canners who will hold the tomatoes for their own prices, even if they have to carry them clear over until the early spring trade, and

Fancy Corn—Closely sold up in first hands on both Maine and mid-Western packs, with the jobbing market having shown a 35 to 40 cents per dozen advance since the opening prices were made. Standard corn showing less firmness, but the market statistically stronger than it has been at this season of the year for several years past. Canners quoting 90 to 95 cents, f. o. b. cannery, with the top price prevailing in the majority of cases; and

Maine Sardines—More closely sold up than for many years past at this season of the year. The market firmly maintained at recent advances, with further mark-ups in prices anticipated by the time jobbers and chain-store buyers come into the market for their spring and summer requirements. Imported sardines in such small supply that they cannot plug up the gap left by the shortage of the domestic; and

Peas—The 1923 pack almost entirely cleared from canners' hands in Wisconsin and New York State. Prices have advanced considerably since the opening early in the year. Canners already have substantial volume of future business on their books at prices in most instances on a par with last year's or slightly higher than the 1923 opening basis. Southern canners' holdings depleted by a good buying movement, and the market strongly held at advances over opening prices; and

Tunafish—Prices materially higher than the opening basis, and supplies of white meat too small to take care of distributors' demands. Other grades strongly maintained, with a good distributive outlet for California pack; and

Salmon—Pinks generally well sold up, the market holding steady at $1.25, f. o. b. Seattle. Chums so well sold up in first hands that remaining stocks are no real factor in the situation. Reds showing increasing firmness, with most holders quoting $2.35, and the prospective pack outlook bearish as to output and bullish as to price, owing to the recent Government fishing restructions, which will apply during the 1924 packing season in Alaska; and

California Fruit—Holdings in very light supply, particularly on the lower grades of peaches, which have been heaviest in demand. Distributors' stocks of fruits also rather light for this season of the year, and re-sale offerings in jobbing markets small in volume and high in price. Difficulty will probably be experienced by private label wholesale grocers in securing assortments for their spring and summer trading, and canners are talking higher prices all along the line. No. 10 pie fruits for the bakery and restaurant trade are strongly held in price and in small supply; and

Private Labels Menaced—By a bill pending in Congress, which provides for amendment of the Federal Foods and Drug Act to provide that the name and address of the canner be marked upon the label of canned foods distributed by private brands. This bill evidently has the backing, moral at least, of canners and specialty manufacturers who cannot see the distributors' right to compete directly with the producer by using the producers' quality products to push a house brand.

Swells—Question still definitely unsettled, although both canners and wholesale grocers are still strenuously engaged in lining up support for their own pet ideas for handling swells claims. To date, according to the National Wholesale Grocers' Association, the New England States, New York, Florida, Nebraska, Iowa and Illinois food officials have gone on record as prohibiting the return of spoiled and swelled canned foods to central warehouses, holding instead that they must be promptly destroyed where and when found. Question arousing bad feeling between canners and wholesale grocers; and

Canned Foods Week—Plans by canners and machinery men maturing for big campaign during 1924 Canned Foods Week. Support by wholesale grocery trade on large scale rather dubious owing to bad feeling engendered by swells settlement controversy. Probable, however, that talk of non-support by jobbers is just talk, and nothing more, as the wholesale grocers have just as much to gain as the canners by a successful 1924 Canned Foods Week.

The Convention—The above, in brief, summarizes the market situations on the last day of the year 1924. What the situation will be three months from now many in the trade believe they know. What it will be a year from now, many of them, particularly canners who must shortly plan for their 1924 operations, would give a lot to know. The convention of the canning and brokerage organizations in Buffalo during January is now engrossing the attention of the trade, and it is probable that there will be an unusually large turnout for the event. Canners this year have more to go for (and in truth more to go on) than they have had for several years. Jobbers have both more to go on and for, and the brokerage fraternity is vitally interested in what comes out of the '24 convention. It is probable that the Conference Committee representing the jobbers and the canners will "go to the mat" on the warehouse plan, with the brokers necessarily maintaining a strict neutrality.

Personal Items—There have been very few visitors along the Street this week, as is usually the case during Christmas week.

John Wilbur and Lew Hake, comprising the new brokerage firm of Wilbur & Hake, with offices at 100 Hudson street, have returned from a trip to California, and will start their business with several good accounts on hand.

Frank Reynolds, of B. O. Bowers Co., well-known sardine and shrimp commission merchants, spent the holidays at his family home in Baltimore.

Carl Weisl, well-known Philadelphia broker, was along Hudson street during the week, having just returned from a trip to California.

CHICAGO MARKET

Retailers Busy—General Business in Very Good Condition—Industry Never in Better Condition Than the Present—Jobbers' Stock Low—Heavy Buying Looked For—The Apple Canners Showed Wisdom—Canned Fish Dull—Good Winter Weather Will Help.

Chicago, December 28, 1923.

BUSINESS in canned foods during the past week has been confined almost all together to the distribution to consumers by the retail trade. Retailers state that they are enjoying the largest volume of business they have ever previously known.

Consumers seem to have plenty of money with which to buy food and are spending it freely—not only for necessities, but for luxuries. Conditions of employment in Chicago and vicinity have been almost perfect for several months past, and no one who wanted to work was compelled to remain idle.

Savings bank deposits in Chicago for the year past have exceeded those of any in the history of the city. This is not solely attributable to the fact that employment has been plentiful, but to the fact that the 7,000 saloons in the city have been practically closed for a year or more, and the money which formerly went into the saloonkeeper's cash drawer has gone into the savings banks and is being spent for the purchase of food and of life's necessities.

The situation in relation to canned foods in the Central West at the close of the year is the most propitious that the industry has ever known, for although production has been large in the three great vegetable staples— corn, peas and tomatoes—sales have also been large, and the surplus, after filling orders, remaining in first or canners' hands, is small and is inadequate to supply the normal demand for winter and spring trade. Stocks in the hands of wholesale grocers are also limited. The buying of futures by wholesale grocers was not large, but was very general, and all wholesale grocers, to a great or less extent, bought a considerable quantity of canned foods for future delivery and have received them and have distributed them to the retail trade.

The stocks of canned foods remaining in wholesale grocers' hands are lower than usual, and, in fact, so low that they must be replenished shortly after the first of January if wholesale grocers intend to remain in the canned foods business.

Stocks of canned foods in the hands of retail grocers at the conclusion of the year and after the holidays are over will be small, and they will have to buy freely from wholesale grocers in order to fill up their shelves.

This general situation is applicable not only to the three great staples—corn, peas and tomatoes—but all other kinds of canned foods. Fancy and choice California canned foods are exceedingly scarce. Michigan fruits have sold freely, and there are none scarcely to be had in first hands and but few in second hands. The only article in canned fruits that might be said to be in full supply is that of canned apples.

The crop of apples has been heavy in nearly all the apple-producing States excepting New York State, where the crop was poor, but it is estimated by the Department of Agriculture that the crop of apples this year in the United States is larger than for many years.

However, canners have been advised as to this fact, and knowing that a great many apples would be carried in barrels and cold storage for the use of bakers and consumers, the canners have not packed very many apples, and will not do so from the fact that prices are so low that there is no profit in canning apples. Most of the canners of apples have closed down for the season and will put no more apples into cans.

The canned fish situation is dull. Salmon, shrimps, oysters and sardines are all moving very slowly. Dealers say that this is attributable to the high prices prevailing.

Canned fish sell well when fresh meats are high in price, but just at present fresh pork is cheaper in the market than at any time since 1913, and fresh beef is 25 per cent to 30 per cent cheaper than it was two years ago. Consequently the people do not find canned fish as compared with fresh meats economical.

The price on No. 1 tall red Alaska salmon, which is being firmly held on the Coast at $2.35, is very much higher than it was ten or twelve years ago. This accounts for the fact that pinks and chums in salmon have sold freely, while red Alaska No. 1 tall has sold very slowly. Prices in American sardines have advanced so that quarters, keyless, in oil, are now being held at $4.75 per 100 cans in Maine canneries, as compared with $2.75 to $3.25 last year.

This is not the canners' fault, because the run of fish was very small and the catch small, and therefore, the cost was high, but it makes the article slow and difficult of sale at the price.

California canned fruits are in great demand and supply for the fancy and choice grades of fruit, but the grades of canned fruits from standard to pie are dull, and there is but little demand for those grades in cans of any size. The demand for California fruits in lower grades will possibly improve at the beginning of the year, as they have been purchased in a very limited way.

One cause of recent dullness in the canned foods market is that we have had no winter weather so far to speak of in the Central West. The weather has been exceedingly springlike and has permitted the outdoor exposure and open sale of all kinds of fruits and vegetables, without risk of freezing, and their safe transportation to the markets. This situation has inveighed against a large sale of canned products.

The weather prophets are predicting severe weather for January, February and the spring months, and it is quite possible that cold weather will bring about an active distribution of all canned foods.

ST. LOUIS MARKET

Market Waits—Future Peas Selling—Spots Quiet—Not Much Doing in Tomatoes—Corn Quiet, but Firm—Market on Fruits Disappointing—Inventories Are Holding Up Much Business—Miscellaneous.

St. Louis, December 27, 1923.

MARKET Waits—Canned foods trading has practically stopped until after the first of the year. Occasionally there are a few sales. What is done is largely of the pick-up variety. Several distributors have been in the market for canned fruits and other canned goods which might be obtained at price concessions from buyers anxious to unload before the end of the year, but there was not much business done.

With the jobbing trade planning to take stock during the first week in January, they are naturally holding down their stocks as much as possible. Only immediate requirements on any item are being bought. This condition is usual for this time of the year, but the dullness is more pronounced this year than in former years.

Peas—Thus far future trading has been largely confined to Wisconsin peas. The largest jobbers have covered or are considering a part of their requirements, but prefer to purchase standards in straight lots rather than in assortments. Spot peas are firm in all grades, and offerings are light. Cheap old packs in standard grades would sell, but this grade is scarce. What is left of this stock is being held for full prices or advances later on. Futures are held in check in the same, way as jobbers desire to do better than present opening prices. Canners do not care to sell their standards straight.

Tomatoes—Not much has been done during the past week in tomatoes. Distributors are well stocked up and do not except to do much until after their inventories are completed. Canners in the South will not quote below listed prices preferring to hold their packs for a later market. California packers are of the same opinion. Futures are in such an unsettled state that little attention is paid to them.

Corn—There is a quietness in corn. The firmness in tone is surprising considering the large pack. It is also surprising that such moderate stocks are in first hands. Fancy and standards are being bought more for immediate needs than for later use. Packers are not worrying in regard to this and will not shade prices.

Miscellaneous—The spinach market is steady. Asparagus demand is light, but the market is steady on all grades and sizes.

Fruits—All offerings in fruits are quiet. For such an important classification this is disappointing. Spot offerings, even of standard packs of known brands, are sold under values by some operators. This has a weakening effect on prices and has a tendency to limit buying. California canners are not urging sales. There is a steady demand reported on cling peaches, but trading is confined to small quantities. Pineapple is steady. Apricots are quiet. Cherries and pears are both showing a steady basis. Local jobbers, it is said, have not surplus stocks. No. 10 pie fruits of all kinds are steady, with a fair demand for small lots reported.

Milk—With the nearness of the inventorying season now only a few days distant, buyers of condensed and evaporated milk are holding down purchases, but selling pressure has lightened despite this market condition. Weak holdings of case goods have apparently been well cleaned, and holders on spot are now showing more of a willingness to carry their goods over, if need be, to get the regular asking prices.

Fish—A-1 grades of Maine sardines are showing strength. The demand is quiet just at present, but canners are confident of disposing of any stocks they may have early next year at present or even higher prices. There is little interest shown in salmon during the past week, and the spot price basis remained unchanged.

CALIFORNIA MARKET

The Retail Holiday Demand Causes Slow Market—Deep Impression on New Pack Results From Lower Prices—The Cold Weather Damages Oranges and Olives—An Improvement as to Color and Flavor Made in Spinach—Fig Canning Growing—Some Coast Notes.

San Francisco, December 22, 1923.

VERY little business has been done by canned foods interests during the past couple of weeks, and no marked activity is anticipated until after the first of the year. The retail trade is too busy taking care of the holiday demand to pay much attention to buying, except where absolutely necessary, and jobbers are letting their stocks run low, so as to have as light an inventory as possible. Canners are making no attempts to force sales, and general confidence is being expressed that a very close cleanup will be made. The expert demand has been limited this season, but the domestic demand has been stimulated by the lower prices quoted on the new pack, and has not only absorbed the carry-over from last year, but has made deep inroads into the new pack. The outlook for business during the next few months is considered very promising, with higher prices ruling on some lines.

Rain Needed—Weather conditions during the past few months have scarcely been to the liking of California farmers, and rainfall to date is far below normal. December was ushered in by a cold snap, and a heavy wind in the southern part of the State, which did considerable damage to oranges and olives. It was followed by light rains, but these have been barely sufficient to enable farmers to start ploughing operations, and the present prospects for an adequate water supply are not favorable. However, there may be heavy storms early in year to relieve the situation.

New Spinach—While some business has been booked on new pack spinach at the prices named recently by various interests, orders have not been especially large, and most buyers express a desire to wait until later to anticipate their requirements. The California Packing Corporation has not announced opening prices, and is not preparing to bring these out immediately, according to present plans. Last season's pack has been fairly well cleaned up, as far as first hands are concerned, and a large pack is being prepared for. The pack of 1923 was of good quality, despite the unfavorable growing season, due largely to the great care exercised by canners in handling it. Blanching is now done under water instead of in the open, and the color and flavor of the California pack has been greatly improved, as a general rule.

Peas—Considerable interest is being taken in California and Utah peas at the opening prices announced recently by the California Packing Corporation, and it is expected that the estimated pack will be sold up shortly. The output in these States is not heavy, under the best of conditions, and is not enough to fill the Far Western demand.

Statistics Wanted—The Canners' League of California has sent requests to all members for pack statistics covering the 1923 output, and Secretary Preston McKinney hopes to have these complete early in the year. Statistics on peas, asparagus and spinach were made public several months ago, and the ones now sought are largely on fruits, although tomatoes, string beans and miscellaneous vegetables will be included.

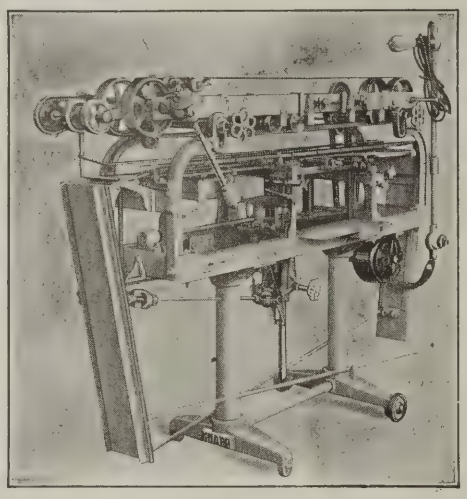
Fig Canning—The acreage of canning figs coming into bearing has caused several established canning companies to turn their attention to this fruit, and from now on a very marked increase in the pack is expected yearly. The Pacific Pea Packing Co., of Oakdale, Cal., put up an experimental pack of Kadota figs this year, and is sending samples to jobbers to acquaint them with the product. Up to the present time this fig has been packed largely in glass, and the demand has been such that the output has been absorbed without difficulty. With the increase in the quantity of the fruit available for packing a considerable part of the output will be marketed in tins.

Hawawiian Pineapple—An increased output of canned pineapple is expected in the Hawaiian Islands in 1924, owing to an increased acreage in bearing and improved cultured methods. The Eckart paper mulch process is now in use on a commercial scale and gives promise of becoming general. The Hawaiian Pineapple Co., Ltd., holds the exclusive right to process in the growing of pineapples in the territory, and many growers have signed contracts for licenses to use it. Early in 1923 the Hawaiian Pineapple Co., Ltd., announced that $25 an acre would be charged other growers, this being for the life of the plants, but this was later reduced to $12.50 for a limited period. Exhaustive experiments have led to the belief that production can be increased about 40 per cent by the mulching process, with a marked saving in labor costs. Several thousand acres were placed under mulch during the recent fall planting season under the sub-license plan, according to advices from the Islands.

Olives—The agricultural experiment station of the University of California has issued a bulletin by W. V. Cruess and E. H. Guthier, of the Division of Viticulture and Fruit Products, on the results of studies made of some of the problems experienced by picklers of California olives. Since the beginning of the ripe olive industry in this State a loss of fruit has been suffered during the pickling season because of bacterial decomposition, losses from this source having amounted to as much as $75,000 in a season. According to the results of the investigations, the trouble is caused by gas-forming and other bacteria which are present on the surface of the fresh fruit.

MAINE MARKET

Lumber Crews Waiting for Snow—Business Drags—The Corn Market Unchanged, Because There Is No Corn Here—The Apple Season Is Over—Getting Busy With Canned Foods Week.



Portland, Me., December 28, 1923.

LOCAL trading is very dull, and while a certain quiet period is expected just at this time, the present week seems to be falling behind other seasons. As usual, the weather is having to take the blame, the lack of snow making a serious delay in carrying on the regular winter business. Lumber men have crews ready for the woods, but are not able to operate to any extent until snow comes; and since the passing of the old lumbering menu of beans and bacon, the business of supplying stores for the quartermaster of a big lumber company is a considerable item in the jobbers' December volume. Lumber camps are now large users of all kinds of staple groceries and of canned goods in surprising quantities, and the delay in this business is felt in local jobbing circles.

There is no change in the Maine canned corn market, for the reason that there is practically no corn on hand. There are still a few lots held in first hands, but as these have now been shipped into winter storage, they will not be offered until the spring season, unless the demand becomes so urgent that prices advance before that time. Golden Bantam corn, at last reports, was easily bringing $2.00, although today it is difficult to locate any that can be bought at this price. Crosby is worth $1.65 to $1.75. All of the holdings now are limited to the No. 2 cut style of both varieties, with possibly a very little No. 10 Bantam ear corn at $7.00.

The apple season has closed for this winter, and probably every case has been shipped out to the trade by this time. Maine apples at $3.50 was a very good buy, and as the season progressed and the condition of the fresh fruit market and of the fruit itself became known, buyers took hold of the proposition readily. Despite the fact that the fruit generally was rather poor this season, the local canners were able, by a little extra care and expense in handling, to produce some very nice canned apples.

The local committee for Canned Foods Week has been named and is already at work outlining the campaign for 1924. Active canvass of the jobbers and retailers will be made immediately after the convention, and the movement will doubtless have even greater support than in 1923.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

SMILE AWHILE

ONCE WAS ENOUGH

There's a suburban home whose owner's principal delight is keeping it spick and span. After dinner he and a guest were smoking on the lawn. The guest, after lighting his cigar, threw the burned match to the ground.

"Oh, I wouldn't do that, George," said the host.

"Why not?"

"It spoils the appearance of everything," was the answer. "It's just those little things that make a place look bad."

The guest smoked his cigar in silence for a few minutes; then, without a word, got up, walked down the road and disappeared. He returned in a short time.

His host asked: "Where've you been, George?"

"Oh, I just went down to spit in the river," said George.—Chicago Tribune.

THAT'S WHO'S BOSS

Kriss—So you told your wife that you were going to be boss of the home?

Kross—You bet I did! And after that she never does anything unless she tells me about it afterwards.

O'ER THE DEEP BLUE SEA

Gish—Yes, madam, I'd like to see all these ultra-modern women on an island in mid-ocean.

Madam—Oh, sensible young man! Are you in the church?

Gish—No. madam, in the Navy.

SHOULD SAY HE WAS!

She was a dainty young thing, dressed in the latest fashion, and as she tripped into the room the office boy gasped, then grinned, as she came to a standstill before him.

"Could you tell me if Mr. Jenkins is in?" she asked.

The boy nodded and pointed vaguely over his shoulder at the open door.

The girl hesitated for a moment.

"Do you know if he is engaged?" she inquired.

The boy looked astonished.

"Engaged?" he almost shouted. "Engaged? Why, he's married and got two kids."—Detroit Free Press.

NOT IMPROBABLE

Judge—This man says that after he fired a shot he saw you run from his chicken coop.

Rastus Johnsing—He could easy be mistaken, Jedge. Fast ez Ah was runnin', it mought have been someone else what faintly resembles me.

CLOSE FRIENDS

"Ah say, Mary, would you jes's soon—?"

"Look here, Jim Jackson, don' you git fresh wif me. Mah name's Miss Smif, not Mary. I don 'low only mah bes' and mos' pa'ticular friends to call me Mary."

"Ah begs yo' pardon, Miss Smif. But, say, Miss Smif, would you shif' to de oder knee? Dis one's gittin' tired."—Black and Blue Jay.

EDITORIAL

THE CANNED FOODS EXHIBIT AT BUFFALO—In past years, we used to beg and urge and exhort—not to say threaten—the canners to patronize the canned foods exhibits at the annual Conventions; to bring out their goods, place them before the eager public and let them eat and be convinced, and that the canners might be proud of their handiwork. But if we had been bushwhackers in the jungles of Africa the moving picture men would not have gotten a single "shot" at any kind of a wild beast from our beatings. After all the pleadings and explanations, not a canner stirred, except those who did not need such urging, but had seen the great value of the project as soon as it was announced, and determined upon taking advantage of it. At the recent great show in Atlantic City, for instance, how many individual canners were represented? There were some Association shows, one or two great companies, and a canner or two. Not much of a harvest for all the ballyhooing that was done to "get them out." And lest we be misunderstood, let us hasten to add that we were not the only ones trying to get them out; every other journal and an intense campaign by the Associations added their voices to the appeal. So the glory of the failure is not all ours.

This time, for the Buffalo Canned Foods Exhibit, the industry was told plainly about the proposition, and the matter let rest there—and it would seem the Show is going to be the greatest ever put on! It is promised that the Buffalo housekeepers will be shown all manner of canned foods, packed in all sections of the globe, and in a most lavish and attractive form. The wink and the nod did what the hulabaloo could not do. All the better, for the one thing that is all-important is that the full line of canned foods be shown to the world at this Annual Convention, when the world turns its eyes upon canned foods. If you have not sent your goods you are out of luck, and the conclusion can only be drawn that you are not very proud of your goods, or that you do not recognize the value of popularity; that is that you cannot, as yet, see beyond the wholesaler who buys your goods. If you belong to an Association which will include your goods in the display, and that Association has planned its exhibit to make people know your goods, then you are exhibiting and making the right effort.

DO WE NEED THE NAME ON THE LABEL?—Here is a letter from a man residing in the heart of the Peninsula—over on the 'Shore—where canning has been known to every inhabitant since his infancy; a lawyer, and therefore a more than ordinarily well-read man, and wide awake. And yet he writes us to ask how to buy canned foods of the kind he wants.

> "I am anxious to get in touch with the canner who used to put up Farens' Sifted Peas, and also with Burnham & Morrell, who used to have pork and beans, fine Maine corn, &c. When I go to buy from grocers in Philadelphia and Baltimore, I find that they put up such vegetables under their own names and sell them. Such as 'Amchat,' which stands for 'Acker Merrill & Condit.' Others use J & S, which stands for Jordan Stabler Co.
>
> I want to find someone who sells under the true names the vegetables canned by the firms from whom I used to purchase three or four years ago. Having gotten stuck two or three times, I want to see if I cannot get what I want. If you will give me the address per the enclosed stamped envelope, I shall greatly appreciate it."

His appeal is particularly for the name on the label, but it is also an appeal for a more intelligent label. The two things, of course, go hand in hand. There can be no doubt as to the necessity of a vast improvement in the wording on the label, and the whole industry is coming to see this, and it will be done, as some are now striving to do it. They will just as ardently advocate their names upon the label when they become aware of all that this means, and overcome their slight hesitation caused by the fact that some of their goods are not such as they would wish their name to appear upon. But there is the very reason why their name should be on the label.

The use of the jobber's label grew to the size it is today because of the lack of marketing ability on the part of the canning industry as a whole; and it is not

true of canned foods, as it is of many other items, that the only goods put out under another's label are those which the manufacturer knew were not up to his standard. That is a custom in other lines where they have off-grades or goods that have not turned out up to the standard of the house, the house will not permit its name to go on them, and they are sold, unmarked, to a class of buyers who take such goods and find a market for them. If the law makers took a canvas of the consumers they would find that that is the opinion held by the majority; that it is popular belief that goods put out under some other label are the goods which the manufacturer would not put his name upon. It would be unfair to bring that judgment upon canned foods sold under the jobber's or distributor's label, but the danger is there, nevertheless. In the aggitation before the public on this statement to the Pure Food Law, certainly the public will be puzzled to know why the distributor objects to the name of the manufacturer upon the label, alongside of his own, if the manufacturer is a reputable one. And failing a suitable explanation, they will conclude that the maker of the article is not one of whom the distributor is proud, and therefore that the goods are questionable. On the other hand, if the canners do not back this effort for the amendment, to the man, they will lay themselves open to this same accusation. A father who is ashamed of his children has no standing in the eyes of the world, and should have none. The lawmakers are presumed to be business men, and they cannot but wonder if the canners are not eager seekers for this amendment. The canners have not saught this on their own account; it has been brought about, as we before stated, because the Pure Food authorities need it in the enforcement of their laws. Many States have such a requirement in their State laws, and now the time has come for the National law to contain this requirement, and it is backed by a host of food manufacturers, and the canners must fall into step or be misjudged. This amendment to the law is needed and needed badly.

Try the effect upon yourself and see the result. Suppose your dealer offered you a shoe or a hat or any other needed article, and said, "This is a Douglas or a Hannan shoe, or a Stetson or a Knox hat made for us and which we sell over our own name or label." Could you buy it with the same confidence that you would if it contained the name of the maker, together with the name of the dealer, if he choosed? You could not keep a doubt from rising in your mind to save your life. Business men do not share their "good-will" with others; they guard it most diligently, value it in dollars and cents, and consider it one of their best assets. And so it is, except with canners who seem to delight in sharing it with any jobber who will take it. Here is good work for the Buffalo Convention. And it will not be the first time that the canners have gone on record for a law compelling the name on the label. The National Canners' Association passed such a resolution, unanimously, at the Milwaukee Convention. But the time was not ripe then, and the jobbers had to be mollified! There is no thought of antagonism to the jobber now. The canners in repassing this unanimous resolution will simply be acceding to popular request, as expressed by other food trades, and asking for only their just dues. It is going to be done and the canners must do their share.

A SUGGESTION ALL CANNERS SHOULD TAKE—President W. H. Kilian, of the Canned Goods Exchange, in extending New Year's greetings to members, voiced a sentiment well worth careful consideration and due digestion to every canner in the business. What President Kilian applies to the canners of the Exchange, applies just as forcibly to every canner in his State or local or National Association, and he puts it so pointedly and so well that we are going to reproduce it herewith. Take it and read and heed this excellent advice:

"To merely extend the wish for 'A Prosperous New Year' is a very fine sentiment, but it is too often but a stock phrase, with wish and acceptance entirely mechanical.

This thought impresses me while I write this to extend to the members of the Exchange my sincere wish for their prosperity in the coming year.

I am mindful of some opportunities in 1923 which might have afforded increased prosperity, had they not been wasted through the lack of the spirit of co-operation.

Just a week ago a special meeting of canner members, called to consider so important a matter as the pending question of Swell Allowance, found more than two-thirds of the canners CONSPICUOUS by their ABSENCE.

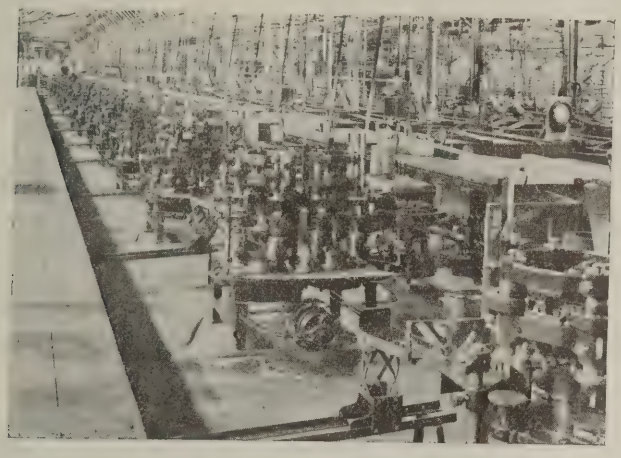
The Baltimore Canned Goods Exchange, I believe, holds the distinction of being the oldest canner association in the United States. It is said of some things that 'they improve with age,' while others 'petrify' and become merely 'monuments of the past.'

I make bold to ask YOU, fellow-member, to which class do you think the Exchange now belongs?

And in whatever class you conclude it to be, what part have YOU taken in establishing it in that position?

The field of opportunity for the canning industry, right here among us, is full of possibilities, but that field is also full of weeds, too full for just a few pairs of hands to attempt to weed out.

To clear it out and make it more productive for good for the 1924 season needs—just that extra part which YOU can take. Your counsel and interest in the several important matters and many minor ones that exist.



In thus prefacing my wish to the members for a Prosperous New Year, I ask that the above remarks be taken seriously and with the sincerity with which they are made.

1924 can be made just as much better than 'luck and nature' will actually endow it—as YOU care to have it—and as YOU lend your good offices to the accomplishment.

W. H. KILIAN, President."

BUFFALO CONVENTION NEWS

ANNUAL CONVENTION, WEEK OF JANUARY 21st, 1924

National Canners Association—Canning Machinery & Supplies Association
National Food Brokers Association

BIG MACHINERY EXHIBITION BIG CANNED FOODS DISPLAY

EVERYBODY WANTED——EVERYBODY WELCOME

Record Attendance Expected—Judging from advance hotel reservations, the Seventeenth Annual meeting of the National Canners Association, to be held at Buffalo the week of January 21, will set a new record for attendance. The Canning Machinery and Supplies Association, and the National Food Brokers Association, will assemble at the same time. President James A. Anderson, of the National Canners Association, has coined a new slogan for the Convention this year, which is, "Come Sunday, and Stay until Saturday".

A particularly attractive program of speakers has been arranged and this will be announced at an early date. It is expected that there will be an exhibition with the United States Department of Agriculture.

The exhibit of the Canning Machinery and Supplies Association will be housed and amply cared for in the Broadway Auditorium.

Elmwood Music Hall, where Canned Food Show will be held.

The Canned Foods Exhibit—Plans are being made for a real food exhibit at Buffalo next January, during Convention week. Eight State associations have made application for space, and in addition, many members of the National Canners Association are also arranging to exhibit their products.

Evidence of the interest that is being taken in the exhibit is the fact that the Canning Machinery and Supplies Association have advanced the idea that in addition to showing the public how to close the can, the consumer might be even more interested in learning how to open the can—not as the can is opened in hotels and restaurants, but in the private home. Accordingly, it is just possible that types of these can openers may be demonstrated, and a feature made of these demonstrations.

An idea of the size of the exhibit at Buffalo may be gained from the fact that it is proposed to distribute at least one hundred thousand complimentary tickets of admission, through the retail grocers, to the people of Buffalo, now a city of over half a million population.

As at Louisville, and by way of tying up with the Canned Foods Exhibit, Canned Foods Week will be held in Buffalo at the time of the Convention.

Lafayette Square the center of down town Buffalo.

Railroads Grant Reduced Rates—Reduced rates to members and department members of their families of a fare and a half for the round trip to the Buffalo Convention have been requested of the various passenger associations, and at this writing have been granted by the Trunk Line Association, Central Passenger Associa otin, the Southeastern Passenger Association, The Transcontinental Passenger Association, and the Western Passenger Association. It is expected the other passenger associations will grant this request.

To secure the benefit of these rates, members of the National Canners Association should write the Secretary's office at Washington for the number of certificates required, as tickets can only be purchased on presentation of a certificate.

The Canned Goods Exchange Special Train—The Canned Goods Exchange of Baltimore will run a special DAYLIGHT train to the Buffalo Convention, leaving Baltimore, Union Station (Penna. R. R.), 8.15 Sunday morning, January 20th, arriving at destination 7.30 the evening of the same day.

The train will consist of parlor cars, each car accommodating about thirty persons, including one draw

IMPROVED STEEL PROCESS KETTLE

Manufactured to hold 800, 1,000 and 1,200 2 lb. cans. Conceded to be the best; hundreds in used. Double theremometer pocket riveted to each kettle. Constructed so as to use either water, dry steam, or open bath process

Stecher Lithographic Co.
Rochester, N.Y.

ing room to the car, and with dining-room service, table d'hote luncheon at $1.25 and table d'hote dinner at $1.50.

The one-way fare to Buffalo is $14.27, which will make the round-trip fare on the "one-and-a-half-rate plan" $21.41, plus parlor-car seat at $3.00 per person one way, making a total of $24.41 for round-trip railroad fare, and including Pullman charge from Baltimore to Buffalo.

There will be a drawing room to each car, cost of which is $15.00, and in which five persons can be accommodated.

It will not be necessary for the members of the party to secure the Identification Certificate — your committee will attend to the certificate, and will also deliver to you while en route to Baltimore the return railroad ticket, which can be used up until February 1st, 1924.

We are given the following information by W. T. Buckley, Convention Manager, for the benefit of those whose hotel reservations are to date Monday, January 21st, and who, of course, will require reservations for Sunday in event of joining our special train party:

> Buffalo hotels will move reservations one day ahead, providing the delegate advises his respective hotel within several days prior to opening of the Convention. Of course, the sooner you pass this information along to the hotel, the better it will be for all concerned.

If you intend joining the party, kindly send check at once for $24.41, as per above information, and should you prefer being placed in a car with any particular friend or friends, the committee will be glad to accommodate you, providing the request is made within a reasonable time.

Do not forget to send check with reservation, and please do so as promptly as possible.

Send reservations to Robt. A. Sindall, 116 Market Place, Baltimore.

CANNERS TO SEE A ROUND SQUARE AT BUFFALO CONVENTION

"THIS is Niagara Square—the only round square in Buffalo!" shouts the youthful crier on the big sight-seeing car that carries its load of curious visitors from one point of interest to another in Buffalo.

* * *

And here once stood the splendid mansion of Millard Fillmore, the Thirteenth President of the United States.

* * *

In the center of the Square stands a stately obelisk—a tribute to the memory of William McKinley, whose assassination in 1901 at the Pan American Exposition is the one bitter memory of that great fair.

* * *

Today much of the space which once was a fairyland of beautiful exposition buildings is filled with comfortable homes. And still another part of the land is occupied by the great Pierce Arrow plant.

* * *

Not infrequently do home builders in this section dig up a plaster arm or hand which perhaps once graced some muse of art at the entrance of an exposition building.

* * *

The building which contained the exhibit of New York State during the exposition is now the Buffalo Historical Building, a chaste piece of marble architecture filled with thousands of interesting historical relics.

* * *

Indeed, Buffalo is alive with these stirring landmarks, part of a dramatic past. So, no visitor need have a minute's unused time on his hands. And, if he tires of romance, he will find the practical side amply provided for in lectures and exhibits at the Pure Food and Canning Machinery Shows.

A strong appeal is being broadcasted to every canner to bring his wife and family. Provision is being made to give the ladies a wonderful time. There will be numerous luncheons, dinner parties and dances, and theatres are close at hand for the devotees of the stage.

* * *

As an added point of service, a transportation committee has been appointed to see that proper accommodations are provided for all return journeys.

INCREASED BROKERAGE ON BEANS

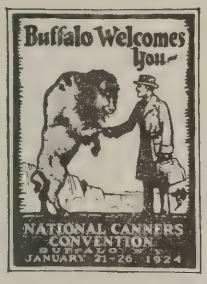
By Paul Fishback,
Secretary of the National Food Brokers' Association.

THE Association has been interesting itself for some time in behalf of its members in an improvement in the rate of brokerage paid for the sale of beans. There has been justified complaint that the rate paid by most bean shippers has been so low as to render inadequate compensation for the time and effort, to say nothing of the expense involved in selling beans. New York State bean shippers have been paying 10 cents per bag brokerage for some time. The matter was presented to the Michigan Bean Jobbers' Association last winter and again this fall, but the Michigan people claim that the present rate is the highest that can be paid.

Efforts have been made to procure a better condition among the members of the California Bean Dealers' Association and the Rocky Mountain Bean Dealers' Association. At a recent meeting of the California Association the matter was discussed, and the rate of brokerage on California beans increased to 8 cents per 100 pounds on all small beans and 10 cents per 100 pounds on limas. The following extract from a circular letter mailed recently by one of the members of the California Association to his brokers explains the situation:

> "The much-talked-of advance in brokerage has finally reached the point where we can now assure you that after January 1 the brokerage will be eight cents (8c) per 100 pounds on all small beans and ten cents (10c) per 100 pounds on limas and baby limas in straight and mixed cars.
>
> "We realized for a long time that the small brokerage paid on California beans was no incentive for the broker to devote much of his time to selling beans, especially when other commodities were more profitable to handle. We have worked hard for this advance, and we hope you will now find it to your interest to work the bean trade more consistently. More orders mean more money for both of us."

If our members who sell Michigan and Rocky Mountain beans will remind their principals of the truth of the statements in that paragraph immediately foregoing, at the same time calling attention to the fact that there has been an increase in the California rate, the effect should be beneficial.



JOSEPH B. HANWAY DIES

Joseph B. Hanway, widely known throughout Baltimore and Harford counties, died December 28th at the home of his nephew, Edgar S. Rouse, in the Preston Apartments. He was 84 years old.

Mr. Hanway, whose home was at Joppa, Md., was one of the pioneers in the canning industry. He later became interested in the fertilizer business and was vice-president of the Miller Fertilizer Company up to the time of his retirement from active business. He was a director of the Second National Bank of Belair and the Mutual Fire Insurance Company in Harford County and a member of Mount Ararat Lodge of Masons, Belair. His wife, who was Miss Sarah E. Rouse, died three years ago. He is survived by a brother, B. Frank Hanway, of Harford county.

Funeral services were held at Mr. Rouse's home by the Rev. Dr. Harris E. Kirk, pastor of Franklin Street Presbyterian Church. Burial was at Abingdon, Harford county.

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

The Department of Raw Products

"Quality" cannot be produced in the can unless quality products are produced on the farm. This Department will, therefore, seek the best thoughts of the country on better crops, and how to produce them, and ways and means of combating the enemies of such crops.

The assistance of all agricultural experts is sought and heartly invited, a way offered them here to reach the entire canning industry of all States; and we likewise extend to all our readers an invitation to explain their troubles and ask remedies. And by all means let those who have devised ways or descovered remedies give the benefit of their experience to those less fortunate.

"Quality" canned foods can only be attained by the co-operation of all canners towards the production of quality crops.

PAPER MULCH INVENTION BOON TO CROPS

The use of the Paper Mulch on many canners crops is beginning to be investigated, because is seems to hold out wonderful possibilities. The following article from the Los Angles' Times of recent date will be found very intersting.

Charles F. Eckart, styled the "Burbank of the Hawaiian Islands," whose patented idea of applying prepared roofing paper as a mulch in pineapple fields, to increase crop production, spread over the world almost as fast as the paper mulch spread over the island plantations when its efficacy was determined, arrived in Los Angeles yesterday from the East, enroute to his home in Honolulu.

Today, the name of Charles F. Eckart is being written in large type into the history of agriculture and in a few years to come, the date of this discovery will be used to reckon the new era of intensive cultivation for pineapples, tobacco, cantaloupes, tomatoes, cabbage, sugar cane, and varied other crops which are increased from 35 to 50 per cent through the use of paper mulch.

Miles of Paper—So practical were the first experiments with the Eckart process in the Hawaiian pineapple fields, that the planters last year laid 4261 miles of paper strips, three feet in width and from one sixteenth to one thirty-second of an inch in thickness, at a total cost of approximately $250.000. Producers of sungrown Sumatra tobacco in Florida began using the paper in this manner in 1922 and found that it increased their yield 40 to 55 per cent.

Experiments with California tomatoes, resulted in an increased production raging from 55 to 168 per cent. Strawberry growers in Louisiana and California produced from 25 to 75 per cent more berries and noted an increase of 50 per cent in size.

Cantalope producers in the Imperial Valley and growers of blackberries, raspberries, loganberries and similar small fruits are experimenting this year and the small area devoted to tests during the past year, gave indications that the increase in the yield would be approximately as great as in the strawberries.

Pioneer Contract—Eckart is in Los Angles to confer with officials of the Pioneer Paper Company, who are licensees under his patent. The new $1,250,000 Pioneer plant in Vernon has already begun to turn out mulch paper, composed of felt saturated with asphalt, to meet the requirements of growing conditions in California fields. According to William Henry, vice-president and general manager of the Pioneer Paper Company, many shipments of Pioneer mulch paper, to be applied in accordance with the Eckart process, have been shipped to various points in the State, to be experimented with, for various crops.

The Eckart patent, is for the idea alone. He does not manufacture the prepared roofing paper mulch, nor sell it, nor apply it on the fields. He conceived the idea, tested it thoroughly and found that it was highly successful. Now Mr. Eckart holds the patent for the idea and each prepared roofing manufacturer, who he licenses, can sell prepared roofing paper for mulching purposes, only by paying to Mr. Eckart, a substantial royalty.

Aids Producers—"During this trip across the United States and back," declared Mr. Eckart yesterday, "I have paid particular attention to the manufacturers who are already selling mulch under license. Although experiments have been made for practically all crops, manufacturers are working with university experts and farmers to make the final test of the mulch process under conditions peculiar and local to their territory, in order to establish once and for all, the efficacy of the plan specifically in each locality.

"The purpose of this trip, was to assist in this work and to aid the manufacturer and sales agents of the manufacturer, to get under way. However, in every city that I visited, throughout the East, I was besieged by roofing manufacturers for licenses.

"The demand for the mulch has spread around the world. Growers have read of the phenomenal crop increase which has invariably resulted from the application of the mulching paper and as the cost is small per acre, and the roofing paper is strudy and lasts for several seasons, the expense is considered insignificant, when it is compared with the total gain per acre in production."

Mulching Process—In explaining the modus operandi of the mulch idea, Mr. Eckart declared that Thermo-Gen, which is the patented name applied to the process, promoted the growth of plants chiefly by improving the soil conditions with respect to temperature and moisture.

"It also checks the growth of weeds," he said, "protects the soil from the compacting action of rains, reduces the leaching of soluble plant foods, reduces the requirements for soil stirring implements and therefore the damage which they often do to the root system and to some of the functioning leaves, increases the layer of staple or top soil for the accommodation of the principal feeding roots of the plants by allowing the roots to approach nearer the surface, increases the thickness of the soil stratum in which the bacterial population operates and aids in other ways."

The Pioneer Paper Company is planning a campaign in California to inform the growers of the tests conducted and the benefits to be derived from the use of the Eckart process, according to Willis G. Hunt, president of the company.

QUALITY.

The consistent use of

Wyandotte Sanitary Cleaner and Cleanser

by a rapidly increasing number of canners confirms the belief that canners are quick to recognize quality, efficiency, economy and service.

This cleaner, because it is peculiarly adapted to the needs of the canning trade, not only cleans clean, but it also sweetens and purifies everything it cleans. It guarantees also containers faultlessly clean and rinses so easily and freely that preventable causes of "flats" are entirely removed. It will maintain your eqipment in a fresh, wholesome, sanitary condition and will do this at the lowest cost. It has a use in every department of the cannery.

The New KYLER BOXER.

A machine, simple in construction, positive in action, which takes the cans from the Labeler – or Automatic Cooker – as fast as they, come and places them in the cases without injuring the cans or Labels. Sturdily built to last a lifetime; all metal – operates either by foot or hand – both furnished with all machines – always on the job.

PERRYMAN, MD., December 7, 1923

We just want to write you in regards to the splendid success we had with your boxing machine this year. It cased three thousand cases per day for us for forty-two days. I do not think we lost a minute's time with it during the entire season. I would say it was one hundred percent perfect.

Yours truly, F. O. Mitchell & Bro.

WILL BE EXHIBITED AT BUFFALO
Manufactured and Sold by

Westminster Machine Works
Westminster, Md.

"When the growers are convinced through results of official experiments, and they can see where it increased production, they will obtain a high percentage of gain in net profits through the expenditure necessary to apply the paper mulch, I am confident that the demand for the product to apply in the Eckart process will 'force' us to again expand the Pioneer plant," declared Mr. Hunt.

TOMATOES CAN BE EATEN, BAVARIAN GERMANS FIND

Catsup Also Is "Discovered" Down Where Wurzburger Flows.

Wurzburg, Bavaria, Dec. 27.—Tomatoes threaten soon to vie for fame with the beer and breweries "down where the Wurzburger flows." The Germans, prior to 1924, scarcely knew what a tomato looked like. But people everywhere eat them now in summer and put them up for use in winter. The taste for tomatoes was cultivated during the war, when food of all kinds was scarce and it was "discovered" that tomatoes were wholesome and platable and that they were easily grown.

Tomato catsup, too, has become exceedingly popular among the Germans, something virtually unknown in this country some years ago excepting in the larger hotels which catered to American and English travelers. Several catsup factories have been built in the vicinity of Würzburg within the past few years—and the friend who sent this in from the Philadelphia Record of December 28th, added: Probably before long we will see "Made in Germany."

THE WISCONSIN CANNERS' SHORT COURSE

By R. E. Vaughan

THE Wisconsin Pea Canners' Association held a short course at the University of Wisconsin, Madison, December 10-15, which was attended by over 150 canners. They came from 28 counties of the State and a few from neighboring States.

The afternoon of the first day was given over to registration in the office of Secretary W. E. Nicholoy. The course proper was conducted at the College of Agriculture with faculty members from the department of Agronomy, Bacteriology, Economic Entomology, Plant Pathology and Soils on the special teaching staff.

Dean Russell welcomed the canners to their first short course at the University, and in a few well-chosen remarks pointed out some of the milestones which canners had passed and had in store for them in the future.

Prof. A. R. Whitson, chairman of the Soils Department, discussed the origin and types of Wisconsin soils and their relation to pea growing. By the aid of a soil map, on which was indicated the present locations of the pea canning factories, he showed the probable trend of development on the silt loam and clay loam soils of the State.

The work of developing new strains and varieties of peas was presented by Prof. E. J. Delwiche, of the Agronomy Department. He showed by example from his breeding work at the branch experiment station at Ashland how it was possible to combine characters in different varieties into a new variety. His new strain, the Horal, is a cross between the Horsford and Alaska and combines with small size and uniformity of ripening the very desirable quality of resistance to root rot.

The course in the afternoon was varied by dividing the large group into four small groups and giving them laboratory work. One group had a chance to examine seed that had been sent in for testing. They discussed in detail the vine characteristics of the Horal and insects more particularly pea weevil and aphis and the other new selections. Another group examined pea predators that feed on these harmful insects. One group examined specimens of pea diseases more particularly root rot and saw spores of the root fungus swimming in water. The last group examined soil maps, types of soils and studied their water-halding capacity. They also examined the basic fertilizers and made a soil acidity test. The groups changed laboratory work each afternoon so that by the end of the course each man had an opportunity of coming into close contact with the work of the various departments concerned.

Wednesday morning Prof. R. A. Moore, Chairman of the Agronomy Department, gave some of the principals of plant breeding as applied in the production of Wisconsin pedigree barley, oats, corn wheat and peas. The work in breeding peas was started at Madison in 1902 but owing to the ravages of the weevil was later transferred to the branch experiment station at Ashland.

Fertilizers in their relation to pea growing were discussed by Prof. F. L. Musback, of the Soils Department. He brought out the fact that peas required a high content of available line. In tests with commercial fertilizers applications of acid phosphate at the rate of 300 pounds per acre gave the most profitable returns. In regard to rotation of crops the fact was brought out that there were many good rotations which could be followed. The main thing was not to have two cultivated crops following each other, and to have at least three and preferably four years between crops of peas.

The state seed law was explained by Prof. A. L. Stone of the State Department of Agriculture. He pointed out that when canners purchased seed grown outside the state that it was subject to the regulations of the federal interstate commerce commission and the state law did not apply. However, when the canners come to sell such seed to their farmer growers the state law did apply. Considerable discussion followed regarding the value of the blotter and soil tests of seeds and Prof. Stone pointed out that with present funds and staff available it would be physically impossible to make soil tests even if greenhouse space were available.

The problems in connection with the inoculation of pea seed were discussed Thursday morning by Mr. J. W. Nelson, Farm Manager of the Rochelle Canneries, Rochelle, Illinois, and Dr. E. B. Fred of the Agricultural Bacteriology Department. Mr. Nelson described in detail the mechanical operation of their machine for inoculating large lots of seed. A pint of liquid inoculum was allowed to run slowly onto a bushel of seed as it was conveyed into a revolving drum about four feet wide and ten feet long. The amount of moisture added was so small that the seed was ready to sow immediately. In fact, Mr. Nelson said they always tried to have the seed planted the same day it was inoculated thus insuring that the nitrogen fixing bacteria did not loose their vitality by drying.

BROWN BOGGS CO. LTD., HAMILTON, ONT., Sole Agents for Canada.

Dr. Fred illustrated his remarks with lantern slides showing prepararions of the bacteria found in the nodules of pea roots and some field results that had been obtained in Wisconsin by inoculating seed with pure cultures. In regard to supplying the Wisconsin canners with pure cultures Dr. Fred stated that plans had been made to send out cans of inoculum enough for 20 bushels of seed at $2.50 and for 40 bushels at $4.50. At this low figure it would not be possible to take back any unused culture as had formerly been the case when pea cultures had been supplied only in small bottles enough for one bushel.

Following the lectures the meeting adjorned to the laboratories of Agricultural Bacteriology where the method of making pure cultures of Pea bacteria and inoculating seed were demonstrated by Dr. Fred, Prof. Hastings and W. H. Wright.

Friday was pea pest day. Professor J. E. Dudley gave a very interesting progress report on the pea aphis work which was being carried on jointly by the experiment station and the United States Department of Agriculture, Bureau of Entomology. The control of aphis was shown to be very difficult because of the rapidity with which they multiplied. Several kinds of contact sprays and dusts were tried for aphis control but were found to be of limited value for peas planted broadcast. A mechanical apparatus for knocking the aphis from the vines gave the best results last year. The machine is known as an aphidozer. Several machines will be constructed for experimental use next season.

The pea weevil and predator insects which attack aphis were discussed by Professor Fluke. He showed that by employing the aphidozer discussed by Dubley that the aphis being soft bodied would be easily killed while the more resistant lady-bugs, syrphid flies, etc., that feed on the lice could be liberated to continue their work.

Pea root rot was discussed by Prof. R. E. Vaughan. The necessity for crop rotation was pointed out since the fungus most commonly associated with root rot lives in the soil, and may be distributed in soil water and on farm tools.

Professor L. R. Jones, Chairmen of the Plant Pathology Department, was the last speaker in the course. He made two suggestions which were left for further action by the directors of the Canners Association.

The first proposition was the creation of a special research fund for speeding up the work of maintaining and perfect desirable types by levying a tax on every bushel of the new Horal strain that should be sold. This fund to be administered by the Regents of the University thru the Department of Agronomy. This point was illustrated by what the National Kraut Packers Association is now doing in connection with the disease resistant strains of cabbage that have been developed by the Plant Pathology Department.

The second proposition was for a field survey for the presence of root rot, insects and possible soil type and inocultion to be made by some young man employed by the College of Agriculture but financed by the canning companies who desired this special service. This proposition met with considerable favor and Secretary Nicholoy was directed to confer with Professor Jones in the near future to work out details of a plan which could be presented to group meetings of the canners.

The Corn section held an adjourned meeting following a get-together supper on Wednesday evening. On Thursday evening a banquet was held at the city Y. M. C. A. where all enjoyed a good meal together and listened to remarks by Dean Russell, Professor R. A. Moore, Mr. Burr, newest member of the Canners Association, President Clark and past President Hagemann of the Canners Association.

One of the interesting events of the course was the walk over the hill on Thursday noon and assembling at the Lincoln monument on the upper campus just as classes were dismissed. It was an inspiring sight to see the double line of students streaming down the hill. President Birge greeted the canners at this time and expressed the hope that they would find this short course so profitable that they would wish to return to the University next year for "post-graduate" work.

PROGRESS OF ASSOCIATION WORK IN THE NORTHWEST

By E. M. Burns, Manager
Northwestern Canners Association

SEVEN short years ago, during the summer of 1916, a scant half dozen Canners met at luncheon in Portland, Oregon, having in mind the possibility of forming some kind of an association which could act for the Canners of Oregon in an attempt, at least, to aid in the solution of its problems of a general nature which continually develop in any great business, and which can be handled only as a general matter. This body formed themselves into an association known as the Northwest Canners Association, which Association for several years was more or less of a precarious matter. However, in the last few years, realizing that much could be accomplished by united effort, the Association has grown rapidly until in the year 1920 it was enlarged in scope to take in the State of Washington as well as Oregon, so that the Association now has a membership of forty six firms, operating a total of sixty three fruit and vegetable canning plants in the two States; more than two thirds of the total number of canneries, and packing approximately eighty percent of the total output.

The Association, during the year 1922, found that its task had grown to such an extent that it was necessary to establish permanent offices in the City of Portland, and, due to the united co-operation of its members, the Association has been able to greatly better conditions having to do with the canning industry; particularly in matters pertaining to traffic problems, publicity, legislative and problems of general interest in the matter of canning specifications, general betterment of working conditions, the improvement of sanitation, and—indeed—all matters of this character.

Not alone have the member plants been benefitted but, as a natural consequence, every Canner, whether or not a member, has received untold benefits through the efforts of the Association.

On the question of standardization of pack—the Association is putting forth every effort toward this end. Strict specifications are issued and every Canner is expected to pack strictly in accordance with these specifications. It is the object of the Association to so educate the Canners in the Northwest that the pack of every plant will be as near a standard as is humanly possible, so that each can of fruit packed in the Northwest will be on a par.

In order that there may be no misunderstanding as to the proper grading of fruits, annually this Association conducts an investigation, in the City of Portland, at which time samples are taken from every plant in the two States and are examined carefully by most competent judges, and the findings of the examination are reported in detail to all members of the Association. This gives the Canners an opportunity to check up on the packs of their competitors, and has had much to do with the wonderful increase noted in the standardization of Northwest packs. The task of inspecting the hundreds of cans is huge and the investigation lasts over a period of days.

While progress has been made in the canning industry and a steady increase in production noted, with the single exception of the year 1920, which being a year of reconstruction and owing to the fact that thousands of cases of canned goods were thrown into consumption from Army stores, which necessarily slackened up the pack for that year, nevertheless the industry is handicapped principally for the want of capital to properly function. This does not mean that a great deal of assistance has not been given to the industry by the financial powers but rather that the importance of the industry to the Northwest has not been fully appreciated by the financial interests and by the Chambers of Commerce.

In order to properly understand the needs of the Canner—one should keep firmly in mind the fact that canning business is one that requires the keenest foresight, and also bear in mind the fact that very few carloads of straight varieties of one kind of fruit are purchased by the jobbing interests. In fact, by far the greater part of the canned goods shipments consists of mixed cars, and in these cars are every variety of canned fruits and vegetables packed in the Northwest, so that the Canner finds it necessary, in the Spring before the season is under way, to endeavor to secure some future orders that will give him at least an insight of the probable requirements of the consuming public for the ensuing year. Of course, it is impossible for the Canner to book ahead sufficient business to take care of his entire operations but using his future orders as a figuring basis, he must so arrange his affairs that he will have the necessary diverified pack in order to take care of his buyers. Therefore, starting in with the gooseberry pack at the first of the year, he must proceed through the whole year packing consecutively strawberries, rapsberries, loganberries, cherries, pears, prunes, plums and finishing up with apples in October.

Were it possible for the Canner to ship his pack as it is produced in the plant, his troubles would not be great, but he must be in a position to hold his early pack clear through the packing season and into the Fall before he is able to clean up on his mixed carloads, which means that, in some cases, a period of six months elapses before he can realize on his pack. Now—the Canner must pay cash for everything for the reason that his is a cash basis. It is, of course, well known that sugar, one of the chief essentials of the canning business is a cash sale; his cans are also cash; his labor, of course, is cash; his transportation charges, which are heavy, are a cash proposition, and most important of all his supply of fruit is handled strictly on a cash basis for the farmer or producer must be taken care of—he, in turn, has his problems of paying cash to his pickers and other help, so that the canner must have a tremendous line of credit in order to accomodate all of these people and himself be able to wait until the Fall when he can realize on his shipments. This means that for six months in the year everything is being paid out, but his returns come very quickly when the packing season is over.

The Northwest Canners Association is putting forth every effort to aid in a more liberal financing of canners, having in mind these facts, and while it is true, as stated before, that the canning industry has grown and will continue to grow, it is nevertheless even more true that no extraordinary growth in this industry will be noted until such a time as the combined interests of the Northwest unite in a more liberal financing of this great and important industry.

The canner is doing his best to aid the small farmer, but thus far has had to fight his battles practically alone, and while, of course, it is true that the Canner needs the Grower and the Grower the Canner, nevertheless it is also true that the business interests of the Northwest need both the Grower and the Canner if the entire district is to grow as it should.

OREGON'S THIRD ANNUAL CANNERS SCHOOL

February 4-23, 1924

THE Horticultural Products Section of the Department of Horticulture wishes to announce its third annual Canners' Short Course. Preparation has been made to handle a large number of students. A new addition to the Horticultural Products Building will house the seaming school of the American Can Company. The men in and associated with the canning industry are urged to spend as much time at this school as is convenient.

The lectures on preparation given by practial men are especially adapted to fore-women and others in charge of the preparation rooms. All those finding time to spend at least a few days here are urged to come.

The registration fee for students who are residents of Oregon is $1.25 with an extra tuition of $7.00 for non-residents. Laboratory fees amount to $1.00 for each course requiring laboratory work.

Students registering in the short course may take any or all courses if they so desire. Those desiring work in seaming only may elect this work and devote their entire time to it.

Double Seaming Course—The seaming machine course formerly given at Portland under the direction of the American Can Co. has been transferred to this school and made part of it. Operations may take this course only if they so desire.

The course in double seaming will cover the care, adjustment, and operation of all makes of American Can Co. machines only.

The work presented in this course will be under competent men able to present the work in a through manner. It will consist of both lecture and laboratory work.

Preparation of Fruits and Vegetables.—This very important phase of cannery work is dealt with by practical men who have had years of experience in canning in the Northwest. The work covers the preparation, grading, and packing of all fruits and vegetables packed. This course is designed to give the various operations and fore-women in charge of prepara-

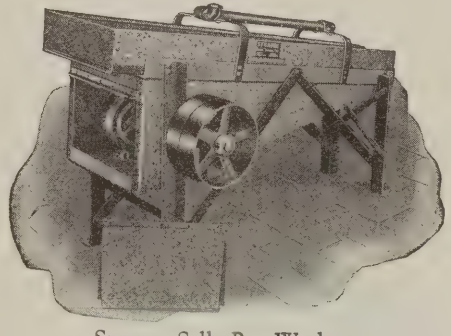
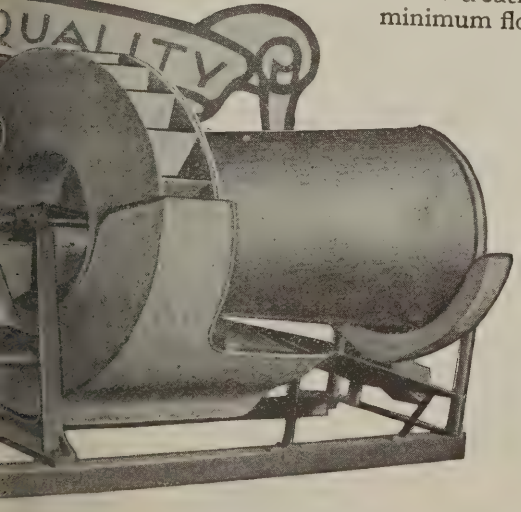
Sprague-Sells Pea Conveyors and Elevators
(Glass Type)

Buckets firmly locked together and do not separate in passing over sprockets so that no matter what position buckets are in, peas cannot get between them. *The only conveyor which positively will not crush peas.* Special patented sprockets insure positive, easy running, uniform drive.



Elevators of this type are replacing boots in many plants because *they really will not break the peas.*

Sprague-Sells Pea Washer



For the final washing and cooling after the blanch. Removes splits. An inexpensive machine that gives splendid results. Used by over 90% of the quality packers.

Well built throughout. Smooth surfaces—no pounding of peas. Movement of peas through washer controlled by baffle plates to permit maximum treatment by water sprays in minimum floor space.

Pans readily interchangeable, permitting use of any size perforation.

Sprague-Sells Pea Washer
(Glass Type)

THE products of both our factories are sold through the General Sales Office in Chicago. We can supply from our own plants practically any machine you may need.

Whenever you are planning any changes or additions to your equipment, let us submit a proposal covering your requirements. When quick action is necessary, telegraph or telephone at our expense.

tion information necessary to standardize the products of our Northewestern canneries.

Canning Problems.—Discussion of problems arising in packing various products will be emphasized. The subject of exhausts, processes, cooling, and storing are taken up with each product.

Jelly and Jam Manufacture.—Lectures on the principles involved in the manufacture of various jellies and jams. Samples will be studied and students have an opportunity to make various kinds of jelly in the laboratory.

Fruit and Vegetable Handling and Storage.—A series of lectures dealing principally with the various varieties of fruits and vegetables adaptable to canning. The handling and storage are emphasized, as well as the new varieties of fruits and vegetables which are showing promise to be better than some of the varieties now used.

Bacteriology of Canned Foods.—A course of study dealing with the micro-organisms found in the canning industry. A thorough study of the development and control and the relation of the micro-organisms to curing, ripening, and preservation of food products.

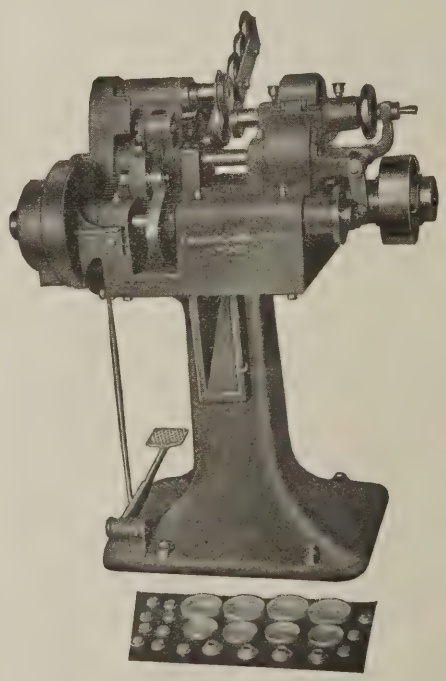
Students having had the preliminary work in this course will be given advanced study on spoilage problems.

Chemistry of Preserved Foods.—Lectures covering the methods of testing, standardizing, and making of solutions used in canning will be given. The student has the opportunity to learn how to test for alcohol, acetic acid, the strength of lye solutions in the laboratory. Simple methods of testing the contents of cans for hydrogen, carbon dioxide, sulfurs, etc., are undertaken. Students are requested to ask the instructor in this course for methods of testing in which the operator is most interested.

Growers' Contracts.—Lectures on the essential elements of the valid contract with the grower.

Talks by Prominent Men.—A series of talks by prominent men of the Northwest canning industry on selling canned products, cannery costs, cannery management, and various other phases of the canning industry.

THE WORLD TURNING TO CANNING



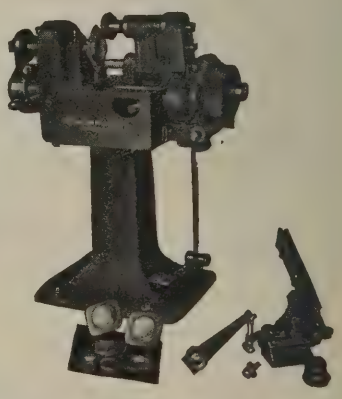
Central Canning Company,
Karwar (India),
459, Narayan Peth, Poona City
Dated 6th Nov., 1923.

Dear Sir:

We have great pleasure in writing to you to see if you can help us in connection with our work in canning. It would be better, in the first place, to give you some idea about the nature of our work and the difficulties we have to encounter.

There is very little of canning done in this country. This is mainly due to lack of knowledge of this art and want of cans and other accessories required for the manufacture. There is also a tendency among the Indians not to use any canned foodstuff and very few people can afford to do so.

In all there are four or five canneries in India, all of which are conducted on a very small scale. No



ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

MANUFACTURED BY

LA PORTE MAT & MFG. CO. La Porte, Indiana

power machinery is used anywhere. They use only solder-top cans, made locally. Sanitary cans are now not being used anywhere. There are very few places where the material to be canned can be had fresh in large quantities at a comparatively low price. This is why there is greater scope for starting small canneries rather than big ones.

We have started our firm recently and prepare only the marginally printed articles at present. We also use only solder-top cans, double seamed and soldered. Mere double-seaming as done here does not render them airtight. Neither solder-hemmed caps nor capping steels are available here, not to speak of hand-capping machines. So our first wants are:

(1) Solder-hemmed caps to suit can openings of carrying diameter, preferably smaller.

(2) Capping steels to suit the above caps and also hand-capping machines.

If the sanitary cans be found to be cheap enough we shall also require hand-sealing machines for such cans. We do not know whether we shall be able to operate with these successfully.

Please supply, therefore, quotations for solder-hemmed caps, capping steels, hand-capping machine, sanitary cans, hand-closing machines for them and samples of solder-hemmed caps and sanitary cans, if possible.

We shall be glad to have any booklets from you giving information regarding the use of any of the above.

Hoping to be excused for the trouble,
Yours faithfully,
S. V. CARBOLA,
For Central Canning Company,
Karwar.

P. S.—Kindly inform me as to the prices of crown caps and hand-sealing machines for these. I want also every detailed information regarding handy capping machine and others. Thanking you in anticipation.

TRADE-MARKS DEPARTMENT

Conducted by National Trade-Mark Company, Washington, D. C.

The following are trade-mark applications pertinent to our field pending in the United States Patent Office which have been passed for publication and are in line for early registration unless opposition is filed promptly. For further information address National Trade-Mark Company, Barrister Building, Washington, D. C., trade-mark specialists.

As an additional service feature to its readers, this journal gladly offers to them an advance search free of charge on any mark they may contemplate adopting or registering. You may communicate with the Editor of this department, or send your inquiry direct to the National Trade-Mark Company, stating that you are a reader of this journal.

Yes Bay—No. 187,277. Alaska Pacific Fisheries, Seattle, Wash. For canned salmon.

INCOME TAX IN NUTSHELL

Who? Single persons who had net income of $1,000 or more or gross income of $5,000 or more, and married couples of $2,000 or more or gross income of $5,000 or more must file returns.

When? The filing period is from January 1 to March 15, 1924.

Where? Collector of internal revenue for the district in which the person lives or has his principal place of business.

How? Instructions on Form 1040A and Form 1040; also the law and regulations.

What? Four per cent normal tax on the first $4,000 of net income in excess of the personal exemption and credits for dependents. Eight per cent normal tax on balance of net income. Surtax from 1 per cent to 50 per cent on net incomes over $6,000 for the year 1923.

Tips for Taxpayers

No. 1

January 1, 1924, marks the beginning of the period for filing income-tax returns for the year 1923. The period ends at midnight of March 15, 1924. Heavy penalties are provided by the revenue act for failure or willful refusal to make a return and pay the tax on time.

Form 1040A, heretofore used for reporting net income of $5,000 and less, from whatever source derived, has been revised in the interests of the largest class of taxpayers—wage-earners and salaried persons. Reduced from six pages to a single sheet, Form 1040A is to be used for reporting net income of $5,000 and less derived chiefly from salaries and wages. Persons any part of whose income is derived from a business or profession, farming, sale of property or rent, though the amount is $5,000 or less, will be required to use the larger form, 1040. The use of Form 1040 is required also in all cases where the net income was in excess of $5,000, regardless of whether from salary, business, profession, or other taxable sources.

It being impossible to determine at this time which form is desired, copies of both forms will be sent taxpayers who filed individual returns for the year 1922, and may be obtained also at the offices of collectors of internal revenue and branch offices upon written request.

The Markets

BALTIMORE, JANUARY 7, 1924

WEEKLY REVIEW

Brokers and Canners Waiting and Watching the Buyers—Market Very Quiet This Week—Inventories Said to Disclose Very Small Holdings—Canned Cranberries Growing in Importance—The Warehousing Plan at the Buffalo Convention.

WAITING AND WATCHING—This week has made the brokers who are champing at their bits ready to go a little restless, but not uneasy. The same might be said of the canners who are waiting patiently for the buying which they foresee in the very near future. It has been another such week as last week, the distributors busy taking stock and pricing up their holdings before adding further to them. The buyers are doing one thing at a time, and propose having this all settled and put away before starting on the new buying. Nothing will move them from this, as a rule, though once in a while one breaks the rule and inquires for some line of canned foods. But when he does he is usually looking for a bargain, as, for instance, one Western buyer who came into the market for 6,000 cases of full standard No. 2 tomatoes at 85c. That would be a very nice buy for him if he could make it, but the goods just cannot be found at such a figure. The holders of tomatoes know their value, and are demanding it in full.

When will the buying open? That is just a little hard to say. The buyers are being very careful; they do not intend to rush the market and thus raise prices against themselves. Their inventories are all said to show very low holdings, and the same is largely true of the retailers. On top of this the real winter weather that has set in means the beginning of heavy canned foods consumption, and this will force the retailers to replenish their stocks. So the buyers will have to come to market, and they are ready and willing to do so as soon as the "man higher up" gives the release orders on buying.

THE MARKET—A review of each article of canned foods, starting alphabetically and going from top to bottom, would mean a mere repetition in each instance, since market prices show no changes in any item, and the demand for each one is on a par with all others. It would fill space and be dry reading. We realize that the holders of any article of canned foods want a direct report on that particular item, and we give it to them this way—turn to the market page. The market prices remain as there quoted, unchanged; demand is of a nibbling, inquiring sort, with a hint of soon needing some of the goods; but nothing definite. A real "feeling out" it might be termed, with but little actual buying this past week, which is the last of the holiday weeks. No holders are attempting to force the market, and the feeling is strong and hopeful. Just apply this to any item of canned foods, and you will have all that we could say in reporting each individual article.

CRANBERRIES—A few years ago we asked in our columns why some canners did not take up the canning of cranberries, a delightful dish, extensively used, and one which might grow to big proportions, if rightly handled. We received in reply, at first, a series of objections, and then, as is always the case, some approving expressions; but nothing much seemed to come of the idea. It was being done, however, and that it has grown even more rapidly than we anticipated is shown when we received a letter, under date of December 27th, complaining that canned cranberries are not quoted in our market pages, and the writer—the United Cape Cod Cranberry Co., with its cannery at South Hanson, Mass.—added: "We are packing some 50,000 to 60,000 cases this year, which are being distributed all over the United States and a few exported. We pack both the strained and the whole fruit sauce; the strained at $1.90 for the No. 2 cans, and at $9.00 for the No. 10s. The whole fruit at $2.10 for the No. 2s, and $10 for the No. 10s. " They have a most attractive label, setting forth the article in the can, its wholesomeness and the way to use it, and make high claims for the vitamines contained in cranberries, and the writer adds: "While you have a pretty good paper, we know if you add cranberries to your diet it will be better." No doubt he is right, but in any event the fact that this new line of specialties in cans has grown to the size indicated is a good evidence of how the people are turning to the can for every kind of supply. It should be added that the product is carefully packed and comes well up to expectations—and that is the only kind of canned foods that may be expected to grow and continue to grow. If this can be done with cranberries, what cannot be done with the staple articles of canned foods and all other fruits and vegetables?

BUFFALO'S IMPORTANCE—All recognize that the annual Convention of the canners is gaining in importance every year, and that is why all forward-looking canners and others associated with the business make it a point to be present and see and hear what transpires. But the market seems to be "banking" more on Buffalo this time than usually. The wholesale grocers of New York and New England, and, for that matter, pretty much all of the country, seem to think that this Convention will be the deciding point in the Warehousing Plan, forgetting that this is a closed incident with the canners, the National Canners' Association and all State Associations of canners having adopted this Warehousing Plan already. The canners have adopted the Warehousing Plan as their official method in the settlement of disputes, and just how the question is to be opened again at this Convention is hard to see. The wholesalers profess to think that the matter will be solved to their liking when the canners meet at Buffalo. On the contrary, we expect to see the canners exhorted to stand fast to this plan and to give it, at least, one year's good trial. Much has been made of the sales of future peas on the flat-allowance basis; but one large

operator told the writer this week that of all the Wisconsin peas they had seen sold there was but one block, by one canner, on which the buyers asked a flat allowance of ¼ of 1 per cent; all the rest of them were sold on the old style—swells to be handled as directed by the sellers—and that means Warehouse Plan. The canners should write the Warehousing Plan clause in all their contracts and stand by it, and this would settle the matter definitely, so far as the trial of this method is concerned. The flat allowance was given its fair trial, and proved almost disastrous to the industry and to the further increase of the use of canned foods. It is the unsettled condition of the question that is causing the trouble. If the entire industry stood pat upon the plan until it can be proved, even the wholesalers would welcome the definite position rather than the present unsettled state. If the plan should prove unworkable for any reason, it can be abandoned before tried. The buyers are most too fearful of the cost to the canners; they appear too solicitious for the pocketbooks of the canners. They should cease their worries and leave the expense to the canners, who are perfectly willing to take the chance and stand the expense, if it proves to be an expense instead of a saving, as we expect it to do.

NEW YORK MARKET

Inquiries Abundant, but No Business as Yet—A Complete Clean-up Expected—Fruits in Better Demand—California's Holdings Reported Light—Tomatoes Continue Firm—Corn Is Quiet—Pea Movement Is Slow—Members of the Trade Are Preparing for Convention.

New York, January 3, 1923.

By "New York Stater,"
Special Correspondent "The Canning Trade."

INVENTORY Season—Wholesale grocers and chain-store buyers are beginning their annual stock-taking period, and the canned foods markets in New York have shown a quiet tone thus far in the year, particularly in view of the holiday on Tuesday.

Many Inquiries—Buyers have a pretty good idea as to what their future requirements of canned foods will be, however, as is evidenced by the numerous inquiries which local brokers are receiving, asking them to get offerings and prices on certain lines of canned foods which buyers will want for early shipment.

Look for Cleanup—Brokers are very optimistic regarding the future of the market, and anticipate an early cleanup on practically all carryover canned foods. Canners' views as to prices are very strong, and it is expected that when canners, brokers and wholesale grocers get together at the annual convention in Buffalo late this month, progress will be made in cleaning up remaining canned foods stocks.

More Inquiry for Canned Fruits—New York has experienced quite a cold snap during the past several days, and demand for canned fruits at retail has picked up as a result. The mildness of the weather thus far has held up the sale of both dried and canned fruits, cheap fresh fruits supplying the market to a great extent.

California's Stocks Light—Holdings of canned fruits in the California market are not heavy, and canners are not disposed to force the sale of what fruits they still have on hand. Few of them have any sizable quantities to offer, and many are of the opinion that if they hold their fruits to take care of the spring and early summer trade, they will get better prices than those now prevailing, particularly on standard grade fruits. An early opening of future trading in California canned fruits is anticipated, in line with the early start of future business in other lines of canned foods out of the 1924 pack.

Tomatoes Are Firm—A firm market for tomatoes, both Maryland and California packs, is reported. While the demand is not particularly active at this time, distributors are looking for sufficient business to effect a cleanup of both jobbing holdings and cannery stocks before the 1924 packing season begins. Future prices have been named by a number of Maryland and Delaware canners, but as yet no material volume of business has been done in the New York trade.

Standard Corn Quiet—Buying of standard corn has been rather quiet during the past two weeks. Canners continue to quote the market at 95 cents, and accept business at 90 cents, which has weakened buyers' confidence in the situation. However, cannery stocks of corn are light for this season of the year, and a firm market is anticipated during the remainder of the season. Maryland is expected to come to the front with a high-quality pack of corn this year.

Pea Trading Quiet—Jobbing stocks of peas are light, and the market in first hands is also strong. Canners have only small quantities remaining unsold, particularly on the lower grades, and they are holding firm at quoted prices. Demand for peas in the jobbing market is rather quiet at the moment. Because of the firm prices now prevailing, distributors are buying peas only as they are needed.

Sardines Quiet—Trading in the Maine sardine market has remained quiet during the past week, and the price basis is quotably unchanged. The carryover is light on all grades, and canners are holding firm on remaining stocks. The demand during the early spring months is expected to effect a clearance of small stocks still available.

Pink Salmon Strong—Pink salmon is strongly held at $1.25, Seattle, with a quiet market prevailing. Jobbers are in need of salmon, however, and an early revival in buying is anticipated. Red salmon generally holds at $2.35, Seattle, with a quiet market ruling. Chums are cleared from first hands, with the exception of a few isolated lots here and there.

Tuna Quiet—The high prices quoted on spot tunafish have slowed down trading somewhat and the local market presents a quiet tone. There has been a little easiness shown in bluefin of late, with holders shading the market for halves a trifle. White meat continues in scant supply, and is strongly maintained.

Prepare for Convention—Members of the local brokerage and wholesale grocery trades are making plans to take in the canners' and brokers' convention at the Statler in Buffalo late this month. The selection of Buffalo as the convention city is expected to insure a large turnout, as it is centrally located for most of the Eastern trade. Some of the brokers who are going to the Buffalo meeting are hunting out their old earmuffs and galoshes in anticipation of a cold and stormy week, while others of a more thoughtful frame of mind are hunting up their corkscrews, enthusiastic because of Buffalo's nearness to the Canadian border.

Nothing New On Swells—The swells question is hanging fire, so far as the New York trade is concerned. Jobbers continue unalterably opposed to the warehouse plan, in this market, at least, while the brokers are mute, being between two fires, as it were. The trade are pinning their hopes for a final and definite settlement of the question on the Buffalo convention.

Changes on Street—Lestrade Bros. have formally taken over the canned foods and brokerage business of Mailliard & Schmiedell in New York.

Charles H. Brewster has taken over the Ohio Butler-Sergeant Corporation, which has hitherto been the Cleveland branch of Butler & Sergeant, Inc., of New York. Mr. Brewster has been in charge of the Cleveland business for some considerable time, and is well known to the trade all over the country.

Wilbur & Hake have started in the food products brokerage business, opening at 100 Hudson street today. They will specialize in dried fruits and canned foods, and their wide acquaintance and popularity among the trade here assures them of an early success.

Killian & Clark, Inc., have been apointed New York sales agents for the Hunt Bros. Canning Co., well-known California packers, also operating canneries in the Northwest.

Karl R. Whitmarsh and Francis L. Whitmarsh, sons of Theodore F. Whitmarsh, president of Francis H. Leggett & Co., have been elected directors of the company, effective January 1st, 1924. Both have been actively conected with the business for several years past.

The jobbing business of the old De Grof wholesale grocery concern is now merged with that of R. C. Williams & Co., all of the business being centralized in the big Williams warehouse and plant on Hudson street.

Members of the sales force of Austin, Nichols & Co. held a three-day convention at the plant in Brooklyn late last week.

CHICAGO MARKET

Brokers Take Holiday—The Country's Big Crop of Apples—No. 3 Cans of Apples Hardly Known to the Housewife—Some Inquiry for Corn, Peas and Tomatoes—Increasing Business in Canned Foods—Winter Weather Will Increase Demand—President Hill's Heavy Loss.

Chicago, January 4, 1924.

By "Wrangler,"
Special Correspondent "The Canning Trade."

BROKERS' Holiday—The canned foods brokers of Chicago are endeavoring to amuse each other with diverting stories and interesting reminiscences—they have nothing else to do at present, as buyers are busy pricing up their inventories and will not receive brokers or propositions to buy.

The brokerage business is one that is easily summarized, and most of them have ascertained that the year 1923 has permitted them to escape with their lives, but without much profit.

It shows, however, a turn for the better, because 1922 was worse for the brokers and many of them lost money, whereas 1923 has enabled them to break even, and some of them to even show an encouraging, though not satisfactory, profit.

Apples—The enormous crop of canned apples which has been raised according to the estimate of the United States Bureau of Agriculture is about 2,750,000 barrels, larger than last year's crop, and the number of barrels in winter storage greater than at the first of January, 1922, aggregates 3,000,000 barrels.

The canners of the United States have been very wise in refraining from putting into cans a large quantity of apples this season.

The trouble about canned apples is that they are used only in an exceedingly small way, except in the No. 10 cans, by pie bakers. The smaller cans are scarcely used at all for family consumption.

Pie bakers always prefer to use barreled apples when they are cheap to using canned apples, as they get more flavor out of them, so they say, and can make better pies. The probability is they get more economy out of them, although they do not give that as a reason.

The buyers when they can be approached at all—the approach being dangerous at this time of the year—are making some inquiries for canned corn, canned tomatoes, and also for canned peas, but for very little else. The inquiries are merely tentative—that is to say, they are disposed to state sometimes that they may, in a few days or week or so, need some canned corn, peas or tomatoes, which gives the broker a line on their prospective needs and enables him to "dig up" offerings from all the canning clients whom he represents.

One large wholesale grocer whom I talked to advises that the volume of business in canned foods which his house did this season amounts to nearly 50 per cent of the entire sales, and that the amount of sales in dollars and cents with all lines in the wholesale grocery business for the year 1923 is greater than that of 1922.

This statement I was inclined to debate with him for a little while, but he soon convinced me by actual statement of facts that the value of groceries during 1923 was fully equal to that of 1922 on account of the various advances in prices of sugar and coffee, etc., and that, if anything, the volume of sales for 1923 would naturally be expected to be greater than that of 1922, because values for 1923 were equal, if not higher, and distribution was greater.

Winter Weather—Severely cold weather has arrived, reaching here New Year's Eve, and the temperature has hovered around zero. This is good weather for canned foods, because it will make the handling of fresh vegetables and fresh fruits dangerous, difficult and expensive, and will advance the price on that account on fresh fruits and fresh vegetables, so that the use of canned foods will be found more economical.

Just the contrary has been the case until this cold spell arrived, and the sales of canned foods have been very much retarded by the open weather.

The steady maintenance of prices upon all canned foods of every description, with the exception of canned apples and the important and unusual reduction of stock in the hands of canners in the great staples, peas, corn, tomatoes, as well as other lines, has inspired such a degree of confidence in the stability of prices on the part of buyers that the market is, without doubt, in the control of sellers, and will remain so all during 1924, or, at least, until the new pack of 1924 comes upon the market.

Much sympathy is felt for the Grimes Canning Co., of which J. W. Hill, President of the Western Canners' Association, is an officer—the big factory being located at Grimes, Iowa, no Christmas Day sustained a loss by fire, aggregating about $250,000. Three warehouses were totally destroyed, and they contained 50,000 cases of canned corn, which is a total loss. The insurance will not fully counterbalance the loss, which latter will be important. This will also reduce the stock of canned corn in Iowa and Nebraska unsold by canners to about 150,000 cases, as compared with the holding of last year at the same time of 2,000,000 cases. Canned corn is good property.

Many canners in Wisconsin, New York, Michigan and elsewhere are announcing their prices for 1924 pack, future delivery, on canned beets, canned graded green beans, canned peas and other products, which, though the cost of tin cans will average a little higher this season, are priced about the same as last year, the advance being slight.

The Morgan Packing Co., at Austin, Ind., has named prices on futures and has issued a list as follows:

1924 Pack—Future Delivery

No. 1 Tomatoes	$ .70
No. 2 Tomatoes	1.00
No. 2½ Tomatoes	1.35
No. 3 Tomatoes	1.40
No. 10 Tomatoes	4.90
No. 2 Kraut	.87½
No. 2½ Kraut	1.05
No. 3 Kraut	1.10
No. 10 Kraut	3.60
No. 2 Pumpkin	.75
No. 2½ Pumpkin	.90
No. 3 Pumpkin	.95
No. 10 Pumpkin	3.00

The tomatoes quoted are not quoted by grade, but will grade as extra standard, as this is the lowest grade this canner packs. It is the only price list of futures that I have seen from Indiana, so far.

There will be a large delegation of canners and others going to the National Canned Foods Convention by way of Chicago and from Chicago—a special train will be run from here to Buffalo, and is being advertised. I understand that reservations are being rapidly taken up.

Lamborn & Co., a big brokerage firm which has offices in various parts of the United States, including New York and Chicago, has announced a change of policy which took effect December 31, 1923—they then discontinued their canned foods and other food products departments and are going to concentrate their attention on sugar, in which they are large importers and dealers. This policy applies to all their offices.

ST. LOUIS MARKET

Light Stocks Held by Dealers—Early Buying Looked For—Corn Stocks Reported Cleaned Up—Taking Wisconsin Future Peas—No Interest in Future Tomatoes—The Industry Growing in the Ozarks.

St. Louis, January 3, 1924.

By "Missourian,"
Special Correspondent "The Canning Trade."

STOCKS Light—Little buying in canned foods has been reported during the week just ended, the last week of the year, owing to the inventory period. Distributors' stocks of leading staples in canned foods are very light. The trade is optimistic regarding an early start in spring trading. As canners' stocks are light on practically all grades and varieties of canned foods—vegetables, fruit and fish—an active competitive buying campaign, is believed to be in the cards for the market during the next few weeks.

VEGETABLES—Corn—There has been practically no business in canned corn during the past week. Distributors state there was a very light stock of Western standard corn at the close of the year, so the market has been steady on carryover stock. According to information received, the Iowa-Nebraska

Canners' Association reports a carryover of 1923 pack of only about 200,000 cases, and it is believed that before the end of January this stock will be cleaned up. Canners in Illinois and Indiana are reported in better shape and have fairly large stocks available, but no figures as to the actual supply have been made known. Less than 200,000 cases of the 1923 pack standard corn remains in Ohio, and canners in that State expect that by the middle of February this will be cleared up. Practically there is no corn in Wisconsin and Michigan and Minnesota. Nothing is known here how holdings are in Maryland and Delaware by the canners, but those best informed here state they do not think that the supply is heavy for this time of the year.

Peas—Distributors here have received the opening prices on 1924 pack of Utah canned peas from the California Packing Corporation and the Utah Packing Corporation. The former packers name their prices much earlier than usual this year as the result of early bookings by Eastern canners.

Jobbers here are quietly purchasing all the Wisconsin futures they can, where they can get favorable figures and where restrictions on assortments are not too severe. There is not any big demand, however, but only a conservative covering of part of their future requirements. Standards are favoring the canner more than the packer, and instead of price-cutting, there is a firm tendency. All grades of spot peas are firm. Lines of peas which can be used as a substitute for standards are firm. Every indication points to a big pack in 1024, because of the big money that peas made for both canner and distributor for several years. Old packs are scarce and stiff prices prevail. Futures remain firm.

Tomatoes—California and Tri-State canners are quietly waiting for a return of trading which will begin within a few days, or right after inventories have been finished, and have not been trying to stimulate the demand by shading of prices. There is not enough interest in futures to bring out any movement. With no large surplus and a wider demand than usual from the Middle West, Tri-State pakers look for higher prices with the advance of spring. Southern packers have only small stocks on hand unsold.

Asparagus—Asparagus tips are quiet. There is a steady demand for spinach.

Fruits—A change in the fruit spot situation is not expected for a few days. Jobbers have their money tied up in purchases they have aready made, so will not listen to offerings. Some low prices have been made to tempt buyers, but few of them have been taken up. Offerings from the Coast have been held firm. Stocks in the hands of California canners are lighter this year than for a long time. Peaches are firm. Apricots are strong, although the trade has been quiet. No. 10 pie fruits of all grades and kinds are firm.

Milk—There is a steady undertone prevailing in the market for canned milk. Distributors are not coming into the market for supplies in large quantities, and no real buying is looked for until after inventories are completed.

The canning industry in the Missouri and Arkansas Ozarks, which has been growing rapidly during the past five years, is expected to take on an added impetus the coming season, and several parties have reported that they will establish new canning plants, among them being E. L. Standley, who has announced that he will erect a new factory at Batesville, Ark. It will be much larger than his present plant at Yellville, Ark. Canning factories are now established in almost every town north of Cotter, on the White River Division of the Missouri Pacific Railway, and have proven profitable for the farmer and canner alike. A large part of the pack is tomatoes, but corn, beans, sweet potatoes and fruits also are packed extensively.

CALIFORNIA MARKET

Drouth Is Getting Dangerous—Prunes Reported All Sold for Export—Future Peas Have Sold Well—Large Crop of Olives Being Packed—Looking for Lower Grade Fruits—Tomato Holdings Are Getting Light—Coast Notes of Interest.

San Francisco, January 3, 1924.

By "Berkeley,"
Special Correspondent "The Canning Trade."

DROUTH Getting Dangerous—Weather conditions in California continue unfavorable for most crops, and the outlook is commencing to assume a critical aspect. The lack of rain has hindered the planting of such crops as peas and has held back winter ploughing and farm work in general. Each flurry of rain that has come has encouraged the belief that the rainy season has at last set in, but these have been followed by clear weather, and so far there has not been a real storm. The precipitation at Fresno, in the heart of the San Joaquin Valley, was but 81 hundreths of an inch at the close of the year, as compared with a normal of more than four times this quantity. Los Angeles has had less than one inch, as compared with a normal of about five inches, and there are but few places in the State where the precipitation for the season is half the normal. The snowfall on the summit of the Sierra Nevada Mountains is but nine inches, in place of the nine feet that is expected at this time of the year. Of course, there is still time for heavy rains, but the outlook is not especially encouraging.

Prunes In Export—Handlers of canned foods, particularly of California canned fruits, are much interested in the announcement of the California Prune and Apricot Growers' Association to the effect that the entire holdover crop of 1922 prunes has been sold for export. This carryover has been having an unfavorable influence in all markets, not only on the sale of dried fruits in general, but on the sale of canned fruits as well. Very low prices have been prevailing, and every effort has been made to get prunes into consumption. With the carryover disposed of and shipped to Europe, firmer prices will prevail on remaining stocks, and California canned fruits will have less competition of a price-cutting nature. Dried apricots, apples and pears are all firmer, with raisins now the weakest item in the dried fruit line.

Peas—Considerable business on California and Utah peas has been booked at the opening prices announced early in December, and it is anticipated that the expected pack will soon be sold up, despite the disinclination of some in the wholesale trade to have anything to do with futures. Right now the prospects are not very promising for a large pack of peas in California. The ground is too dry for ploughing, and a small acreage seems in prospect.

Olives—A very large pack of California ripe olives is being made, the crop proving the largest ever harvested. The crop in the southern part of the State is proving rather light, and considerable damage was done by the heavy windstorm and cold weather experienced a few weeks ago, but the output in the Sacramento and San Joaquin Valleys is heavy. The fruit is running to small sizes, but there will be no marked scarcity of the higher grades. Packing plants have been filled to capacity all season and quantities of the fruit have been picked green for the Greek trade. Last year more than 400,000 cases of ripe olives were packed, and this year's output promises to be well above this figure.

Lower Grade Fruits Needed—Numerous inquiries have been received of late by California canners concerning lower grade apricots and peaches, leading to the belief that there will be quite a call for these after the first of the year. The 1923 pack contained but a small proportion of low-grade fruits, especially peaches, and the carryover has been largely disposed of, with the results that these grades are getting into light supply. Trading in canned fruits has been light during the past month, but considerable fill-in business is expected in January, after inventories have been taken by wholesalers and retailers.

Tomatoes—Stocks of California tomatoes in first hands are getting light, and prices are being firmly maintained. No. 2½ standards, with puree, are held at $1.15, with No. 2½ solid pack quoted at $1.60. A great improvement in the local demand for canned tomatoes has been noted since killing frosts visited the growing districts.

Coast Notes—While business on canned salmon has been rather light of late, canners have numerous orders on file which will be filled after the first of the year. Alaska red salmon is well sold up, and prices are firm at $2.25. The lower grades are in better supply than the higher ones, but there is no heavy unsold surplus. Stocks of tuna fish in first hands are light, and prices are exceedingly firm. California sardines are also in good shape, owing to the light supplies of imported fish throughout the country.

Tillman & Bendel, of Fresno, Inc., has been incorporated at San Francisco, Cal., with a capital stock of $250,000, by H. R. White, H. J. Finn, A. B. Dunee, H. A. Judy and R. C. Foerster. The parent San Francisco firm has been engaged in the wholesale grocery business for many years.

The California Chain Stores is considering the installation of a $100,000 milk condensary at Patterson, a thriving dairy community in Stanislaus county, California.

T. B. Ross and J. D. Warde, with Tillman & Bendel, San Francisco, left recently for Fresno, Cal., to assist in taking over the business of the Home Wholesale Grocery Co., a transfer that is to become effective January 1.

Canners of asparagus who have been planning to pay less for canning stocks in 1924 than was the case during the 1923 season have been rather taken back by the purchase on the part of newcomers in the business of considerable uncontracted asparagus at six cents a pound. It is claimed that growers are making good money at the long-term contract price of four and a half cents, and canners hold that the higher price will tend to curtail consumption and bring about marketing difficulties such as canners of other products have had to contend with.

MAINE MARKET

Pea Canning in Maine May Be Expected to Rapidly Develop—Maine's Corn Yield Last Season—The Market Prices Show No Change—Sardines Lack Activity—H. R. Stickney Is Very Ill.

Portland, Me., January 4, 1924.

By "Maine,"

Special Correspondent "The Canning Trade."

BUSINESS remains quiet this week, during the painful period of annual accounting. General conditions in Maine, however, are very satisfactory, practically all industries running on full schedule. The recent snowfall has started work in the lumber camps, one of the most important businesses in this State.

Peas—There is every evidence that pea canning will be made an established business in Maine, acreage having already been signed for the two factories where trial was made last year. The 1923 season was about as unpropitious as possible, but both canners and growers were convinced that the proposition could be made profitable. At Fryeburg, H. C. Baxter & Bro. will operate again with a larger acreage than last year, and at Unity the Portland Packing Co. Doubtless it will be but a short time before other firms enter this field, and Maine peas will take their place beside Maine corn in the large markets.

Corn—An interesting item is issued from the statistician's office at Wakefield, Mass., compiled from reports from the U. S. Department of Agriculture and New England State Departments. It gives 80 per cent as the amount of sweet corn acreage in Maine which yielded any crop last year, with the average yield per acre 75 per cent of the five-year average. But more interesting is the yield to the grower, the average price per ton being $27.51, as against the average of from $8.88 to $13.50 paid in the Western States.

The Market—There is no change to report in market conditions on spot Maine corn. The stocks are so immaterial as to be unworthy of consideration, and indications point to an inclination to hold these goods until spring. There are a few small lots of fancy grade, both Golden Bantam and Crosby, and an even smaller amount of standard. Prices fluctuate somewhat with the desire of the buyer to purchase and the tendency of the packer to hold on, but show no likelihood of declining.

Sardines—There is little activity in the sardine trade, due to small stocks and the fact that canners are not pushing their offerings, and to the fact that buyers have become convinced that there are no goods on hand and have ceased making inquiries. The stocks now held in first hand are very light, indeed; at the present rate of movement they may last until the new season opens in April, but any large demand between now and then would mean a bare market long before that date. While the new season is legally open in April, it is usually well into May or even June before there is any run of fish worth mention.

Henry R. Stickney remains very ill at his home in this city.

Mr. George Pelham, representing the Sprague-Sells Corporation and the Peerless Husker Co., is in Maine for two weeks, and is being welcomed in his new connection with the Sells interests.

Mr. Stickney was closely identified with the earlier development of corn-canning machinery, and is known throughout the industry both for his contributions to its success and for his personal friendship with many canners.

FREIGHT RATES & SHIPPING NEWS

Traffic Bureau

THE CANNED GOODS EXCHANGE OF BALTIMORE

The Southern Freight Association, upon complaint of certain shipers, have docketed a proposal to cancel water and rail rate of 52½c per 100 pounds on canned foods, carloads, from Baltimore to Gulfport, Miss., leaving a combination of rates amounting to 78½c on sweet canned goods, and 70½c on sour canned goods. Oral or written protest against this proposal may be filed with the Southern Freight Association, Atlanta, Ga., on or before January 8.

The Interstate Commerce Commission's examiners who heard the testimony in the complaints of the Indian Packing Co., National Food Packers' Traffic Association and the Glass Container Association, have recommended that the Commission find the present classification ratings on many food articles packed in glass containers were unreasonably high and should be reduced to the same rating as now applicable to such articles packed in tin. On certain other articles, such as preserves, butter, peanut butter, olive oil and ground spices, the examiners found the present ratings were not unreasonable in view of the relative value of such articles as compared with pickles, table sauces, jellies, etc. The report states that since the first-class rating was established many years ago on food in glass there had been many improvements made in the quality of the glass container and the methods of packing them for shipment, which had greatly reduced the element of damage, which element had been the carriers' former justification for the higher rating carried in railroad classifications.

HARD WORK THE BEST TONIC

From The Optimist.

THE grocery trade appears to us to be in a very healthy condition; healthier, perhaps, than any other branch of industry. In fact, the only danger to be apprehended is that of an infection from some outside source.

With the advance of autumn, however, there have been indications that the bloom is off more things than rosebushes. During the past few weeks several large factories have closed down. They were in other lines, to be sure, but they indicate a weakness.

This being so, we believe that business should have a tonic; and the remedy indicated is that good old-fashioned medicine, Hard Work. That is an elixir that cuts the cost of production and distribution, without decreasing employment or purchasing power.

During the last decade the tendency has been to shorten hours, to do less work in a given time, and generally, to take life more comfortably; but the time will come when we must kep up or slump. Don't wait for it to come, get the jump on it!

The time to stave off depression is before it threatens. Once let unemployment spread and sales resistance will be found to increase with distressing rapidity. A little more hard work—a little greater efficiency—will guarantee a continuance of prosperity.

We believe that every employer should take this subject up seriously with his organization. If each individual member will buckle down and work a little harder, the effect on business will be so tonic that all danger of reaction will vanish over night.

EDITORIAL

HIS MAJESTY — THE MACHINERY-SUPPLY MAN.—When the canners assemble in their State or local Conventions, and again here at this mammoth National Convention, where nearly, if not, five thousand will take part, whose pocketbooks is it that are wide open in lavish entertainment of you? Who furnishes the banquets and the amusements—the luncheons to the ladies, the trip to Niagara Falls, the crowning social feature of this great Convention, the Friday night ball, to say nothing of all the many and lavish entertainments that have been given all over the country this past fall—The Canning Machinery and Supplies Association members, with whom many brokers heartily co-operate. They have been your hosts and they are your hosts, and at least you should know your host, and further, you should appreciate it. We know of no industry in the country that treats its customers so well as these generous "boys." Understanding the situation, everyone will feel grateful for their thoughtfulness and duly appreciative. They need not spend their money in this lavish way—you need them, their machinery, their supplies and their service—as much as you need crops for canning, but they are just that kind of men. And it is not a case of spending some of their huge profits, as some small-minded fellow may think. It is an extremely rare case where any firm or individual makes the profit he or they should make. Canning machinery is and has always been sold at too low a price. If you doubt this, get out into some other line of industry and see what they pay for less intricate, less particularly true pieces of machinery. You complain that the prices of cans are too high. How would you like to invest $1,250 to $1,500 in a double-seamer and then rent this out at $50 per year, to undergo all the careless handling and neglect that the average "renter," whether of house or machine, usually gives, and then, on top of this, maintain and keep in action a force of expert men to attend to these "rented" machines? Just figure it up for a moment and you will wonder how it can be done, and probably see why some, formerly, well-known can-making companies have quit the game. This latter feature, we believe, is all wrong and should be discontinued at once. The seamers should be sold outright, and then the owner-canner would take care of them, and the work from them would be better, and they would last longer. The present method makes for inefficiency, the owner-plan would make for efficiency. And what is more, we believe that all the can companies would willingly change the practice, but each one is afraid to make the start.

We have digressed into this simply to quiet any quackers who may think they are paying for these entertainments. They are not. And the ever-generous machinery and supply men, and the contributing brokers, deserve this word of commendation and thanks for their liberality. It is not made upon request or suggestion. Not a soul knows of it until this moment, when you read it.

THE BIG MACHINERY SHOW—Much of this issue is devoted to the welfare of the exhibitors, as they deserve, for their big Show is not only a most interesting one, but a most valuable one to the canners. Here the canner has displayed in one great room all that is best in machinery and supplies, that he may view them and buy to the best advantage. It is the great "market place" of the industry, a replica in substance of what is given in words all during the year in the pages of The Canning Trade. The advertiser helps the canner by calling his attention to the latest and best in both machinery and supplies; this is a real service to the man who knows the value of buying well, and getting the best for his money. It is not all benefit to the advertiser. And at the big Show the exhibitor, and the advertiser, give the buyer a chance to examine and see the thing and so buy, as it were, with his eyes open. Therefore the big Show holds a most important position in this big meeting, and deserves this special attention, and the careful attention of every visitor to Buffalo.

To help the visitor and make it easier for the exhibitor, we have platted the hall, and written the name of the exhibitor in his assigned booth. With this as a guide you can go direct to any exhibit you may wish to see; this makes for order, whereas without it, it is just one huge conglomeration of exhibits. And as a

We render the service---you take the tip: tell the advertiser that you appreciate seeing his offer in The Canning Trade.

further assistance, we give in this issue a brief write-up of each exhibit, mentioning what they will show and the names of your friends who will be found there.

THE PROGRAM.—The Program, reprinted in this issue, is not only a good one, but it is thoughtfully drawn. There is so much to be done in so short a time that there necessarily must be conflicts of meetings, and many men find that matters in which they are interested are to be discussed on the same morning in different meetings. The framers of this year's program have taken this into consideration and have assigned a definite time for each address. You will find this time just in front of each scheduled address, and that means that the speaker will have the floor at the time specified. As all the meetings will be held in the great Statler Hotel, it will not be hard to leave one meeting and drop in upon the other, in time for the address which you wish particularly to hear. And it will be further noted that the program is not over-burdened with addresses, and that the time assigned to each is short. This will make for more snappy action and better business.

BE PROMPT.—On behalf of the speakers, and for the sake of those who appreciate promptness and desire to reap a maximum of good from the considerations, we want to urge all to be present at the meetings in time. The canners may not be the worst set of men in the world in their dilitoriness, but they are a good ways from winning any medals for promptness in attending sessions of the Convention. Upon leaving for the Convention take one resolution: that if you are going to attend the meeting, that you will be there on time and not cause disturbance to both speaker and the audience by strolling in late. It is discourteous, impolite and often a rank nuisance to be late, because frequently some interested ones are striving to catch the particular point the speaker is making, and just then a late-comer drops in, makes confusion and causes the speaker's voice to be drowned and the interested ones lose the very thing they were most anxious to get. The meetings are comparatively short, and the days are long—from early morning to early morning—and all will have plenty of time for the chats with friends or customers. And with the Statler as the headquarters, it will not be hard to find anyone at any time, either at the hotel or at the Show. For everyone's sake, let everyone try to be prompt.

Growth of the Canning Industry

BY JAMES A. ANDERSON

President, The National Canners Association

THE canning industry has made rapid strides during the last few years by reason of the splendid co-operative work of all members belonging to the National Canners' Association. The untiring efforts of this organization have greatly improved the methods of handling food products, all the way from the growing of raw materials to the finished articles as canned foods. The great amount of scientific research work which has been conducted under the supervision of the National Canners' Association laboratories has raised the standard of canned foods to such a high level that many of the most noted and most reliable scientific authorities have voluntarily pronounced them the safest and most sanitary food that can be obtained for human consumption.

The methods of purchasing the raw products and paying for it in accordance with grade and quality make it more profitable for the grower to bring only the very best that the garden, orchard or field can be made to produce. The grading of the raw product is done by men and women of experience along these lines, and that which is not fit for human consumption is rejected by the canner. The raw product that is considered acceptable for canning purposes is washed and prepared under such strictly sanitary methods that it excels in quality and healthfulness any and all products brought fresh from the market, and also excels in the same way any product of home canning for the reason that no consumer in the home can afford to equip with the same scientific, sanitary equipment and process that the cannery must, of necessity, install for this purpose.

In view of these facts, it is only natural that, as the consuming public becomes acquainted with the real facts regarding canned foods, the use of them will increase. Our great improvement in methods of canning and production of quality is, doubtless, the principal reason for the great increase in consumption of these foods. There is every reason to believe that as this education goes on and more of the facts become actually known to the consumer, there will continue to be an increase in the demand for and the consumption of canned foods.

The method adopted by the National Canners' Association for taking care of any spoiled canned foods is going to have a further tendency to establish confidence in the mind of the consumer, and will go a long way toward eliminating all spoiled goods from the market, in that the Zone Warehouse Plan makes it possible for any or all spoiled goods to be studied by technical, scientifically trained men from the National Canners' Association laboratories and the reasons for such spoilage will be reported to the manufacturer, where the evil can then be readily corrected. The plan further provides for the destruction of all canned foods that are found to be unfit.

The plan as proposed makes every packer responsible for his goods, all the way down the line until they have been passed upon by the final consumer, and if these goods are found to be defective in any way, the canner who produced them must pay the invoice cost and freight on such goods, and in order that we might get a thorough check on such spoiled goods, the packer may order them shipped to a zone warehouse, where they will be examined for identification, for cause of spoilage and for positive and final destruction, so that they cannot get back onto the market and be re-sold at attractively low prices.

This work is not going to be cumbersome or impossible, as some distributors have declared it would be, as the percentage of spoiled goods is very low. But it is the desire of the canning industry to reduce the spoilage to a minimum, and, if possible, to eliminate it entirely. This can be done only by a proper study and analysis of the real causes of such spoilage, even though it may be very small on a percentage basis. The examination and study of the causes of such spoilage, made by competent men from the National Canners laboratories, together with the government food officials, cannot help but have the effect of reducing to a minimum, any and all kinds of spoilage in canned foods.

Food officials of the country are welcoming such a plan for the reason that it gives them an opportunity to familiarize themselves with any and all kinds of spoilage, the causes for same, and the remedy, thereby making their work effective and making it possible for them to protect the final consumer against illegitimate trafficking in spoiled canned foods by unscrupulous dealers who have, in the past, resorted to such unfair methods of obtaining a monetary gain at the expense of the original producer of raw products, the canner, the distributor and the consumer.

(*Continued on page 54*)

TOMATO—"The Landreth"

Price $6.00 per Pound

The Landreth is as red as The Landreths, Red Rock and two weeks earlier, ripening about the time of The Earliana.

The vine is short stemmed unusually healthy, astonishingly productive. The shape of the fruit is full bottomed, that is, round at the bottom, free from cracks, with very little cavity at the stem end.

The Landreth Tomato is, in appearance, after the order of the Chalk's Jewel, but is five days earlier, larger fruited, more productive, picking over a longer period, of better color, more solid, and does not crack.

Its ever-bearing qualities extend the picking season at least four weeks, giving the grower an epportunity for greatly increased profits, and large pickings, before there is likelihood of being killed by the frost.

VARIETIES

Bloomsdale	$10.00
The Landreth	6.00
Delaware Beauty	4.00
Landreths' Red Rock	3.50
Stone	3.00
Chalk's Jewel	3.00
John Baer	3.00
Earliana	3.00
Bonny Best	3.00
Paragon	3.00
Landreths' Ten Ton	3.00
Favorite	3.00
Success	3.00
Greater Baltimore	3.00
Royal Red	3.00
Perfection	3.00
Matchless	3.00

Write us for prices on Peas, Beans, Corn, Cucumber, Beet other Seeds for delivery after 1924 crop is harvested

SPOT SEEDS

Before buying for spot delivery your Alaska Peas, Beans, Corn, Tomato, Cucumber, Cabbage, Spinach, Beet, and other Seeds for Spring planting, let us quote you. We have a few Alaskas for spot delivery. Write us at any time for anything you may need.

FUTURE SEEDS

Write us what you want in futures of Peas, Beans, Corn, Beet, Cucumbers or other Seeds and we will quote, meeting the prices of other Good Houses.

We Grow All Varieties of Seeds

Some Canners think that we grow nothing but Tomato Seed This is not correct. We have growing stations in the West, and elsewhere, under our own management, and we grow Peas, Beans, Corn, Cucumber and other Seeds. While we specialize on Tomatoes, to Canners, yet we grow other varieties and we would like orders for Peas, Beans, Corn, and other varieties of Seeds for either spot or future delivery.

BUFFALO CONVENTION NEWS

ANNUAL CONVENTION, WEEK OF JANUARY 21st, 1924

National Canners Association—Canning Machinery & Supplies Association
National Food Brokers Association

BIG MACHINERY EXHIBITION BIG CANNED FOODS DISPLAY

EVERYBODY WANTED——EVERYBODY WELCOME

Buffalo welcomes you, and it is hoped it will be a warm welcome.

* * *

A lot of the old-timers recall the last Convention and the chilling blasts which greeted the Conventionites every day—driving the then popular derby out of fashion and bringing in the cap with ear tabs.

* * *

'Member that, and John Staff and big Bill Phinney?

* * *

It was a good Convention in spite of the cold, and it will be this time, too.

* * *

But why suppose it is going to be cold? If you stay away on that account, you will not only be foolish, but you will be left out in the cold, sure 'nuff.

* * *

"The Lord tempers the winds to the shorn lamb." You were shorn well enough at Atlantic City, in spite of the balmy weather there, weren't you? If not, come on up to Buffalo and give these expert Bonifaces a chance. And, then, again, there will be the machinery and supply boys down in the big Show, to finish any shearing left undone by Buffalo.

* * *

Seriously, however, Old Boreas can cut up his worst, and you will not be bothered, because you will meet in a magnificent big hotel, with every convenience and comfort, and can laugh at the weather. Then, the Machinery Hall is but a short step away—just good exercise and "a breather," and you will again be in warmth, hospitality and comfort.

* * *

Ogden Sells owns Buffalo, you know, and he will make his debut there as the head of the great new combination of machinery firms—the Sprague-Sells Corporation—and he'll fire the Weather Bureau if it does not furnish his guests with good weather.

* * *

Besides, the National Wholesale Grocers' Association is going to send its biggest guns to Buffalo, and promises to make it so hot on this Warehousing Plan proposition, in the settlement of swell claims, that the weather will not have a show.

* * *

We are not much attracted by the hint that Buffalo is right across from Canada, and that possibly a little cold weather will be necessary to produce the needed prescriptions to cure the colds; but for those who find in this a solace, we have our respect.

* * *

Buffalo is an attractive town, and anyone who has never seen Niagara Falls in all the glory of its frost and ice owes himself that treat. There will be much good business, as the program shows, and plenty of enjoyment, and it looks like everyone in the industry will be there to take part.

* * *

It will be worth a very long journey to see President "Jimmy" Anderson lead the promenade on the night of his ball—Friday, the 25th. This is the most pretentious social occasion ever attempted, and anyone who is anyone will be careful to be "among those present." The invited guests will be those on the official registration cards, and everyone must wear a badge while at the Convention. You get that badge when you register.

* * *

From all reports it seems positive that the Canners' Convention at Buffalo is destined to so far outshine all previous ones that thereafter canning history will date from the time of the Convention in 1924.

One prominent canner is quoted as having said: "I don"t know exactly why, but I can hardly wait for Convention to open. I'm like a youngster just before Christmas—even a couple of weeks seems a long time."

But when you stop to analyze the reason, you find it purely a problem in cause and effect. Both the Committee planning the entertainment and the Committee in charge of the industrial side of the Convention have been relentlessly burning the midnight oils in order to make their ends of the plans flawless.

The two mammoth exhibitions—the Food Show and the Canning Machinery and Supplies Show—demand the ceaseless attention of every member of both Committees. "External vigilance" is the watchword. It is the power which is carrying these exhibits far and above any which have ever gone before.

And at the same time it is the mystic influence which has stirred a genuine flame of enthusiasm among the canners all over the country. If the heavy influx of advance hotel reservations is any reliable indication, certainly the meeting at Buffalo will be a record-breaker.

And it should be!

For in a few days the Conventionites will be able to absorb a wealth of ideas from the experience of a hundred and one institutions in his own line and participating lines.

And then, if he still has a craving for mental pabulum of a commercial nature, let him wander over the Niagara frontier—for here is Commerce!

It is interesting to note that on the Niagara frontier is made nearly 70 per cent of all the different lines of goods recognized by the United States Census Bureau. And Buffalo, alone, has gained 475 new industries in five years.

Certainly from this almost unlimited array of manufacturing enterprises the canner who enjoys delving into the whys and wherefores of industrial America will find much well worth seeing and knowing about.

Buffalo has one of the largest, if not the largest, grain elevators in the world, and the largest plant for crushing linseed in the United States, producing over one-third of the country's requirements. Here, too, is a plant devoted to the development of aniline dyes, which is rated as the largest in the country, supplying a great part of all the American coal tar dye requirements. The stock yards at Buffalo rate as one of the five or six largest in the world. The world's greatest lumber market is located in Buffalo and the district immediately surrounding it.

Great steel plants, mammoth rubber factories, the home of one of the world's finest automobiles, several factories devoted to areoplane manufacture, textile mills, soap factories, furniture factories, paint and varnish plants, and a hundred other different manufactured lines comprise a list of imposing dimensions.

Buffalo is rimmed with a circle of industry—and the canners will be welcome wherever they go.

If, on the other hand, the visitor should prefer to spend part of his time in good times of a lighter nature, his opportunity will be a great one, and if he brings the family, they, too, will be well provided for in the way of entertainment.

There will be a goodly number of luncheons, musicales, dances and theatre parties for the ladies—and for the sterner sex, banquets, lectures and other entertainment of an appropriate nature, though, truth to tell, the men will doubtless be as keenly alive as the women to the dancing and theatre parties.

17TH ANNUAL CONVENTION

PROGRAM

BUFFALO JAN. 21-25, 1924

National Canners Association

National Food Brokers Association

Canning Machinery & Supplies Association

GREETINGS AND INVITATION

THE Seventeenth Annual Convention of the National Canners' Association will be held in Buffalo, the city in which the Association was founded. It has experienced a steady growth during the seventeen years, and is now one of the strongest national organizations of the country. The dark financial clouds which encompassed the industry have been practically dispelled, and all should attend this Seventeenth Convention with a feeling of optimism.

The program will be unusually attractive, and, following the precedent set at Atlantic City last year, the Convention will run five full days. Friday will undoubtedly be one of the most interesting days during the week. Entertainment will be provided for each evening of the Convention, and particular attention is called to Friday evening's program.

The Machinery Exhibit will be the equal of any heretofore held, and there will also be a Canned Foods Exhibit many times larger than the ones held previously.

A cordial invitation is extended to every member of the canning industry, to its friends and co-workers, including the machinery and supply men, brokers and distributors, to attend this Seventeenth Annual Convention.

JAMES A. ANDERSON, President,
National Canners' Association.

FRANK C. ENGELHART, President,
Canning Machinery and Supplies Asso.

CHARLES P. WHITEMAN, President,
National Food Brokers' Association.

HOTEL RESERVATIONS

THE New Statler will be headquarters hotel, and, while it will not be possible to accommodate all attenders at the Statler, there will be ample accommodations for everyone. However, these reservations should be made at once. Anyone who has not received a list of hotels and rates may secure a copy upon application to the National Canners' Association, Washington, D. C.

PROMPTNESS NECESSARY

THE program carries a new departure this year, in that schedule of the time when each address will be given is mentioned. This will be especially helpful in view of the fact that there are many meetings held at the same time, and will enable the attenders to hear addresses of particular interest to them. It will also be helpful to speakers who are on different programs.

MACHINERY EXHIBIT

THE Annual Exhibit of the Canning Machinery and Supplies Association will be held at the Broadway Auditorium, and will be open to the Convention Monday, Tuesday, Wednesday and Thursday from 1 P. M. to 6 P. M., and on Friday from 9 A. M. to 6 P. M. The Exhibit will not be open evenings.

CANNED FOODS EXHIBIT

FULFILLING the vision of those who have said for years that there should be a Canned Foods Exhibit commensurate with the size and importance of the canning industry, will be the Buffalo Exhibit. Of course, there have been attempts at Canned Foods Exhibits, and such projects have been talked of for years; nevertheless, it really took concrete form at the Atlantic City Convention three years ago, where it consisted merely of a few sample canned foods shown on a table in glass dishes. At Louisville the following year several members accepted the invitation of machinery exhibitors to show samples in the booths at Machinery Hall. The results seemed to justify the attempt last year at Atlantic City to hold an exhibit in a separate building, which might be thrown open to the public during afternoons and evenings. Here, also, State and local associations were invited to participate, and a creditable exhibit was held in the Steel Pier.

At Buffalo, in Elmwood Music Hall, the plan in use last year at Atlantic City will be followed out, and will be on a very much larger scale. Quite an increased number of State and local associations and individuals will exhibit. As an added attraction, we have secured the services of a Home Economist of national reputation, who will demonstrate meals prepared entirely from canned foods, and will lecture on topics of interest to housewives both afternoons and evenings during the entire week.

RAILROAD TRANSPORTATION

REDUCED railroad rates of a fare and a half for the round trip to Buffalo for the Annual Convention the week of January 21, 1924, have been granted by practically all passenger associations.

Identification certificates will be furnished upon request to the Secretary of the National Association of which the applicant is a member. Under the permit issued by the railroads, the use of these certificates is confined to members of the associations to which the reduced fares have been granted. Officers, stockholders and dependent members of the families of such members are entitled to the reduced rates. It is necessary to present the certificates to the ticket agent when tickets are purchased, in order to secure the benefit of these rates.

Tickets will be on sale from January 17 to 23, inclusive, except in Colorado, Idaho, Montana, New Mexico, Oklahoma, Texas, Utah and Wyoming, where the time limit will be from January 16 to 22, inclusive, and except in Arizona, British Columbia, California, Nevada, Oregon and Washington, where the time limit will be from January 15 to 21, inclusive.

Return tickets must be validated in Buffalo on the date of the beginning of the return journey, and passengers must travel the same route as coming and reach the original starting point in most instances prior to midnight of February 1. Where sale of tickets begins January 16, the return limit is extended to midnight of February 2. Likewise, on tickets sold January 15, the return limit is extended to February 3.

Members of the various associations should write promptly to the Secretary of their National Association for identification certificates and furnish him with the names of persons for whom the tickets are desired, in so far as possible.

ENTERTAINMENT

THE Entertainment Committee in its program tells the full story of what is in store in its foreword, from which we quote the following:

"We promise you that every minute of the National Canners' Convention, not devoted to business, will be crammed to overflowing with wholesome fun."

The American Can Co. will extend its hospitality on Thursday evening, and on Friday at 9 P. M. the Committee has arranged for an informal ball, with a buffet supper.

Special entertainment will be provided for the ladies. On Tuesday a luncheon and musicale will be held at the Hotel Statler in the Fillmore Room. On Wednesday a trip to the Food Show is planned, busses leaving the Hotel Statler for Elmwood

Music Hall each half hour. On Thursday there will be a trip to Niagara Falls, with luncheon at The Inn, Niagara Falls, Ontario. On Thursday evening there will be a theatre party, and on Friday evening the President's Ball.

BROKERS' DINNER

AS usual, the Brokers' Association will be sponsor for the Brokers' Convention Dinner, Tuesday evening, January 22, 1924, in the Ball Room, Hotel Statler, Buffalo, N. Y. All canners who attend the Convention are invited to the dinner. An interesting program is being prepared. Gen. Herbert M. Lord, Director of the Budget Bureau, Washington, will speak. It is necessary to make advance reservation for seats, and these reservations should be sent to the office of the National Food Brokers' Association, Fletcher Trust Building, Indianapolis, Ind., not later than January 19. Dinner tickets will be $5.00 each.

JAMES A. ANDERSON
President
National Canners Association

RAW PRODUCTS EXHIBIT

WE are fortunate in again having a splendid exhibit planned by the U. S. Department of Agriculture under the auspices of the Association's Bureau of Raw Products Research. This exhibit will be shown in Elmwood Music Hall, and, as in the past, will be an attractive and instructive feature for the canners. A number of experts from the U. S. Department of Agriculture's staff will be in attendance and available to canners and those interested in crop problems.

CONVENTION CITIES

THE following are the convention cities of the National Canners' Association:

1908	Cincinnati
1909	Louisville
1910	Atlantic City
1911	Milwaukee
1912	Rochester
1913	Louisville
1914	Baltimore
1915	New York
1916	Louisville
1917	Cleveland
1918	Boston
1919	Chicago
1920	Cleveland
1921	Atlantic City
1922	Louisville
1923	Atlantic City
1924	Buffalo

MONDAY MORNING, JANUARY 21ST

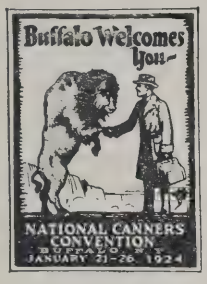
9:00 A. M.—N. C. C. Board of Directors' Meeting, Chinese Room, Hotel Statler.
James A. Anderson, Morgan, Utah, President, National Canners' Association, presiding.
Report of President.
Report of Finance and Executive Committee.
Recommendations of Administrative Council.
Address—"Co-operation Between the Housewives and the Canners." Mrs. Julian Heath, Founder and President, National Housewives League, Inc.; Chairman, Home Economics Committee of New York City Federation of Women's Clubs; representing the business of home-making.
Report of Royal F. Clark, Chairman of Conference Committee with Distributors.
Manufacturing Costs.

(All canners especially invited to attend this meeting. In addition to Mrs. Heath's address and the topics mentioned, matters of vital importance to the entire industry will be discussed.)

MONDAY AFTERNOON, JANUARY 21ST

2:00 P. M.—Opening Session—Ball Room, Hotel Statler.
James A. Anderson, Morgan, Utah, President, National Canners' Association, presiding.
Invocation—Rev. Charles D. Broughton, Rector, Church of the Ascension, Buffalo, N. Y.
Announcement of Committees.
2:30 P. M.—Address—Ogden S. Sells, Director, Canning Machinery and Supplies Association, Hoopeston, Ill.
2:45 P. M.—Address—Charles P. Whiteman, President, National Food Brokers' Association, Oklahoma City, Okla.
3:00 P. M.—Address—Dr. C. A. Browne, Acting Chief, Bureau of Chemistry, Washington, D. C.
3:20 P. M.—Address—J. W. Herscher, President, National Wholesale Grocers' Association, Charleston, W. Va.

(The address and recommendations of the President and the report of the Secretary and Treasurer will be furnished in printed form.)



MONDAY EVENING, JANUARY 21ST

8:00 P. M.—General Session—Ball Room, Hotel Statler.
James A. Anderson, Morgan, Utah, presiding.
Music.
Report of Committee on Nominations and Election of Officers.
8:30 P. M.—Address—Philip A. DePuyt, Rochester, N. Y., President, National Association of Retail Grocers.
8:45 P. M.—Address—Mrs. Anna B. Scott, Cooking Expert and Food Economist, Philadelphia North American.
9:15 P. M.—Address—J. H. McLaurin, Jacksonville, Fla., President, American Wholesale Grocers' Association.

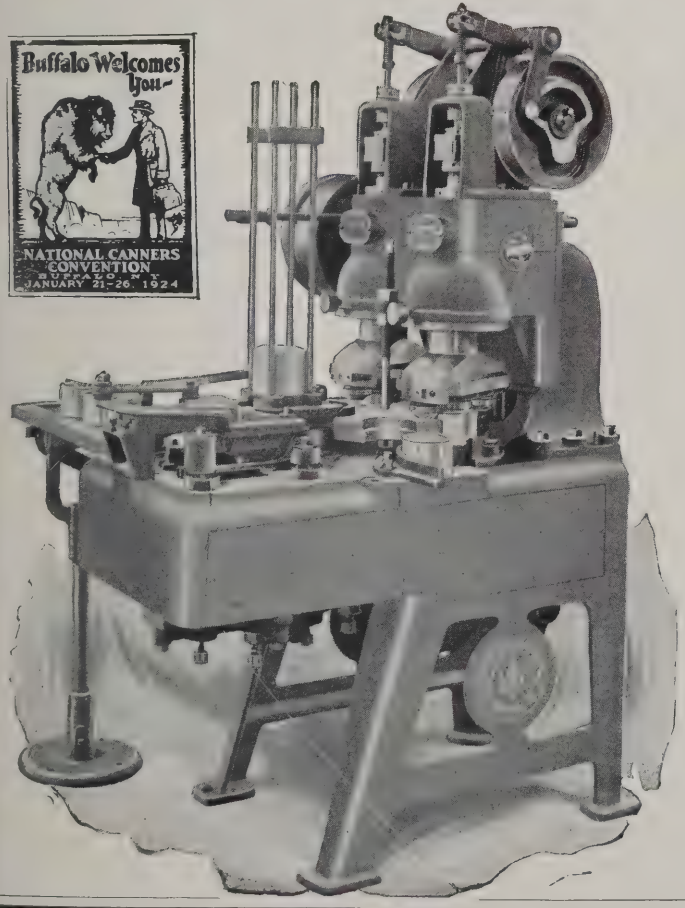
TUESDAY MORNING, JANUARY 22ND

10:00 A. M.—Tomato Section—Ball Room, Hotel Statler.
George E. Diament, Cedarville, N. J., Chairman, presiding.
Richard Stringham, Woods Cross, Utah, Secretary.
Announcement of Committees.
Chairman's Report.
10:30 A. M.—Address—Dr. W. D. Bigelow, Washington, D. C.
10:50 A. M.—Address—"Raw Stock Standardization," Charles W. Hauck, Investigator in Marketing, U. S. Department of Agriculture, Washington, D. C.
11:10 A. M.—Address—"Community Plant Bed Project," A. D. Radebaugh, County Agricultural Agent, Elkton, Md.
11:30 A. M.—Address—"Tomato Products in Indiana," John S. Souder, Greenfield, Ind.
Discussion.
Report of Committees.
Election of Officers.

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:



Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

Southern Can Company

Baltimore, - - Maryland

NEW YORK OFFICE: 17 Battery Place.

Manufacturer of newly developed "SOCOCAN" for Coffee, Peanut Butter, Lard Substitutes, Dry Milk, etc.

TROYER-FOX

Two Spindle Double Seamer, with Automatic End Feed

An ideal Double Seamer for the can maker. First and Second operations made on different chucks. Every can passing through the same set of rolls. Every seam alike. Roll adjustments locked, the second operation having a spring toggle, which allows for the difference in thickness of the plate.

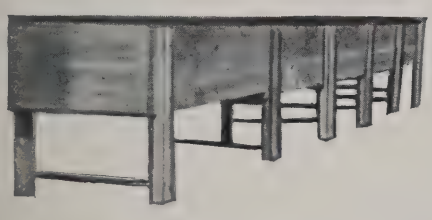
Patent Pending

The New KYLER BOXER.

A machine, simple in construction, positive in action, which takes the cans from the Labeler – or Automatic Cooker – as fast as they come and places them in the cases without injuring the cans or Labels. Sturdily built to last a lifetime; all metal – operates either by foot or hand – both furnished with all machines – always on the job.



PERRYMAN, MD., December 7, 1923

We just want to write you in regards to the splendid success we had with your boxing machine this year. It cased three thousand cases per day for us for forty-two days. I do not think we lost a minute's time with it during the entire season. I would say it was one hundred percent perfect.

Yours truly, F. O. Mitchell & Bro.

The Exhibits and Exhibitors in Machinery Hall.

A glimpse at the big Show, what you may expect to find there, and where, NOW while it is of value to you, and to the exhibitors, rather than after the Show has closed for a whole year.

THE Big Show in the Broadway Armory is more than a mere display of machinery and supplies to induce your orders and get your business; it is a real educational feature if the right use be made of it. Ordinarily the crowd drifts in, looks about, glancing at this and at that, until they find the one something which they have come to see or to buy. But in that crowd will always be found a goodly number of keen observers; men who look closely into everything shown, because they realize that it would not be there if it did not have a place in their industry. These close observers are generally the successful men of the industry, and naturally when an opportunity arrives they are always ready, and so can take advantage of it.

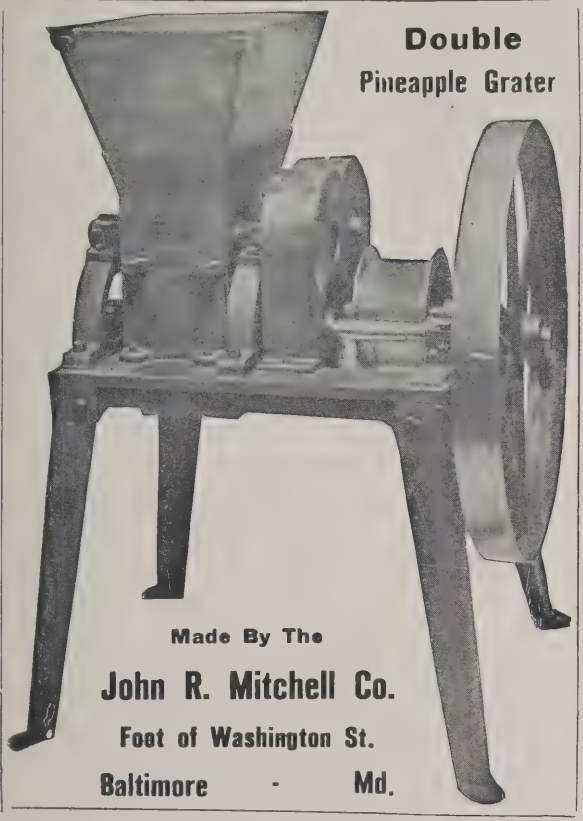
If it is true—and it is—that every man can learn something from every other man, it must be doubly true that every booth in this immense hall can teach every Conventionite much that will prove to his advantage. And the fortunate thing about it is that the teachers are willing, eager and painstaking, and ever anxious to impart that knowledge. The canner should enter this great aggregation of the best there is canning, preserving and food preparing machinery, and the supplies that are used, as if he were taking a post-graduate course in the college of successful business. And he ought to make the most of this golden opportunity.

Since the earliest beginnings the canners have been schooled and drilled in the up-building of the mechanical size of their business; all and every energy has been exerted upon the increase of production and the heightening of efficiency in the cannery; almost to the exclusion of other necessary features of the business—the selling and marketing of the goods, for instance. As an industry the canners are lopsided in their ability as expert producers, and lamentably weak as distributors.

Yet it cannot be denied that the mechanical perfection of the plant is of the utmost importance, and every canner must constantly study and keep wide-awake upon this point. That above all things, is what this Big Show is for.

And it is to help him in this study that we have prepared the plan of the Hall, showing who are exhibiting and their locations, and to further assist we give a brief summary of what will be exhibited and where to find it. This can be but a mere hint, for we want you to go to the booth and see for yourself and learn what is to be learned. In this way we serve both the exhibitor and the Conventionite. Are we mistaken in thinking that this is of more service to you both now, before and during the Show, than afterwards?

THE EXHIBITORS



The plan of the Hall is so clear that we need make no explanation of it; other than to say to the exhibitors that we invited each one of them to supply definite information, as to what they would exhibit and who would represent them, but strange to say most of them failed to comply with the request. If the description of their booth is not such as they would wish, they can thank no one but themselves. If there are any exhibitors missing, their names not in their booths, and no description of them in the list, it is because they had not been assigned spaces when the plat was made, and their names were not included in the list of exhibitors as furnished us. We waited until the lastest possible moment before completing the plat. We would as willingly have included them as those here given.

As we have constructed this as a guide and directory of the exhibitors we will consider them in alphabetical order.

Allen, John H. Seed Co., Sheboygan, Wis., 168 Fourth Ave., will show a full line of their canners' seeds. D. D. Rowlands, President; W. B. Lucas, Vice-President of the firm, and smiling, popular "Bob" Richardson, since this seed firm is represented by the brokerage firm of Staub, Richardson Company of their town, will be in attendance.

Aluminum Seal Co., New Kensington, Pa., 8 First Ave., make bottle seals for bottles and jars and the machines for applying them, and always have an extensive attractive exhibit. They claim qualities for their caps above many others.

American Can Company, with Factories and Offices Everywhere, will have an extension booth against the right wall at 1 to 4 First Ave., and will show you everything in tin cans that you could wish to see, and the machines for handling them. Their booth is always a marvel of beauty and noted for its hospitality. And your favorite salesman will be there to greet you, as well as all the officers of this big, aggressive company. They

Indianapolis Ind.

Have you met the cannie canners from Canada?
There're good canners and good fellows—

will be the hosts on Thursday night at the two big theatre parties. But it will be "President" Phelps this year!

American Metal Cap Co., Brooklyn, N. Y., 169 Fifth Ave., always have an attractive booth showing their fine line of metal caps for bottles, jars, etc., and the closing machine for putting them on. They will feature this year the American Cap and Dexeal, with a complete line of band caps, screw caps, slipon screw catsup caps, etc. They will be represented by C. H. Werner, President; Chas. Hammer, P. C. Doyle, E. B. Kramer.

Max Ams Machine Co., New York City, 173 Fifth Ave., Will have on display the latest and most inproved double seaming machines, an exhibit that is always most interesting with its many rapidly and smoothly working models. Mr. Chales Ams, with his many assistants, will be on hand to great you. These will include: C. D. Trubenbach, E. B. Peet, S. Murckie, J. K. Fitzgerald, H. S. Freeman and M. D. Hopkins.

The opportunity is offered here to study the latest and best in Double Seaming machines. Dr. Carl Lips will demonstrate the famous Amscan Sealing compounds, which have been much simplified.

Anchor Cap and Closure Co., Brooklyn, N. Y., 42 Second Ave., will have a big and attractive exhibit of their famous bottle caps and closing machines, and of the goods on which they are used. They will show a new member of their Cap Family this year, the one-pieced lithographed catsup chili-sauce and mayonnaise dres-cap. The exhibit will be larger than ever before and contain about six different types of sealing machines. The big dinner will be given in the Chinese Room, Hotel Statler, Wednesday evening at 6 o'clock.

Anderson-Barngrover Mfg. Co., San Jose, Cal., 61 First Ave., will exhibit the "Standard" open type continuous Cooker and Cooler; "Economy" type Syruper with can drainer attachment. The A-B Cap Marker and the A-B Water Type Exhaust Box. This latter machine is a new member of their family of exhaust boxes, some of which hold as many as 1125 No. 3 cans at one time. Mr. W. C. Anderson, Mr. Gomes, Mr. Gorsline and Mr. H. C. Randall will be present.

Angelus Sanitary Can Mach. Co., Los Angles, Cal., 62 Second Ave., will show you the famous Angelus Double Seamer, for which they not only make strong claims, but which many users heartily back up.

Appomattox Box Shook Co., Petersburg, Va., 115 Third Ave., will bring to the show some of the fine box shooks they make down in Ol' Virginnie, and a good box shook is a much desired thing now-a-days.

Arabol Mfg. Co., New York, 108 Second Ave., will make their debut as exhibitors at a Canners Convention this year, but not as adhesive manufacturers, for they have been busy at that for many years. They are the largest paste makers in the world, and from the fact that they have been on the scene in Buffalo for some time, we expect some kind of a surprise. Come see it.

Atlantic Can Company, Baltimore, 132 Fourth Ave., will have as they term it 'a place of rest' with a few more added chairs and costumers to take care of their customers and friends. President James A. Cole will be assisted in receiving by H. K. Smith, C. A. Langrall and O. V. Spedden. Drop in and learn how good Altantic Cans really are, and the service too.

Ayars Machine Co., Salem, N. J., 221 Fifth Ave., is the booth which all those seeking up-to-date filling machines will visit. This exhibit always contains machines which attract and hold the attention of canners. This company has been making canning machinery for years, and will show this year their new 1924 Perfection Pea and Bean Filler, and the Universal Tomato Filler—so-called—which might well be called the "Handy" Filler because it will handle almost any kind of goods. They will likewise show their Rotary Syruper, Rotary Exhauster, Straight line Exhaust; Corn Shaker, Liquid Plunger Filler, etc. Chas. H. Ayars, D. M. Ayars, J. C. Butcher and C. N. Williams, with a full crew of demonstrators will be there.

Bernardin Bottle Cap Co., Evansville, Ind., 144 Fifth Ave., will have on exhibition 'the cap beautiful' which is a screw cap for catsup bottle etc., and you may depend upon this will be an interesting booth to visit and inspect. They have been making these caps for years and are experts. They furnish them lithographed, lacquered and embossed, and justly make high claims for them.

J. W. Bauer, Havre de Grace, Md., 238 Gorrell Blvd., makes a can opener that will not fail to win your approval. Make it a point to see this. They are adjustable to open any size can for a No. 2 to a No. 10, and they cut the entire top out clean. It is the can opener you have been looking for.

Bel-Fast Adhesive Co., Rochester, N. Y., 82 Second Ave., will show you a line of canners' adhesives—pastes and gums, such as you need.

Berlin Canning Machinery Works, Berlin, Wis., 218 Fifth Ave., are making their debut this Convention. They are well known to the milk canners and to the Western canners, for they have a fine line of canners' machinery. Mr. Chapman will be present, and he is a live-wire. It is one of the most extensive lines and right up to date. Don't fail to see it.

E. W. Bliss Company, Brooklyn, N. Y., 236 Garrell Blvd., will show their splendid line of can making machinery and Double Seamers. They are all thoroughbreds and look it, as anyone versed in fine machinery can tell. Can maker's problems will be solved here, and canners' too.

FRANK E. GORRELL
Secretary
National Canners Association

The Charles Boldt Glass Co., Cincinnati, Ohio, 28 Second Ave., make a full line of glass bottles, jars and other such requisites, and usually have a very attractive booth.

The J. Bolgiano Seed Co., Baltimore, 118 Fourth Ave., are seedsmen of long standing, and will have on display the full line of their canners' seeds. They may have what you are looking for, and will carefully take care of your wants. They will show a new Tomato "The Monumental". F. D. Manning and J. Ernest Smith will be on hand.

F. W. Bolgiano & Co., Washington, D. C., 167 Fifth Ave., like their name-sake above, are also seedsmen, making a specialty of canners' requirements. They will have a big line to show you, and agreeable salesman to wait on you.

Brown, Boggs Co., Hamilton, Ont., Can., 221 First Ave., are the Canadian representatives of most machinery manufacturers and the Canadian delegates will make this booth their headquarters. This is always a popular booth. You will find them with the Ayars Machine Company—and a jolly welcome.

Burt Machine Co., Baltimore, 150 Fourth Ave., will have on display their fine labeling machines of all kinds and boxing machines. This is a fine line of well-known machinery—for not many men attempt to label cans by hand any more. If you do, see these machines and be converted. A new thing this year is what they call a Mechanical Inspector, which automatically eliminates shiners, and a continuous label feed, making it possible to replenish the labels without stopping the machine. J. L. Whitehurst, C. H. Wild, H. A. Miller and C. F. Jones will be present.

Boutell Mfg. Co., Rochester, N. Y., 33 First Ave., will have on exhibition a fine line of apple peeling and coring machinery, a display that any man handling apples should see by all means.

Buffalo Box Company, Buffalo, N. Y., 170 Fourth Ave., is one of the local firms taking in this Convention, and may depend upon it they will have a booth well worth inspecting. Drop in not only to welcome them, but to talk over your box problems.

Rochester, N. Y.. 705 Commerce Bldg.
London, England, 50 & 51 Lime St., E. C. 3

Do you know any other journal like it? It is the oldest, most highly respected, most influential of them all--The Canning Trade.

Calvert Lithographic Co., Detroit, Mich., 113 Third Ave., face you as you enter. There you will find samples of fine label work, the high art lithography that makes the label distinctive, and a ready willingness to help you emprove your label. They are experts.

Cameron Can Machinery Co., Chicago, 195 Fifth Ave., will show some of the smoothest working, quietly running can-making machinery and double seamers in the show. They can take care of your requirements in can making from the ground up. Mr. Cameron and his aids are always kept busy explaining the lines. You will be welcome.

The Canning Age, New York City, 6 Second Ave., the monthly journal of the industry, will have a well-appointed booth in charge of Mr. R. Palmer and J. T. Ogden.

Capstan Glass Co., Connellsville, Pa., 39 First Ave., will be another one of the new exhibitors in the Show, and it will be an attractive one, as they will show both a full line of their glass tumblers, and glassware for the industry, but goods packed in them. G. C. Rieman, President will be assisted by S. S. Furst, C. W. Gearhart, D. Corin, S. S, Shaw, C, W, Vessy, G. P. White, R. B. Brown, J. J, Pahle and Hugh Crawford,

Chicago Solder Co., Chicago, 26 Second Ave., will have on exhibition an Automatic Corn Feeder for Corn Cutting machines—and you want to see it. Frank C. Englehart of this firm, is President of the Canning Machinery and Supplies Association and will be a busy man at this Convention.

Chisholm-Scott Co., Columbus, Ohio, 75 Third Ave., will not have one of the famous Chisholm-Scott Viners on display. This will be headquarters for pea canners, and you'll find a warm welcome awaits you. They are too well known to need it, and they report being sold up to capacity on their Bean Snipper. But their Mr. Urschel will show one of his Cherry and Currant stemmers. "Thom" Scott, Sherlock McKewen, S. H. Ryder, Frank Copeland and Mr. Urschel will receive.

E. B. Clark Seed Co., Milford, Conn., 147 Third Ave., are famous growers of seed corn and other canners' seeds, and will have on display the full line of their products. Connecticut grown seeds are famous.

Cleveland Cooperage Co., Cleveland, Ohio, 189 Fifth Ave., will have on display a full line of barrels and kegs for cider, vinegar, pickles, kraut, condensed milk, fruit juice, and other food products. President Chas. C. Berry will be assisted by Geo. B. Lee.

Closure Service Corp., Brooklyn N. Y., 101 Third Ave., is another one of the new exhibitors, who will show you a line of bottle caps and machines, which they believe spell service to the user. These bottle closing exhibits are always neat booths, and the operation of capping the bottles, jars etc. most interesting. Ask to see it.

Colonial Salt Co., Akron, Ohio, 166 Fourth Ave., are the makers of Liberty Canners' Salt, with which a steadily increasing number of canners are becoming familiar, as contended users. Let Elwood show you what good salt means in canning. He's a real Buffalo, you know, and his friends consider him "the talk of the earth." Assisting the 'Col' you will find: J. C. Barr, D. E. Brigham and L. H. Elliott.

Continental Can Company, Inc., New York City, 210 Fifth Ave., will have its big exhibit constantly crowded with the contented users of its famous cans and closing machines. With plants in many sections it has customers everywhere, and everywhere boosters. The welcome sign will loom large here.

Coons Mfg. Co., Rochester, N. Y., 207 Fifth Ave., will show you the latest in apple peeling machines, and we promise you will find it an interesting display. You will meet there B. C. Coons, L. L. Mitchell, J. J. Gery and Jas. Finzer.

Crown Cork & Seal Co., Baltimore, 176 Fourth Ave., are the makers of the famous Crown Cork for sealing bottles and jars of all kinds and the machines which put them on. They will show Catsup Capping Machines, and machines for large-size crown seals. E. J. Costa, John R. Wilbor and a full quota of department representatives will be on hand.

Dewey & Almy Chemical Co., Cambridge, Mass., 47 First Ave., pride themselves alike on the quality and the completeness of their Dewalco Line. Their exhibit will include Dewalco Labeling Adhesives for every need of the canner and bottler, and Dewalco Sealing Compounds, Seam Dopes and Soldering Fluxes for the can manufacturer. Particular interest will doubtless be shown in their new non-inflammable Gold Seal Lining Compound, made from rubber latex. They also hope to be able to show photographs of their new factory at Oakland, Cal. With their main factory at Boston and their branch in Oakland, they are in an excellent position to give prompt service to their friends in this country as well as to their rapidly expanding export trade.

Diamond Chain Mfg. Co., Indianapolis, 181 Fifth Ave., will have some samples of their chain drives for various canning machines, and representatives on hand to explain. H. I. Markey, experienced in power transmission, will be glad to solve your problems for you.

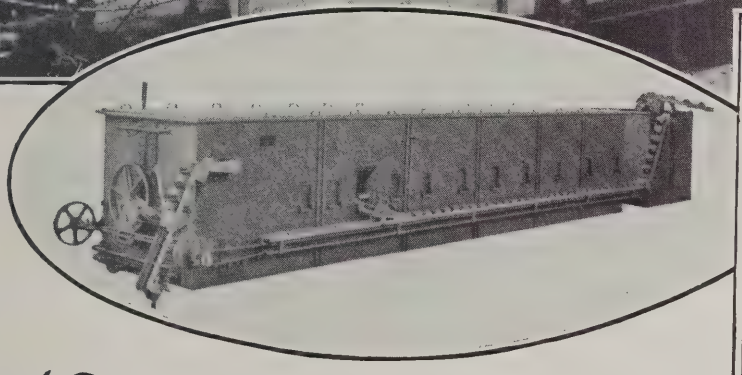
Diamond Crystal Salt Co., St. Clair, Mich., 48 Second Ave., will display their high-grade salt for canners' uses. A good salt is an important item, and this company has a big reputation. They will be represented by W. J. McRea, J. J. LeClare and F. B. Miskell.

F. G. Dickerson Co., Chicago, 219 Fifth Ave., usually make a very attractive display of milk-handling machinery. Their condensed-milk fillers and other machinery are finely made and extensively used.

Economic Machinery Co., Worcester, Mass., 206 Fourth Ave. Did you ever see them label bottles as quick as a wink of an eye? They'll show you it at this exhibit—and put the label on any part of the bottle you want. The World Labeler is working in many big food factories.

Elyria Enamel Products Co., Elyria, Ohio, 54 Second Ave., will show you glass-lined tanks, kettles, pipes, etc., for use by catsup and condiment makers. This is an attractive exhibit, and an educational one. See the big kettle and examine its fine lining.

Edw. Ermold & Co., New York City, 187 Fifth Ave., always have a most attractive exhibit, showing the immense numbers of products labeled on their bottle-labeling machines. Their booth resembles a high-class retail store, and you'll be glad you saw it. They will show their latest-improved New Ermold Labeler, the ultimate in bottle-labeling machines. Another machine will apply body and neck labels. "We are today labeling window shades, hoe handles, Blank books, and, of course, the usual line of packers' bottles," they say in explaining the diversity of their machines. W. A. Guthrie, W. E. Blauvelt, J. H. Wieland and Wm. Leonhardt will be there.



A. T. Ferrell & Co., Saginaw, Mich., 177 Fifth Ave., are makers of pea and bean handling machinery, cleaners, conveyors, etc., a fine exhibit of high-class machinery which you will do well to inspect. They will show this year the Giant Rotary Pea Grader, the 147 Clipper Pea Canner, and the Sanitary Continuous Cup Conveyor, and Mr. A. T. Ferrell will be assisted by L. C. Mendenhall and E. J. Eschenbaugh.

The Filler Machine Co., Philadelphia, 201 Fifth Ave., will have an interesting exhibit of their bottle-filling and handling machinery. Condiment makers and tomato product houses will find this just what they are looking for. They will show four filling machines, one for filling jams and jellies, one for heavy mayonnaise, a single-cylinder horseradish filler, and a small hand-power filler. John McMahon, B. F. Adams, N. B. Chaveas, V. B. Salisbury and John F. Geyer will greet you.

J. B. Ford Company, Wyandotte, Mich., 25 First Ave., have been preaching the use of their Sanitary Cleaner and Cleanser —Wyandotte—but we suggest that you ask them to show you some of the wonderful things this Wyandotte will do. You will be glad you went and became acquainted with this cleaner. You will find at their booth H. H. McClanahan, A. Baumgarten, J. D. Gibby, J. J. Harris and C. B. Robinson.

H. Gamse & Bro., Baltimore, 143 Third Ave., will be represented by Wm. F. Rightor, Jr., Robert L. Eirich and Herman Gamse. The three representatives are going to Buffalo with the idea of assisting canners and jobbers to bring their labels up to date, and any label buyer who is not altogether satisfied with his label design will do well to confer with one of these representatives. Due credit should be given H. Gamse & Bro. for originating the idea of the "Canned Foods" Seal, which is being used by canners, brokers, jobbers and supplymen throughout the United States. The National Canners' Association com-

A-B COOKERS AND COOLERS MAKE GOOD

Hundreds of satisfied customers testify to the unfailingly dependable operation of these rugged, simple and safe sterilizing units which is not the result of favorable circumstances, but the logical recognition of good reliable service.

The A-B Cooking Unit is more than a product of steel and iron— it is an essential in the production of *uniformly cooked products*, a determining factor in the progress of its users because it facilitates the handling of the pack giving the most in output and quality for the least cost of operation.

Full Particulars From Any Of The Following Offices—

Durability

Not a matter of speculation with A-B Cookers and Coolers but actual performance over a period of years reveals the facts that sturdiness and correct workmanship enables them to resist hard usage and even time, long after less durable machines have come and gone.

The Anderson - Barngrover ideal of building a wealth of surplus strength into every part of this equipment to increas its years of usefulness— means a permanent installation and continued satisfaction ten years from *now* with your purchase of today.

There is a Club drive on: each member is to bring in another member; in time for the first Convention report

plimented Mr. Gamse very highly on this valuable idea, which is helping to keep alive the movement of "Canned Foods Week" every year. Leave your orders for Seals with them.

Frank Hamachek, Kewaunee, Wis., 232 Fifth Ave., will have one of his fine Viners on exhibition, and if you are not acquainted with this important piece of machinery, call and examine it. He also makes Viner Feeders, and has a very handy chain-adjuster, for chain drives. These machines are used all over the country, lima bean canners finding them "just the thing."

Hansen Canning Machinery Corp., Cedarburg, Wis., 215 Fifth Ave., will have a crowded exhibit, inspecting and learning more about their new Filling machines and other canning machinery for which they have become famous. P. C. Winner and his assistants will spend a busy week.

Hazel-Atlas Glass Co., Wheeling, W. Va., 79 Third Ave., are among the leading bottle makers of the country. They handle all kinds of glassware. This year they will show the Hazel Vacuum Capping Device, with samples of food products packed in it. H. S. Brady, J. S. Algeo, Robt. Euwer, W. A. Richards, B. F. Roberts and A. L. Cochran will be there.

Hogg & Lytle, Ltd., Toronto, Can., 126 Fourth Ave., are seedsmen of long standing in the industry, coming from Canada for this exhibit. They have the full line of canners' seeds, and you will find a welcome awaits you.

HENRY W. PHELPS
President
American Can Company
Host at Thursday Evening's Theatre Parties

Hohmann-Nelson Co., Eau Clair, Wis., 73 Third Ave., will have on display their line of canners' thermometers, steam gauges, and time and temperature recorders. They are old hands at supplying canners with these instruments, and know their needs.

Huntley Mfg. Co., Silver Creek, N. Y., 229 Fifth Ave., will show three models of cherry pitters, tomato washers, scalders, etc., string bean machinery and a full line of pea machinery. Their newly improved pea grader gives perfect grades and big capacity. A low-priced pea washer will attract attention, for this is the well-known Monitor line. W. M. Buchholtz, W. A. Chapman, W. B. Sutton, A. D. McPherson and B. L. Brooks will be on hand.

Illinois Glass Co., 112 Second Ave., will show a fine line of glassware, bottles, jars, jugs and other receptacles of that kind. Messrs. O. Thompson, C. L. Drum, H. Schmidt and C. F. Levis will be on hand, and C. M. Schofield will show the moving picture "The Story of a Bottle."

Invincible Grain Cleaner Co., Silver Creek, N. Y., 205 Fifth Ave., will show their Invincible Corn Husker, pea cleaning and other machinery, and altogether a most interesting exhibit. This Corn Husker has a big reputation for its work, and should be seen and examined. All local representatives will be here to greet customers. Bert Eesley, of Fremont, Ohio, district; F. H. Morley, Jr., who cares for the Chicago territory; C. Williamson, who looks after the Philadelphia section. In Baltimore, A. K. Robins & Co. represent them.

Karle Litho. Co., Rochester, N. Y., 70 Second Ave., will have an attractive booth displaying the line of labels they make for canners and others. They have a fine plant in Rochester and produce some of the well-known labels.

Karl Kiefer Machine Co., Cincinnati, Ohio, 13 First Ave., may be counted upon as the Mecca for preservers and all condiment makers, as they have a line of machinery for this trade that answers nearly all purposes. Bring your wants to them and they will show you how to straighten them out—and will do so gladly. They will show the new Kiefer Rotary Vacuum Catsup Filler, both 18 and 24 tube sizes. It's a wonder. Also, Kiefer Rotary Bottle Washer and Sterilizer; the Piston type Viscor Filler, which handles jams, jellies, preserves, syrups and similar products, and the new Keifer Screw Capper, Belt Conveyors, etc. E. E. Finch, A. J. Sterling, M. C. Finn and Jos. Eckhoff will be on hand.

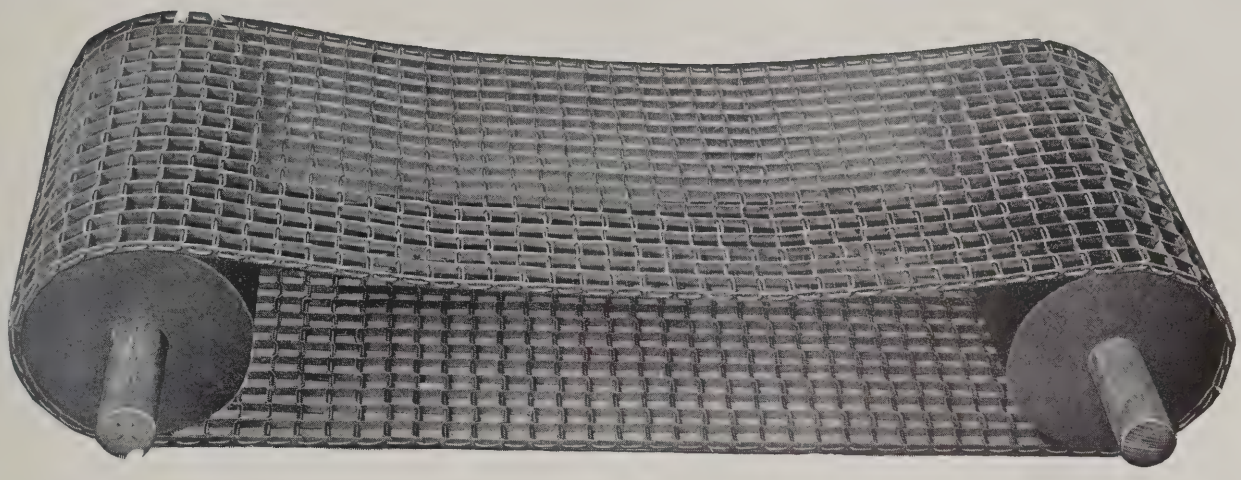
N. B. Keeney & Son, Inc., LeRoy, N. Y., 95 Third Ave., are seed growers of note, and will have on exhibition a full line of their seeds for canners. They are well known as pea seed growers, being somewhat of specialists in this line. It will be noted the company has recently been incorporated. They will be represented by F. T. Woodruff and J. F. Miggins.

Kieckhefer Container Co., Milwaukee, Wis., 138 Fourth Ave., will make their exhibit of both wooden and fibre boxes for canners. They thus can answer the demands of any canner for a good container.

Fred. H. Knapp Co., Yonkers, N. Y., 66 Second Ave., will show you some neat and smoothly working labeling machines, such as are used by many of the best canners. The Knapp Labelers and Boxers play a big part in many canneries—helping to get 'em out quick and neatly.

D. Landreth Seed Co., Bristol, Pa., 87 Third Ave., grow and test their seeds before selling to canners. They will show you the whole line, neatly displayed. They have been growing seeds for canners for many years—have been in the business since 1784—and they ought to know how—the oldest seed house in America. S. Phillips Landreth, J. A. Hicks and Thomas Mahon will take care of your wants.

F. H. Langsenkamp, Indianapolis, Ind., 36 Second Ave., will again be much in evidence with a splendid exhibit of the latest type of Pulping, Finishing and Cooking Equipment. He personally will have charge of his exhibit, assisted by E. C. Prange, S. B. Lindley, Irvin Conway and H. C. Randall.

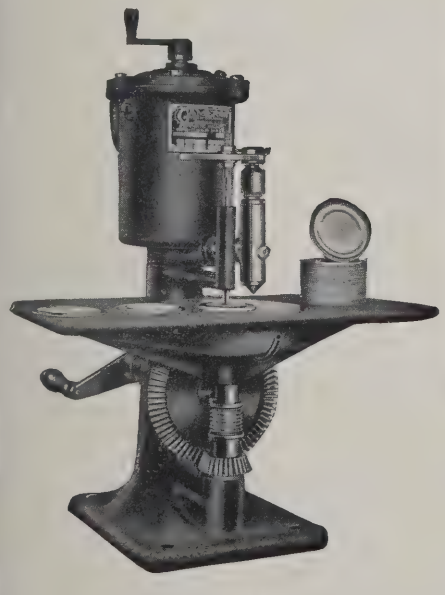


Leonard Seed Co., Chicago, 107 Third Ave., are the men who introduced the narrow-grained sugar corn. They make a specialty of canners' seeds; have immense trial gardens in the best growing sections, and they will have their full line on display.

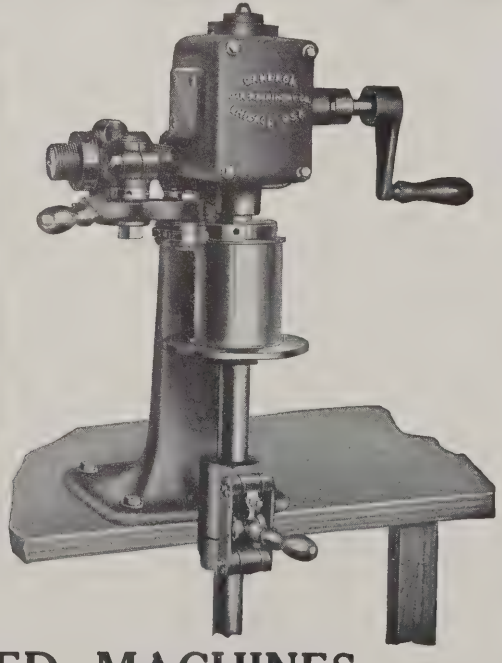
The McKenna Brass & Mfg. Co., Inc., Pittsburgh, 183 Fifth Ave., will be represented at Buffalo by Mr. Otto Horix, the president, and Mr. D. M. Hauger, manager Haller Branch. There will be on display a complete line of Haller filling machinery of both the automatic, semi-automatic and hand-operated types and the fruit and berry washer.

Metal Package Corp., of New York, 93 Third Ave., are canmakers on a large scale. If we said the Boyle Can Co., a lot of you would place them in a minute. This is the company that succeeded the Boyle Co. and extended the business. They are a live-wire lot, With the Boyle plant in Baltimore and factories in New York, they produce a large output of packers' cans and specialties. President A. E. Bruns will be assisted by S. Carl Cooling. J. M. Brooks, J. R. Noel, S. R. Miner and Edward Murphy. They supply the latest type of sealing machines and care for a wide circle of canners.

Mid-West Box Co., Chicago, Ill., 74 Second Ave., are large makers of corrugated and fibre boxes, and may show a moisture-proof fibre box that will interest any canner. Ask them to demonstrate it.



HERCULES SANITARY FLEXIBLE STEEL CONVEYOR



The sanitary belt with the square mesh. Used for all conveying purposes, on Sorting Tables, Scalders, Washers and Exhausters. Made any size. Easily cleaned and durable. If your dealer doesn't handle, write for catalogue and prices.

MANUFACTURED BY

LA PORTE MAT & MFG. CO. **La Porte, Indiana**

CAMERON HAND OPERATED MACHINES

This double-seamer attaches bottoms to can bodies and covers to filled cans. The Compound Applier spreads the rubber cement on the edges of the can ends. These machines are suitable for cans from 2" to 6" in diameter and up to 9" high.

CAMERON CAN MACHINERY CO. **240 N. Ashland St., Chicago, U. S. A.**

23

—in time you get the 1924 Almanac of The Canning Industry, which will be out shortly.

Morgan Machine Company, Rochester, 57 First Avenue, are makers of box-nailing machines. They usually have one of these machines nailing up boxes, driving a series of nails at once, putting a box together with any given number of nails, quicker than you would believe.

Morral Bros., Morral, Ohio, 220 Fifth Ave., will have on exhibtion the famous Morral Husker, and it will husk corn during the show. They have a single machine of large capacity and double machine of twice that capacity. The Morral Corn Cutters are well-known machines, and because they cut Golden Bantam corn are attracting renewed attention.

McDonald Machine Co., Chicago, 50 Second Ave., always display some finely made and smoothly working can-making machinery. They can supply anything in this line, being specialists in it. Just watch one of their automatic-fed die presses at work.

National Seal Co., New York, 53 Second Ave., will exhibit the Duplex Seals for glass containers, Titenrite Seals for tin containers, as also the new Duplex Seal and Nozzle for tins, just out, and Single and Multi-power Closing Machines for affixing these seals. They will be represented by R. A. Peterson and A. P. Stiansen.

Nivison-Weiskopf Co., Cincinnati, 134 Fourth Ave., the label printers, and may be counted upon to have an attractive display. They have been taking care of many canners with dispatch and in a satisfactory manner.

O. & J. Machine Co., Worcester, Mass., 58 Second Ave., catch the eye of the man packing gallons. They have a labeling machine that answers this problem as you wish it. It is well worth loking into. The O. & J. Automatic Labeler which will be exhibited is used by food packers generally for the labeling of bottles, jars, etc., and for spot labeling No. 5 and No. 10 cans at a rapid rate. Condiment makers will find this exhibit helpful and interesting.

Geo. J. Olney, Westernville, N. Y., 240 Gorrell Blvd., will show you a corn mixer with many fine points. It has stood the test of time and proven its worth. Look into it while at the Convention.

Owens Bottle Machine Co., Toledo, Ohio, 105 Third Ave., are among the largest makers of glass bottles, tumblers, etc., in the country. They control the bottle-making machinery, and can take care of all your wants in the glass line.

J. M. Paver Co., Chicago, 81 Third Ave. As the always popular Paul Paver says: "We will just have a few chairs and a table, so our friends can sit down and talk over matters in general." He will be attended by W. F. Mathews, I. J. Goode and I. L. Stone. They have nothing but hospitality to show, but they'll show plenty of that.

The Permutit Co., New York, 243 Gorrell Blvd., will hold "clinics" on the question of the effect of hard water upon foods. Their water-softening system is well known and becoming more generally used. Find out the facts of this important question while at the Convention. They welcome inquiries.

Peerless Husker Co., Buffalo, 17 First Ave., have a line of canners' machinery that is at the front for the quality both of its work and of the construction of the machines. The leader is their Corn Husker, but it is being pressed hard by a whole grain corn cutter, a circular exhaust box and many other strictly up-to-date machines for the canner. Don't miss seeing this line. It will be noted that this company is maintaining its own booth in addition to the Sprague-Sells Corporation, next door. Between the two of them you can spend many profitable hours among the leading canners' machinery. The Sells Bros. and all the well-known Sprague representatives will be on hand to take care of you.

The Pequot Mfg. Corp., Long Island City, N. Y., 162 Third Ave., are makers of corrugated fibre shipping cases, and they will exhibit a full line of these and the machines with which to seal them. This makes an interesting show, and it will be presided over by F. S. Oppenheim, vice-president of the company, and he welcomes inspection.

Pfaudler Co., Rochester, N. Y., 191 Fifth Ave., make glass-lined tanks, kettles, etc., for condiment and other purposes. Theirs is always a most interesting exhibit, well worth careful inspection.

Phelps Can Co., Baltimore, 93 Third Ave., will have a neatly appointed booth to accommodate their many customers. The Phelps can is steadily forging ahead, as they have complete equipment from tinplate mills to the finished product. They can furnish their customers with that feeling of security about their can supply. It's a "comfy" feeling during the season.

Phoenix-Hermetic Co., Chicago, 27 First Ave., are the manufacturers of Phoenix Metal Closures for jars, bottles and tumblers. This year they will feature their Phoenix Compo Cap and No. 21 Automatic Continuous Banding Machine. R. T. Mott, J. H. Dommergue, S. B. Shrope, J. A. O'Donnell, T. L. Taliaferro, L. T. Crabbe, S. L. Hawley, A. J. Mackenzie and H. L. Lonsdale will be in attendance.

A. W. Pinger Co., Minneapolis, Minn., 125 Third Ave., are large manufacturers of wooden boxes, caring for some of the largest contracts in the trade. The welcome sign will be found hanging on their booth, and they will be glad to talk over your box problem.

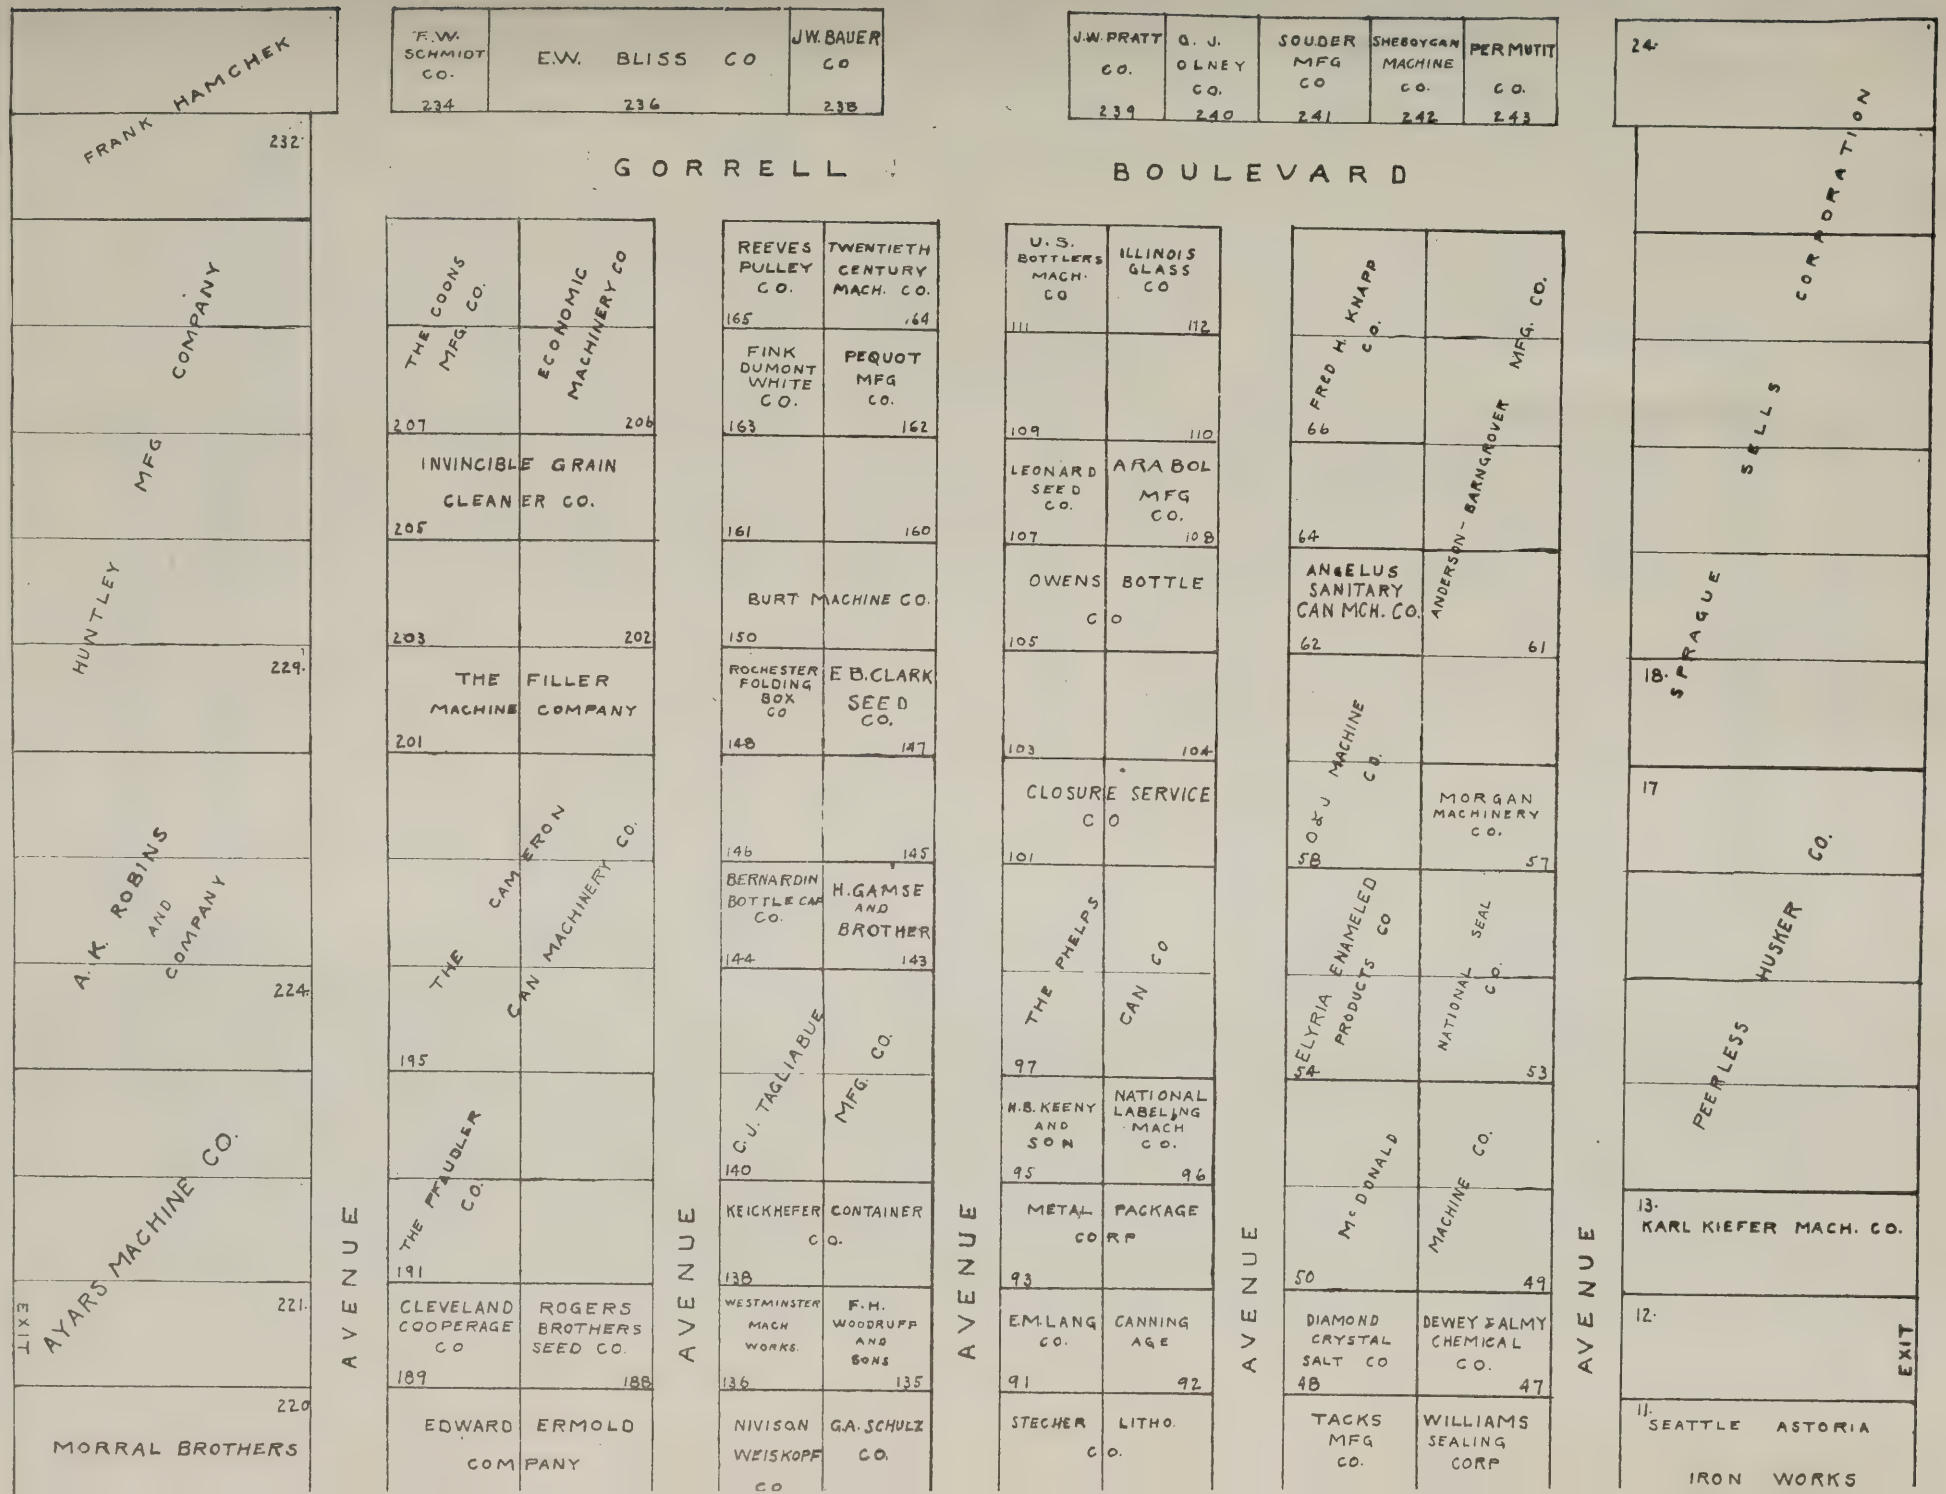
J. W. Pratt Co., Farmington, Me., 239 Gorrell Blvd., will show a Power Radial Fruit and Vegetable Slicer. This machine will slice prepared fruit into 2, 4, 6 or 12 equal pieces without additional change of parts. The usefulness of this little machine is evident. They are selling it this year.

The Reeves Pulley Co., Columbus, Ind., 165 Fourth Ave., will show their variable speed transmission, which can be used on all kinds of canning machinery to regulate the speed of the machine. It is well known and well tried and extensively used.

J. B. Rice Seed Co., Cambridge, N. Y., 31 First Ave., is one of the best-known seedsmen, as well as one of the largest, in the business. All the big canners know this, and most of the small ones. They will have samples of their immense selection of canners' seeds all of the dependable kind. Mr. H. M. Hodges and Charles P. Guelf will be there to take care of their friends—and their friends know how well they can do this.

Rochester Folding Box Co., Rochester, N. Y., 148 Fourth Ave., will show visitors their line of fine corrugated and fibre boxes for canners. They always have an attractive display, well worth looking into.

A. K. Robins & Co., Baltimore, 224 Fifth Ave., will have on display many of the machines most used in the cannery, and the big National Tomato Peeling Machine about which all have heard. This will be a busy spot during the show, but they will welcome inspection and answer all questions. This is the great cannery supply firm for the Eastern section of the country in particular, but for all the country as a fact. Genial and popular "Bob" Sindall has been busy changing the style of this company from his individual plaything to an incorporated company, to take care of the growing importance of the business. But he says it is a close corporation. He'll be there with Harry Stansbury, Mr. Kreiner and other helpers.



Rogers Bros. Seed Co., Chicago, 188 Fourth Ave., are seedsmen with a big reputation. They have some famous strains of corn, bean and pea seed, and a Refugee Stringless bean you should know more about, if interested. They will have a well-appointed booth, showing their full line, in charge of O. J. Swain and Walter M. Jones.

S. M. Ryder & Sons, Niagara Falls, N. Y., 117 Third Ave., have not told us what they are going to "show"; but they used to have a famous can-marking machine, and in the revival of this important practice such a machine would be most welcome. Let's go down to visit them and find out. The visit alone is worth the trouble. The "S. M." in this firm is the "Sam" Ryder of Chisholm-Scott fame. 'Nuf sed? You bet.

The Ryede Mfg. Co., Rochester, N. Y., 116 Fourth Ave., make a can opener that you should know about, and probably you will be wanting some of them. This is the kind of educational work you should not neglect; yet after every Convention we are asked: "What had that good can opener at the Show?"

A. Geo. Schultz Co., Milwaukee, Wis., 133 Third Ave., makers of solid fibre shipping cases, can be counted upon to have an attractive booth. Their aim is to make the kind of a case the canners need, and they are "out after this business." Schlitz made Milwaukee famous, and Schultz believes he can.

THE BIG SHOW.

BALTIMORE, MD.

THE 1924 MODEL
Invincible Green Corn Husker

(*The only all steel roll Husker*)

Comes nearer to being perfect than any other Corn Husker ever offered the trade.

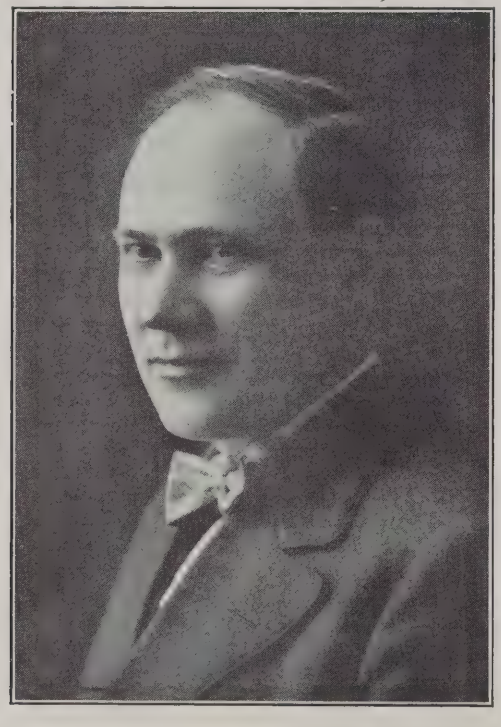
Regardless of whether the corn is the small original Golden Bantam or the Largest variety of Evergreen—The INVINCIBLE will husk it with entire satisfaction, without waste.

The INVINCIBLE has at least one quarter fewer parts than any other corn Husker.

See it on exhibit at the Buffalo Convention.

Our Guarantee obligates us to a complete fulfillment of all our claims and promises.

INVINCIBLE GRAIN CLEANER COMPANY, Silver Creek, New York



Join the biggest club in the canning industry The Canning Trade Club--, dues $3.00 per year. Full time service:—

F. W. Schmidt Pea Harvester Co., New Holstein, Wis., 234 Gorrell Blvd., are the makers of pea-harvesting machinery—a very much-needed item in these days of rapid increase in pea production. Call and see this offering.

Seattle Astoria Iron Works, Seattle, Ore., 11 First Ave., will have an interested crowd of canners constantly around their famous Troyer-Fox Non-Spill Closing Machines. These closing machines have a wonderful record, and all canners are anxious to know more about them. Here is the chance, and it should not be neglected. They make a line of can-making machinery that is becoming famous. Take advantage of this opportunity to see it.

Sheboygan Machine Co., Sheboygan, Wis., 242 Gorrell Blvd., make a Pea Washer and Separator which pea canners have pronounced "fine." They will have it on exhibition. Examine it and find the strong points upon which its reputation rests.

Simpson & Doeller Co., Baltimore, 127 Third Ave., well-known label printers,, will have a finely appointed booth to take care of their many customers, and all will be welcomed. Walk in and make yourself at home, and learn more about this big label house and its facilities. The Doellers will be there to greet you and to talk over that better label proposition. The youngest old salesman on the road, "Pere" Kroneau, and his big son, Harry, will be among those present to care for a long list of customers whose wants they understand.

ROYAL F. CLARK
Vice President
National Canners Association

Sinclair-Scott Co., Baltimore, 30 Second Ave., are the makers of the famous Colossus and Nested Pea Graders. Yes, you know them; exery pea canner does. This year they will show a model of the Nested Grader and what you have been looking for for a long while, a Nested Sample Grader. Here it is. Come and see it. Better do it early, for there is a rush for graders. Mr. Rife, Sr., will be at the Convention this year to renew old acquaintances, for he is one of the best-known men of the industry. His son, C. Edwin Rife, who has been standing the burden of Convention duty lately, will, of course, be there.

Sloan Seed Co., Los Angeles, Cal., 34 Second Ave., will be there, represented by Nichols, North & Buse Co., showing a full line of canners' seeds. Look them up.

Souder Mfg. Co., Bridgeton, N. J., 241 Gorrell Blvd., nearly always have something of interest to the tomato canner, and they may be depended upon to produce a surprise for the show. See the Souder Continuous Cooker and other useful devices they have.

Southern Can Co., Baltimore, 124 Fourth Ave., is marching right along to the top as one of the biggest and best appointed can companies of the country. They have the plant and the facilities, and are producing the can that canners like. They will have a neat booth to care for their many customers, in charge of E. Everett Gibbs, the president, assisted by L. Burbank, F. J. O'Brien, Guy Bollinger, W. Chauncey Crawford and Wm. B. Smith, the manager of the Double Seamer department. They will exhibit plain and decorated cans of all sizes and descriptions.

The Sprague-Sells Corp., Chicago, 18 to 24 First Ave., will have the same lavish display of canners' and preservers' machinery as the Sprague Co. formerly had, but a rejuvinated line this year. President Ogden Sells has weeded out the old and less worthy and kept only the best, and added where needed, so that he will present a complete outfitting equipment and of the best. He will be there, as will popular "Bab," Leland A. Babcock, and a big corps of salesmen to handle the crowd. It takes a 400-page catalogue to mention the things this firm has for canners' uses—and we haven't the room. "If it's used in a cannery, they have it."

Stecher Litho. Co., Rochester, N. Y., 89 Third Ave., have one of the finest lithographing plants in the country, and do some of the finest label work. Ask them to help you devise a real, honest-to-goodness label, and they will gladly comply. All the popular representatives of this big house will be there to welcome you.

Tacks Mfg. Co., Utica, N. Y., 46 Second Ave., are the well-known makers of Tackstick for attaching labels to cans. They make all kinds of adhesives, or, rather, adhesives for all kinds of purposes, and you will find their booth an interesting place.

C. J. Tagliabue Mfg. Co., Brooklyn, N. Y., 140 Fourth Ave., makers of canners' thermometers and time and temperature recording instruments of every kind, will have a booth where you can profitably spend much time learning the need of accuracy in these matters. Ask to see the TAG Automatic Temperature Controllers, the TAG Automatic Pressure Controllers, the TAG Recording Thermometers. You can't know too much about your processing requirements. H. D. Cooke and Messrs. White, Anderson, Mason and Day, Jr., will be in charge.

Taylor Instrument Co., Rochester, N. Y., 83 Third Ave., are well known as makers of thermometers and recording instruments, automatic controls for processing, and instruments of this nature. Call on them and let them demonstrate how they can rid your processes of uncertainty. Being right near home, Mr. Fred K. Taylor will have his whole force at the service of visiting canners, and will show an installation of "the Tycos method of jelly kettle control," a distinctly new and original method. They promise a surprise in a radically new process thermometer. Don't fail to see it.

Thermokept Products Corp., New York City, 6 First Ave., will present a new idea to many—a new and modern automatic machine for sealing tins in vacuum. This is becoming a popular question in the industry, and here is the opportunity to study it and see the results. S. G. Gibson, F. F. McColl, W. W. Williamson, N. P. Bach, H. H. Gluntz and W. B. Phillips will be there.

The 20th Century Machinery Co., Milwaukee, Wis., 164 Third Ave., again become exhibitors, and all who know their line of machinery will be glad of that fact. Their pulping machinery and other special machines will be on hand, and Mr. Scarborough with his assistants ready to explain.

U. S. Bottlers' Machinery Co., Chicago, 111 Third Ave., are headquarters for bottlers' supplies, machinery for bottling and bottle handling, and will present the visitor with a most interesting display. They can solve your bottling troubles or problems. Somebody is always asking where to obtain bottling machinery or supplies. Here is the answer.

U. S. and Virginia Can Companies, the one at Cincinnati, Ohio, and the other at Roanoke, Va., will have a booth at 10 First Ave. They are what might be called the Western and Eastern or Southern branches of a big can compaany, with many customers. They make a fine can and you will find their booths

Largest Manufacturers of QUALITY Labeling Machines

Hudson, Gansevoort and Thirteenth Streets

NEW YORK CITY.

"Weekly market information by experts; digest of important news matters: weekly bulletins on laws or trade actions"--

crowded with customers. Long years of service have proven their dependability.

U. S. Printing and Litho. Co., Cincinnati, 120 Fourth Ave., will have one of the show places in the hall. They have branch factories in Brooklyn and Baltimore and make a very good proportion of the labels used on cans, bottles, etc. They can take care of your label problems in fine shape. This year, in addition to an attractive array of modern canned foods labels, they will show advertising for canners in the shape of window and counter displays. A. C. Osborn, Richard Dorsey, T. E. Lester, C. C. Pollock, T. S. MacMechan, Albert Weis, J. W. Hautman and C. F. Bowen will be on hand.

Lansing B. Warner, Inc., Chicago, 69 Third Ave., are cutting another juicy melon this year—returning $490,000 in insurance premiums to their subscribers. If you are a subscriber, call and find the size of your check; if not, get in line, place your insurance with this Bureau and make sure of a check for next year.

Westminster Machine Works, Westminster, Md., 135 Fourth Ave., will present one of the new machines in the Show—the Kyler Boxer. It is a little machine, substantially built, to put the cans into the cases without hurting the labels, and built to stand strain just when most needed. A. H. Kyler is a well-known labeling and boxer man, and he has put into his machine the things the canner needs there. Be sure to see it.

Wheeling Corrugating Co., Can Division, Wheeling, W. Va., 216 Fifth Ave., is the successor of the Wheeling Can Co. and a subsidiary of the Wheeling Steel Corporation. In their booth they will have one of the well-known 100-D Double Seamers, and a Wheeling No. 75 Double Seamer, running on packers' cans. S. J. Davies will be assisted by H. J. Humphrey, H. Schrader, J. P. Wells, P. O. White and F. Hougham. They are unusually well situated to take care of this can business, both as to supplies and location. Call on them.

The Williams Sealing Corp., Decatur, Ill., 45 First Ave., will have an attractive display of Kork-N-Seal products, both in glass and tin. They will exhibit the Korn-N-Seal Nozzle, which they are just placing on the market. This nozzle when applied to cans makes it possible to use the Kork-N-Seal cap on products packed in tin cans. W. R. Lord and others will be there to meet you.

F. H. Woodruff & Sons, Milford, Conn., 135 Third Ave., will have on display their line of canners' fine seeds of every description. They have been long in the business and know what the canners need.

S. D. Woodruff & Sons, Orange, Conn., 114 Fourth Ave., like their relatives above, are seedsmen of long standing with the industry, and will show the whole line of canners' seeds. They will cheerfully answer any questions. Watson N. Woodruff, who has been attending these Conventions for a quarter of a century, will be on hand, together with S. D. Woodruff II. and John J. Merwin.

Worcester Salt Co., New York City, 32 Second Ave., make and supply a great many canners with their salt. Worcester Salt is famous for its purity, and most canners have learned that a good salt is cheap, but that poor salt is expensive at any price. Let them show you. Last year, for instance, they report having shipped in one train 52 cars to the Wisconsin canners from their Encrose, Mich., plant. Mr. Lorenzo Benedict, the president, will be assisted by "Santy," as everybody knows him, A. F. W. St. John, the vice-president; H. Fierstein and J. F. Spain.

The Canning Trade Booth, 71 Third Ave., will keep open house to canners and the supplymen. If we have helped your selling in this brief recital, we are glad; and we know we have because the industry wanted this information—not after it had gone home, but now, while they could see you. The industry knows how well we serve it; but there are yet some supplymen who have not learned the secret. They would save money and make money by talking it over with us at our booth. We are old travelers in the lanes they are most anxious to traverse—the direct road to this Billion Dollar Industry.

SALT OF QUALITY.

Stecher Lithographic Co.
Rochester, N.Y.

1924 MODEL
HANSEN PEA AND BEAN FILLER

1—All undesirable features of the old **Hansen** have been eliminated.

2—It has only **one-half** the gears, **one-half** the shafts, **one-half** the clutches, **one-third** the brackets or supports, and occupies only about **one-half** the floor space of any other filler on the market.

3—It has **no brine tank,** no float valve, no stuffing boxes, no hopper agitator and **no funnel rubber.**

4—It has eliminated **all waste**, for it is impossible to overflow the can. It has no brine tank to overflow. It **stops automatically** in case the cans fail to reach the filler. The mixing head and plates are entirely enclosed, making it impossible for brine to escape should the plates become damaged or cut.

5—It is the **only filler** that complies with the laws of sanitation, because it can be taken apart and **really cleaned.** Besides, the brine is **not exposed** in any way to flies or dirt, because the briner encloses the brine instead of being surrounded by brine in an open tank.

Send for Catalog and Complete Information.

Hansen Canning Machinery Corporation,

Cedarburg, Wisconsin.

Experience and the Swells Question

Copy of Letter to Broker by Mr. W. O. Hoffecker, of the J. H. Hoffecker Canning Co., Smyrna, Delaware.

ANSWERING your favor, beg to say that I am very sorry there should apparently be any difference, amounting virtually to a fight on, between the manufacturers (canners) of such an enormous supply of the world's foods, and the distributors (wholesale grocers) of same. These two organizations, canners and grocers, should work hand in hand and with the utmost cordiality and friendship, but it seems to me instead of this dwelling together in peace and harmony, we live and go along like cats and dogs.

I distinctly recall several years ago now, while I was a member of the executive committee of the National Canners' Association, sitting up until 3 o'clock in the morning with a committee from the Wholesale Grocers' Association, fighting over the buyer's label proposition, and it has gone along almost constantly since, first one antagonism and then another, as between the canners and wholesale grocers. There must be an end to this strife some day, I think, and as a step has been started by the chain stores somewhat against the wholesale grocers, this selfishness, which seems to be the basis of their attitude, may force the canners to undertake the sales distribution of their products direct to the retailers to get away from this constant irritation between canners and jobbers.

Now, I am not making this as any threat whatsoever, for threats or the spirit of threats are not at all conducive to harmony or adusting differences, but the attitude of the wholesale grocer pure and simple is not to deal justly with the canners, but to obtain what in effect is an additional trade discount, which I think is an outrageous attitude for the jobbers to take.

So far as our company is concerned, and I believe it is the position of every honest and upright canner, we stand back of every can of our output, from factory to consumer, and if the goods are a year old we are entirely willing to redeem them if it is an honest and legitimate claim. We are likewise absolutely against making a present to every jobber to whom we sell goods of an additional trade discount in lieu of swells which he never has and, therefore, has no legitimate claim for.

The central warehouse for spoiled foods does seem to me the most practical and best way out of our trouble, because the health officers in so many of the cities, together with the Federal Government at Washington, have prohibited the returning of swells to the packer. To put your house to the trouble and expense of going to the retail store where claims for swells may be made, is impracticable, and to put ourselves in the hands of dishonest buyers, for our experience has been that all the buyers are not honest any more than are all the canners honest, is deplorable.

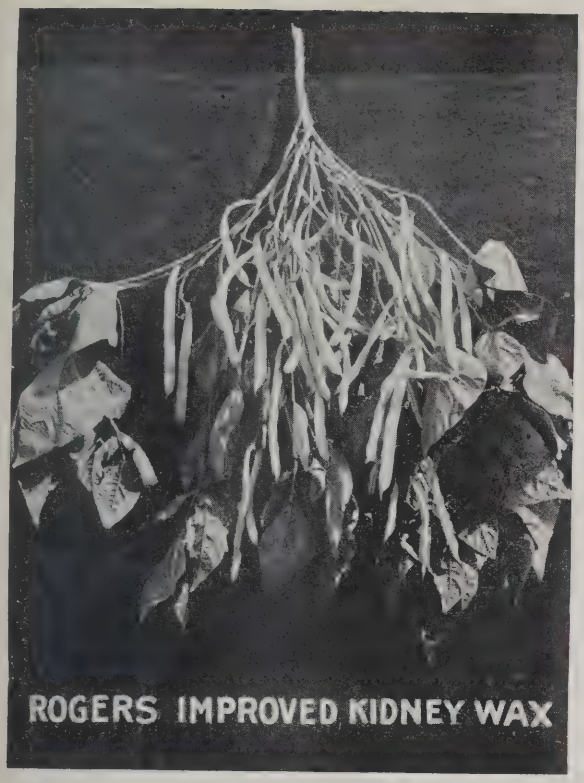
Several years ago you sold two carloads of tomatoes for us. They filed a claim for 11½ cases of swells. We ordered them back, and when they came back, they shipped them in a barrel; the barrel contained peaches, pumpkins, apples, peas and corn, and four other brands of tomatoes than our own, instead of there being 11½ cases there were 11 cans that belonged to us. Now this sort of thing probably every canner has experienced to a greater or less extent.

A gentleman was in our office only this week from Baltimore, who said that there are certain jobbers, that he could give the names of, who keep on hand swells until they burst, and put in a claim after claim on the same lot of swells, because there are so many packers who will not go to the expense of paying freight on them to have them returned, and consequently keep paying claims on swells on the some goods over and over. Now, since this rascally practice is a fact, it must be remedied, and the zonal warehouse plan is the best remedy I have yet heard suggested.

In addition, we have had it happen over and over again where the cans that were evidently cut as samples, were returned to us as spoiled cans; another infernally rotten practice on the part of the jobber.

Now the Bureau of Chemistry has given its consent to the trial of this plan and so have the health commissioners of several states and cities. Further with the establishing of these warehouses all over the country it will practically do away with the interstate shipment of these canners' foods. For instance, a warehouse in Philadelphia goods anywhere in Pennsylvania can be shipped to Phipadelphia without entering Interstate Commerce.

Now the special advantage of this zone warehouse plan is that goods will be examined by experts representing the National Canners Association and representative of food officials will be invited to co-operate or participate in such examinations. Both canner and distributor will be notified of the time and place of examination, and be given an opportunity to have a representative present if they so desire. Examinations will be followed up not only to determine whether the goods are spoiled, but also the cause for spoilage, giving the canner an opportunity to apply a remedy. Is this not in the very best interests of the industry and likewise in the very best interest of public health?



The thing we are trying to do is first, to make absolutely sure that spoiled canned foods are not allowed to be trafficked on or doctored by reprocessing or otherwise, and then resold; that is the first consideration. Next to make every canner stand on his own feet. If he has a case of spoiled goods due to any one of the many causes, for the most part within his control, and he fails to exercise proper care, he should stand his own loss and not roll any part of it back on the canner who is careful and does not have his excess amount of swells. Now that certainly is equitable, and this zonal warehouse plan makes that proposition entirely workable. This plan of charging a flat allowance is absolutely unfair because it makes the careful man suffer the burdens of the careless packers, and therefore puts a premium on carelessness and unsanitary conditions in the canners factory.

The next point that you make is as to an undue amount of notoriety created by these zonal warehouses. That does not appeal to me at all for the reason that every merchant handling canned foods is subject to spoilage and is writing to make claim for it. The greatest publicity and notoriety comes in the retail stores where the customer either sees and objects to the spoiled can, or buying and taking it home and finding it spoiled, comes back for an adjustment with the merchant from whom she purchased, and usually not in a very pleasent state of mind, and hence not careful in her expressions no matter whether there is no one else present in the store or whether the store is crowded. I think there is infinitely more publicity given to spoiled foods and a black eye to any label or brand this way than can happen in a thousand years from the publicity of the zonal warehouse, for if the fact of canned goods spoilage was known only to the canner and to the jobber, it would even then not be, in my judgment, a serious proposition, but when it is known to everybody, what possible effect can it have in the way of publicity?

In the next place, what portion of the population of the city of Philadelphia do you think would know anything about a zonal warehouse for the receipt of spoiled canned foods being in existance in Philadelphia if one were established there?

The jobbers have driven their stake to obtain this additional trade discount of ½ of 1%, and they are like a drowning man grabbing at every straw to support them in their effort to set up this regulation and some of the reasons they have assigned are, to me, the most absurd and ridiculous that I think any reasonable man could hatch up.

Keep in mind that for ourselves, and I feel sure we are speaking for all honest canners and for the great rank and file of the National Canners Association, we start out with the proposition to stand by every can of our goods from factory to consumer, and if it spoils we are ready to make it good by refunding the amount paid for same. Next, we do not wish to pay any part of any other canners' swell claim. Next, we are unalterably opposed to making jobbers an additional trade discount allowance. Next,

Rich, creamy, slender oval pods, 5 to 6 inches in length, free from rust, perfectly straight and entirely stringless.

Seed: white, with very small, black eye. Plant: robust, about 18 inches high, erect, bushy and very prolific.

We know of no wax variety more desirable for home, market gardener, or canners' use.

Now booking contracts, future delivery, 1924 crop.

BERLIN, WIS.. U. S. A.

What better occasion than this Convention--to bring your friends to our booth, and have them subscribe.

we are committed to the examination by expert chemists to determine not only the fact of the spoilage, but the cause for same, and that the best suggestion to accomplish these results is the zonal warehouse proposition. In addition to the National Canners Association, every local canners association that has held a convention this year has gone on record in favor of the plan, and I believe and feel perfectly sure that the coming National Canners Convention at Buffalo will go on record overwhelmingly in favor of this proposition.

Now if the canners will all hold together and not sign contracts for the ½ of 1% allowance, but care for their swell claims on this zonal warehouse proposition, and the jobbers should likewise refuse to, but except on their plan of contract, these two organizations would be at lagerheads proper, and if no solution could be amicably reached, it would logically, I dont say actually, result in the jobbers going into the canning business and the canners going into the distributing business, for I do not believe the canners are going to abandon their plans and quit business, and should such a thing happen, the Lord have mercy on the people living in the cities for food supply; or do I believe that the great rank and file of the jobbers want to go into the canning business, and it therefore, seems to me that it behooves the level-headed jobbers and the level-headed canners to get together in a friendly way and agree upon something and at least let us all be willing to try out this zonal warehouse plan for one year, and see how it works. We have tried the ½ of 1% allowance, and know from our experience that it is an awfully unjust proposition. Brother Ned went over our books for the past fifteen years and our claims are under ¼ of 1%, and in those fifteen years are included years when we had poor results from our closing machines, making an undue amount of swells because the cans were not tightly closed. But this year, when we labeled up our goods, and everything in the house is labeled, we did not have swells amounting to 1/75 of 1%, practically none at all. For instance, out of 13,000 cases of No. 2s or 312,000 cans we had 21 cans spoiled. Twenty-one cans out of 312,000. Now ½ of 1% would mean 1560 cans and with this jobbers plan, we would therefore be giving away 1540 cans as swells that were as good as any case of the entire lot.

I submit to you in all honesty, do you consider this a fair proposition?

Now the swells in our No. 3's were just a little more than this, but still such an amount would amount to very little.

I have written you thus very fully because I am very keenly alive to this proposition, and with my past experience on committee meetings with the jobbers, I do not like their attitude, It has been entirely too selfish and to dictatorial, just like Mr. Hannegan put over at the Adelphia last week.

We sold goods last year through both your good selves and Jessup and Roberts on the old basis of allowance for swells and I exceedingly hope that you both will able to find enough customers to take our output this coming year on that same basis, otherwise, we will feel I am afraid, that we will have to gun around among other brokers, to see if they cannot find purchasers on the square basis, before we will submit to this additional trade discount allowance of ½ of 1%.

Very truly yours,
W. O. HOFFECKER.

GEN. HERBERT M. LORD AT THE CONVENTION

As the special speaker at the big banquet of the National Food Brokers' Association, Tuesday evening, January 22nd, Gen. Herbert M. Lord, Director of the Budget Bureau, Washington, will be present, with the consent of President Coolidge. As a business man it would be hard to imagine one of higher caliber than the director of the United States Budget, and the brokers are to be congratulated upon securing such a man of eminence. What he will have to say will be listened to very attentively by all present, and it will be well worth attention. The brokers are business men, and they will appreciate this business address. Incidentally this banquet is not confined exclusively to brokers, but all are invited, and will be welcomed to the limit of the banquet hall, but reservations must be made in advance. Paul Fishback, Indianapolis, will take care of such reservations.

All indications are that the

NATIONAL CANNERS ASSOCIATION CONVENTION

at the

Broadway Auditorium, Buffalo, N. Y.

will be the greatest and best in the history of the Association.

A most cordial and hearty welcome awaits all members and visitors at the

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

Bigger, Better Crops From Your Growers

AT EVERY canning season the same problem confronts you—how to get bigger, better crops from your growers. Proper transplanting is one of the big factors in crop production. That's why it will pay you to find out about the

NEW IDEA TRANSPLANTER

Here is the most efficient transplanter ever built. Has revolutionized transplanting. Handles *any* transplanting job. The driver's seat is in *back* of the plant setters where he can make sure that every plant is properly set, watered and covered. The result is better planting, bigger crops!

A Few NEW IDEA Features

Plant setters sit in front of the driver's seat, where he can direct the operation. This is an exclusive feature.

Plant boxes are removable for replenishing, Water tank has 50 gallon capacity, and flow is adjustable.

Planting depth up to 4½ inches.

Pole lock keeps rows straight.

Pack wheels are on flexible frame to follow irregularities of the soil.

All working parts made for long trouble-free service.

It will actually pay *you* to buy this machine to loan to your growers, or recommend it to those who can buy for themselves. Send us a list of their names and we will gladly give them full information.

FRUIT AND VEGETABLE PACKS IN NORTHWEST

THE 1923 packs of canned fruits and vetables in Washington, Oregon and Idaho have just been compiled by the American Can Company. The total pack for the district over that of 1922 is about 500,000 cases, showing the growing importance of the canning industry in the Pacific Northwest.

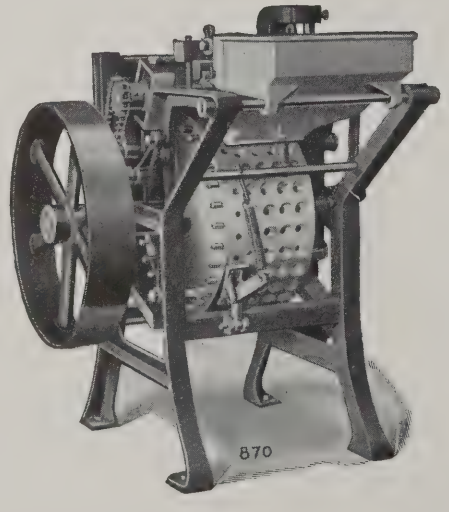
ARE YOU PREPARING TO TAKE ADVANTAGE OF CANNED FOODS WEEK OPPORTUNITIES?

An Outline of the Magnitude of National Canned Foods Week, Which Is to Be Held March 1-8, 1924, and All Branches of the Industry Will Unite in Country-Wide Canned Foods Demonstrations.

CANNERS, food brokers and wholesale and retail distributors are beginning to grasp the importance and possibilities of National Canned Foods Week, to be held throughout the country March 1-8, 1924. Co-operating in this campaign are the following:

National Association of Retail Grocers
National Wholesale Grocers' Association
American Wholesale Grocers' Association
National Food Brokers' Association
Canning Machinery and Supplies Association
National Chain Store Grocers' Association
Glass Container Association
National Canners' Association.



All State retail grocers' associations have been invited to participate.

Indicative of the magnitude of the campaign are the enormous quantities of red, white and blue window streamers now being sent out from Canned Foods Week headquarters. This literature is being distributed as follows:

Window streamers (full-sized paper)..400,000
Window streamers (miniature paper)..600,000
Window streamers (full-sized cloth)... 60,000

The full-sized muslin streamers will be for use on automo-

On Your Way To Buffalo.

Of course, you are going—everyone is. Dont miss it. It's an education of itself.

While you are there, a short trolley ride takes you to Silver Creek. Come out and see how and where your favorite canning machinery is made. You will understand better why it stands up so well. Call at our Booth at the Convention.

No. 32 Automatic Strip Feed Press

Although similar to our other Automatic Strip Feed Presses, this particular size is especially adapted to the rapid production of deep drawn metal articles.

Of extra heavy design with chrome nickel crankshaft and solid steel flywheel, the Press is well suited for single or double die operations requiring excessive strain. Large diameter shaft bearings allow ample rigidity and extra long slides maintain a perfect alignment of dies.

The Press is provided with compound change gears for variable cuts and simple adjustments for different lengths of material.

The automatic feeding insures a high uniform output and eliminates the dangerous hand operation.

The Press is equipped with automatic release which immediately stops feeding mechanism when subject to undue strain.

Adidtional particulars on this press or any other automatic can producing equipment gladly furnished upon request

McDONALD MACHINE CO.

When we tell a man to advertise we merely advise him to let the canners know what he has to offer.

bile trucks, delivery wagons and general outdoor display. They will be able to stand almost any kind of weather. In addition to these, there will be a miniature paper streamer adapted to small windows, doors, pleasure touring cars and auto-truck windshields.

There will be intensive drives in many of the larger cities, such as Chicago, St. Louis, Boston, Washington, D. C., Indianapolis, Baltimore, and other places. An interesting fact is that Honolulu will participate, as was done in such notable fashion last year, and already window streamers have been sent to the Hawaiian Islands. By means of bulletins and other methods of communication State retail associations have been urging their members to get behind the campaign. Among those first cooperating in this respect are Ohio, Colorado, Maine and New York. State canners' associations already heard from are the Tri-State, Maine, New York, Ohio, Indiana, Wisconsin, Minnesota, Iowa, Nebraska, Colorado, Utah, California, and many others.

Canned Foods Week in Buffalo will be held during the Convention week, beginning January 21, 1924, and will tie up Canned Foods Week, the Canned Foods Exhibit and the National Convention.

Chicago and Other Rotary Clubs to Help Celebrate Canned Foods Week—The National Canned Foods Week Committee has been advised that the Chicago Rotary Club, on Tuesday, March 4, 1924, will give a Canned Foods Week dinner, at which all foods served will be from cans packed by a Rotarian canner. After the dinner the empty cans will be brought in on tea carts for the edification of the diners, to show them how much they have eaten. There will be other novelties, such as canned foods films.

Following close upon this announcement comes a letter from another friend of the Canned Foods Week Committee, which reads, in part, as follows:

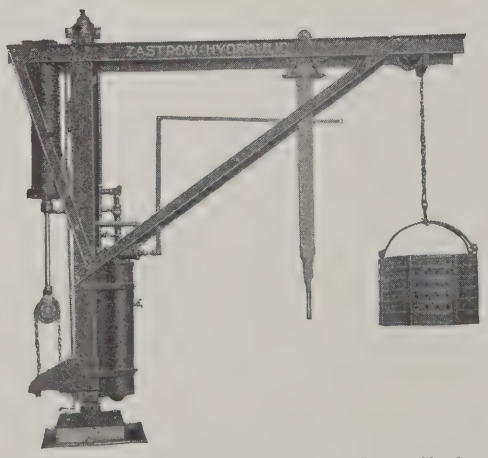
"For your information will say that the writer has talked with a number of Rotarians at various conventions, and Canned Foods Rotary Luncheons will be held during National Canned Foods Week at Indianapolis, Indiana; Columbus, Ohio; Chillicothe, Ohio; Circleville, Ohio; Cleveland, Ohio, and Seymour, Ind., in addition to the one scheduled for Chicago.

"It is quite probable that the writer will send a circular letter to every Rotary Club in America, calling its attention to National Canned Foods Week and asking that a special effort be made to feature their luncheon during that week with canned foods. We believe that a lot of good can be accomplished in this way, and if you have any suggestions to make regarding it, we will be pleased to have them."

The National Canned Foods Week Committee, with such dinners as the above in mind, is now at work outlining a typical canned foods menu. It will be sent upon request to anyone interested in getting up such a meal.

Success of 1923 Canned Foods Week Cited—"That the 1923 Canned Foods Week was a success everywhere, and went considerably ahead of last year, is shown by a questionnaire sent out to retailers," says the report of the National Canned Foods Week Committee, of which Royal F. Clark, of Beaver Dam, Wisconsin, is Chairman, and Russell B. Kingman, of Orange, New Jersey; John A. Lee, of Chicago; H. L. Herrington, of Ogden, Utah, and Bismark Houssels, of Los Angeles, are district chairmen. "Out of the first one hundred and twenty-nine replies received, only nine reported no increase in business. The rest reported increased sales all the way from ten to one thousand per cent."

CANNING ITEMS, NEWS AND NOTES



Seaford, Del.—Mr. E. Greenabaum, head of the well-known firm of canners, is reported dangerously ill, as we go to press. His family and friends are much worried about him.

Dover, Del.—Mr. Scott has taken over the Allwn cannery here, and will handle the pea acreage and pack during the coming season.

Echo, Oreg.—H. Kuska is one of a committee looking into the establishment of a cannery at that place. They want full information as to equipment and supplies for fruits.

New Orleans, La.—The Empire Manufacturing Co., 1028 Bienville street, write that they intend going into the canning business, and want full information regarding soups and home-made stew in cans and glass.

Milwaukee, Wis.—Direct factory branches warehouses have been established in San Francisco and Los Angeles by the Chain Belt Co. of this city. These are in addition to the houses in Spokane, Seattle and Portland, Oreg.

Selbyville, Del.—James C. Townsend, only brother of Ex-Gov. J. G. Townsend, Jr., died at his home in Selbyville, Delaware, Monday, December 31, 1923. His pleasing and cheerful manner will long be remembered by his many friends among the canners and canning supply men. He was a member of the firm of J. G. Townsend, Jr., & Co., and was associated with his brother in the lumber and several other industries in Southern Delaware. He is survived by a widow and one son, Covington.

Buffalo Welcomes You.

TO ALL MEMBERS OF NATIONAL CANNERS' ASSOCIATION, NATIONAL FOOD BROKERS' ASSOCIATION AND CANNING MACHINERY AND SUPPLIES ASSOCIATION

Dear Sir:

For the past few weeks you have been reading in the trade papers a little bit about earlier Buffalo, a little bit about the business side of the coming Convention, and a little bit about the entertainment that has been provided for you. We have tried to arouse your enthusiasm about coming, and now this is our final word.

There have been canners' conventions in the past, and there will be canners' conventions in the future, but we do believe that having attended those that have passed and after attending those to come, that there will be something about the Buffalo Convention which will be unforgetable.

Awaiting the opportunity to welcome you, we are

Sincerely yours,

THE ENTERTAINMENT AND PUBLICITY COMMITTEE, CANNING MACHINERY AND SUPPLIES ASSOCIATION.

Per Chairman, MILLAR N. SELLS.

PRESIDENTS' BALL; TO ALL PAST AND PRESENT PRESIDENTS OF THE THREE ASSOCIATIONS.

THE Entertaiment Committee of the Canning Machinery & Supplies Association, will hold an informal Ball on Friday Evening, January 25th, at nine P. M., in the Ball Room of the Hotel Statler, Buffalo, N. Y.

This Ball will give all who desire an opportunity to pay honor and homage to all of the men who in the years since 1907 have served their respective Associations as President. We believe it desirable and proper at this time to take advantage of the opportunity the Buffalo Convention affords to honor these men, for it was here in Buffalo that the National Canners Association was born just seventeen years ago.

A special invitation is being sent to each one of these men, and we are going to try and have them all in a receiving line,

FILTERS

FOR

FRUIT JUICES-CIDER-VINEGAR---

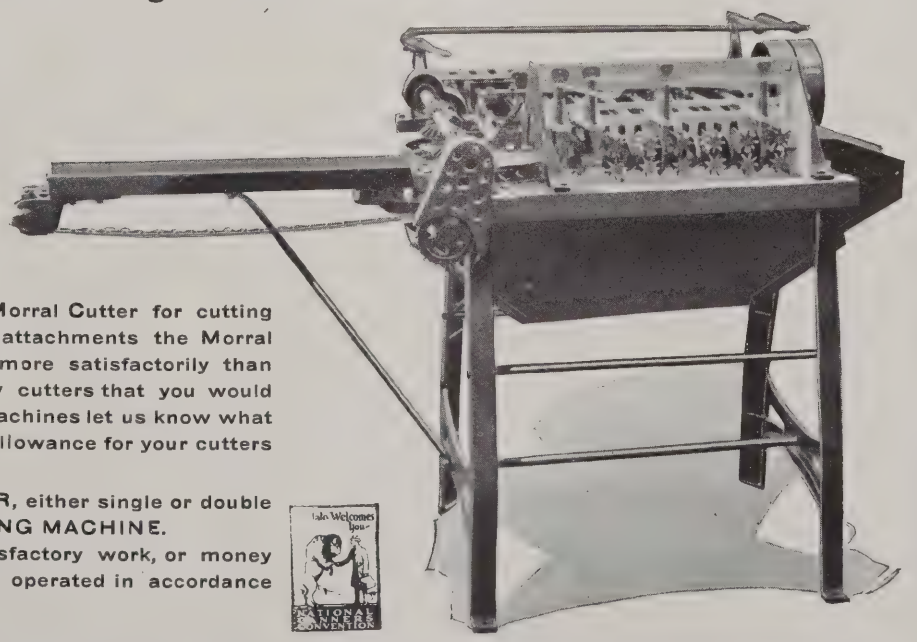
Snow-white cotton filtermasse in Kiefer Filters gives beautiful luster and brilliance to fruit juices without lessening the flavor or imparting a foreign taste.

No other agent is necessary and your product has that cleanliness and polish that brand it an unusually good product.

We make many different types and sizes of filters for clarifying all kinds of liquids.

Write for catalog.

The Karl Kiefer Machine Co.



CINCINNATI, OHIO

KITTREDGE LABELS CHICAGO

THE MORRAL CORN CUTTING MACHINE
Either Single Or Double Cut

THE MORRAL CORN CUTTING MACHINE is the most durable, simple and efficient cutter you can buy. It has the most positive feed of any cutter in use.

The Morral Cutter will cut large ears, nubbins and pieces of ears, without clogging like other cutters and for this reason you can secure a larger yield of cans per ton with the Morral Cutter than with any other type of cutter.

We furnish special attachments for the Morral Cutter for cutting Golden Bantam Corn and with these attachments the Morral Cutter will cut the Golden Bantam Corn more satisfactorily than any other cutter in use. If you have any cutters that you would like to replace with new and up to date machines let us know what you have and we will make you a liberal allowance for your cutters on the price of new cutters.

We make the MORRAL CORN HUSKER, either single or double and we also make the MORRAL LABELING MACHINE.
Our machines are guaranteed to do satisfactory work, or money back if they fail to do so when set up and operated in accordance with directions furnished.

t will pay you to write at once for prices and further information.

MORRAL BROTHERS, Morral, Ohio

We join the advertiser's force of salesmen, and call WEEKLY upon more prospects than he could reach in a year.

where those who wish can pay them their respects.

We wish each and every one who attends the National Convention, to consider this as an invitation to attend the Presidents' Ball, and we can assume them that there will be plenty of dancing, good music, and that we have even looked after the cravings of the inner man, and have ordered a buffet luncheon to be served along about midnight of this evening.

Come and bring your wife, and help to make the Buffalo Convention the largest ever.

WALTER SEARS ENTERS BROKERAGE BUSINESS

Mr. Walter J. Sears has announced to his friends that he will enter the merchandise brokerage business in Chillicothe, Ohio, representing manufacturers of canners' and grocers' supplies. As Mr. Sears has a wide acquaintance in the food industry throughout the country, his new undertaking has met with such a favorable response as to promise success.

In this connection Mr. Sears made the following statement: "As is generally known, I have given most of my time during the past year to the reorganization of the Sears & Nichols Canning Co. The Reorganization Committee has placed in my hands the sale of the first and refunding bonds, as provided by the Plan of Organization which has been approved by the Creditors' Committee and the court, and which has been submitted to the stockholders and creditors. My new enterprise will not in any way interfere with the work of restoring the old company, to which I am fully committed, but will, in fact, provide a working organization which will greatly aid to that end."

The announcement came in the following form:

WALTER J. SEARS & COMPANY
Chillicothe, Ohio

I desire to advise my friends that I have entered the merchandise brokerage business in this city, under the name of Walter J. Sears & Co., and will specialize in canners' and grocers' supplies. My long experience in the canning industry and my wide acquaintance with the grocery trade has equipped me to understand the needs of both the buyers and sellers.

I will count it a pleasure to be of service to you.

Respectfully,

January 8, 1924. WALTER J. SEARS.

The Markets

BALTIMORE, JANUARY 14, 1924

WEEKLY REVIEW

Passing Out of the Dullest Time of the Year—Business Is Loafing and Enjoying Contemplation of Good Year Finished and Better Year Ahead—Buyers Are Stirring—Offers Below Market Meeting Quiet Refusals—Tomato Holders Are Advancing Ideas—Tomato Futures Wait.

BUYING APPROACHES—"The last half of the month of December and the first half of the month of January always, or nearly always, form the dullest period of the year," said T. J. Meehan & Co., in their weekly circular letter of January 5th, and this very aptly describes the real situation. Experienced canners and market operators do not expect anything else during this time, and all men recognize that the nearness of the big annual Convention likewise exerts its influence towards holding off buying. There are those who hint that the buyers are holdiing off their purchases as a club over the industry until they have held their parley upon this Warehousing Plan at the Buffalo Convention. We place small stock in such considerations—the buyers need the goods, but for some unaccountable reason, buying in all lines of industry has fallen into a slump the past few weeks, and canned foods cannot expect to be an exception. This slump is not due to any loss of confidence or even hesitation, we believe, but comes probably from the realization that business in the future appears very bright, and having had a good year just closed, they have stopped to take breath and enjoy the situation before again getting into the heat of battle. Business, like the individuals, has gotten into the fashion of "taking it easy," and so instead of jumping in to make things hum with the beginning of 1924, they have sat back, said to themselves "we will get it anyway, so what's the hurry," and there you are. Does labor sweat as it used to do? Do any men work as they used to work? It is not the style, and business must be what the individuals make it. Probably never before in the history of this country has such a satisfactory balance sheet been struck as that at the close of 1923, and it will do no harm to have this breathing spell.

This dullness will not last, and, in fact, it is disappearing as we write. The canners who are fortunate enough to hold spot stocks have been waiting for the promised period of active buying, and they are somewhat impatient, or we should more properly say anxious to see that period arrive. They have but a little while to wait now. The buyers are making inquiries, and putting out feelers—having their brokers tender offers at a shade under the prices they know are prevailing—fishing, it might very well be termed, figuring that all they catch is just that much better for them. When the industry recognizes the way the game is played it will be ready to meet them with the proper resistance, and if reports be true, they are meeting them in just that way, and as a result the fishing is very poor. In other words these tenders are being turned down as not interesting to the holders. Following this will come the genuine offers at market prices, and when those holders who are anxious to sell have cleaned out, the man who looks ahead will be able to ask and receive his price. Everyone recognizes that stocks of all kinds are low, that consumption is at a terrific pace, and that while there will probably be no undue scramble for goods, they will be cleaned out of canners' hands long before new goods can be produced. The whole market situation is, therefore, in a very strong position.

TOMATOES—There is nothing new or of much interest to report on this item. The one feature is that holders are growing firmer in their ideas, and it is said steadfastly refusing to consider anything under the full market price. It is reported that unlabelled tomatoes are very scarce and hard to find. The market prices are nominally just where they have been for a month or more, but many handlers have moved their ideas up to the inside price. In other words, while 1s are quoted at 62½c to 65c, holders will not listen to less than 65c, and so on down through all quotations: No. 2s, 90c to 95c, with more wanting $1.00; No. 3s, $1.35 to $1.40 and on good standards higher prices demanded. No. 10s are nominally $4.75 to $5.00, actually about the latter figure only. Other markets report the buyers covering their immediate wants in tomatoes, and it will not be surprising to see active buying at or before the Convention, and certainly shortly afterwards, if there are any tomatoes left. Dealers' and jobbers' stocks are known to be low, and once they start to restock the supplies, which are all in the East, will quickly disappear.

There is not much heard in the matter of future tomatoes. Canners of that article in this section, at least, do not care to consider futures until after the annual Convention, and this would seem to be the idea in most sections. There have been "feelers" put out as to prices. One of the larger packers of No. 10 tomatoes reported having answered such an inquiry with a price of $4.15, for a big block of goods, and the buyer is said to have come back with a tender of $4.05, which the canner declined. This shows the drift of things.

CORN—This article is also unchanged and without particular action this week. There have been some good inquiries and some trading, and it is said the supply on hand is rapidly growing less. Most corn holders are firm in their ideas, and expect better prices. In the Central West it is said that corn is very well cleaned up, and there is not much in the East. Maine has but the tailings of a pack and not able to supply any fair sized order. New York State is not greatly different, and the Iowa canners long ago reported their holdings as unusually low for the time of the year and likely to be cleaned up in short order. Some Eastern holders are quoting standard corn as low

as 80c to 82½c, but it is hard to find at this price, and the West is moving its price to 90c strong. Better grades are ruling higher and are proportionately harder to find.

There is some talk heard as to futures in corn, and there probably have been some contracts signed in the regular way, but the future corn market is not officially open at the time of going to press. It will be, we believe, at Convention time. In this section nothing is heard about the price. As with tomatoes the corn canners here are trying to sound out the growers as to contract prices for next season, and the growers are busy just now listening—and that's all.

PEAS—If one took literally all he hears about spot peas, we would come to the conclusion that "thar ain't no sich anemul," and that spot peas had all gone into present consumers. In fact, an inquiry as to canned peas is answered with a reply regarding future peas, and how well and extensively they have sold. Frank Stare, the old-war-horse of the pea canning game in Wisconsin, says that the canners of that State never before inventoried so few peas as this year, and he continues, "we doubt if there are as many unsold peas in Wisconsin today as there were at the beginning of the 1923 pack, and there were mighty few then, as we all know." And he reports no end of inquiry for spot peas. Wisconsin, however, is not only clean of peas, but of beets and beans and most articles which they packed to supply this winter's wants. Wisconsin is living in the future so far as canned foods are concerned.

Here in the East the pea canners have assembled to consider the matter of pea canning. In some sections where the pea louse has shown himself they are despairing of canning peas; but others are keeping on and have contracted acreage and expect to get the crop. This matter of crop hazard is worrying them in the naming of future prices. And well it may. There are no markete changes to report in canned peas, and it is said that most canners are well sold up on futures, that is the Western and Northern canners, although the Eastern or as they are termed in the pea game, the Southern canners, are still in the game.

FRUITS—The general report on fruits, taking the entire country into consideration, is that the market is gaining strength. A heavy raw apple crop tends to weaken the market on canned fruits, but it would seem that buyers have allowed their stocks to dwindle down to a low ebb and the packs of fruits, last year, were kept to a low mark, so that supplies are not overplentiful. Fruits have been due for an advance and it seems near.

Specialties and general lines are all in the same position as the staples; inquired for and the market strong, without change.

NEW YORK MARKET

Interest Received and Inquiry Good—Interesting "Propositions"—Keen Interest in the Buffalo Convention—Future Pea Bookings Heavy—Late Buyers Coming In—Future Corn Offered—Spot Corn Getting Stronger—Tomatoes Not Offering as Futures—Spot Tomatoes Firm—News Notes.

New York, Jan. 11, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

MORE Canned Foods Interest—There has been an early revival in interest in canned foods following the first of the year holidays this season, and brokers report a surprisingly good inquiry, notwithstanding the fact that many buyers are still engaged in checking up on their stocks on hand.

Want "Propositions"—Many buyers are calling upon the brokers from whom they buy for information regarding the holdings of the canners whom the brokers represent, and are also asking for offerings from the canners. Some buyers are submitting "propositions" to the canners, and it is more than probable that a good many of these inquiries will be translated into actual business as canners with small stocks on hand will be willing to make slight concessions to clear out their stocks before they go to Buffalo to the convention, and where they will talk over the situation of 1924 packs with buyers, brokers, and fellow canners.

Party For Convention—Keen interest is being shown here in the coming convention of the canning and allied trades, and a general exodus of brokers and canned foods buyers will be staged in the direction of Buffalo convention week. The New York trade is making up a party which will include many leaders of the local market including the following: H. F. C. Killian, of Killian & Clark; Arthur P. Williams; Wm. Ely, Jr., Howard Turner; Clarence Stewart; Jos. Steiner; Jas. Smithson; C. A. Lumb; Walter J. Townsend; F. D. Fields; Hugo Kock; Archie C. Clark; A. G. Sherwood; Chas. Eden; Harry Montgomery; John W. Kyger; Ed Skiffington; Harry Sinsheimer and S. Joselof. A number of other brokers and buyers are expected to join the party.

Future Pea Bookings Heavy—Buying of future Wisconsin peas has been unusually heavy, reports from packing sections indicate. Many buyers held off placing their future contracts until after the turn of the year, and these buyers are beginning to show interest now in the offerings of the canners. In some section of the trade it is predicted that a heavy volume of pea business will be submitted to the canners at the Buffalo convention, and that an immediate advance in canners' prices will follow this buying movement. This remains to be seen, however. Reports from authentic sources state that business on straight No. 4 Alaska and No. 5s sweets, standards in both instances, has been booked at $1.10, and in one instance at $1.15, f. o. b. cannery. Most canners, however, are refusing to book business on these grades unless the buyer also takes a percentage of the smaller siftings.

Offer Future Corn—Minnesota canners are soliciting future business on corn at $1.70 per dozen for fancy golden bantam, $1.30 for fancy early Crosby, and 95 cents for standards. Illinois corn canners are quoting futures at $1.27½ for fancy country gentleman. Wisconsin is booking fancy country gentleman at $1.25, f. o. b. cannery. The market for standard corn has firmed up a little, and very few offerings at 90 cents cannery are heard of these days, most canners having advanced their price to a 95 cents basis.

No Western Tomato Prices—Indiana and California tomato canners are reported to be holding off from naming prices on 1924 pack, preferring to wait until the season is further advanced, and they can figure closer on their probable pack and costs. Some s. a. p. business is being booked, however.

Maryland Tomatoes Firm—There is a firm market for Maryland and Delaware tomatoes for prompt shipment, with considerable inquiry reported on No. 3 standards, which are being firmly maintained at $1.32½ to $1.35 per dozen, f. o. b. cannery. Buyers are reported to be in the market for $1.30 standard 3s, but are not having much success at this figure, The market for standard 2s is being held at 90 to 95 cents, f. o. b., while 2½s are attracting some interest at $1.30 to $1.35, cannery. Jobbers' stocks of tomatoes are not heavy, but in view of the firmness of the market they are expected to buy only in small quantities, to take care of their requirements as they go along.

Canned Fruits Strong—Continued strength features the market for California canned fruits, and packers are holding the market on a firm basis. The carryover this year is light, assortments are limited, and many canners are holding their fruits, confident that they will obtain better than the current going prices when the spring demand sets in. There is some inquiry for standard quality peaches being received by brokers representing Coast packers, but the canners are unwilling to grant any concessions as to price. The position of the market for standards and seconds in some varieties is relatively stronger that the market for choice and fancy fruits.

Swell Opponents Marking Time—There have been no further broadsides launched against the canned foods warehouse plan of the canners during the past week or so, and all is quiet along the Hudson Street front. It is believed, however, that the opponents of the warehouse plan are lining up their forces for the decisive battle which is expected to be waged at the Hotel Statler during convention week when the canners and wholesale grocers will gather harmoniously or otherwise, around the council table and get down to brass tacks on this proposition.

Canned Fish Firm—Considerable strength features the group of canned fish staples. Sardines are scarce, and are strongly held with canners expecting the spring demand to clean out all of their holdings. Shrimp is quiet, owing to the smallness of current offerings. Salmon is quiet and unchanged. Tunafish remains steady under quiet trading.

Leggett Buys Out Jurgens—As predicted in these columns several weeks ago, there has been another merger of large wholesale grocers in this market. Francis H. Leggett & Co., have

"How many firms operate more than ten factories?" we were asked recently. Well, how many?

taken over the business of W. B. A. Jurgens Co., prominent Brooklyn wholesale grocers, and will operate the Jurgens business in conjuction with the big business which the "Premier" house does in this market.

Producers' and Distributors' Labeling—Considerable interest has been aroused locally by the editorial in last week's The Canning Trade, concerning the marking of producers' and distributors' names on labels of canned foods. One of the main objections to this by the jobbers, outside of the fact that they want only their own name to appear on the label of their house brand, is the fact that retail buyers will complain if they receive a lot of provate brand tomatoes, packed in Maryland, one week, and the next week get a lot of the same private brand of tomatoes, the label showing them to have been packed in Indiana, or Ohio, or Delaware, or Virginia. The local law now requires that the name of the packer be on labels for canned milk. To give their trade consistent brands some of the jobbers are now limiting their milk purchases to one or two canners, so that the same name will appear on the label right along.

N. L. Waggoner of Beesmeyer & Waggoner, Inc., Los Angeles food products brokers, was here this week. After spending a few days in the local market, Mr. Beesmeyer sailed for England for a brief visit.

J. W. Mailliard, Jr., of Mailliard & Schmiedell of San Francisco, was here during the week, making his headquarters with Lestrade Bros.

Weidman, Ward & Co., prominent wholesale grocers of Albany, N. Y., have incorporated their business for $1,000,000. Thos. R. Ward is president, John E. Sweeney first vice-president, John H. Tietgen, second vice-president, and S. W. Gifford, secretary-treasurer.

CHICAGO MARKET

Buyers Beginning to Show Interest—Canned Tomatoes Are Very Scarce—Most Sections Seem Cleaned Out—Utah Tomatoes Coming In—Corn Is Active—Difference of Opinion Between Brokers on Future Sales of Peas—Cold Weather May Help Fruits—Prunes Reduced.

Chicago, January 11, 1924.

By "Wrangler,"
Special Correspondent "The Canning Trade."

INTEREST Showing—The market for canned foods is steady and firm as to price, and buyers have begun to take interest in brokers' quotations and to place orders for needed goods. This is to say, that the market has opened and resumed, after quite a period—nearly a month, in fact—of stagnation on account of the holiday trade and inventory taking.

Canned Tomatoes—It is almost impossible to find any tomatoes of any description in Indiana, Michigan or Ohio, and buyers are perforce compelled to go to Maryland and the Tri-States for supplies.

Some attempts to secure offerings from Virginia recently have not been successful. Virginia does not seem to have any canned tomatoes to offer.

Missouri is completely sold out—in fact, was oversold before packing began. Buyers are now interested in Utah tomatoes. Some very fine tomatoes have been packed out there, but the freights are so high that they have not been available for this market. Prices have advanced some, however, and the difficulty of obtaining tomatoes nearby will probably direct some of the trade to the Utah canneries.

Their freights are a little higher than those from Baltimore and Maryland, and they pack only the 2½ cans, but this market will be able to reach the Utah canners of tomatoes before long—in fact, our buyers are now investigating the Utah market.

The Utah canners do not pack tomatoes in puree, and on that account their output is preferred to that of California.

Canned Corn—The market for canned corn has become active, and a number of buyers in Chicago are looking for good trades. It is getting more and more difficult to buy good standard No. 2 canned corn at 90c canneries, although there are a few offerings from Illinois and Indiana at that price, even Ohio is asking 92½c—95c for standard corn, with a few offerings of less undesirable standards at 90c.

Canned Peas—It is reported that large sales of futures of canned peas have been made, but there is an impression among the brokers that these reports are propaganda intended to scare the buyers into contracting.

It is unquestionably the case, however, that there has been considerable contracting for 1924 output of canned peas, but Chicago brokers are a little incredulous about the rather optimistic reports from field brokers in relation to large sales of futures.

The market for spot peas is practically nominal, and every canner who owns any spot peas sets his own price, and usually gets it, if it is not too extremely high.

There are a number of new pea canneries being started in Wisconsin, and if the crop is good, there will be a large output of canned peas for 1924; but it would seem that it cannot be so large that the American public will fail to consume it. The pack of 1923 was the largest on record, and yet it is practically sold out.

Canned Fruits—The demand for canned fruits is negligible. Buyers do not seem to be much interested. The severe cold snap which we have recently experienced in the Central West has driven all the fresh fruits into winter storage and has stopped the shipments of fresh fruits from the Pacific Coast, Florida and elsewhere temporarily.

This will, no doubt, have the effect to increase the demand for canned fruits. Stocks in canned fruits with the wholesalers are not large, and the retailers are sold pretty low, and I have no doubt that the market will be more active and the demand greater in a short while.

The only competing danger which I can see to canned fruit is the low price just made on California dried prunes and raisins.

The revised prices of dried prunes in 25-lb. boxes, f. o. b. Pacific Coast, Sun Sweet Brand, just received by wire, are as follows:

Prunes

20/30	to the pound	16½c
30/40	to the pound	12¾c
40/50	to the pound	10c
50/60	to the pound	8½c
60/70	to the pound	7c
70/80	to the pound	5½c
80/90	to the pound	4½c
90/100	to the pound	4c

On all sizes this is a sharp reduction, and a strong advertising effort is to be made, so I understand, for pushing prunes, as well as raisins, the latter having been reduced as to price recently. These are all new prunes of 1923 crop, and the prices are guaranteed against the Association decline until the opening prices of 1924.

These low prices on prunes are restricted to orders received by January 13, 1924. After that, it is understood, prices will probably be advanced.

These prices are a drastic reduction from the last prices quoted of about 20 to 25 per cent average, and places prunes on the market as an exceedingly economical article of fruit and unquestionably of excellent quality. Those low prices of dried fruit may have the effect of restricting the demand for canned fruits.

The discussion of the question of zone warehouses for "swells" seems to have quieted down—everybody has apparently concluded that it had become a little heated and too much friction was being engendered, and the advocates on both sides seem to have determined that it would be best to fight it out at the National Canners' Convention at Buffalo.

Lamborn & Co., the big brokers, who several years ago established canned foods and dried fruit departments in connection with their sugar business, have discontinued these departments, and will concentrate their efforts upon sugar entirely. This applies to all their offices throughout the United States, we understand.

Grimes Canning Co., at Grimes, Iowa, will not sustain quite as heavy a loss by the fire which they had on Christmas Day as was at first feared. Three warehouses were destroyed, but the canning plant was not injured, and the warehouses will be rebuilt at once. About 50,000 cases of corn were destroyed in the fire, but it is said that the insurance will cover a considerable portion of the loss, which will not be as severe as was at first suposed.

CALIFORNIA MARKET

Very Little Activity Noted in the Market—Some Buyers Sending Hurry Calls—Growing Conditions Favorable—Some New Spinach Prices Heard—Higher Prices Being Paid for Asparagus—Salmon Selling Well—An Important Conference of Canners—Coast Notes.

San Francisco, Jan. 10, 1924

By "Berkeley,"

Special Correspondent "The Canning Trade."

THE Market Quiet—Very little activity is being noted in the canned food market, owing to the fact that this is the period of inventories, but small orders to replenish stocks are expected to soon become numerous. Packers advise that they will make quite heavy shipments of staple canned foods during the next six weeks to fill orders placed during the fall months. Considerable business was placed then for delivery after the first of the year and some buyers have sent hurried calls for stock, indicating they are quite closely cleaned up on many lines. Prices remain as they have been for several weeks, but advances are expected in some lines to cover the cost of carrying and insuring goods.

Growing Conditions Favorable—Wether conditions continue very unfavorable for farming interests, with the rainfall far below normal and low temperatures prevailing. The citrus crop in the southern part of the State has suffered quite a heavy loss and the outlook for 1924 is not considered encouraging in any line. There has been but a light fall of snow in the high mountains and a scarcity of water for irrigation seems likely.

Spinach—While a few packers have put out opening prices on spinach the largest are still out of the market and are uncertain just when they will come out with figures. The old pack is getting out of the way nicely and there will be but little in the line of a carry-over to embarrass the trade, but weather conditions are such that the outlook for the 1924 pack is still very uncertain.

Asparagus—Packers of asparagus are coming into the market quite freely for canning stocks at six cents a pound, or rather more than the average price paid last year. No intimation has been made as to possible opening prices, but by practicing ecomony in other lines it is believed that prices can be held at about the same level as in 1923. Packing operations are usually commenced in March and by the middle of April are in full swing. The old pack has long since been disposed of.

Salmon—Sales of Alaska red salmon have been very large this season, with good brands in demand at $2.35 a dozen, or ten cents more than was secured for the 1922 pack. The demand is growing steadily and should it continue at the present rate packers declare that there will not be sufficient to last until July, when new pack fish will be available. During the past three weeks the stock of the Alaska Packers Association has registered a gain of forty points in the market, directing attention to this concern and to its products. The reason for this strong showing is held to be because of the fact that the California Packing Corporation is considering the making of a definite offer to take over the portion of the stock not now controlled by it. The California Packing Corporation now owns eighty-two per cent of the stock of the Alaska Packers Association.

A Canners Conference—The California canning trade is taking great interest in the canners' conference to be held at the Food Products Laboratory of the University of California, Berkeley, in January. A splendid program has been arranged, which includes the following papers and addresses: "Factors in Processing", Dr. A. W. Bitting, food technologist, Alameda, Cal.; "The Cold Storage of Canning Fruits", W. A. Sherman, manager of the Merchants Ice & Cold Storage Co., San Francisco, Cal.; "Packing Tomatoes in Concentrated Form", F. E. Booth, president of the F. E. Booth Company, San Francisco, Cal.; "The Canning of Figs", E. W. Moorhead, sales manager, California Peach and Fig Growers, Fresno, Cal.; "Canning Grapefruit in California", H. M. Miller, production manager, Van Camp Sea Food Company, Los Angeles, Cal.; "Some Water Relations of Common Fruits", Prof. A. H. Hendrickson, Deciduous Fruit Station, Mountain View, Cal., and "Mechanical Peeling of Tomatoes", Production manager, Van Camp Sea Food Company, Los Angeles, Cal. The topics are all vital ones, with a number giving opportunities for the presentation of new ideas, and a large attendance of canners and superintendents is anticipated.

Coast Notes—At a recent meeting of the executive committee and board of directors of the Canners League of California, held at San Francisco, it was decided to declare the National Canners' Zone Warehouse plan for handling swells operative in this State and to urge canners to have the new plan made a part of their 1924 contracts. The plan has been approved by members making ninety-eight per cent of the pack credited to members of this organization, and more than ninety per cent of the pack of fruits and vegetables in the district known as Northern California.

The National Canners' Association has opened an office at San Francisco, Cal. with Alan Richardson in charge. Quarters are occupied with the Canners' League of California at 112 Market street.

The pack of canned fruits in the Pacific Northwest during 1923 amounted to 4,500,000 cases, according to figures compiled by packers of Salem, Ore. The output of some lines, especially of loganberries and pears, was lighter than in 1922.

A meeting of fruit growers and laboring men was held recently near Modesto, Cal. for the purpose of establishing a wage scale for farm labor in Stanislaus County during 1924. A basic wage of 35 cents an hour was decided upon, this being slightly higher than the scale adopted in Sutter and Fresno counties. A sliding scale was suggested for fruit picking, this to vary with the price received for fruit.

The brokerage business of R. P. Russell, Inc., Seattle, Wash., has been taken over by the Wiliam W. McBride Company, and B. G. Goebel, of the former concern, has purchased an interest in the William W. McBride Company. A new firm has been formed and business will be conducted under the name of the McBride-Goebel Co. A specialty is made of handling canned products.

ST. LOUIS MARKET

Trading is Quiet as Yet—Buying Expected to be Heavier in Futures this Year than Ever Before—Peas Leading, but Other Staples Following Close—Standard Peas the Best Sellers—Tomatoes Quiet—Buying Corn for Immediate Needs—Fruits Slow.

St. Louis, Jan. 10, 1924.

By "Missourian,"

Special Correspondent "The Canning Trade."

THERE has been very little done in canned foods line thus far. Some jobbers are still working on their inventories, and those who have not started have not been willing to add to their stocks when they had no immediate needs for their replenishment. In other words, trading was quiet. There is only a nominal call for staples and specialties since distributors are not in need of stocks for current use. In fact is was an off week—just about the average at this time of the year.

From the volume of futures business already done, it is believed distributors will purchase heavier this season for their normal outlets than they did last year. Peas have been the outstanding figure, but corn and other staples have been sold in larger volume than is usual before the first of the year. It is not trading for speculation, but placed by jobbers who are covering part of their requirements. The spot market is quiet and will remain so until after the inventories have been completed.

Peas—Operators have much faith in peas because for three years they have been successful and Wisconsin canners have booked more business than ever before up to January 1. Some of the more enthusiastic brokers have claimed that they have done more business up to the present time, than during all last year. This is doubtful, but nevertheless there has been a very large volume, so much so, that canners are no longer free sellers and are now inclined to make restrictions as to assortments as well as to hold for higher prices. The best sellers continue to be standards. The old crop is firm and is offered almost entirely in resales, and as prices are high, there are limited sales. Spots are so closely sold out of first hands that canners in Wisconsin have little to offer. Stocks controlled by other factors can only be purchased at stiff prices. It is hard to purchase straight standards and the market is also firm on

If ye can't be prompt be as prompt as ye can—
at the sessions of the Convention.

assortments. Many traders have quit buying until after the convention. Then their inventories will be finished and they will be able to meet canners.

Tomatoes—There is not being much done in tomatoes. Inventories will have to be completed before there is much done in the way of purchasing. Futures are not being taken freely. In spite of the quietness all sizes are held at quotation figures.

Corn—Most of the corn buying is for transient needs, and while the pack was big, there does not seem to be any big surplus held by packers. Fancy corn is scarce and cannot be bought at shaded prices.

Fruits—Fruits are very slow, more so than any other canned goods. Trading is only spot and prices are irregular. With distributors well stocked, they do not need replenishments. Spot sales are to cover short ages. California line is quiet. California canners carried only a small surplus of canned fruits into this year. A strong and advancing market is looked for during the spring months. Standard and second cling peaches have had a good sale and holdings are light. Pineapple is unchanged. Apricots are showing little interest.

MAINE MARKET

All Eyes Turning Toward the Convention—Maine Will Have a Canned Foods Exhibit at Buffalo—Difficulties of Clam Canning—A Demand for Small Lots of Corn—Apples Well Cleaned Up—Stringless Beans Are Out of the Market.

Portland, Me., January 11th, 1924.

By "Maine,"
Special Correspondent "The Canning Trade."

THE next event of importance to the Maine canning industry, as to their brothers in all sections, is the Buffalo Convention. The local delegation will be even larger than usual, and many ladies will be in the party. The Maine Canners' Association is to have a pure food exhibit during the Convention, and the committee, including H. B. Bird, C. C. Soule, J. H. Cassidy, S. H. Soule and Miss T. M. Greene, is leaving several days in advance in order to prepare the exhibit.

High Cost of Clams—The canning of clams no doubt seems a very prosaic business to the buying and consuming public, but to the small group of canners and fishermen it is a very different matter. Local papers of recent issue carried a story of a clamdigger who started from his island flats with a load of clams, was wrecked during a severe storm, spent a night lashed to his overturned dory, was washed ashore on a deserted island, and was finally rescued after more than twenty-four hours of exposure and hardship. Needless to say that with this risk concerned in the undertaking it is difficult to get the diggers to work. Several factories have closed for the winter season on this account. Clams are selling at $1.25 and $1.20 for 5 oz., with no surplus stocks on hand. Canners predict that the spring pack will be worth $1.30.

There is no change in the local canned foods market. Corn is still scarce and the small lots on hand at the close of packing are fast being absorbed. Buying is in small quantities, but is continuous, and in the run of the winter will doubtless equal the average in all lines. Apples are well cleaned up. Nearly all canners packed about a carload beyond their sales, and these small blocks are held at $3.50 for present sales, or an advanced price in the spring. Stringless beans are out of the market altogether.

As usual, a small amount of squash has been canned, and has sold at $1.45. The squash packed in Maine is all consumed in New England and does not compete with the product from other States. The local demand is for a very solid pack—the writer saw squash opened yesterday that was too dry to run out of the can, but rather had to have the can lifted off, and the contents still retained the shape of the can. That is really getting full value for the money at $1.45.

Growth Of The Canning Industry

(*Continued from page 8*)

The consumer will welcome this plan for the reason that it offers protection in every way and guarantees the destruction of spoiled canned foods when they are found.

We are glad to state that this plan now has the approval of the National Canners Association and every state association that has held its meetings during the fall and, I believe, every association, excepting one, has held those meetings and approved unanimously, the plan. The plan also has the approval of all government food officials and a large percentage of the distributors have expressed themselves as being willing and anxious to try this plan out, so that it now seems that it will be given a fair and impartial trial.

Some distributors, however, have offered a counter-plan, or proposition, which is usually termed a "flat swell allowance" and, generally speaking, this calls for one-half of one per cent. swell allowance on every invoice for canned foods sold to the wholesale distributor. This, however, would not constitute a final settlement, for the reason that should there be found in the shipment an amount in excess of one-half of one per cent., the manufacturer has no claim on the distributor for such amount.

The flat swell allowance plain, therefore, cannot possibly be considered fair, honest or equitable as between buyer and seller. It furnishes no means whatsoever of studying the cause for such spoilage or the remedy for same, neither does it offer a protection against trafficking in spoiled canned foods. True, the law may provide that the spoiled goods be destroyed upon the spot when found by government food officials, but how could it be possible for the limited number of food officials that the government can afford to maintain to police all the retail stores throughout the country and destroy all spoiled canned foods that may develop? Such a plan can only be considered as a special cash discount which would be abused in the future as it has been in the past because a large distributor may call for such a special discount in the way of a flat swell allowance, and through his large purchasing power, will have the influence of enforcing his demands upon packers; while the smaller distributor who has not this influence and purchasing power, must be satisfied with a smaller flat swell allowance or without any allowance at all.

This flat swell allowance plan also encourages unscrupulous packers, and we must admit that there are some in the canning industry as well as in all other industries who allow all of their swelled and spoiled goods to go into their shipments and to justify such action by saying that the distributor understood this as one of the terms of the contract and, if the terms of the contract call for one-half of one per cent flat swell allowance, this unscrupulous packer seems to think that he has a right to deliver one hundred per cent on that term as well as on all other terms of the contract. I, of course, would condemn such methods and practices, yet, at the same time, why inaugurate a plan that encourages such unfair, dishonest methods when we are spending enormous sums of money, time and talent to keep the industry clean and free from unscrupulous, unsanitatry and unbusinesslike methods; and why penalize the honest packer who will, under all circumstances and regardless of what plan is adopted, put out the best product he can manufacture, and eliminate from his pack, as far as possible, all spoilage and at the same time, give a premium, to the man who wishes to be unfair to the distributor and the consumer and indirectly, unfair to himself?

It seems almost incredible that anyone who studies carefully the two plans and considers the ultimate object and purpose of the same, would discredit the warehouse plan and uphold the flat swell allowance plan.

However, I am hopeful that a satisfactory solution of the whole problem will be arrived at in the very near future, and that the warehouse plan will be given a fair and impartial trial at least for one year. In order that the plan may receive this fair and honest trial, it should have the support of not only all of the canned food manufacturers but of every distributor together with the approval of the food officials of the country. I am optimistic enough to believe that this will be the final outcome and that a great amount of good will come from the final solution of the problem.

It is also very gratifying to be able to state that members of the canning industry all over the country appreciate the splendid results accomplished through the untiring efforts of all those who, in the past years, have worked so diligently for the success of the National Canners Association. The approval of the work done by the association and the future program to be carried out is expressed in the fact that the membership, based upon the number of cases of canned foods packed annually, has increased since our convention of January, 1923, from approximately nineteen million cases to fifty million cases, and it is the earnest desire of those in charge that such membership shall continue to increase until all canners have become full fledged members. This increased membership will enable us to do more extensive work and at the same time reduce the membership dues.

The Canning Trade always publishes the first report of the Convention-- while it is news. This year Feb. 11. 1924

Tonight the poker player wins heavily, and tomorrow he loses heavily; tonight he will have the cards —will have luck—and tomorrow he will not have the cards, and, therefore, will not have the luck. And so it will go during a year and during a period of years, and at the end of a year or a period of years he will neither have won nor lost—he will break even.

* * *

It is so with the tomato canner. This year he will win, but next year he will lose. He will not win straight ahead, nor will he lose straight ahead, and at the end of ten years he will neither have won nor lost; at the end of ten years he will be where he was at the beginning. If he plays the game recklessly he will be bound to lose, and thus he will soon horn himself out. To break even during a period of ten years the tomato canner has to play the cards "close to his shirt."

* * *

The poker player engages in a game of chance—he may win or lose. All his hopes of winning are bound up in the cards which are dealt him. If the cards co-operate the poker player wins; but if the cards come to him singly and inconsecutively, he loses. If four aces shall combine, and, therefore, co-operate, the remaining forty-eight cards become almost valueless.

* * *

And so the game of tomato canning may be likened to the game of poker. The tomato canner, when "he sits in on the game," never knows whether he is going to win or lose. But whereas uncertainty or chance is the element which fascinates in poker playing, it need have no part, at least no great part, in tomato canning. Tomato canning need not be a gamble, but usually it is a gamble.

* * *

The tomato canner may win practically all the time if he cares to, but he's got to know what he is doing if he is going to win at all. In the tomato canner's game the consumer must be allowed to play a prominent part, for if the consumer isn't setting in on the game it must always be a profitless adventure.

* * *

ACKNOWLEDGMENT—This is a tardy, but, nevertheless, a hearty acknowledgment of the many cards of greeting received at the Christmas period and for the New Year. They came from almost every point of the country, from coast to coast and from Canada, and bore not mere stereotyped messages, but personal expressions of good will and wishes for prosperity, health and progress. They constitute that touch of human nature that makes life worth living, and gives that impetus to do better and to live better because there are such friends in the world. From the greatest to the least we wish to acknowledge in this way our sincere appreciation for the thoughtfulness that prompted them, as well as for the good wishes and for the personal interest that is manifested, for it would be almost impossible to acknowledge each one as it is worthy of acknowledgment. "The Soul of Christmas" came from President Anderson, with greetings in Jimmie's own poetry from Mrs. Anderson, Marcel and Alice. A long-time friend and reader sends: "Health and benediction, merry Christmas and prosperous New Year," not in cold type, but in written form; another, "May you never grow weary in the service you render to the industry," and so on through a shower that comes as refreshing and encouraging as the spring rain to the budding plants. We thank you, and we sincerely reciprocate the good wishes, and may they be multiplied an hundred fold for each and every one of you, faithful friends and readers.

DEATH OF LOUIS T. WEIS.

"Funeral services for Louis T. Weis were held yesterday at his home, Pimlico road and Oswego avenue. The Rev. Dr. Julius Hofmann and the Rev. J. G. Flerk conducted the services. Burial was in Druid Ridge Cemetery. Mr. Weis is survived by his widow, Mrs. Margaret Weippert Weis; two sisters, Mrs. C. K. Vogt and Mrs. Adam Lohmann; a brother, Theodore P. Weis; a daughter, Mrs. Raymond H. Bloedorn, and four sons, Albert H., Edward C., G. L. Wellington and Louis T. Weis, Jr."

The above notice appeared in the morning papers of Baltimore January 16, 1924, and means the passing of one of the well-known supply men in the canning industry. Louis Weis was one of the best-known local men in the industry. For years he operated the American Label Company., until that business was taken over by the United States Printing and Litho Co., and he then continued as manager of this branch for years. For more than a year he had been on the retired list, owing to poor health. His son is with the company. Mr. Weis was a wide-awake, progressive thinker and worker, and the industry is the poorer because of his passing.

MR. E. GREENABAUM DEAD.

Thursday morning, January 17th, Mr. E. Greenabaum died at his home, in Seaford, Del., where, as previously announced, he was taken seriously sick a week or so ago. Mr. Greenabaum belonged to the old school of canners, was one of the largest in Delaware, and was always a close student of the business. There were years when he was the largest pea producer in the East, as he was often in tomatoes, but the pea aphis had become so bad in his fields that he decided to abandon pea packing this year.

He steadily improved his plant until he had one of the best appointed in this section, and was a very large producer of catsup.

Mr. Greenabaum was a quiet, thoughtful man of ability, respected and beloved, and will be sadly missed. He leaves his business in excellent hands, his son and a son-in-law, I. Stephany, being well tutored under Mr. Greenabaum's experienced care.

THE LANDRETH

SPOT OR 1923 CROP SEEDS

We have for spot delivery, a few Alaskas, Green Admirals. These are all short.
Sweet Corn is short. We still have some however.
Write us for prices.

We also have the following for spot delivery——

Peas	Okra	Cabbage	Cucumber
Corn	Tomato	Spinach	Snap Beans
Beet	Squash	Pumpkin	Cauliflower

Dwarf Lima Beans

Or any other varieties you may want.

FUTURE OR 1924 CROP SEED

When ready to place your Contract order for delivery after 1924 crop is harvested, write us for prices.

If we had not grown good seeds, given fair prices and careful attention to business, we would not be the oldest Seed House in America, as this is our 139th year in the business.

D. LANDRETH SEED COMPANY
BRISTOL, PA.

Business Established 1784
139 years in the Seed Business.

Tonight the poker player wins heavily, and tomorrow he loses heavily; tonight he will have the cards —will have luck—and tomorrow he will not have the cards, and, therefore, will not have the luck. And so it will go during a year and during a period of years, and at the end of a year or a period of years he will neither have won nor lost—he will break even.

* * *

It is so with the tomato canner. This year he will win, but next year he will lose. He will not win straight ahead, nor will he lose straight ahead, and at the end of ten years he will neither have won nor lost; at the end of ten years he will be where he was at the beginning. If he plays the game recklessly he will be bound to lose, and thus he will soon horn himself out. To break even during a period of ten years the tomato canner has to play the cards "close to his shirt."

* * *

The poker player engages in a game of chance—he may win or lose. All his hopes of winning are bound up in the cards which are dealt him. If the cards cooperate the poker player wins; but if the cards come to him singly and inconsecutively, he loses. If four aces shall combine, and, therefore, co-operate, the remaining forty-eight cards become almost valueless.

* * *

And so the game of tomato canning may be likened to the game of poker. The tomato canner, when "he sits in on the game," never knows whether he is going to win or lose. But whereas uncertainty or chance is the element which fascinates in poker playing, it need have no part, at least no great part, in tomato canning. Tomato canning need not be a gamble, but usually it is a gamble.

* * *

The tomato canner may win practically all the time if he cares to, but he's got to know what he is doing if he is going to win at all. In the tomato canner's game the consumer must be allowed to play a prominent part, for if the consumer isn't setting in on the game it must always be a profitless adventure.

* * *

ACKNOWLEDGMENT—This is a tardy, but, nevertheless, a hearty acknowledgment of the many cards of greeting received at the Christmas period and for the New Year. They came from almost every point of the country, from coast to coast and from Canada, and bore not mere stereotyped messages, but personal expressions of good will and wishes for prosperity, health and progress. They constitute that touch of human nature that makes life worth living, and gives that impetus to do better and to live better because there are such friends in the world. From the greatest to the least we wish to acknowledge in this way our sincere appreciation for the thoughtfulness that prompted them, as well as for the good wishes and for the personal interest that is manifested, for it would be almost impossible to acknowledge each one as it is worthy of acknowledgment. "The Soul of Christmas" came from President Anderson, with greetings in Jimmie's own poetry from Mrs. Anderson, Marcel and Alice. A long-time friend and reader sends: "Health and benediction, merry Christmas and prosperous New Year," not in cold type, but in written form; another, "May you never grow weary in the service you render to the industry," and so on through a shower that comes as refreshing and encouraging as the spring rain to the budding plants. We thank you, and we sincerely reciprocate the good wishes, and may they be multiplied an hundred fold for each and every one of you, faithful friends and readers.

DEATH OF LOUIS T. WEIS.

"Funeral services for Louis T. Weis were held yesterday at his home, Pimlico road and Oswego avenue. The Rev. Dr. Julius Hofmann and the Rev. J. G. Flerk conducted the services. Burial was in Druid Ridge Cemetery. Mr. Weis is survived by his widow, Mrs. Margaret Weippert Weis; two sisters, Mrs. C. K. Vogt and Mrs. Adam Lohmann; a brother, Theodore P. Weis; a daughter, Mrs. Raymond H. Bloedorn, and four sons, Albert H., Edward C., G. L. Wellington and Louis T. Weis, Jr."

The above notice appeared in the morning papers of Baltimore January 16, 1924, and means the passing of one of the well-known supply men in the canning industry. Louis Weis was one of the best-known local men in the industry. For years he operated the American Label Company., until that business was taken over by the United States Printing and Litho Co., and he then continued as manager of this branch for years. For more than a year he had been on the retired list, owing to poor health. His son is with the company. Mr. Weis was a wide-awake, progressive thinker and worker, and the industry is the poorer because of his passing.

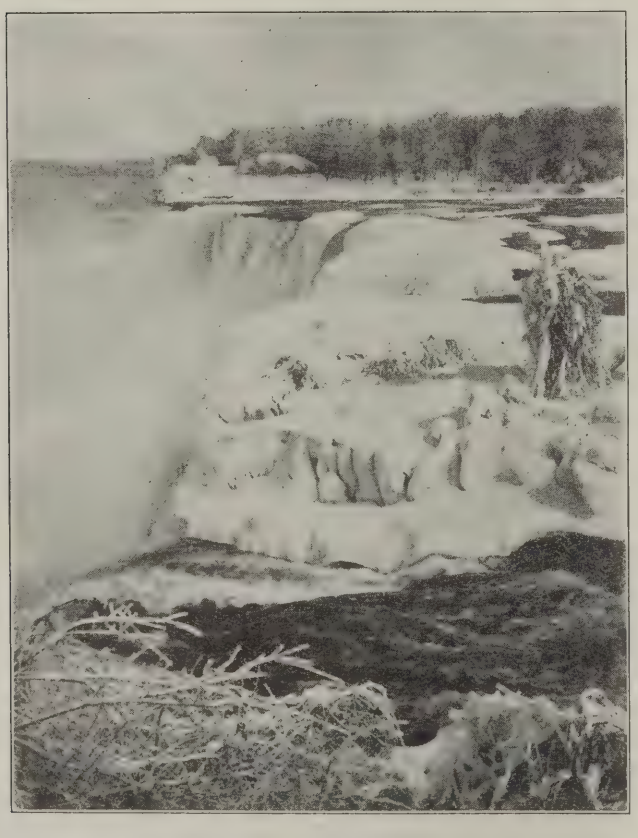
BUFFALO CONVENTION NEWS



ANNUAL CONVENTION, WEEK OF JANUARY 21st, 1924

National Canners Association—Canning Machinery & Supplies Association
National Food Brokers Association

BIG MACHINERY EXHIBITION BIG CANNED FOODS DISPLAY

EVERYBODY WANTED——EVERYBODY WELCOME

"Tune In", You Raido Fans—For those canners who cannot attend the Convention, and especially for the families of the canners, the stay-at-homes, arrangements have been made that will allow them to take part in the enjoyments of the Convention, while comfortably seated in their own homes. On Tuesday afternoon at 2.30 P. M. the musical tendered to the ladies of the Convention will be broadcasted by station WGR (Buffalo). These musicals are always by famous artists and are a treat far above the ordinary, so that if you or your friend have a radio be ready and tune in on this and you will be able to share this delightful occasion.

Niagara Falls in winter—a sight many canners hope to see during the Convention.

The same station will broadcast the music at the President's Ball on Friday evening, January 25th, from 11.30 to 2 A. M. arrange your party and dance with the Convention on this closing evening of the Convention. Buffalo is well situated to reach the greatest number of home by raido, and if the thoughtfulness of the Convention Committee is appreciated, there will be parties all over the land, dancing to the music which is 'tickling the toes' of the dancers on the floor of the great ball-room in the Statler hotel. Another year, with the rapid spread of the raido habit, it may be arranged to broadcast the entire Covention, addresses and all, and the canners can then sit at home and hear all that transpires and be saved the trouble of reading it in a convention issue. But, they will never be able to broadcast the 'thrill' of the crowd, the educational and broadening influence which comes from rubbing of elbows with fellow canners and the swapping of experiences with the men in your same line of endeavor; and above all the sight of Machinery Hall and what it has to offer in the latest and best of machinery and supplies, the 'contagion' of the hum and the noise, of the warmth and the life of that big hall, can only be had by being numbered among those present.

What City Next?—It may seem discourteous and lacking is respect to our host, Buffalo, to speak so soon of the next Convention City, but our intention is just the reverse; we want to call particular attention to Buffalo and the splendid way in which she greets us. and for this reason. There has grown up a very decided sentiment against this nomadic method of holding the annual Convention, and many men in the industry want to see the annual Convention convene in the same City every year; to stop this tramping from town to town, this seeking for a new location each year. Which City should be selected is a very much alive question, and not of our making. After last year's Atlantic City meeting some of the previously died-in-the-wool central-western advocates come to us and begged us to wage inceassant battle to have Atlantic City chosen as the regular, every year meeting place for annual Convention. They were enthusiastic over its climate, the balmy days and beautfil sunshine, its numerous hotels of every kind and discription to fit the pocketbook of every man, of its magnificent Machinery Hall and the excellent manner in which the exhibits were handled into and out of the Show. They were then enthusiastic over Atlantic City; they had checked up carefully on Louisville the year before, they knew Cleveland and Chicago, and now they have the chance to study Buffalo and its most modern and up-to-date offerings, for Buffalo stands in the front of Convention Cities, in both hotels and Machinery hall. So our purpose its merely to answer their demands by suggesting more study and closer observations. After Buffalo possibly a definite decision can be reached, and if it can, it should be reached. The Convention is too big, and too important to be dragged all over the country as we have been doing all these years. It cannot be expected that everyone could possibly be pleased with any selection that may be made, we are not seeking the Utopia. But every angle of the matter must be taken into consideration, hotel accomodations, and

style of treatment of Conventions, railroad facilities for both passengers and freight, and as we meet in about the worst possible time of the year as regards weather the climate of the selected City must have due consideration. Buffalo is up for consideration, and the Conventionites should study it during Convention week, and be ready for a decision when the Convention is over. This is not a discourtesy to Buffalo, but on the contrary is a compliment, for we believe that Buffalo will measure up excellently with any other City.

CHILE PROMOTING MODERN CANNING FACTORIES.

MODERN canning is being promoted by the Chilean Government by the establishment of a modern canning factory on the large model farm, says Vice Consul Edwin H. Livingstone, Valparaiso, Chile. Chile is a producer of a large variety of fruit, sub-tropical as well as varieties common to the temperate zone. The Chilean canning industry at present consists of 17 plants with a production in 1920 of slightly over 9,000,000 cans. In every case these factories are using hand or semi-hydraulic machinery, and are employing methods obsolete in the canning industry of the United States for the past 15 years.

NORWEGIAN HERRING AND SARDINES STILL SCARCE.

SARDINE fishing in Norway has been practically abandoned, due to the scarcity of fish, and the fishermen have mostly gone into other pursuits, according to Consul George N. Ifft, Bergen, Norway, in a report to the Department of Commerce dated November 10, which has just been received. The catch up to that date was 42,000 hectoliters. The fat herring fishing shows slight improvement, especially in the northern districts. The catch is mostly small herring, suitable for canning, and amounted to date to 132,000 hectoliters, which is about one-third of the normal catch.

"WAREHOUSE PLAN" CONTRACT CLAUSE.

Add This to All Your Contracts.

Goods sold under this contract are packed in compliance with the Food and Drugs Act of June 30, 1906, and are guaranteed against spoils.

(a) If sold for delivery from future pack to July 1st following date of billing.

(b) If sold for delivery from spot stocks for six months from date of billing.

Payment shall be made by seller on certificate of identification and destruction of spoiled goods at zonal warehouses maintained by the National Canners Association, to which spoils shall, at the request of the seller, be shipped by the buyer for official inspection, identification and destruction.

Claims so established shall be paid within thirty days at invoice price, and freight to warehouse, if incurred.

All claims for spoils must be made and bills rendered by buyer to seller on or before July 10, in case of sales against future pack, and not later than six months from date of billing, in case of sales from spot stocks.

The Department of Raw Products

"Quality" cannot be produced in the can unless quality products are produced on the farm. This Department will, therefore, seek the best thoughts of the country on better crops, and how to produce them, and ways and means of combating the enemies of such crops.

The assistance of all agricultural experts is sought and heartly invited, a way offered them here to reach the entire canning industry of all States; and we likewise extend to all our readers an invitation to explain their troubles and a_k remedies. And by all means let those who have devised ways or descovered remedies give the benefit of their experience to those less fortunate.

"Quallty" canned foods can only be attained by the co-operation of all canners towards the production of quality crops.

BETTER FARMING THE ONLY SAFE RELIANCE

AFTER we have done everything that it is possible to do toward improving agriculture as a whole, it still will be true that only those who farm intelligently and carefully, who work diligently and save reasonably can hope to prosper. Those who fall below these standards will make at best but a bare living.

It is a mistaken notion that when prices are low because of overproduction that the remedy is to take less pains and let the yields of our acres and of our animals run down. Such practice leads to but one end —bankruptcy. *Whatever the price, it is the man that makes the highest returns on his acres who is most prosperous.* The truth is, the lower the price of the product, the greater the need of high efficiency in producing it. When prices are high, even mediocre yields are profitable; but such yields are always unprofitable when the prices are low. Therefore, the more discouraging the price of farm products, the greater the necessity for good farming. * * * Except for brief periods when we were farming new land that had been virtually a gift from the Government, those who have taken only average pains have never prospered. There is no more new land now. Henceforth we shall have to farm old land and pay a good round price into the bargain for it. No agriculture can be prosperous in the face of declining yields and rising production costs. The surest way to cut production costs is by increasing the yields of our acres and our animals. The farmer who disregards this law cannot be saved by any outside help.

Twenty years hence the farmer who has systematically produced high yields through periods of low prices and high prices will be out of debt and be the leading man of his community. At that time the fellow who is more interested in holding down yields to prevent overproduction than in getting large and economical returns from his land will be fortunate if he is as well off as he is today. From an editorial by H. J. Waters in the Weekly Kansas City Star for December 5th.

INVESTIGATIONS EMPHASIZE IMPORTANCE OF YIELD TO PRODUCTION COSTS

By Soil Improvement Committee, Nat. Fert. Asso.

INVESTIGATORS of the Cornell (N. Y.) Experiment Station have published the results of their efforts to obtain information on the production and costs of the principal canning crops grown in that State.

The report contains much of interest regarding peas. "The cost per ton of peas," states L. J. Norton, "is very closely related to the yield per acre." Thus on 101 farms where yields averaged 2,138 pounds per acre the return was $20 per acre more than on 81 farms averaging 1,492 pounds. Furthermore, on 80 farms averaging 2,938 pounds per acre the increased return advanced to $52 per acre. These increased returns were produced at an average total cost of $2 per acre. The returns for the three groups per hour of man labor were, respectively, 31c, 83c and $1.59.

The three factors that seemingly had the most to do with increasing the rate of yields were fertilizer, manure and lime. It was found that the yield per acre advanced almost exactly in the same order as did the amounts of fertilizer and manure used, particularly the former.

IS NEW ENGLAND "WORN OUT?"

Editor, Rural New Yorker:

In a recent issue you say that the New England people ought to produce more of their food supply. I think that is bad advice. Most New England soils are worn out and cannot be restored. The section must always depend on other parts of the country for its food supply.

WE do not believe it! If New England decides that her soil is "worn out" and attempts to live the life of a parasite—drawing its food from a distance—her manufacturing supremacy will slowly fade away, and she will lose her place in the business sun. In the future the food supply will determine the rate of nations and sections. The soil of New England is not "worn out." We know of one garden, in a town where the soil is naturally light, which has produced more than 300 crops in succession, and this year's crop is best of all. Around Concord, Mass., are fields which were used by the Indians as gardens before the white settlers appeared. These fields have been in continuous cultivation and still produce great crops. In Europe there are farms which have been under cultivation for 1,000 years and more—still productive and strong. Most of the New England soil is capable of producing good crops, and with the proper handling will continue production for centuries. It is no more "worn out" than the sun, the moon and the stars. Much of it is "resting." More of it has been so abused that it is sulky, and no wonder, but it is not "worn out." By using soybeans, sweet and Alsike clover, as is done in parts of the Middle West, thousands of acres of New England soil can be made to produce bread and meat for home consumption. Just as soon as the New England people stop listening to the pessimists and really believe that their soil has these possibilities the food supply will increase. It is just a matter of belief in the soil and its possibilities.—Editorial in Rural New-Yorker.

PLAN OF REORGANIZATION

The Sears & Nichols Canning Co.

Chillicothe, Ohio

As approved by the Creditors Committee

November 27, 1923

Creditors Committee—H. C. Robinson, Vice Persident, Guardian Savings Bank and Trust Co., Cleveland, Chairman S. M. Veail, Vice President, First National Bank, Chillicothe, Ohio, Secretary James L. Ford, Jr., President, Franklin Bank, St. Louis, Mo., Geo. C. Forey, Vice President Fletcher American National Bank, Indianapolis, Ind., W. E. Woollenweber, Whitaker-Glessner Co., Wheeling, W. Va., James J. Heekin, Heekin Can Co., Cincinnati, Ohio, Arthur Morgan, U. S. Printing & Lithograph Co., Cincinnati, Ohio.

Plan of Reorganization

The re-organization of The Sears & Nichols Canning Company to be effective as follows:—

1. **Incorporation.** A new Company to be incorporated under the name of Sears & Nichols Corporation, which shall purchase the assets and business of the old Company, and assume the first mortgage bonded indebtedness now outstanding, amounting to $750,000.00, and refund the same.

2. **New Issue Bonds.** The new Company to issue $1,250,000.00 of First and Refunding 7 per cent. Fifteen Year Bonds. Of these, a minimum of $600,000.00 are to be sold for cash at $90.00, yielding $540,000.00; the remaining $650,000.00 to be held in trust to take care of the First Mortgage Bonds.

3. **First Mortgage Bond Extended.** Of the present issue of $750,000.00 First Mortgage Bonds now outstanding, $100,000.00 to be retired by cash payment, and the balance of $650,000.00 to be exchanged for a new 8 per cent. First Mortgage Bond issue of $650,000.00 maturing in ten years. The Sinking Fund to be reduced to $37,500.00 for two years, $50,000.00 for four years, $75,000.00 for two years, $100,000.00 for one year and $125,000.00 for one year.

4. **Cash Payments** Creditors' claims to be credited with interest at 6 per cent. from the date of the appointment of the Receiver, namely, April 22nd, 1922, to the date of re-organization, and 10 per cent. of the total claims to be paid in cash.

Second Mortgage Bondholders to be paid all past due interest and 20 per cent. of the principal in cash.

5. **Debentures** The new Company to issue approximately $200,000.00 of Class A Income Debentures, maturing in fifteen years, bearing interest at 7 per cent., which said Debentures are to have a preference over Class B, in regard to the payment of interest, and in case of liquidation, which said Debentures are to be given in exchange at par for balance owing on the present outstanding Second Mortgage Bonds. Also approximately $1,000,000.00 of Class B Income Debentures, maturing in fifteen years, bearing interest at the rate of 7 per cent., which said Debentures are to be given in exchange at 90 as settlement in full for the balance owing the general creditors.

The Debentures to have the right to select two-thirds of the Board of Directors until one-half of the total amount of the Debentures are retired, at which time the stockholders are to have the right to select one-half of the Board of Directors.

The Income Debentures shall be cumlative at the rate of 7 per cent. which must be paid if earned, or such proportion as is earned. Earnings to be clearly defined in the Trust Agreement.

6. **Working Capital.** The balance of the cash received from the proceeds of the sale of the First and Refunding Bonds, after the payment to the First Mortgage Bondholders, and the cash payments to the Second Mortgage Bondholders, the general creditors of the Company, and the re-organization expenses shall be used for working capital.

7. **Retirement of Bonds and Debentures.** Both the First Refunding Bonds, and both classes of Debentures, to be callable at any interest time, either in part or as a whole at par. with the understanding that an amount of money proportionate to the total outstanding issue of each class, shall be set aside whenever it is desired to retire any of these issues. Retirements to be made by tenders, the cheapest bonds and the cheapest tenders in each class of Debentures being selected, and in the event that no tenders are received for one class of securities, the Directors to have the option of either retiring said class by lot, or of applying the money set aside for this class to the other classes making tenders of securities, in proportion to the amount of same outstanding. No retirement of either class to be made if the net quick assets after such retirement, be less than the First Mortgage Bonds outstanding.

8. **Right to Create New Mortgage.** The First and Refunding Mortgage shall have provision that in the event of the necessity for refinancing the First Mortgage Bonds, a satisfactory sale cannot be made of the First and Refunding Bonds held in trust for this purpose, that the Board of Directors shall have the right to create a new First Mortgage Bond, limited to an amount that would produce sufficient funds to retire the present and outstanding First Mortgage Bonds. This right shall be given to the Board of Directors without the necessity of securing the consent of either the First and Refunding Bondholders the Debenture Holders, or the Stockholders. If this step is necessary, the First and Refunding Bonds that were held in trust for the purpose shall be cancelled.

9. **Capitalization.** Capital Stock to be authorized as follows:

(a) 10,000 shares of no par value Common stock Class "A," with voting power.

(b) 15,000 shares of no par value Common Stock Class "B," with voting power.

10 **Conversion Old Stock for New.** (a) The present Common stockholders owing 9965 shares will receive the new no par value Common Stock Class "B" on the basis of one share of the new stock for one of the old stock.

(b) For the passed dividends on the Common Stock, declared prior to October 1st, 1921, but not withdrawn, amounting to $20,616.98, the stockholders to recieve for each $100.00 of such dividends one share of the no par value Common Stock, Class "B"; scrip to be given for fractional parts thereof.

(c) The present Preferred Stockholders owning 457 shares of 7 per cent and 9059 shares of 8 per cent stock to receive the new no par value Common Stock

AYARS MACHINE COMPANY

SALEM, NEW JERSEY

BROWN BOGGS CO. LTD., HAMILTON, ONT., Sole Agents for Canada.

Class "A," on the basis of one share of the new stock for one of the old.

(d) For accrued dividends on the present Preferred Stock for the period from October 1st, 1921, to December 31st, 1923, amounting to $170,259.75, one share of the new Common Stock Class "B" for each $100.00 of accured dividends; scrip to be issued for fractional parts thereof.

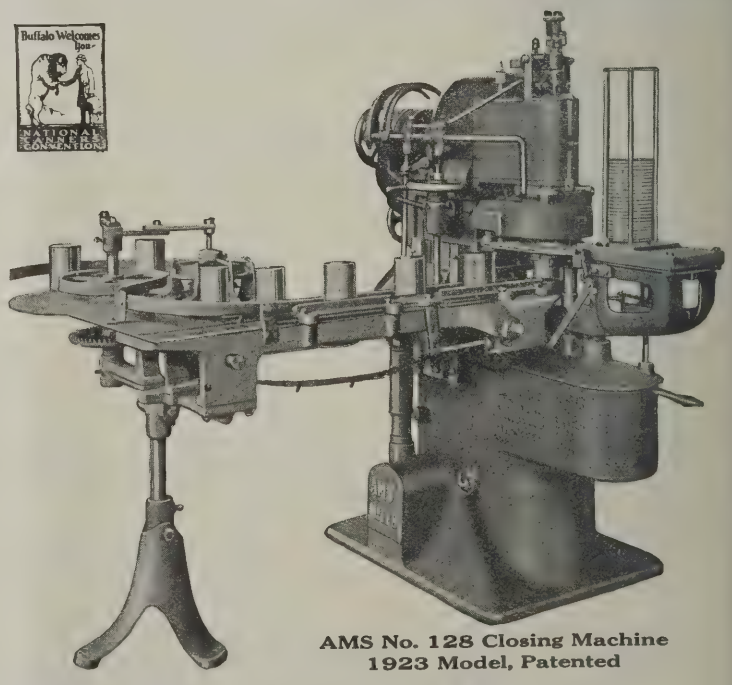
11. **Terms and Condition Common Stock Classes A and B.** (a) The annual earnings of the Company shall first be used in paying the interest and Sinking Fund on the First Mortgage Bonds; the interest on the First and Refunding Bonds and Debentures and the retirement of the First and Refunding Bonds and Debentures. After obligations have been met and proper reserves for plant betterment and surplus have been made each year, together with a sufficient reserve for meeting the fixed charges of the next year following, the Directors may annually declare a dividend upon the Common Stock Class "A" of not more than $7.00 per share provided sufficient net surplus remains to justify the payment of such dividends, said dividends to be paid semi-annually or annually as the Directors may decide.

(b) Said dividends upon the Common Stock Class "A" shall be paid preference to any dividends upon the Common Stock Class "B."

(c) The said Common Stock Class "A" shall be preferred as to the assets of the Company, in case of its insolvency or dissolution, and the holders thereof shall be entitled to receive from the assets which remain after paying the liabilities of the Company, the full payment of $100.00 per share, and such dividends as may have been declared and not paid before anything is paid to the holders of the Common Stock Class "B."

(d) The holders of both classes (of the Common Stock Class "A" and Common Stock Class "B") shall have the right to vote in the election of Directors and all legal corporate matters, being eligible to serve on the Board of Directors.

(e) After the First Mortgage Bonds, First and Refunding Bonds and the Debentures have been retired, any or all of said Common Stock Class "A" issued and outstanding may be redeemed in whole or in part as determinded by the Board of Directors on any dividend paying date upon the payment to the holder of $100.00 per share and such dividends as may have been declared and not paid.



12. **Re-organization Committee.** For the purpose of carrying this plan into execution, it is recommended that the holders of the first and second mortgage bonds, the general creditors, and the stockholders, shall each select a representative to serve as a member of a committee on re-organization, having full power and authority to carry out the provisions of this plan, and shall deposit their holdings and claims with a custodian as they may select, for the purpose of facilitating the work of reorganization.

Respectfully,
CREDITORS' COMMITTEE,
THE SEARS & NICHOLS CANNING CO.

No. 30A Automatic Strip Feed Press

This Automatic Strip Feeding Press is adaptable to the rapid and economical production of can ends or other articles made from tinplate or light sheet metals up to 4'' round or square. The feeding mechanism is entirely automatic giving an output of from 60,000 to 100,000 a day and is arranged so that change gears may be utilized for handling from 3 to 20 cuts to the strip and stock up to 29'' in length. The positive action of feed not only allows a high capacity, but insures an accurate register for decorated work. As on all our automatic presses an improved friction brake is provided which does not engage crankshaft until clutch is released. To prevent damage to dies, press is equipped with a recent improvement which automatically stops the entire mechanism when conditions are not entirely regular. Standard equipment includes attachments for one size only with exception of dies. Attachments for additional sizes can be promptly furnished at extra cost.

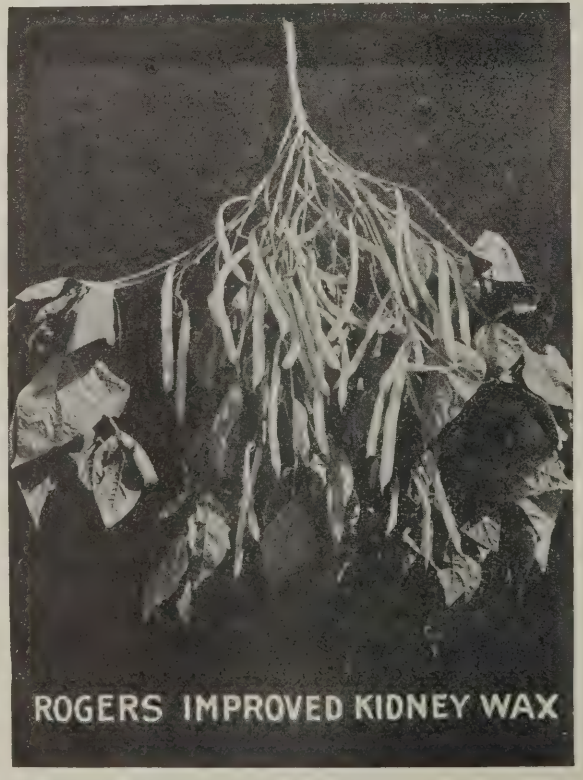
Prior to 1923 Pennsylvania, Tennessee and Kentucky composed one group.



The figures for Arkansas were, prior to 1923, included in the group now composed of all other States.

CONGRESS AND THE TAX BILL.

By Paul Fishback.

THERE are two items in the tax law in which our members can interest themselves, and by co-operating with the Association, and other Associations which are active in the same general direction, may be successful in obtaining relief at the hands of Congress, from the nuisance taxes on telephone and and telegraph messages, and from the $50 Occupational Tax assessed against brokers.

Secretary of the Treasury Mellon has recommended that certain taxes be reduced and others abolished, provided a soldier bonus bill is not passed. The new treasury bill will advocate the repeal of the tax on telephone and telegraph messages. This bill will be referred to the Ways and Means Committee of the House, which may or may not submit it to Congress in

Other Originations:
Rogers Stringless Refugee G. P.
Rogers Green Admiral Peas,
Rogers Winner Peas.

Rich, creamy, slender oval pods, 5 to 6 inches in length, free from rust, perfectly straight and entirely stringless.

Seed: white, with very small, black eye. Plant: robust, about 18 inches high, erect, bushy and very prolific.

We know of no wax variety more desirable for home, market gardener, or canners' use.

Now booking contracts, future delivery, 1924 crop.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

original form. Further, the fight on the soldier bonus and the tendency of all congressmen to play politics in a presidential election year, may delay or prevent any action.

The following bill, introduced almost as soon as the House organized, by Congressman Wm. J. Morgan (17th Ohio District), known as H. R. 91, aims at the repeal of the tax on telephone and telegraph messages, independently of any action by Congress on a general tax bill (a similar bill, known as S·1025, has been introduced by Senator Frank B .Willis, of Ohio):

"A BILL

To Repeal the Tax on Telegraph and Telephone Messages. Be it enacted by the Senate and House of Representative of the United States of America in Congress Assembled, That Section 500 of the Revenue Act of 1921, except subdivision (d) of such section is repealed, but shall remain in force for the assessment and collection of all taxes which have accrued thereunder, and for the imposition and collection of all penalties and forfeitures which have accrued or may accrue in relation to any such taxes."

That is the entire bill, and is all that is necessary to repeal this tax. There have been several bills introduced in the present Congress to repeal this tax, but it is believed that if all members of all interested trade associations (there are 247 working on this repeal) concentrate on the Morgan bill and the Willis bill, it will prevent the scattering of shot, prevent duplication and aid in results.

Write your Senator and your Congressman urging the passage of the Willis and Morgan bills, so that the tax on telephone and telegraph messages may be abolished. Write, also, to one or more members of the Ways and Means Committee of the House, their names are listed below, urging them to recommend the repeal of the tax.

The tax on telephone and telegraph messages was a war tax, is indefensible in times of peace, and amounts to $30,000,000 annually, which is a big load on commerce. Similar taxation (on freight, passenger and express charges, all of which were war time measures) has long since been repealed, and there is no justification for the continuance of this tax.

If business men will let their congressmen know that they want this wire tax repealed, no matter what is done with the revenue bill, it may result in having H. R. 91 and S. 1025 passed, repealing this tax, even if politics blocks or defeats action on general tax reduction.

$50 Occupational Tax—It is not known at this time whether the Treasury Bill includes section 1001 of the 1921 Revenue Act, which provides that "Brokers shall pay $50.00." Just as soon as a copy of the Treasury Bill may be obtained you will be informed on the subject.

However, our members are urged to write one or more of the members of the House Committee on Ways and Means, demanding that this section be omitted from the 1924 measure. The Occupation Tax, which was also a war measure, is discriminatory. It is neither right nor fair that Congress should tax one class of business men, without taxing all classes, merely because they are in business. If occupational taxation is right in principle, then it is right that the retail grocer, butcher, druggist, auomobile dealer, or any other class of business men be taxed as such. The Occupational Tax was written into the law during war times. It was unfair then, but was unopposed because all citizens were willing that the country have ample income to prosecute the war. There is no justification for the discrimination now.

An effort is being made to have a bill introduced simultaneously in the House and Senate repealing this section of the Act of 1921, so that it may receive action, regardless of the fate of the general revenue bill. Pending such action, let the House Ways and Means Committee know that food brokers are opposed to that section of the existing law which imposes a $50 tax upon them for no good reason.

Members of the Ways and Means Committee—The membership of the Ways and Means Committee of the House of Representatives, which committee will handle all tax legislation in the present Congress, has been increased from 25 to 26. Of this number 15 are Republicans and 11 Democrats. Please write to one or more of these members of the Ways and Means Committee urging them to support legislation that will repeal the tax on telegraph and telephone messages. The address of all of the members of the Ways and Means Committee is simply "House Office Building, Washington, D. C." Use the title "Hon." as a prefix, and after each name write "Member Ways and Means Committee." The names follow:

Republicans: Wm. R· Green, chairman, Iowa; Willis C. Hawley, Oregon; Allen T. Treadway, Massachusetts; George M. Young, N. Dakota; James A. Frear, Wisconsin; John Q. Tilson, Connecticut; Isaac Bacharach, New Jersey; Lindley H. Hadley, Washington; Charles B. Timberlake, Colorado; Ogden L. Mills, New York; Henry W. Watson, Pennsylvania; Frank Crowther, New York; Charles C. Kearns, Ohio; Carl R. Chindblom, Illinois; James C. McLaughlin, Michigan.

Democrats: John N. Garner, Texas; James W. Collier, Mississippi; Wm· A. Oldfield, Arkansas; Chas. R. Crisp, Georgia; John F. Carew, New York; Whitmell F. Martin, Louisiana; Peter F. Tague, Massachusetts; Cordell Hull, Tennessee; Clement C. Dickinson, Missouri; Henry T. Rainey, Illinois; John J. Casey, Pennsylvania.

ECONOMIC PROSPECTS OF 1924

By Herbert Hoover, Secretary of Commerce.

THE important thing in formulating any judgment as to the economic future is an understanding of our present position and of the forces that are in motion for and against economic progress. The following summary is based on the annual review by the Department representatives throughout the world:

The economic outlook for our own country for the next year is bright. In general the world situation is hopeful. The general spirit of prudence, the absence of speculation, complete employment, high production, and the great financial strength and stability of the important States in the Western Hemisphere, together with the promise of the early conference for systematic consideration of constructive solution of the world's greatest economic menace—Franco-German relations —all creates a hopeful foundation on which the new year may build.

An economic weather chart of the world would show three distinct areas.

The Home of the Peerless Husker Co.

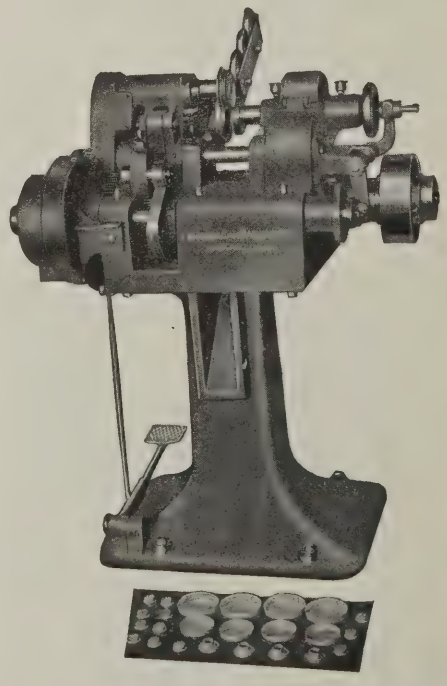
SPRAGUE-SELLS and PEERLESS CANNING MACHINERY

This advertisement is published jointly by the Peerless Husker Company, Buffalo, N. Y., and the Sprague-Sells Corporation, Hoopeston, Ill.

First, the Western Hemisphere (Asia, Australia and Africa), which have made distinct economic progress during the past year, achieving a high degree of economic recovery.



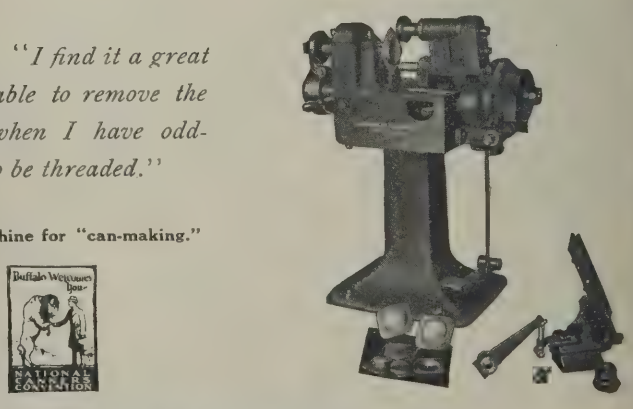
Second, Russia, the Baltic, the Balkan States, the Near East, Italy and Spain, which are still struggling with after-war political, social, currency, debt and budget problems, but yet show undoubted progress in the restoration of commerce and industry.

Third an area of economic depression resulting from the occupation of the Ruhr and the collapse of Germany. While most acute in that country, it radiates its depressing influences strongly over Poland, Czechoslovakia, Switzerland, Hungary, Scandinavia, Holland and Great Britain. France can well be placed in this group, because the failure to secure reparations has contributed to an unbalanced budget and the resulting indirect inflation. This has concealed the true situation and has given an artificial and forced draught to the industrial activity. The other countries of the group are suffering from a distressing increase of unemployment.

The German collapse has in less degree affected every other part of the world. The decreased consuming power of Germany and of the states most affected has contributed to the low price levels of food products in the United States and other food exporting countries. The decrease in her steel and coal production at first gave some stimulus to the production of other countries, but this is now offset by decreased buying power of the depressed area for other commodities. One other effect of importance has been the undoubted substantial flight of capital from any of the states in this area of depression to the United States, resulting in further excessive accumulation of gold here. The economic world has not yet felt the full impact of the occupation of the Ruhr. Were it not for the hope inspired by the initiation of negotiations for settlement of the German problem the situation would be most unpromising for the future.

Even with settlement accomplished, there will arise considerable problems in readjustment of trade through re-entry of German coal and steel into the markets and through the possible (and to be hoped) return of capital which has sought refuge in the United States from many parts of Europe. During the whole year passed the events of the depression area have at least served to inspire caution in the rest of the world, and has contributed to the absence of speculation and, therefore, to their fundamental stability. If it be possible to reconstruct Germany's finances during the forthcoming year and to secure such assistance to France as will enable the stabilization of the franc, the world will have entered into a period of great hope and much promise of prosperity. Full consumption connot, of course, be accomplished without a large measure of disarmament in Europe, for the armies today maintained by 170,000,000 people there are upon a scale which if repeated in the Western Hemisphere would mean 3,000,000 men under arms—a strain that would have made recuperation almost impossible on this side of the Atlantic, even with the economic strength which this hemisphere possesses.

Russia is slowly making progress with the inch by inch abandonment of communism and socialism. War has ceased in the Near East. Greece and Turkey



ONE BLOCK AHEAD OF THE PROCESSION

are turned toward progress. The eastern states of Europe are sensibly approaching sound projects for stabilization of budgets and currency. China is still disturbed politically, but her commerce is maintained despite it. The Japanese disaster has had less effect upon her economic stability than many anticipated and has furnished new proof of the great strength and courage of that country. Latin America is steadily increasing in productivity, but currency conditions in some instances leave much to be desired. Except in Mexico there has been a steady increase in political and social stability.

Our own country has shown a more freedom from depressing European economic influences than most others. The explanation lies in the fact that, although our exports are of profound importance, less than six per cent of our total productivity is exported, and of this only about one-half of Europe. The proportion of different products exported to Europe, of course, varies, and European conditions, therefore, have a fluctuating influence upon different industries. As less than one per cent of our manufactured products find their market in Europe, the direct products which are much more dependent upon European consumption, such as wheat and pork products, and we endure both economic and political reactions at home from this latter fact.

In 1923 the United States has witnessed the highest total productivity and movement of commodities since the war, with full employment, high real wages, greatly increased savings, large additions to home building, and the largest increase in railway equipment since the war. The whole has been accompanied by a remarkable absence of speculation, consequent over-accumulation of consumable goods, or dangerous expansion of credit. As we are not in a boom, we can expect freedom from a slump. Some secondary interrogations can be raised as to the effect of the expension of installment buying consumable goods, the acute suffering in the Northwest agricultural areas, the increase on stocks of some commodities, and decrease on some advance orders. These items are small compared to the whole industrial fabric. Taking the country as a whole, we never in history have enjoyed a higher standard of living and comfort, nor so great a degree of commercial and industrial efficiency as today or so wide an understanding of the forces which control the ebb and flow of business. As severe as the situation is the worst of the agricultural States, yet the disparity between agricultural prices as a whole and industrial commodities is gradually lessening and the economic balance is tending to right itself.

A more detailed examination of our own situation based upon the first eleven months and some later data indicates that our foreign trade will show about $4,100,000,000 in exports and about $3,800,000,000 in imports, an increase of 7 per cent in the former and 20 per cent in the latter over 1922. The merchandise balance will be about $300,000,000 in our favor. Net gold and silver imports will be about $260,000,000, or on the face of these figures almost a full liquidation of the trade balance. On the other hand, our very large net expenditure upon tourists, emigrant remittances, and other current invisible items have been apparently liquidated by the very considerable flight of capital from Europe. Our publicity issued loans to foreign countries and enterprises have been about $300,000,000 net for the year, as compared to over $600,000,000 last year.

Our manufactured production taken together will show about 10 per cent higher than 1920 and 15 per cent higher than 1922. The 1923 production of coal and coke shows a great increase, but the strike in 1922 prevents any useful comparison with last year. Production for this year increased over 1922 by about 40 per cent in iron and steel, about 50 per cent in copper, about 60 per cent in automobiles, about 15 per cent in rubber tires, about 10 per cent in lumber, about 20 per cent in cement, about 20 per cent in sanitary ware and about 10 per cent in leather. Textiles were about the same as the year before.

In the agricultural products, cotton production increased about 3 per cent, the total bushels of cereals show an increase of about 3 per cent, pork products about 20 per cent, beef about 5 per cent, with a slight increase in dairy produce.

In construction work the large additions to our railway equipment have enabled the railways to fully handle the traffic for the first time since the war, and marks a great achievement. In building there has been about the same floor space constructed, but there has been a great shift from public construction to make way for private work, as indicated by the decline of over 20 per cent in public building construction, and an increase of about 15 per cent in residential buildings compared to 1922. This shift from public to private construction is also indicated by the fact that conconcrete road contracts declined about 16 per cent,

The New KYLER BOXER.

A machine, simple in construction, positive in action, which takes the cans from the Labeler – or Automatic Cooker – as fast as they come and places them in the cases without injuring the cans or Labels. Sturdily built to last a lifetime; all metal – operates either by foot or hand – both furnished with all machines – always on the job.

PERRYMAN, MD., December 7, 1923

We just want to write you in regards to the splendid success we had with your boxing machine this year. It cased three thousand cases per day for us for forty-two days. I do not think we lost a minute's time with it during the entire season. I would say it was one hundred percent perfect.

Yours truly, F. O. Mitchell & Bro.

WILL BE EXHIBITED AT BUFFALO

Manufactured and Sold by

Westminster Machine Works

Westminster, Md.

while the output of cement, however, increased as above.

In transportation, car loadings were increased by about 15 per cent. Cargo traffic through the Panama Canal doubled—it increased 40 per cent in through Sault Ste. Marie and 30 per cent through the Erie Canal. The overseas tonnage was about the same.

Consumption is indicated by the increase in sales of mail order houses by about 30 per cent, in chain stores 18 per cent, and department stores about 10 per cent over 1922. Postal receipts were 10 per cent greater than 1922.

The stocks of goods generally at the end of this year are somewhat higher than at the beginning of the year and unfilled orders for steel are lower, as are orders for railway equipment. But the large employment bids fair for large continued consumption of goods.

Price levels maintained comparative stability. Wholesale average prices of all commodities declined about 3 per cent for the year and stand 52 per cent above 1913. Average prices for ground crops increased 15 per cent, while live stock declined about 7 per cent. Retail food prices increased during the year about 4 per cent, and the Labor Department Cost of Living Index would show an increase of about 4 per cent.

The national debt has been reduced about one billion dollars during the year, bank debits to individual accounts remain about the same in New York, but increased about 12 per cent in the rest of the country. The money in circulation apparently increased about 6 per cent. Member banks show an increase of about 6 per cent in loans and discounts. The reserve ratio is about the same as a year ago—that is, about 76 per cent. Savings increased about 10 per cent, and life insurance sales about 22 per cent. The financial items, therefore, show a general parallel with increased production without inflation.

In summary, the world situation continues under the European cloud of the reparations dispute, unbalanced budgets, unstable currencies, and the political uncertainties of armies in the old allied states greater than pre war. Yet the realization of the necessity to constructive solution of reparations, the constructive aid to Austria and Hungary, and the projects for budget reorganization in other countries all give hope that we have at last taken a turning.

Our own country has exhibited extraordinary strength and progress. The basis of healthy business activity lies in balanced budgets, stable currency, high production accompanied by proportionate consumption and savings with an absence of speculation, extravagance and inflation. These things we have in the United States. We have even more in the hope of decreasing taxes. The odds are favorable to 1924.

THE ELIMINATION OF EXCESS VARIETIES.

A Consideration in Relation to Inventory Time.

AN appeal to manufacturers throughout the country to give more attention to the elimination of excess varieties during 1924 is contained in a pamphlet just issued by the Fabricated Production Department of the Chamber of Commerce of the United States.

The department suggests that manufacturers who have not already done so undertake to simplify and standardize their products at the next inventory period.

"Wouldn't it be very much worthwhile," the pamphlet asks, "if the amount of physical, clerical and other effort of inventory could be cut in half, or probably even more; the period of plant shutdown greatly reduced, and all the figures available quickly without undue burden on the force, Have you thought of the possibilities along these lines afforded by the elimination of excess varieties and duplications you may be producing and carrying in stock? But increased facilities of inventory taking is only one of the manifold benefits and savings that are certain to accrue from a simplification and standardization project, all of which point to that all-important goal—the elimination of avoidable industrial waste.

"Certain applications and possibilities become evident on first thought. For instance, such items as raw materials, purchased parts, component parts, finished product, cartons, packing cases, terminology, performance, brands and finishes are all amenable to the simplified practice treatment. Consider, also, the extent to which centralized effort is reflected in the functioning and operation of not alone the fabricating, but of the purchasing, the accounting, the engineering, the stockkeeping and all the other departments."

Reductions made by individual manufacturers in certain commodity lines by eliminating unnecessary varieties are shown in the pamphlet, as follows:

Bottles	210 to 20
Bread	15 to 6
Cameras	106 to 67
Cigars	150 to 6
Clocks	600 to 80
Fertilizer	100 to 17
Fine Papers	377 to 56
Forged Tools	2753 to 671
Men's Collars	150 to 25
Saws	660 to 203
Toilet Goods	426 to 140
Wheelbarrows	42 to 16

"It should be observed, however," quoting the pamphlet, "that such an undertaking is not single purpose. Its direct results ramify widely. The dealer benefits through the reduced number of lines with their repair and accessory parts which he must carry in stock; the ultimate consumer finds the ready interchangeability of parts on his several machines of immense value, and the supplier of raw materials experiences a substantial improvement in the facility with which his orders are processed and handled.

"Then, too, this carrying out of individual plant simplification and standardization in no way precludes or hampers the co-operative movement within an entire industry. In fact, it facilitates the broader project. The individual program may, in many instances, be the proper initial procedure in that the potentialities of the work have been appreciated and the increased effectiveness of operation demonstrated. Interest ordinarily would be stimulated to the extent that subsequently all the manufacturers through joint efforts could determine upon a plan for the adoption of a simplified schedule to which the entire industry and trade would gladly subscribe."

"DOES THE TAIL WAG THE DOG?"

We have adopted the Wisconsin Pea Packers Association 1924 form of sales contract.

F. F. O'BRIEN BROKERAGE CO.,
D. E. Greb. Wisconsin Canned Food Dept.

CANNED FOOD PRICES

Prices given represent the **lowest** figure generally quoted for lots of wholesale size, usual terms f. o. b. Baltimore (unless otherwise noted) and subject to the customary discount for cash. ****Many canners get higher prices for their goods; some few may take less for a personal reason, but these prices represent the general market at this date.

Baltimore figures corrected by these Brokers: (‡) Thos. J. Meehan & Co. (†) Jos. Zoller & Co., Inc. (§) A. E. Kidwell & Co. (*) Howard E. Jones & Co. New York prices corrected by our special Correspondent.

ESTABLISHED 1878

The Markets

BALTIMORE, JANUARY 21, 1924

WEEKLY REVIEW

Tomatoes Advance in the Face of Statistics—The Market Higher and Firmer—Another Good Lesson in Quality—Definite Answer as to Future Prices in the Staples.

TOMATOES JUMP UP INSTEAD OF DOWN—When the first inkling as to the size of the 1923 tomato packs—14,672,000 cases—crept out the latter hours of last week, inquiries began to arrive as to what effect the figures had upon the market. For some reason or other the figures did not disturb us. Possibly we are too well acquainted with the antics of the "festive tomato" to be surprised at anything they might do. But when we ran back over the past few years and compared them with this year, we could well understand the uneasiness of the man who holds canned tomatoes and hopes for high prices. This year's statistics look large, and as figures they are large. But the market is not buying or trading in figures—apparently it is too busy eating tomatoes—and so again we are not surprised to see these same canned tomatoes, after coming close to one record, to go right ahead and establish another—they advance in price, when by all the rules of the game they should have declined. That is the answer to the numerous and insistent inquiries: What happened to the tomato market when the 1923 statistics were made known? It advanced in price, and is stronger today than it was before the figures had been announced! We are obliged to advance our market quotations on that page this week up to $1.35 in the county for 3s, as the inside or lowest possible price, and up to 95c on 2s in the same way, and 1s have gone to 65c. As this section is the controlling factor in canned tomatoes just now, those who may have been hoping for a different story might do well to cease their dreaming and get busy buying, because along with this advance has come unmistakable evidence of a firmer feeling on the part of holders, and a determination to get more for their stocks. These holders know that the great Central West is out of spot tomatoes, so far as the canners are concerned, and they are likewise quite certain that the wholesalers and jobbers are very low on stocks. True, California brought in a decided surprise with its 2,397,000 cases of tomatoes, but they are a long ways off, and present holders in this region are not worrying about them, even if California has any appreciable surplus on hand at this time, which is doubted. For there is the strange thing about it all—in spite of the big pack, the holdings in first hand are light. There is no doubt about this. The people are eating canned tomatoes, and eating them fast, and comparing the packs of the Tri-States with former years, or of the number of 10s or of 2s as packed with former years, will not replace the tomatoes that are gone.

ANOTHER LESSON IN QUALITY—R. W. Messenger say it is due to the improved quality of packing, and explain it as follows:

"Many canners will be very much surprised to learn the size of the tomato pack for 1923. The only just cause for surprise is that with the largest pack of 10s ever made there are so few left. The pack of this size was nearly twice as large as that of last year, and there are just about as many in packers' hands at the present moment as there was last year. This shows the tendency of the times. They note that the pack of 1s was two-thirds larger than 1922, also, and they are about gone; 2s, 2½s and 3s combined only a small percentage larger than last year and going fast.

"WHY this exhaustion of stocks at such an early date, when there was really a large pack made? Because of the improved quality, of course, and the actual shortage in the States which normally pack the best quality, causing buyers to turn to other States and purchase the best quality they could get in those States. Since 1919 canned tomatoes have been better and more palatable than ever before. It took a little time to bring the answer, but the answer is right here now, and if there is no slipping back we can confidently expect a higher consumption of canned tomatoes in future years than we have ever had in the past. But stick by the great lesson of the past five years, stick by the better laws now in force, and by all means improve them."

You may have differed with Mr. Messenger in the past o some of his tomato forecastings, but that he is right this tim a blind man can see with half an eye. Times without numbe any year after year we and other strivers after better qualit in all canned foods have repeatedly said that if you will give th consumer a satisfactory can of food he will keep you busy try ing to feed him. But try to "get by" with a pretty label and sloppy can of poor food and the goods will back up on you warehouse floors and the market drop off in a steadily declinin fashion. The years of adversity seem to have taught the tomat canners, as they did other canners, the truth of these assertions and they set out to pack quality in 1923—or, as we prefer say ing, a satisfactory can of food—and you see the difference in al lines of canned foods. Has the lesson been learned? Undoubt edly, but will it be remembered and followed?

It was easy to predict the result which must follow th packing of quality—satisfactory—canned foods. There was n mystery or science or farsightedness in foreseeing that inevita ble result; it was bound to follow. To the man who knows, th wonder has always been that the consumption of canned food gained as it did in the face of so much poor stuff that was regularly canned. But, now, what will be the result if the quality is not maintained, and if the Smart Alecs try to play on the reputation that is made? We do not believe that it is any harder to predict that result than it was to predict the other If the canners during 1924 are given a fair, average yield by Dame Nature, based upon their present preparations, and do not pack a bang-up, satisfactory article of canned foods in every

instance, they will be in a blue-funk at this time 1925. And not just tomatoes, but peas and corn and other things, too. And what is more, if you scare the consumers off this coming year, you will have a harder time getting them back than you ever had before. They are eager, interested, pleasantly surprised consumers and beginners now, like children; but swindle them next fall in the kind of goods you give them, and they will not only go away from canned foods, but they will tell their children's children down to the third generation to never touch canned foods.

On the other hand, pack the goods in a quality style, and you need not be afraid of what the harvest is or how large the packs of 1924.

AS TO FUTURES—We have an interesting communication from the ex-President of the Tri-State Association, E. M Records, in which he says:

"My attention has been called to quotations on future pack canned foods being sent out by brokers and commission houses. However, these quotations are not over canners' signatures, and, no doubt, in many instances could not be confirmed. These prices are absurdly low, and in some cases below cost of production.

"It has occurred to me that if more canners would publish their prices in your paper it would have a tendency to cause some of our friends to revise their ideas of selling prices. Following up this idea, I am sending you a letter that we are sending out today to our various brokers. If you see fit, we will be glad to have you publish this letter in your valued paper."

And the circular letter referred to is as follows:

"After going into costs for this season's pack very thoroughly, we submit the following prices for 1924 pack canned foods:

Peas

No. 1 Sieve in No. 1 cans Justright Peas at $1.25 per doz.
No. 2 Sieve in No. 1 cans Justright Peas at 1.10 per doz.
No. 3 Sieve in No. 2 cans Justright Peas at 1.40 per doz.
No. 4 Sieve in No. 2 cans Justright Peas at 1.25 per doz.

Tomatoes

No. 1 cans Justright Tomatoes.....$ .70 per doz.
No. 2 cans Justright Tomatoes..... 1.00 per doz.
No. 2½ cans Justright Tomatoes..... 1.35 per doz.
No. 10 cans Justright Tomatoes..... 4.75 per doz.

Corn

No. 1 cans Justright Corn.....$ .70 per doz.
No. 2 cans Justright Corn..... 1.00 per doz.

"Either wood or fibre cases option of seller. Shipments to be made from 1924 pack as soon as packed and ready for shipment. Swells guaranteed either under N. C. A. Warehouse Plan or old plan.

"All orders subject to our confirmation. All contracts are made on pro rata delivery basis.

"E. M. RECORDS & CO."

E. M. Records & Co. hold a high position among the business men of this industry, and their figures might well be taken as indicating the ideas of canners as to future prices on these three important items.

THE MARKET—There is little or no market to report, as the buyers have not as yet decided to come into the market. The indications from all sections of the country, however, are that they will soon want the goods, and are making ready to begin buying. The coming Convention is held out as an excuse, but it is little else. All indications are most favorable; the feeling is strong in practically all lines, and holders show confidence in their goods.

NEW YORK MARKET

Convention the Chief Topic—Good Inquiry for Canned Foods—Plenty of Interest, but Well Suppressed—Tomatoes Show Increasing Firmness—Smaller Fruit Packs in California Cause Surprise—Market Takes on More Strength — Salmon Seems Neglected—Trade Notes.

New York, January 18, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

CONVENTION Breezes Stir the Air—The chief topic of conversation in the local canned foods market is the forthcoming Convention of the National Canners' Association in Buffalo next week. A canvass of the New York market by The Canning Trade's correspondent shows that "everybody who is anybody" in the local market will either attend the Convention in person, or will have representatives at Buffalo to take in the canners' deliberations.

More Buying Interest—While buyers express themselves as being little interested in current offerings of canned foods, brokers' reports indicate that there is a surprisingly good inquiry for canned foods. There is a well-grounded suspicion in some quarters that the buyers are "playing 'possum," and that while they show little interest in canned foods, actually they are in the market for considerable quantities. This attitude has apparently fooled some of the observers of market conditions; but the canners are fully cognizant of the situation and are playing the right game—standing pat and waiting for the buyers to come to them.

Tomatoes Are Firmer—Southern tomatoes have developed new firmness during the week, with quite a good deal of buying interest shown. Particular difficulty is being experienced in obtaining unlabeled tomatoes for prompt shipment. Maryland and Delaware canners are quoting the market at 65 cents for 1s, 92½ to 95 cents for 2s, $1.35 to $1.40 for 3s, and $4.75 for 10s, all prices f. o. b. cannery.

Future Tomatoes—A general opening on future tomatoes is anticipated during Convention Week. Many canners have put out tentative prices, as a sort of "feeler," but formal prices will probably be announced during the coming week. Some 10s are offered on future contracts at $4.00 per dozen, f. o. b. cannery.

California's 1923 Fruit Pack—Telegraphic advices to a local jobbing concern during the week gave a summary of the statistics of the fruit pack in California during the 1923 season. The actual statistics on the pack surprised many members of the trade. The falling off in the production of apricots, pears and peaches came greatly as a surprise, although early estimates of curtailed production of these items had prepared the trade for a falling off. The pack of cling peaches, however, was rather larger than some in the trade had looked for.

More Fruit Demand—Buyers are showing quite a little interest in offerings of canned fruits for factory shipment, and the market is taking on a little more strength. Pears are quoted higher in California, and offerings of New York State and Northwestern canners are also light, with firmer values in evidence. Low-grade peaches are meeting with a good call, but the market for apricots remains dull at the moment.

Tuna Fish Firmer—Tuna is showing more firmness on the spot, and the trade believes that the spring movement will clean up all of the available supply of tuna. Halves bluefin are now quoted at $8.00 per case on spot, and the market for halves whitemeat is held at $12.35 to $12.50, according to brand and seller. Coast stocks are very limited, and the market in California is advancing; indeed, in some instances prices quoted on spot stocks are under the Coast parity.

Salmon Neglected—There has been very little buying interest shown in salmon on spot during the past few weeks, and the market is quotably unchanged all along the line. Coast stocks are not heavy, however, and canners are holding the market firm in the belief that spring buying will clean up the carryover of the 1923 pack.

Warn of Harbor Toll—The National Wholesale Grocers' Association is advising its members to consider the San Francisco harbor toll when making purchases of California canned foods. L. W. Mallory, chairman of the Contracts Committee, writes: "Wholesale grocers purchasing goods from California are, in many instances, required to pay a so-called toll tax, if the shipment moves through the harbor of San Francisco. Upon the products ordinarily shipped to wholesale grocers this toll is usually 15 cents per ton. The question whether this charge is to be paid by the seller or the buyer depends in the first instance upon the terms of the contract between them. Reasonably interpreted, the contract recommended to wholesale grocers by the committees representing the National Wholesale Grocers' Association and the Canners' League of California does not require the purchaser to pay this toll, but in every instance, to make certain, buyers should before concluding a purchase examine any proposed contrast as respects not only this point, but various other provisions in the contract. If grocers buy f. o. b. San Francisco steamer, then the seller pays, or should clearly pay, the San Francisco harbor charges. But if grocers buy f. o. b. San Francisco dock or f. a. s. San Francisco steamer, the point is open to question, unless the contract covers it clearly one way or another."

Sardine Stocks Short—Holdings of Maine sardines in canners' hands are estimated at only about 10 per cent of the normal holdings for this season of the year, and the market is showing a strong tone. Canners expect the spring trade to clear their

holdings. California canners have only limited quantities to offer, and the market on Coast pack is strong.

Notes of the Trade—S. E. Comstock, of S. E. Comstock & Co., well-known canners, of Newark, N. Y., was here during the week, visiting his brokers, Butler & Sergeant, Inc.

Harry Montague, of the Valecia Evaporated Milk Co., of Madison, Wis., was visiting the trade here during the week.

B. F. Shriver, of Westminster, Md., was one of the out-of-town trade visitors this week.

An influx of out-of-town canners and brokers is expected late next week, when the big Convention at Buffalo starts to disband.

George Stocking, of the Central Wisconsin Canneries, of Beaver Dam, Wis., was in the market during the week.

The National Wholesale Grocers' Association announces that its 1924 convention will be held June 3, 4, 5 and 6 at the Congress Hotel, Chicago.

Directors of the Irving National Bank a few nights ago tendered a testimonial dinner to Theodore F. Whitmarsh, president of Francis H. Leggett & Co., following his appointment of the New York Federal Reserve Board.

E. M. Clerke, well known among the local brokerage fraternity, has started a brokerage business at 100 Hudson street, specializing in canned foods and dried fruits.

A. J. Latham, of E. H. Baker, canners, of Middletown, Del., was here during the week, stopping with his brokers, Jessup & Roberts.

N. P. H. Barret, formerly a canner, is now associated with Frank MacMonnies. Inc.

Wiley & Powell have been appointed New York sales agents for the Cutler-Lobinger Packing Co., which, beginning March 1, will operate canneries at Pomona and Ontario, Cal.

ST. LOUIS MARKET

Buyers Are About Finished on Inventories, but Have Not Commenced to Buy—Will Buy More Freely, but Not Speculatively—Inquiries for Tomatoes — Peas Hard to Find—Futures Becoming Harder to Buy —Full Prices Demanded for Corn —Fruits Are Firm.

St. Louis, January 18, 1924.

By "Missouriah,"

Special Correspondent "The Canning Trade."

INVENTORIES About Finished—Distributing outlets are commencing slowly to broaden as dealers are finishing their inventories. However, there is not much of a movement started as yet with staples. Jobbers have been inclined to postpone buying until after the Canners' Convention. Buyers and sellers will therefore exchange views. Merchants throughout the country will then be able to understand the situation better and arrange their buying accordingly. Distributors, as a rule, are optimistic in regard to the future. They expect to make larger contracts and do more free buying during this year than last. They will buy freely, but for actual needs and not for speculative purposes. It is the consensus of opinion of all that during the early part of this year there will be an unusually good amount of buying done.

Tomatoes—While local jobbers are not purchasing tomatoes in a big way, there is much of inquiry being done. Bids made are quite frequently below ruling prices, and concessions are not made by the canners. The popular small size are being held firm in the South in assorted as well as straight cars. Canners say their stocks are moderate and they anticipate a continued demand. There is very little call for gallons, except in small blocks, but no radical cut in prices is made. California quotations are unchanged.

Peas—Cheap old pack of peas are hard to locate, either resales or otherwise. Holders are not long on any grade and are not trying to sell. While there is no speculative movement, there are always some changing hands. Trading in futures is quiet, because much of the urgent business has been placed. Canners still have firm ideas and are not inclined to show any indication of weakness. It is hard to buy Wisconsin futures at prices or in assortments, which makes the jobber satisfied.

Corn—There is not much of a supply of spot corn, so full prices are insisted upon for all grades. Local holdings are less than normal, because many distributors who have bought on contract have not yet ordered shipped in. While some future corn has been sold, much of the demand is for old packs.

Fruits—It is hard to reconcile the firmness and confidence on the Coast and the indifference of local operators. Reports indicate there is a decidedly strong situation in California in all packs, with no surplus to worry about, and hence there is no pressure to sell. In jobbing markets like this, however, the demand for assortments is light and spot goods are preferred. While there is more inquiry, actual sales since the first of the year have shown little change. For the most part the spot market is dull.

Milk—Fluid milk is being diverted from the condensing and evaporating factories to creameries and other fields, and as this has been the tendency for several weeks, the make has been much reduced. The market at present points to working into better position, but the outlets in jobbing markets have not widened sufficiently to make a radical change in the spot situation. There is less pressure to sell goods.

Among the Ozarks—At a meeting of the directors of the Ozark Fruit Growers' Association, at Monette, Mo., officers for the coming year were elected and arrangements were made to market the large strawberry and grape yield that is expected in the Missouri and Arkansas Ozarks the coming season. The Board of Directors organized by electing the following officers: President, Dr. E. L. Beal, of Republic; secretary-treasurer, J. W. Stroud, of Rogers, Ark.; first vice-president, E. N. Plank, of Decatur, Ark.; second vice-president, E. A. O'Dwyer, of Monette. The Strawberry Committee for next year consists of the following: J. S. Atkinson, of Garfield, Ark.; R. F. George, of Pierce City; A. Rhinehard, of Senaca; Charles Appleby, of Fayetteville, Ark.; Bailey Hubbard, of Alba. Atkinson was made chairman of the committee. The Grape Committee was elected as follows: J. A. Eastridge, of Neosho; John P. Davis, of Monette; D. E. Eicher, of Springfield; Felix Andemandi, of Tontitown, Ark.; Sam Flaim, of Knob View; M. Love, of Chadwick; Max Morton, of Farmington, Ark. Eastridge was elected chairman of the committee. The fruit growers are more or less interested in the canning industry. Many of them maintain canneries to take care of the products that cannot be shipped. The Ozark section of Missouri and Arkansas is the largest producer of various kinds of fruits and vegetables in this section, and, as already stated in The Canning Trade, cans a great amount of fruit and vegetables.

CHICAGO MARKET

Buyers About "Set" Ready to Go—Tomato Statistics First Shock and Then Quiet Market—Most Tomato Canning States Known to Be Well Sold Up—Market Well Maintained—Shortage in California's Pack— Pea Prices Entirely Nominal— Corn Is Hard to Find— On to Buffalo.

Chicago, January 18, 1924.

By "Wrangler,"

Special Correspondent "The Canning Trade."

THE Market—The market for canned foods is about as previously reported—the condition being that buyers are not yet entirely through with their inventory analysis, and are, therefore, not prepared to buy regularly for replenishment.

However, they have posted up their stock books to some extent and know pretty well wherein their depleted stocks lie and as to what articles they are short.

It would seem that the present shortage in this market applies especially to canned tomatoes, and most of the buyers are, to a greater or less extent, interested in this article.

Tomatoes—The report of the National Canners' Association, to the effect that the output of canned tomatoes for 1923 aggregates nearly 15,000,000 cases, was somewhat staggering, and for a few days the buyers were very shy in relation to considering purchases, but on analyzing the localities in which the tomatoes were packed, it was found that the big increase over expectations, and over last year, was in California and Maryland, the disturbance as to their views was not so great.

It is realized that California standard tomatoes with puree cannot be used to advantage with the consumers of the Central West, and as Indiana packed about 500,000 cases fewer tomatoes

than last year, the reason for the quick cleanup in that State is apparent.

It is also the case that the firm holding of prices by Maryland and Delaware as to standard tomatoes is evidence of the fact that sales in those States have been larger than was supposed, and that present stocks are, comparatively speaking, light.

Nearly all the tomato canning States, with the exception of California and Maryland, are reported to be well sold up. Missouri, Ohio, Virginia, Kentucky, Indiana, Michigan, Wisconsin and Illinois are practically out of the market, having nothing in the way of canned tomatoes to offer in any size or quality. The position, therefore, despite the largest pack of canned tomatoes since 1918, is, nevertheless, strong and well maintained.

Fruits—A report from Washington and Oregon in relation to canned fruits packed in those States goes to show that those two States packed the largest output of canned fruits and vegetables in their history, but that about 90 per cent of their production was sold for future delivery before it was packed, and that the holdings at present are nominal.

The very low rate of freight which these two States secure to Atlantic port cities and to Europe give them a great advantage in sales of their output over other fruit-canning States, and the quality of their production is very fine.

The report of the output of California canning establishments for the year 1923 has reached Chicago and shows an enormous shortage in several articles.

Canned apricots are about 2,000,000 cases short over 1922.

Bartlet pears are about 500,000 cases short over 1922.

Yellow free peaches are about 400,000 cases short over 1922.

Yellow cling peaches are about 1,200,000 cases short over 1922.

And these figures, which have been issued by the Canners' League of California, are doubtless correct and are almost stunning in their importance.

It will be remembered that the California pack of canned fruits for 1922 was large, but that it was eventually sold down closely so that there was very little carryover, even in the low grade of water and pie fruits, but this tremendous shortage of 1923 pack compared with 1922 shows conclusively that canners of California did not propose to pack in 1923 so as to have a heavy carryover to 1924-1925. The situation as to canned fruits on the Pacific Coast seem to be, statistically, very strong.

Peas—In canned peas for immediate or prompt shipment the market is entirely nominal. Any canner who holds any stock at present is exceptional and is able to obtain almost his own price.

The situation as to stocks is so discouraging to brokers that they will not attempt to look up the special needs and requirements of the buyers as to grades, but are merely offering a few small lots that they can find and let it go at that.

Corn—As to canned corn, stocks in Iowa and Ohio are very low. Wisconsin and Michigan are about sold out, and the Indiana and Illinois canners who are suposed to have some corn on hand have either sold what they are supposed to have, or are inclined to hold whatever surplus they have for a higher market, as they are apparently disinclined to offer whatever holdings they may have at any price.

In futures there is some selling of peas, corn and tomatoes, but not in an important way. The canners and buyers all seem inclined to wait until after the National Canners' Convention at Buffalo next week before entering into active negotiations for future delivery.

The Convention—There will be quite an important attendance from the Central West at the Buffalo Convention of the National Canners' Association—all the States surrounding Chicago will be well represented by canners and brokers, and this city will have a strong representation of buyers and brokers at the Convention.

A great deal of interest is being taken in the result of the discussion and conferences at the Buffalo Convention in relation to the Warehousing Plan for "swells." Most of the wholesale grocery buyers are opposed to it—most of the canners are in favor of it, and most of the brokers are on the fence.

Considerable strength as to the prospects of the adoption of the plan was imparted by a letter of J. H. McLaurin, President of the American Wholesale Grocers' Association, recently published, wherein he stated that he was personally in favor of trying the plan for a year in order to find out how it worked. Most of those who have expressed opinions in relation to the prospects of the plan at Buffalo are inclined to believe that such will be the result of the discussion.

CALIFORNIA MARKET

The Packs of 1923—A Review of the Fruit Crops of the Past Year—Crops Generally Larger, but Packs Are Smaller—Unfavorable Outlook for 1924 Spinach Crop—Sardines Are in Good Demand—Fig Canning on the Increase.

San Francisco, January 17, 1924.

By "Berkeley,"

Special Correspondent "The Canning Trade."

STATISTICS for 1923—The feature of the week has been the announcement of fruit and vegetable pack statistics for California for 1923. These will undoubtedly have some effect on the market, but it is too early to judge just what this will be, or to what extent. The figures for Northern and Central California, where the bulk of the pack is made, were compiled by Preston McKinney, secretary of the Canners' League of California, while the figures covering the pack made in the southern part of the State were compiled by S. W. Cunningham, secretary of the Southern California Canners' Bureau. The figures are as accurate as could possibly be secured, statements having been secured from packers representing more than 99 per cent of the pack. Secretary McKinney advises that the figures do not include fruit salad, since this articles is packed from fruits already covered by the statistics of the pack, nor do they include canned dried prunes. The increase noted under the heading of "Other Fruits" is made up chiefly of figs, which is rapidly assuming importance enough to warrant it being given a heading of its own.

Following are the pack figures for the year, with figures for the two preceding years for comparative reference:

Fruits	1923	1922	1921
Apples	22,697	3,749	98,500
Apricots	1,562,298	3,569,918	1,150,514
Blackberries	118,530	135,289	85,542
Cherries	590,685	557,591	222,772
Grapes	54,210	69,760	91,886
Loganberries	34,553	17,675	6,198
Pears	1,181,565	1,712,773	872,396
Peaches, Free	872,676	1,314,597	1,633,418
Peaches, Cling	6,591,335	7,844,912	4,162,849
Plums	164,402	182,270	141,348
Raspberries	.....	3,182	1,200
Strawberries	6,443	4,412	437
Other Fruits	152,142	61,737	44,791
Total	11,351,536	15,477,865	8,511,851

Vegetables	1923	1922	1921
Asparagus	1,519,756	1,239,839	887,030
Beans, String	96,793	150,988	97,815
Peas	223,923	473,260	86,074
Spinach (Spring)	1,383,831	1,180,525	434,068
Tomatoes	2,924,909	1,925,389	357,092
Tomatoes Products	1,283,198	1,489,617	495,101
Other Vegetables	368,425	444,753	258,767
Total	7,800,835	6,913,371	2,615,947

The pack made in Southern California, which is included in the above totals, was as follows:

Fruits		Vegetables	
Apples	874	Beans, String	39,907
Apricots	330,542	Spinach	109,612
Cherries	1,778	Tomatoes	525,469
Pears	6,245	Tomato Products	298,755
Peaches, Free	268,492	Other Vegetables	141,613
Peaches, Cling	327,434		
Other Fruits	2,342		
Total	937,707	Total	1,115,356

The figures for the pack of fruit do not give the right idea, in many instances, of the real size of the crop. The pack of apricots was less than one-half of that of 1922, yet the crop was larger. However, it ran to small sizes and could not be utilized by canners, who were carrying over low-grade fruit from the

previous year. It is estimated that fully one-quarter of the crop was allowed to go unharvested. The pack of pears was smaller than that of the previous year, yet the crop was larger. Growers shipped a larger part of their fruit in the fresh form and secured returns, in many instances, larger than could have been had from canners. The pack of peaches was more than a million and a half cases smaller than the pack made in 1922, but the tonnage showed no such falling off. The pack of asparagus and spinach was the largest on record, but both lines are well cleaned up, especially the former. The output of tomatoes probably surprised many in the trade, being about a million cases larger than for 1922. The warm, dry fall contributed largely to this showing.

Cold Weather—Very cold weather has prevailed of late in California, and the picking of ripe olives has been curtailed in some places. However, the output for the season will surpass all former records, and pickling plants are operating to capacity. It will be several months before some of these get all their ripe olives into containers.

Spinach—Stocks of California canned spinach are being held quite firmly. owing to the unfavorable outlook for the 1924 pack. The rainfall to date throughout the State is but about one-third of the normal, and the prospects are for a small acreage of spinach.

Salmon—The canned salmon pack for British Columbia for 1923 amounted to 1,341,681 cases, an increase of about 50,000 cases over that of 1922.

Sardines—An increased demand has been noted of late for California sardines packed in tomato sauce, especially for 1s oval. Most of the calls are coming from the Eastern territory, where stocks are said to be very limited.

Figs—Packers of figs are taking great interest in the annual peach and fig institute of the California Peach and Fig Growers to be held at Modesto, Cal., January 17 and 18. Ira J. Condit, who returned recently from a six-month trip to Europe, will give an illustrated talk on fig culture in foreign countries. A feature of the institute will be a display of all grades of real Smyrna figs just as they are harvested from the trees, and California growers will get an idea of just the quality of fruit that must be met in competition for American trade. Growers of Kadota figs are awaiting with much interest the observations of Mr. Condit on Kadota fig culture in Italy. Large acreages have been planted there to Kadota figs, and possibilities of foreign competition in the preserving of Kadotas is of special interest.

MAINE MARKET

Large Delegation to Go to Convention—No Reasonable Excuse for the Quietness in Trading—Lumber Camp Held Up by Absence of Snow—Spot Goods Gone, Futures Not on the Market—Growers Have Advanced Their Prices—Some News Notes.

Portland, Me., January 18, 1924.

By "Maine,"
Special Correspondent "The Canning Trade."

CONVENTION the Talk—The Buffalo Convention is of paramount interest to all of the Maine canning fraternity, and a large delegation will be present. The State will be officially represented in machinery displays by the J. W. Pratt Co., its apple slicer, and the E. M. Lang Co., the "old original" Neverslip solder firm. At the Food Show the Maine Canners' Association is putting on an exhibit of the vegetables and fruits canned in Maine.

General trade among the jobbers is rather quiet, with no "reasonable excuse" offered. Buying is in small lots, but is continuous, and shipments to dealers move in the same way. While most of the State is covered with a few inches of snow, enough to make very fair traveling, the lumbering sections are still bare and operations are at a standstill in most camps. This is partly responsible for the quiet trade, and lumbering is a large part of Maine's winter business.

If present plans materialize, Portland and Maine are due for added business within a short time—we are among the towns now inviting Henry Ford to locate his new plant with us. and there is a reasonable prospect that he may accept Portland's invitation. Our shipping facilities and lack of labor problems carry weight in this matter. From the canner's point of view. it makes farm labor scarce and adds to the production costs of canning; but, of course, that is not to be considered against the immense benefit of having such a plant located here.

Canning interests are quiet, spot goods being gone, and futures not on the market. Corn is usually the first item offered, and there is a feeling among the canners that no move can be made for several weeks yet. The price to growers has been advanced this season, due to the farm labor problem, and there is no indication of any possible cut in other materials which can offset this raise. A cent a pound to the grower means approximately 12c a dozen to the canner in costs. Acreage for stringless beans is also going to cost more money this season, one packer stating that this advance would be one cent per pound. The cost of raw blueberries will not be decided upon for some time, but this year it is intended to install a sanitary inspection system which will demand some changes in equipment and method, and will tend to increase production expense. All in all, it looks as though the general selling prices on Maine canned foods would necessarily be advanced somewhat over last season.

SMILE AWHILE

GOOD ADVICE

Mrs. Jones—My daughter's teacher advises me to stop her piano practice, as she has no ear for music. What do you think?

Neighbor—I think it is certainly sound advice.

THE SCIENCE OF THE GAME

Mr. Wallnut—I can't see why that roughneck professional wrestler is so popular with the girls. He can't dance.

Miss Foxtrot—He is a little clumsy on his feet, but he knows so many novel holds.

SHE WAS ONE

He—I'll be glad to see the old-fashioned girl come back again.

She—You mean Eve?

BROKE

Mrs. Jenkins—Supposing, Mary, I deduct from your wages the cost of all the dishes you broke?

Mary—Sure, mum, in that case its meself'd be like the dishes.

SOUND ADVICE

"Every time I take a vacation I get lonesome for my work."

"What kind of work do you do?"

"I'm a chiropodist."

"Then, why don't you spend your vacation in a corn field?"

COULD NOT TAKE THE CHANCE

The Mrs.—If I don't get a letter from you every day I'll feel so lonesome I'll come right back home.

Hubby—Never fear, dear, I'll write twice a day.

NOT THAT KIND

The manager of a local hotel, recalling his novitiate as clerk employed in a country wayside house, relates that one morning a guest came downstairs and complained to the proprietor that he had not slept at all.

"I was troubled with insomnia," he said.

"Don't believe a durn word of it," said the indignant host. "Had the place cleaned out only this spring. Show me one, if you can! Show me one!"—Philadelphia Evening Bulletin.

SAFETY FIRST

Agent—Is the head of the house in?

Man—Just a moment. (Calling loudly) Mary! (No answer.) Yes, what was it you wanted with me?—Sun Dial.

NOT SO LOUD

Morgan—That beautiful woman hasn't anything on—"

Harjes—Don't point, but just show me.

Morgan (continuing)—The woman I intend to marry.—Virginia Reel.

SEEING IS BELIEVING

"I hear that Hank had an accident."

"Yes, some one gave him a tiger cub, and told him it would eat off his hand."

"Well?"

"It did."—Wampus.

SWEET REVENGE

First Dentist—How is it that you offered to fix Mr. Peck's teeth free of charge?

Second Ditto—He sold me a second-hand car last winter.—Judge.

Vol. 47 BALTIMORE, JANUARY 28, 1924 No. 23

THE BUFFALO CONVENTION—A glance at the Statler Hotel lobby made one think that the whole industry and his wife had come to the Convention this year. And it is a well dressed, prosperous, fat and sleek "bunch" of business men. Some of the "old boys" have been recalling the previous Convention in Buffalo—in 1906—but it is a differently dressed crowd to those days, and we were there and can recall it very clearly. And other things have changed. The man who now runs a whole chain of mammoth hotels—Mr. Statler—in many cities was then a mere restaurant owner, conducting that year the most famous restaurant in the country, famous for his 40-cent dinner, the Statler 40-cent dinner. It was such a good dinner, so well served and in such an attractive dining room that it brought him not only fame, but fortune, and out of it he built his first hotel, within sight of his restaurant, and now operated as the Hotel Buffalo.

Times have changed in the fourteen years since then, but that restaurant is still operated by Mr. Statler in the same place, as attractively fitted out as ever, and he continues to serve that famous dinner, but the price is now $1.10. As then, it is now the best meal in town for the money!

Times have changed, and Statler has added this present mammoth Hotel Statler, in Buffalo, 17 stories high, and a veritable city in itself; he has hotels in Cleveland, Detroit, Boston, St. Louis, and he operates the Pennsylvania Hotel, in New York city, the greatest hotel in the world possibly; but Statler has never changed his original plan of quality and service. There is a lesson here well worth the industry's thoughtful attention. "Quality" is being cried into the ears of all canners—pack "quality" and you will succeed. Experience cries out this truth, and the Buffalo Convention will go down as the exponent of this war cry for the industry from now on. This is the Quality Convention; the sleek and fat canners—yea, the conventionites—are here well dressed and sleek, because during two years thy have produced quality, and the consumers have bought their output down to the last can. It has brought prosperity to the canners and to all connected with them, and it will always do so.

THE CANNED FOODS EXHIBIT—Here was a vast display, a really beautiful and extensive display of canned foods that every man, woman and child felt proud of and marvelled at, such high quality foods and in such profusion. Buffalo has turned to canned foods because of this display and of the good work which the local committee did in putting on a Canned Foods Week in Buffalo during the Convention. They were told about canned foods; they looked at them, found them better than they thought; tasted them, and their surprise and pleasure were further added to, and now they believe in canned foods. Quality!

This exhibit is several times as large as the Atlantic City exhibit, and very much more attractive. The canners did a splendid job of this effort, and we heartily congratulate them. The Canned Foods Exhibit was a real credit to the industry, excellently done

BRACE UP—If the canners could improve the quality of their business operations as much as they are improving the quality of their products, what a march forward the industry would make. But they continue distrustful of their fellow canners, ready and eager to believe anything they hear about a competitor, and no more willing to work together with other canners than they were 16 years ago. When we first reached the Convention individual canners from many sections told us that they were selling futures on the Warehousing Plan; that the jobbers were not asking for the percentage allowance. So great and so widespread were these reports from the canners themselves that we felt most hopeful and happy over it. However, after two days visiting with jobbers and brokers, we saw a change come over them. And soon we began to hear complaints about some canner who was selling on the percentage allowance basis. Did they know he had done so? No, but they had been told so on good authority! The buyers, aided by their lieutenants, the brokers, can always play upon the credulous side of the canners, and obtain the object they have in view. They know the canners will not trust each other as far as you could throw a bull by the tail. Moreover, that they would not think of looking up the accused canner and of asking him plainly if it

be true. If the canners would but do this they would nail the nest of lies and save themselves; but they have not yet gotten to the point of confidence in their fellow canners, because they have no confidence in themselves. The game is hoary with age, but it never fails to work, sad to relate. How can any industry make progress where there is no confidence?

If the buyer or the broker tells you that another canner is making a fool of himself, giving away the goods, being false to his fellow canners, why should you be so anxious to do the things you curse him for doing? Tell the buyer to get his goods from the poor fool! But don't make a fool of yourself, and don't believe all that is told you when a man wants to buy. Even if your competitor has done it, he probably did so because he had been told you had done it. Can't you see how they pluck you clean, because of your total lack of confidence in your fellow canner? If the industry had some backbone it would set a trap for these "baiters," and there would be a grand killing. The next time you are told some canner is selling on the percentage allowance plan, tell your informant you don't believe. Then call up or wire the canner and ask him. Work up some self-protection. And if a canner calls you tell him; confer together against the common enemy, and you'll soon rout the enemy. You must hang together or you will hang separately.

THE CONVENTION REPORT—The Convention report will be made in the February 11th issue of The Canning Trade. A little patience and it will all be in your hands.

SOME PHASES OF OUR FOREIGN TRADE.

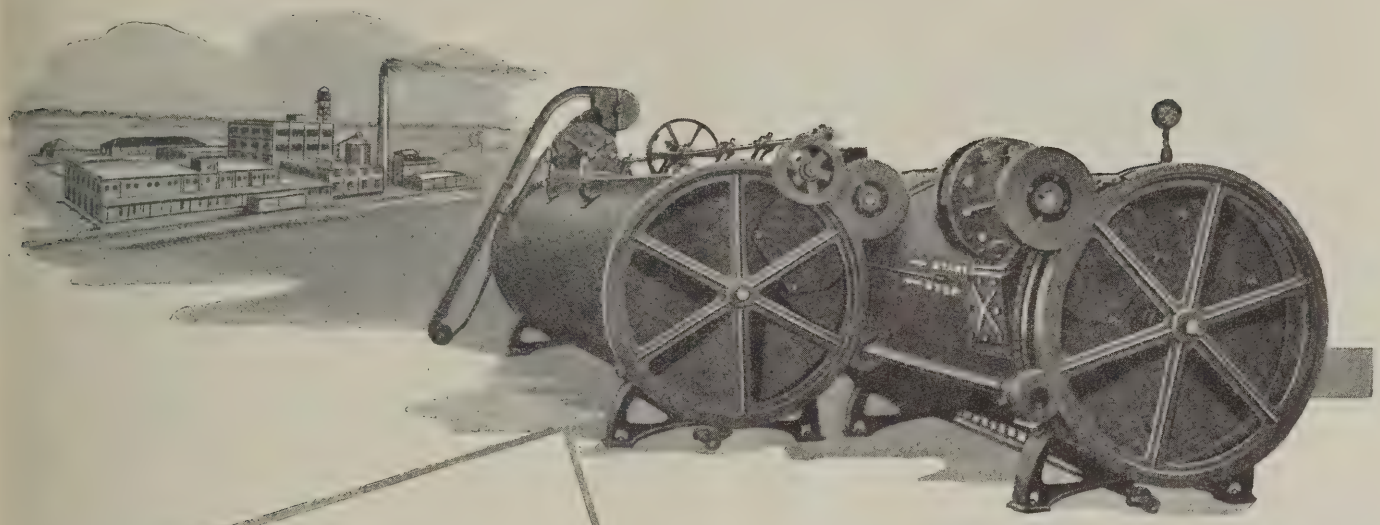
By James A. Farrell, Chairman, National Foreign Trade Council.

THE foreign trade conference being held in your city today is an important gathering. It finds its reason in the increasing recognition among our people of the fact that our country requires a permanent and sound development of foreign trade, because American consumptive demands are, on the average, insufficient to absorb the great and growing output of our mines, mills and farms. To meet this situation it is necessary for commerce, shipping and communication to co-operate, as they are inseparable units of a co-ordinated policy in our economic welfare.

These meetings have a distinct function of their own. Not only do they serve to stimulate and keep active the enthusiasm and interest aroused by National Foreign Trade Conventions, such as that held in this city two years ago last May, but they also furnish opportunity and occasion for intensive study of the possibilities of co-operation in the development of the resources of the state, and for the consideration of matters of particular concern to all phases of international commerce.

Cleveland is the center of a district of great industrial productive capacity. Surrounding you are mills and factories, the aggregate output of which is very large; within a radius of a few hundred miles exports for the first nine months of this year have amounted to approximately $350,000,000. You have their questions to answer, similar in character and principle, no doubt, to those of various other localities, but each with its own, one might almost say personal, factor, and these furnish occasion for the thoughtful examination possible in such a conference as yours of today. It is well that these conferences continue, and I am glad to be able to take part in them. I should be glad to see similarcon ferences held in other places, for as they undoubtedly stimulate activity and interest in the localities where they are held, they must also be helpful nationally.

While I am thus interested in the purely local phase of this conference, there are some matters of wider scope of which I want to speak. The first of these is the European situation, and its relation to ourselves. Much time and attention have been devoted to this subject by our Government and our people. And it is quite right that such should be the case. Much emphasis has been laid upon the relation of a going Europe to our commercial welfare, and there is no question that that relation is important. Europe regularly supplies us with a great deal of needed material, and takes a considerable part of our products. The lessening in the capacity of Europe to buy and sell unquestionably affects our commerce, but there is no information on which we can base an assurance that the European market can be restored within a stated time, nor that her economic interests may not eventually lie in directions antagonistic to our own.



Are we to retire from foreign trade because Europe is not now able to continue her accustomed rate of buying and selling? I think not.

In the first place, our participation in foreign trade is not now, and never has been, merely a matter of preference on our part, or even a matter of convenience. On the contrary, it has been and is a matter of economic necessity. The first men who landed on our shores from Europe needed and had to have supplies of various sorts from the countries from which they came. Our import trade began at that time, in the supply of these wants. So, also, our export trade began then, in the shipment back of the products of this land; and by this means those first comers paid for the necessary things they received from their old homes.

That same necessity exists today. However it may have shifted in its application, whatever change may have occurred in the details of our international trade, the principle of need and the satisfaction of same that operated in the very beginning is precisely the same principle that is in operation today.

So I say it is not within the scope of our preference or convenience to attempt to retire from foreign trade now just because Europe has become a chaos of political conflicts that seriously affects her ability to buy and sell. We must in any case go on in the development of our foreign trade. The need of our first settlers that had to be supplied by the importation of various articles from other lands was no more urgent and compelling than the need of our manufacturers today for foreign markets that will absorb part of their production and permit them to keep their plants busy and furnish employment to our people.

(To Be Continued Next Week)

We made the largest pack of Whole Grain Corn and Peas last year that we have ever made—120,000 cases and did it with less trouble, less labor, less fuel than we ever did a smaller pack due to our "Pressure Cooker."

We have had less leaks and swells than ever due to a uniform cook, the contents of every can cooked and cooled alike; opens with the same color as when it was placed into the can.

We think more of this machine than any machine we have in the plant. Not a bit of trouble in getting 3,000 cases or better per day.

DESTINED to revolutionize the sterilization operation, ANDERSON-BARNGROVER CONTINUOUS AGITATING PRESSURE COOKERS AND COOLERS have demonstrated their superiority with such products as Whole Grain Corn, Spinach, Evaporated Milk, Pineapples, etc. and can be adapted for all other products cooked under pressure.

The detailed qualities of construction cannot be gauged by any former standards; they are unique and can best be appreciated by the description in our new bulletin pertaining to this equipment, copy of which will be gladly furnished upon application.

BRIEF NEWS FROM THE CONVETION

THE BIG CROWD AT BUFFALO

THE DETAILED REPORT WILL APPEAR IN THE CANNING TRADE OF FEBY. 11th.

Possibly no local convention committee in recent years worked as hard or as well to make a success of the Convention as did the Buffalo Committee, and the result of this work was shown in the advance registrations, which gave promise of a 5,000 attendance. This figure was not reached, but whereas a normal canners' convention runs about 3,000, the Buffalo Convention is near 4,000.

* * *

And the Convention has gotten back into its old stride and habit. Cold weather with blizzard trimmings. Saturday night Buffalo began to take on its first real wintry weather, and every conventionite will testify that it has been real winter every moment since.

* * *

A gale varying from 40 to 50 miles per hour, with the thermometer 7 degrees below zero, greeted the Convention Monday morning, and continued all day and night. Tuesday morning the wind had died down somewhat, but later in the day it recovered and blew as hard as ever. The streets were covered with ice from the early rain on Saturday, and on top of this had fallen a light snow, making conditions just about as dangerous and disagreeable as could be. It was dangerous to venture on the streets, because of the wind and ice, and most disagreeable on account of the intense cold.

* * *

So the Convention is "staying indoors." Fortunately, all meetings are being held in the Statler Hotel and the Convention is living at that hotel. The machinery show, about six blocks away, is being badly neglected. Monday and Tuesday may as well be said to have been lost to the exhibitors. The same is true of the Canned Foods Show, a dozen blocks up the other way. Most visitors to the Convention have seen neither.

* * *

Buffalo is hospitality, kindness and consideration itself. Attendants at the Machinery Show find nothing too good for the visitors, and no trouble to comply with requests. The Statler force has stood up splendidly under the terrific strain of trying to feed nearly 4,000 three times a day, after turning over one of their main dining rooms as a meeting hall. Buffalo is doing everything in her power to make amends for the bad weather. For those who can stay indoors there has been comparatively little inconvenience.

* * *

The Machinery Show is a magnificent display, well arranged and beautiful to look at, and the building quite well heated—very well heated considering the conditions. Monday it was a torture to get to and from the show, men being blown off their feet and injured, and ears and noses nipped by the cold; but once inside all found it comfortable. There is not much new at the show, but all old faces are there, and everybody happy, because business is good.

In recent years there had been no "Hotel Headquarters," and everybody cried loudly for the return of this custom. Now they have a "Hotel Headquarters"—the Statler—and, as we have intimated, this is fortunate, owing to conditions; but there will not be many buttons left on clothes by the end of the week. The crowd is dense, milling around constantly with no chance to sit down—except in the meetings—and for the first two days they did not patronize the meetings well. These were very lightly attended. Canners, wholesale grocers, brokers and machinery and supply men preferred to "visit with each other."

* * *

President Anderson, who this year brought his brother with him, threw the meeting of the Board of Directors—always the first meeting—open to the public, or it would be more correct to say decided to hold it in the great ball room, so that everybody could attend, and the move was not a success. There is always a great deal of real work done at the board meetings, to be submitted to the Convention for approval during the week. You can't do this kind of work with a crowd. These meetings were never held behind closed doors. But a small body of men can better handle and thresh out a question than can the multitude. The new move should not again be attempted.

* * *

The question above all others of this Convention was the Warehousing Plan. The jobbers and chain store men from all over the country are here, and they have been in conference with the committee of canners almost since the first. Tuesday evening, near 6 P. M., the jury rendered the verdict. The Warehousing Plan was adopted as covering all jobbers' or wholesalers' warehouse stocks, the National and the American Wholesale Grocers' Associations accepting it, to be tried out for a year. The chain stores have not done so. Prof. E. J. Lea, representing the pure food authorities, acted as chairman of the conference, and government and state food officers endorsed the plan. A slight compromise was asked to cover the retailer who had a single can of spoiled goods, and it was agreed to permit its destruction when and where found, and that seller and buyer might make such allowance as seemed right to cover such cases. Both sides agreed that the plan was to stand or fall on its own merits, and that there was to be no propaganda for or against it by either side during the year in which it is to be tried out. So the plan is now a reality, and canned foods are to be traded in on this method until proven unsatisfactory.

* * *

When this result was announced a canner expressed the view that the battle had been lost, claiming that by granting a percentage allowance to cover these small retailer, single can cases the industry was not insuring the destruction of unsuitable goods, and was, in fact, granting the jobber even more than they asked, covering their large purchases in warehouse and refunding on all retailers' claims. They are wrong in this. So it is estimated that the warehouse

stocks constitute 80 per cent of the goods, thus leaving only a small portion of the packs in danger of percentage claims. The pure food authorities, who are seeking to protect the canners, as are the canners, too great complications if the single can in the retailer's hands had to be handled through the warehouse, and they objected and asked to be allowed to destroy it when and where found. If the canners allow themselves to be imposed upon through this means it will be their fault, and not the fault of the plan. An allowance of 1-10 of one per cent is conceded to be ample for all goods under this claim.

A MILLION CALLS FOR INFORMATION ON FOREIGN TRADE.

Annual Report of U. S. Commerce Department Bureau Chief Shows Enormous Increase in Number of Requests from American Firms for Information About Foreign Economic and Commercial Conditions.

A RECORD of nearly a million requests for assistance for American firms engaged in foreign trade is announced in the annual report Dr. Julius Klein, Director of the Bureau of Foreign and Domestic Commerce of the Department of Commerce. This figure for 1922-23 is just double that for 1921-22, the previous high record. This striking increase in the demands for services from the government trade-promoting bureau indicates impressively the growing appreciation of the importance of foreign sales in maintaining American prosperity and in relieving the possible depressive influence of surplus farm products and manufactures, the report says:

International trade is characterized now as never before by extreme fluidity and swift readjustment," Director Klein declares; "voilent exchange fluctuations, shifts in consumptive capacity and standards of living, sudden upsets of trade balances, dislocations of old trade routes, restrictive commercial legislation and taxes—all these are now entailing confusing changes of vital concern to the American manufacturer and farmer having increasing surpluses to sell abroad. These growing complexities must be followed and studied if American merchants and producers are to compete successfully with their foreign rivals."

The maintenance of a fact-finding organization comparable to this Bureau would be financially impossible for any private corporation, whereas the Government agency, because of the exceptional collaboration it enjoys with foreign officials, American trade organizations and journals, and large numbers of exporters and manufacturers, has been able to handle trade inquiries and problems at an average cost to the taxpayer of about $2 per assignment or case. Against this average $2 outlay, the Director enumerates a long list of specific export transactions effected through the bureau's facilities by individual firms, ranging in value from $6,000 up to $750,000.

The American trade and news press, according to Director Klein, deserves much credit for the success of this unusual achievement in government service. Through the cordial co-operation of leading dailies and trade periodicals throughout the country the Department of Commerce has placed information regarding specific sales openings and trade opportunities befor a weekly audience of not less than 7,500,000.

Strengthening of the Commerce Department's for eign offices, material improvement in its thirty-fiv "service stations" throughout the United States, th expansion and speeding up of its statistical work, th addition of new experts for its commodity and tech nical divisions, and the enlargement of its domesti commerce promotion service are mentioned by Directo Klein as features in the program of the Departmen for the coming year. "The ability of the Bureau t take an effective part in recent crises in the coal indus try and in transportation, because it had on its com modity staff highly qualified experts in those lines, ha been convincing proof that experts equally well qual ified in other commodities can render unique service i the distribution field and will not in any way duplicat or overlap the activities of any other organizations public or private," Dr. Klein declares in support of his discussion of plans for the enlargement and improvement of the staff of the bureau.

CANNED MILK IN THE NETHERLANDS, EAST INDIES.

Practically All the Europeans Use It. Natives Drink Fresh Milk of Water Buffalo.

THE city of Batavia, with the districts of Weltevre and Meester Cornelis, in the Netherlands East Indies, has a population of about 775,000, and the supply of fresh milk for this city is neither adequate in quantity nor satisfactory in character, says Consul C. L. Hoover, of the State Department. Most of the present supply of fresh milk is shipped in by train from two towns located, respectively, about 30 and 80 miles from Batavia, where the country is more suited to dairying than that surrounding the city. A few cows are kept near Batavia and produce excellent milk, which is consumed in the various hospitals, only a small quantity being available for distribution to the public. But little, if any, of this milk is consumed by the natives, whose limited requirements are met by a small amount of fresh milk from the water buffalo, or by canned, condensed, evaporated or sterilized natural milk.

Practically all the Europeans use canned milk. Either condensed milk or evaporated milk is used for cooking purposes, while for drinking and feeding babies the sterilized natural milk is, of course, preferred. It is difficult to determine which kind is most popular with the natives and to what use they make of it. Most dealers seem to think that the natives prefer the condensed, sweetened milk, and use it rather as a sweet than as a food. However, some of the dealers claim that the natives are beginning to use the condensed milk for the same purpose as the Europeans. It is certain that its use other than a sweet is not widespread, even though it is growing. There is, nevertheless, a potentially great market among the natives, as there is a very slow, but steady, rise in the standard of living. Naturally, the use of canned milk increases more rapidly in places where the contact between the natives and Europeans is more intimate.

THE U. S. CHAMBER OF COMMERCE MOVES FOR TAX REVISION.

A TAXATION program carrying thirteen recommendations for repeal and reduction of present federal taxes and for changes in the administration of federal tax laws, the work of a special committee of the Chamber of Commerce of the United States, was made public by the Chamber preliminary to submitting it to a referendum vote of member organizations.

The report goes at length into the subject, the committee supporting its proposals in each instance with material showing the effects of the present law as well as the effect of present methods of administration.

The recommendations of the committee are as follows:

1. There should be a revision of the normal and surtax rates on individual incomes to an extent equal in its results on revenues to a large part of the surplus anticipated at the end of the fiscal year.

2. In the rates of federal income tax there should be reasonable differentiation between earned income and other income.

3. War excise taxes confined to particular businesses should be repealed.

4. There should be an amendment to the Constitution permitting non-discriminatory taxation reciprocally between the federal government and the states of income derived from future issues of securities made by or under the authority of federal and state governments.

5. There should be set up in the Treasury Department, independently of the Bureau of Internal Revenue, a board of tax appeals, under such conditions of salary and otherwise as will make it possible for the Secretary of the Treasury to obtain the services of men of the highest ability.

6. The Commissioner of Internal Revenue should be freed of all duties with respect to the prohibition act and the narcotic act.

7. In the administration of tax laws such conditions for recognition of merit, salary and permanency in tenure for competent men should be established as will make possible an efficient organization and reduce turnover of responsible employes to a minimum.

8. Congress should direct the Commissioner of Internal Revenue to decentralize administration as rapidly and as far as possible, and to report to Congress not later than January 1 of each year upon the progress which has been made.

9. The various parts of the Bureau of Internal Revenue now located in Washington should be brought together in one suitable building.

10. Arbitrary assessments designed to extend the limitation period fixed in law should be prohibited.

11. Taxpayers should be informed of all rulings which may affect their rights, adversely or favorably.

12. Congress should expressly authorize the filing of a tentative return on the present due date with a right to file a final return not more than three months later.

13. There should be created a joint committee, with members from both houses of Congress and representatives of the public, to make a thorough study of federal taxes, simplification of the law for the income tax, and improvement in administration, and to report its recommendation to Congress.

The members of the committee who signed the report are:

James R. MacColl, President, Lorraine Mfg. Co. Pawtucket, R. I.

Dr. T. S. Adams, Sheffield Scientific School, New Haven, Conn.

Arthur Andersen, Arthur Andersen & Co., Chicago, Ill.

Guy W. Cox, Vice-President John Hancock Mutual Life Insurance Co., Boston, Mass.

Philip H. Gadsden, Vice-President, United Gas Improvement Co., Philadelphia, Pa.

Dr. John H. Gray, 115 Nevada street, Northfield, Mass.

Finley P. Mount, President, Advance-Rumely Co., Chicago, Ill.

J. H. Scales, Treasurer, Belknop Hardware and Mfg. Co., Louisville, Ky.

Hamilton Stewart, Vice-President, Harbison-Walker Refractories Co., Pittsburgh, Pa.

Henry M. Victor, Vice-President, Union National Bank, Charlotte, N. C.

Other members of the committee, who did not attend the meeting at which the report was drafted, are:

Thomas N. Dysart, Vice-President, William R. Compton Co., St. Louis.

Granger A. Hollister, Vice-President, Rochester Gas and Electric Corp., Rochester, N. Y.

Frank J. Moss, President American Sash and Door Co., Kansas City.

Henry C. Stuart, Elk Garden, Va.

In connection with its recommendation for reduction of income taxes the committee declares that taxation of personal income affects not only the persons involved, but business conditions in general. "If investors are required to pay excessively heavy surtaxes upon ordinary investment income, while they have the easy opportunity of investing in state and municipal bonds substantially exempt from all taxes," says the committee, "private industry suffers, the interest rates which it must pay for capital are increased and prices must be raised to cover the increased cost of capital. Excessive surtaxes thus injure every consumer who is adversely affected by high prices and the general body of consumers would gain in reduced cost of living by a reduction in the upper surtaxes."

The reduction of rates on individual incomes, the committee points out also, will reduce inequities such as exist in the case of partners and individuals engaged in business as compared with corporations.

Urging differentiation between earned and unearned incomes, the committee used the words earned income, in the sense of income earned directly by personal exertion. This is especially desirable, the committee holds, when income from investments in public obligations is wholly or partly free from tax.

The administration of many of the war excise taxes, according to the committee, has resulted in absurdities. "Very frequently," the committee asserts, "they harass industries which they affect to an extent which is beyond any justification in the revenue they produce. They make distinctions not existing in fact, and place the business they affect at a disadvantage with other businesses."

As to its recommendations for a constitutional amendment dealing with non-taxable securities, the committee says the evils flowing from the present situation are well known, and it classes as the greatest evil the circumstances that persons evading national taxes through purchase of tax exempt securities are able to put on persons with smaller incomes a proportionately heavier burden of income tax.

The committee urges creation of a board of tax appeals on the grounds that conditions of administration under the present method have reached a crisis, and that the income tax is being rapidly discredited through its administration. "The difficulty," the committee declares, "does not exist in lack of honesty of purpose of the administration. Delay in audit of returns has seriously and adversely affected the interests of many thousands of firms and individuals. Twenty thousand employes of the Internal Revenue Bureau constitutes a vast army representing the commissioner, and the members of it act as prosecutor, judge and executor in determining and collecting billions of dollars in taxes.

Both the taxpayer and the Bureau of Internal Revenue should be able to go to a board of tax appeals for a final determination, within the Treasury Department, of contested points with respect to any additional assessment or any remission of taxes and decisions should be binding alike, so far as administration of the law is concerned, on both taxpayer and the bureau."

Duties of the Commissioner of Internal Revenue in enforcing the prohibition and narcotic act, the committee declares, in recommending that he be freed of them, are of a nature requiring diversion of his attention from the task of administering the income tax law, a most important task within itself.

Rapid changes of personnel within the bureau, the committee says, now cause taxpayers much delay, many inconveniences and often largely added expense. This and other reasons make, according to the committee, prompt the recommendation for a plan which will bring permanency in tenure for competent employes.

Decentralization of administration, proposed by the committee, is necessary, it is set forth, to expedite cases, as well as to add to the convenience of those who now are forced to make long trips to Washington. The same reasons govern the recommendation of the committee for housing the various units of the bureau in Washington within one suitable building.

Discontinuation of arbitrary assessments is proposed, the committee says, because the practice has abused the rights of taxpayers. "The statute of limitations was placed in the law," says the committee, "to confer rights upon taxpayers after administrative officials had had the full opportunity which Congress considered adequate to make their investigations. The Bureau should in good faith complete its assessments within the period established by law."

Secret or confidential rulings for the use of administrative officials, the committee holds, should be discontinued entirely.

As regards tentative returns, the committee says that previous general extensions of time for filing complete returns has not mitigated difficulties, because extensions have been authorized only within a short time of the date when returns were due.

The joint committee proposed, the committee declares, is necessary for a thoroughgoing study and investigation as a means of doing away with inequalities and of simplifying the laws.

W. E. ROBINSON PLAYS SANTA CLAUS.

W. E. ROBINSON, of Belair, Md., is one of the leading canned goods brokers of Maryland, but he found time recently to play Santa Claus for 2,100 orphan children in the Near East.

Here's how it happened. Miss Alice Rouse, of Belair, also widely known in Baltimore, is teaching 2,100 boys and girls in the Syra orphanage, Greece how to play. Before the holidays Miss Rouse wrote to Maryland Headquarters, Near East Relief, asking if it wasn't possible for her home state to bring some cheer for Christmas to the little ones under her care. In response state headquarters told Mr. Robinson that an appeal was being made for everyone to hang an extra stocking on Christmas for those Near East children. Mr. Robinson heartily took up the idea and became chairman of a committee for Harford county that got hundreds of filled stockings for the little ones under Miss Rouse's care. These stockings were sent to Syra, and reached the children there in time for their Christmas season, which comes later than over here. The orphanage at Syra is under care of the Near East Relief.

THE MERCHANDISING BROKER.

By John A. Lee, Secretary-Treasurer Western Canners Association.

THE merchandising broker seems of late to have but few friends and many critics, and yet he has his place in the economy of distribution, and should have at least a small spot in the sunshine.

The fellow that most of the critics are shooting at is really not the merchandising broker, but the food jobber who buys and sells on his own account at a profit, who is a buyer of bargains and large blocks of goods, and as a quantity purchaser secures concessions and resells to the wholesale trade, large or small, usually small, and makes a profit.

His business is legitimate and he has a right to pursue it, for he invests his capital and takes the risk of owning and carrying the merchandise. He is a jobber, however, as long as he confines his sales to the wholesale trade, for when he sells to the retail trade he becomes a wholesale dealer.

This trade distinction is clearly recognized in Europe as jobbers are very prevalent there and usually specialize in a few articles, sometimes only in one.

Coffee jobbers, sugar jobbers, tea jobbers, rice jobbers are numerous in the United States and seem to have established a place for themselves in the general recognition of the trade, and there are a few canned food jobbers.

They all carry stocks usually in public warehouses and are considered a convenience to the wholesale trade because they operate on very small margins, save the difference between local and carload freight, enabling wholesale grocers to carry small stocks and to make quick turn overs in merchandise. They do not usually represent manufacturers as agents or brokers, but buy and sell on their own account.

BROWN, BOGGS CO., LTD., HAMILTON, ONT., Sole Agents for Canada

The enormous assortment and variety of goods a wholesale grocer must carry precludes the idea that he can buy goods in carload lots or large invoices, for his interest and carrying charges would eat up his profits and then some. So much for the jobber who is confused frequently by uninformed critics with the merchandising broker.

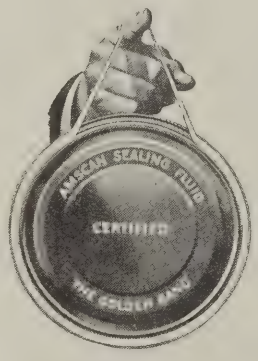
The criticisms referred to are usually directed against canned food or dried fruit brokers who carry consigned stocks in wharehouses and who either bill the goods themselves, or have them billed by their principals, the manufacturers.

They do not invest their money and do not make a profit on the goods, but receive only their regular brokerage on sales and do not take the risk of declines or benefit of advances. They are really manufacturers' agents.

This kind of a broker receives goods on consignment from his principals, and secures to the wholesale grocers, the advantage between carload and less than carload freight rates, which differences are exorbitant under present railroad classification and administration, and if not overcome would be prohibitive in many instances.

This merchandise broker or manufacturers' agent is a legitimate broker and his services to the wholesale trade are valuable. He sells quantities or car loads whenever he can do so, but otherwise, sells his consigned warehouse stocks, or makes up pool cars to save the difference in freight against less than carload shipment.

It is frequently the case that dried fruit packers or canned foods packers have not good winter storage and want to ship their surplus to city frost proof warehouses, or that having a surplus, they may want to ship to public warehouses in cities where money can be borrowed on warehouse receipts and the goods held until sold.



The broker, who serves his clients in this method of handling merchandise, is what I would call a merchandise broker or manufacturers' agent, but he is not a jobber and there is a marked distinction.

Such brokers represent their principals, the manufacturers, and sell goods for direct shipment from their factories, sell goods for prompt and future delivery, and perform all the prescribed duties of brokers, and of course, do not sell retailers.

If this method of handling consignments from their principals is condemned by critics, I would call attention to the value and convenience of it to wholesalers, and the fact that it is in conformity and co-operation with the avowed policy of wholesale grocers in recent years, to carry small stocks and buy for immediate wants.

It might be held that sales by merchandising brokers, or manufacturers' agents, in less than carload lots to small wholesalers interferes with the larger wholesale houses which buy largely.

This is seldom the case as my experience is that wholesale grocers do not usually care to do a jobbing business or to sell in jobbing lots to each other. They do not find it profitable to do so as the margin of profit obtainable is less than their average expense for doing business, and when they pay brokerage on such sales, there is no profit left and frequently, a small loss when expenses are considered.

We have named

Amscan Certified Sealing Fluid

(Color Certified Harmless To Foods)

The Golden Band

because it is the finest product of our laboratories. It not only is Golden in Color but Golden in Profits to the canner in the increased percentage of Perfectly Sealed Cans he produces when they are sealed with **The Golden Band.**

Hedstrom Automatic Compound Drying Machine

THE Hedstrom Automatic Compound Drying Machine employs a new and unique method for drying the compound applied to sanitary can ends. On account of its extremely simple and compact construction, this Dryer is sure to be of great interest to all makers of sanitary cans. The complete machine requires a floor space of only two feet square and is a decided improvement over the large, cumbersome machines now being used for this purpose.

The can ends are individually fed and slowly rotated through the drying chamber, insuring an even distribution of compound during the drying operation. The Spiral movement of the ends creates a natural agitation of heated air in the chamber, so the compound is thoroughly dried, absolutely free of blistering, with a surprisingly small amount of heat.

The machine as shown, was exhibited at the Canners' Convention and was considered the most unique and satisfactory Drying Machine ever offered. The Dryer is operated in connection with our No. 1 Single Spindle Compound Applying Machine, but when equipped with the necessary attachments may be used with other types of Applying Machines.

Write us for further particulars.

McDONALD MACHINE CO.

Mfrs. of Automatic Presses, Can Making Machinery, Dies, etc.

7600 South Racine Avenue Chicago, Illinois.

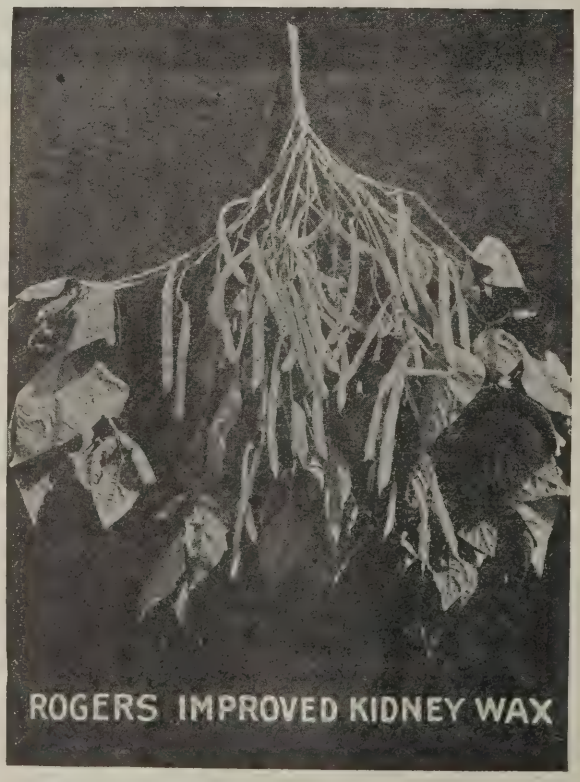
Then wholesalers specialize largely on goods under their own labels for they will not handle goods under a competitor's label, and stripping off labels and relabeling is expensive and troublesome.

Some wholesale houses carry stocks of unlabeled canned foods, or such goods under packer's labels and are thereby better prepared to sell to other wholesalers, but such houses are few and exceptional.

The merchandising broker, as I classify him, and view him, is a valuable ally to the wholesale grocery trade. A jobber is, on the other hand, a competitor of the wholesale grocer. Both have their places in the economy of distribution, for commerce is world wide and as free as the air, and its laws recognize service only, and do not countenance intolerance.

THE POSITION OF CANNERS LEAGUE OF CALIFORNIA ON HANDLING OF SWELLS.

NOTE—A number of requests have been made that the Canners' League of California issue a statement which sums up the attitude of its members on the Zone Warehouse Plan. Complying with these requests a statement along these lines has been prepared, and is as follows:



FOR years many of our members have sold their product on a straight guaranty basis. We have always regarded this as the proper basis, for surely our customers can expect nothing more than that the industry guarantee its product 100 per cent. Any discount arrangement is impracticable because it does not destroy the swells. In other words, it is impossible to destroy swells with a billing machine or a typewriter, no matter what the wording may be. The National Wholesale Grocers' Association recognized this fact when it joined with us in promulgating a sales contract which provided for a straight guaranty.

When U. S. Service and Regulatory Announcement No. 381 was issued, we immediately began the consideration of plans to meet the new condition. We favored and still favor the purpose back of Order No. 381, which was to prevent trafficking in swells. We recognized also, however, that this was its only purpose, and felt that it was not good public policy, nor was it in line with the Government's own wishes, that as a result of this order those canners who sold on a straight guaranty should revert to the half-way measures of allowing a discount which, as stated above, would not destroy the swells. The zone warehouse plan was worked out, was approved by the Government, and we felt, and still feel, that it offers a practical solution and is in the best interests of the trade as well as the public.

It does not entail any change in the letter or spirit of the Pacific Coast Sales Contract, approved by the National Wholesale Grocers' Association and the Canners' League of California, which became effective March 15, 1922. This contract reads in part as follows:

"All claims for swells must be made and bills rendered by buyer on or before July 10th, or not later than six months after date of invoice, and swells held subject to seller's order."

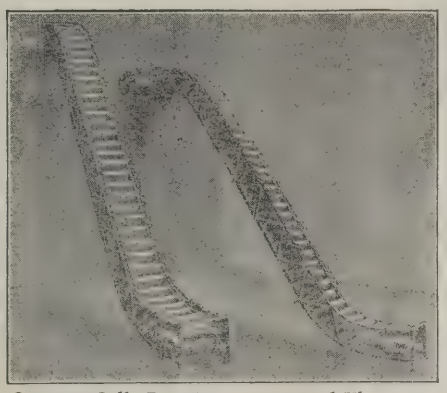
Under these terms it is entirely proper for the canner to order the swells sent to the nearest zone warehouse if he desires. Surely this arrangement is

Other Originations:
Rogers Stringless Refugee G. P.
Rogers Green Admiral Peas,
Rogers Winner Peas.

Rich, creamy, slender oval pods, 5 to 6 inches in length, free from rust, perfectly straight and entirely stringless.

Seed: white, with very small, black eye. Plant: robust, about 18 inches high, erect, bushy and very prolific.

We know of no wax variety more desirable for home, market gardener, or canners' use.



Now booking contracts, future delivery, 1924 crop.

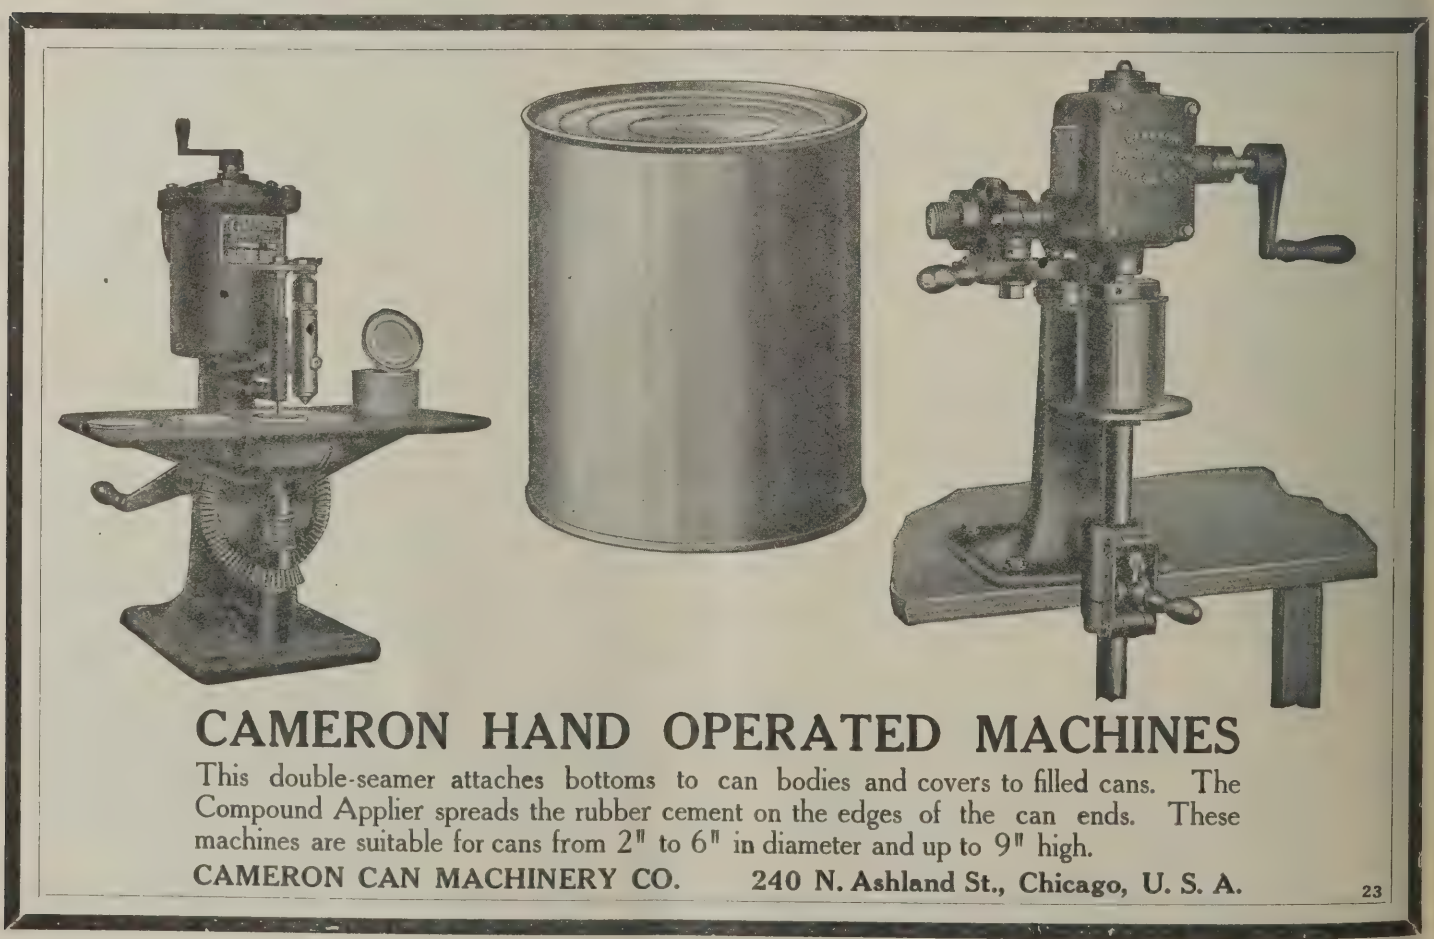
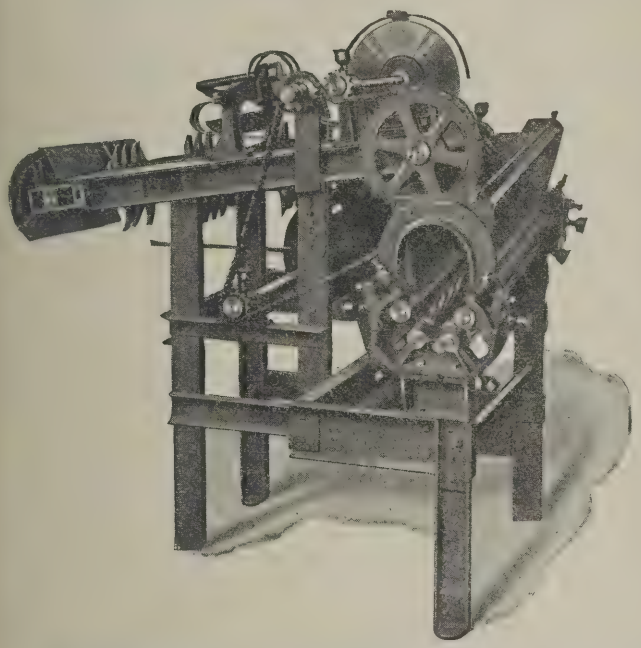
more convenient for the jobber than the old plan which contemplated shipment back to the cannery.



The National Wholesale Grocers' Association has offered certain objections which we will endeavor to answer briefly as follows:

1. That the red tape made necessary by the zone warehouse plan is impractical, and therefore defeats its purpose. We can see no more red tape in the zone warehouse plan than that which was followed by those canners who operate on a straight guaranty basis before Order No. 381 was issued. All the jobber has to do is notify the canner that he has certain swells on hand subject to the canner's order. The canner immediately notifies the National Canners' Association, which gives shipping instructions and payment is made on the certificate. Even the detail above referred to would be largely eliminated if the canner and jobber entered into the spirit of this plan, for at the time the sale was made canners dealing with jobbers whom they knew would issue blanket instructions that swells be shipped direct to the zone warehouse as fast as they developed, providing, of course, for some fair minimum quantity. Under the old method there was red tape and delay because often the canner would not have the men at hand to make a prompt examination. There is nothing in the new plan which changes the present status, whereby the canner operating on the straight guaranty basis sometimes makes payment direct for specific lots of swells without requiring shipment.



2. The point is made that 25 zone warehouses for the handling of swells would create adverse publicity. Acting for the National Canners Association, the Secretary of the Canners League has organized the two warehouses here in California, and we are certain that fears in this particular are unfounded. Every wholesale grocer in this country has a swell room or a swell corner of his warehouse and that is all any one of the zone warehouses will be. While the space occupied will, of course, be somewhat larger than that occupied in the wholesale grocers' own warehouses, it will be relatively small in size compared with the size of the great warehouses in which we have taken space. There is no news value in the maintenance of space in these warehouses and if a story ever broke it would be favorable, because it would show that we were meeting our problems in a scientific and proper manner, and this with the approval and co-operation of State and Federal food officials.

3. The point is made that these warehouses will be unduly expensive. Surely this should not be the concern of the wholesale grocer, for it is the canner who will finance it.

4. The point is made that, while the zone warehouse may offer the solution of the swell problem for members of the National Canners' Association, it does not solve the problem for canners who are not members, and therefore is not a plan which should be supported by a national association of wholesale grocers or by food officials. As organized, the plan is, in effect, a public utility, and any canner, whether a member of the National Canners' Association or even a foe

THE 1924 MODEL
Invincible Green Corn Husker

(The only all steel roll Husker)

Comes nearer to being perfect than any other Corn Husker ever offered the trade.

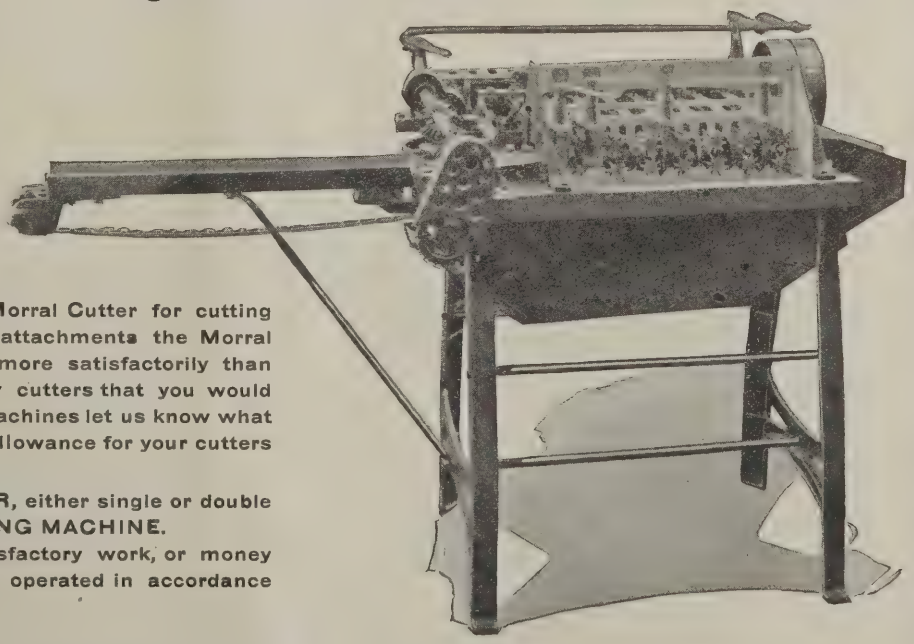
Regardless of whether the corn is the small original Golden Bantam or the Largest variety of Evergreen—The INVINCIBLE will husk it with entire satisfaction, without waste.

The INVINCIBLE has at least one quarter fewer parts than any other corn Husker.

Our Guarantee obligates us to a complete fulfillment of all our claims and promises.

INVINCIBLE GRAIN CLEANER COMPANY, Silver Creek, New York

THE MORRAL CORN CUTTING MACHINE
Either Single Or Double Cut



THE MORRAL CORN CUTTING MACHINE is the most durable, simple and efficient cutter you can buy. It has the most positive feed of any cutter in use.

The Morral Cutter will cut large ears, nubbins and pieces of ears, without clogging like other cutters and for this reason you can secure a larger yield of cans per ton with the Morral Cutter than with any other type of cutter.

We furnish special attachments for the Morral Cutter for cutting Golden Bantam Corn and with these attachments the Morral Cutter will cut the Golden Bantam Corn more satisfactorily than any other cutter in use. If you have any cutters that you would like to replace with new and up to date machines let us know what you have and we will make you a liberal allowance for your cutters on the price of new cutters.

We make the MORRAL CORN HUSKER, either single or double and we also make the MORRAL LABELING MACHINE.

Our machines are guaranteed to do satisfactory work, or money back if they fail to do so when set up and operated in accordance with directions furnished.

It will pay you to write at once for prices and further information.

MORRAL BROTHERS, Morral, Ohio

of the National Canners' Association, can use these facilities upon payment of a reasonable charge for the specific service rendered. If there should be any question as to the fairness of the charge made against a non-member,we feel certain that the National Canners Association would be willing to submit the matter to the nearest state food official or to one of the nationally established boards of arbitration.

We are frankly disappointed in the attitude of the National Wholesale Grocers' Association. Canners and jobbers cannot always expect to agree, and here we have an honest difference of opinion between men who, we can safely say, are of equal intelligence and equal business sagacity. Also, a considerable element in the jobbing trade approves it, as witness favorable action by the American Wholesale Grocers' Association. We believe the plan is practical, and the reason we are disappointed in the attitude of the National Wholesale Grocers' Association is that we feel the only way to determine who is right is to give the plan a fair honest trial. If it is proven wrong, we will be as quick as anyone to condemn it.

NOTES OF INTEREST TO FISH CANNERS.

By Bureau of Foreign and Domestic Commerce, Department of Commerce.

France—According to Mr. Wm. W. Corcoran, American Vice Consul at Boulogne-sur-Mer, France, Portuguese sardines are being sold to a much larger extent in northern French markets. They are very popular in the mining and industrial districts. Although the sales for the first ten months of 1923 were only 41 metric tons, this represents a large increase over the 14 tons imported in 1922.

The Portuguese fish are packed in tins containing from 6 to 8 fish weighing about 8.8 ounces. The French sardine cans contain the same number of fish and weigh from 7.4 to 8.4 ounces. The Portuguese are sold for 13.2 cents per can, while the French sell for 18.7 to 19.3 cents, using the franc value of 18.16 to the dollar. Objection is made to the Portuguese fish on account of the strong flavor of the oil in which they are packed. Dealers state that any sardines which can be sold at prices comparable to the Portuguese product, will have a ready market if the objectionable flavor can be eliminated.

"PRESERVED SWEET CIDER NOT CONTROLLED BY VOLSTEAD ACT EVEN IF IT GETS HARD LATER.

AN interesting case involving the legal position of cider under the Volstead Prohibition Act arose recently in New York State. The Duffy-Mott Co. and the Hildrick Apple Juice Co., two large cider manufacturers, applied to the Commissioner of Internal Revenue for permission to manufacture and sell preserved sweet cider consisting of fresh apple juice preserved by the addition thereto at the time of production of not to exceed one-tenth of 1 per centum of

An Ideal Viner FEEDER with Distributer

On Every Viner is Economy

Patented in U. S. Canada and France

OVER 1500 IN USE

No viner can do satisfactory work when its beaters are obliged to work on heavy mats or bunches of vines.

Separation of the vines by the feeder is, therefore, essential to best results.

Hamacheck Ideal Viner Feeders with distributor are the only feeders that thoroughly separate the vines. The savings effected, over the use of any other viner feeder, are so large that it is not unusual to hear pea packers say that Ideal Viner Feeders more than save their cost each season.

The New KYLER BOXER.

A machine, simple in construction, positive in action, which takes the cans from the Labeler – or Automatic Cooker – as fast as they come and places them in the cases without injuring the cans or Labels. Sturdily built to last a lifetime; all metal – operates either by foot or hand – both furnished with all machines – always on the job.

PERRYMAN, MD., December 7, 1923

We just want to write you in regards to the splendid success we had with your boxing machine this year. It cased three thousand cases per day for us for forty-two days. I do not think we lost a minute's time with it during the entire season. I would say it was one hundred percent perfect.

Yours truly, F. O. Mitchell & Bro.

Manufactured and Sold by
Westminster Machine Works
Westminster, Md.

benzoate of soda. Duffy-Mott Co., Inc., stated that when so manufactured the preserved sweet cider contained less than one-half of 1 per centum of alcohol, but that it did not insure that the alcoholic content would remain below that amount, but, due entirely to natural causes, such preserved sweet cider would develop an alcoholic content in excess of one-half of 1 per cent. Hildrick Apple Juice Co., Inc., stated that when so manufactured such preserved sweet cider would contain more or less than one-half of 1 per centum of alcohol, depending upon the alcoholic content of the pure juice in the apple prior to being expressed and also upon other natural causes. The director refused to grant such permits unless the applicants would guarantee that the alcoholic content of such preserved sweet cider would not at any time exceed one-half of 1 per cenum by volume; they filed petitions in equity in the United States District Court for the Southern District of New York pursuant to the provisions of Section 5 of Title 2 of the olstead Act (41 Stat. 305), permitting manufacture by proper proceedings in courts of equity to review the action of the Prohibition Commissioner.

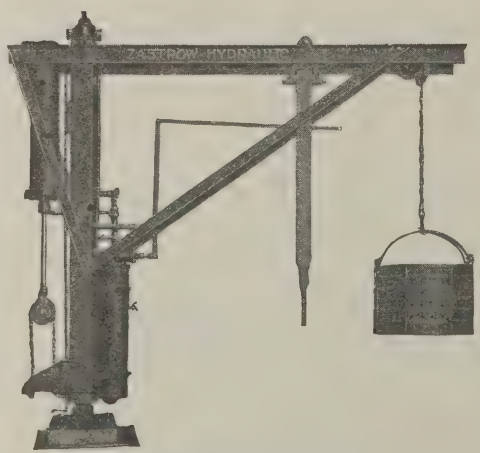
The Court reversed the action of the Commissioner, on the ground that the Volstead Act exempted "preserved sweet cider" from its provisions, which made it legal to make and sell it (if it was preserved at the time) (regardless of whether fermentation later overcame the benzoate and turned it hard.—From Modern Grocer.

PENNSYLVANIA FINDS PLANT FOOD CHEAPEST IN HIGH-ANALYSIS FERTILIZERS.

By Soil Improvement Committee, National Fert. Assn.

In his report covering the spring fertilizer season of 1922 J. W. Kellogg, State Chemist, cites figures showing that plant food costs less in high-analysis fertilizers (containing 14 per cent or more plant food) than in low-analysis fertilizers, despite the higher ton price of the former.

During the period mentioned samples of 451 brands of complete fertilizers were sampled, 193 of which were high analysis. The following table shows the average plant food content, the average retail ton price and the average cost per unit of plant food.



Cost of plant food in high and low analysis fertilizers (Penna.). Per cent. plant food content:

193 brands with 14 per cent or more plant food: Nitrogen, 2.20; available phosphoric acid, 8.91; water soluble potash, 5.98; total, 17.09; average retail ton cost, $34.76; average cost per unit plant food, $2.03.

258 brands with less than 14 per cent. plant food: Nitrogen, 1.25; available phosphoric acid, 8.48; water soluble potash, 2.74; total, 12.47; average retail ton cost, $27.58; average cost per unit plant food, $2.21.

The notable fact revealed by these comparisons is that while one ton of fertilizer, carrying 4.62 per cent. more plant food than another, cost $7.18 more per ton, it furnished plant food at a rate 18c per unit lower. That means that the actual plant food in the ton of fertilizer analyzing 17.09 per cent. plant food cost $3.06 less than in the ton analyzing 12.47 per cent. plant food.

FOR SALE—We have a small surplus of Golden Bantam, Large Late Crosby, Improved Hickok men and Evergreen Sweet Corn all grown here by ourselves for seed purposes, from selected stock seed which was carefully tested for disease and vitality by the rag doll testing system which eliminates disease and unfertile barren stalks. We have been growing and improving this corn for a number of years under the above system. This work has been done by our Mr. Skinner with the assistance of Dr. Woodbury and the Department of Agriculture. We are offering this and will be pleased to receive your inquiry
W. R. Roach & Company, Grand Rapids, Michigan

FOR SALE—2500 bushels Guaranteed Alaska Pea Seed, grown by well known seed growers. Price and particulars on application to
Box A-1132 care of The Canning Trade

CANNED FOOD PRICES

Prices given represent the **lowest** figure generally quoted for lots of wholesale size, usual terms f. o. b. Baltimore (unless otherwise noted) and subject to the customary discount for cash. ****Many canners get higher prices for their goods; some few may take less for a personal reason, but these prices represent the general market at this date.

Baltimore figures corrected by these Brokers: (‡) Thos. J. Meehan & Co. (†) Jos. Zoller & Co., Inc. (§) A. E. Kidwell & Co. (*) Howard E. Jones & Co. New York prices corrected by our special Correspondent.

The Markets

BALTIMORE, JANUARY 28, 1924

WEEKLY REVIEW

THE PLAN ADOPTED—The great battle of Buffalo has been fought and won. Won by the canners, it is claimed by the committees of canners and others, and won by the jobbers, it is claimed by other canners, principally those who wanted no sort or kind of compromise on the question, but stood on their right to name the terms upon which they would sell their goods. So, at least so far as winning is concerned, all hands ought to be very well pleased; and if buying has been suspended awaiting this decision, it ought now to begin with a rush. But why this division of opinion, this uncertainty?

You may find it stated in the Buffalo Convention News page —and so discover it for yourself. It all depends upon the viewpoint; but possibly it more particularly depends upon the individual canner. Briefly, the wholesale grocers accepted the Warehousing Plan as covering all goods while in their warehouses. But where a retail grocer may find a single can, instead of putting it through the involved process of sending it to the Zonal Warehouse, the pure food man may destroy it. In fact, the pure food men were prepared to refuse to go to this trouble if it had been demanded. So in order to help out the pure food men and save the Plan for the great bulk of all canned foods, this point was conceded. Then the wholesale grocers asked to be covered on such losses, and after more discussion the Conference Committee decided to draft a clause covering this concession; and that clause stated that, separate and distinct from the first decision (adopting the Plan), it might be arranged between buyer and seller at time of sale to reimburse for these small claims upon an agreed percentage allowance, or to settle at end of a stipulated period. On the one side it is claimed this concession does not weaken the Plan; on the other side, that the concession annuls the whole Plan and leaves the swell allowance question just where it was, or, even worse, that it makes the position of the wholesale grocers even better than they asked. These latter contend that the jobber will now demand ¼ or ½ of one per cent to cover these small claims, and that all claims will, in the future, come from the small retail grocer.

It was contended, in asking for this concession, that these claims were so small and insignificant that it could make no difference to either side. What we cannot understand is, that unless these great wholesale grocery firms measure, in stature, about as high as a gnat's eyebrow, and if they are honest in their statement that such claims are mere trifles, why they should ask for reimbursement for the trifle! If the proposition had been to pay these single-can-retailer losses in German marks, we presume these great princes of trading would have insisted upon change from a single mark. But not much more can be said of the canners who listened to this pleading for a few pennies and granted it; that is, until you think just a little farther, and then you begin to realize that there was decidedly more behind the request than the "trifle" mentioned. In any event the question is settled, it would seem.

PROPAGANDA—There is a widespread effort—a propaganda—to make all canners believe that all other canners are selling futures freely on a percentage allowance basis. Names of leading canners are mentioned as having sold 1924 goods on this basis, the idea being that when the smaller canner learns this he will become indignant and consent to sell also on the percentage allowance basis. It is not possible to chase out every one of these totes, but what we have investigated have proved to be pure, unmitigated lies, or the propagandists, having been able to inveigle some unfortunate canner into such a contract, are multiplying that sale—by old Dame Rumor—into a common practice.

We have personally talked with a very large number of canners from many sections, some of them large and some small canners, and whereas we had previously understood that the sales of futures, excepting peas, had been very slow and of small moment, all of these canners say that the buying of futures has been unusually active in corn and tomatoes, as well as peas, and every one of them said that in not one single instance had a buyer asked for the percentage allowance clause! A large Utah canner said that he had not sold a can of future tomatoes, but that the buyers had taken his entire expected pack (nearly 100,000 cases) away from him, and that he was out of the market and refusing further offers—and not a case was sold nor asked for under percentage allowance. Wisconsin pea canners—many of them—said they were sold up on futures, and had never been asked to grant the percentage allowance. Indiana is said to be well sold up on 1924 tomatoes—all under old form contracts.

Note two things from this: the buyers are taking futures, and, secondly, the canners are not selling under percentage allowance contracts—and don't be misled. Most of these canners whom we interviewed are located in the West or Central West, and most of this trouble is coming from the New York market. No one seems to doubt that that set of buyers is demanding the percentage, or, worse still, the allowance on return of label. But at the Conference Mr. Arthur Williams is said to have granted the justness of the canners' demands to know why the goods spoiled, and to have endorsed the Warehouse Plan for jobbers' stocks. And it was agreed by both sides to avoid all propaganda for or against the Plan. In fairness it must be said the propaganda above referred to was started long before this agreement.

THE MARKET—If there are any weak-kneed canners holding goods, none of them was at the Buffalo Convention. Everyone is a firm believer in better buying and better prices. There were inquiries as to whether or not future prices had been named on tomatoes, and we presume there were many future tomatoes sold this week; but nothing much has been heard of price. Canners at the Convention, at least, feel that business will be very brisk, that the country is eating canned foods, and will need all that the canner can produce. And if they produce quality goods, we are inclined to agree with them.

Of course, there is much talk of the packs being overdone this coming year; but there are always big packs of all kinds of goods in January and February. And as foolish as it may seem, there are always canners who sell futures on these heavy January and February packs! Until the big packs are produced don't discount your prices on them. Wait until August and September arrive before cutting prices, at least.

NEW YORK MARKET

Hudson Street Has Moved to Buffalo for Week—The Convention Is Reported to Be a Record for Future Business This Year—A Canners' Market—Maine as a Pea Canner—Future Tomatoes.

New York, January 23, 1924.

By "New York Stater,"

Special Correspondent "The Canning Trade."

MARKET at Buffalo—Hudson street, to all intents and purposes, has moved to Buffalo for the week, and the local market has slackened off, as many of the leading operators are out of town. With the question of swells settlement scheduled for a thorough going over, buyers, in many instances, decided to hold off the market until some adjustment satisfactory to both canners and wholesale grocers was made.

A Compromise—Reports from Buffalo herald the "compromise" which the canners and jobbers have arrived at, but a perusal of the agreement reveals that most of the conceding was done by the wholesale grocers. Arthur P. Williams, chairman of the Canners' Conference Committee of the National Wholesale Grocers' Association, after attending the joint session at which the agreement was reached, said: "The jobbers have conceded the Zone Warehouse Plan for large blocks of swells in jobbers' warehouses. In return the canners are to make a fair percentage allowance for swells in the hands of retailers which cannot be returned. This, in substance, was the tentative settlement of the most difficult problem the canners and grocers have had to contend with in many years. It was shown that the swells allowed to retailers represent about 80 per cent of the average swell losses of jobbers, so that the percentage as outlined by the jobbers in their official bulletins will be modified and all swells from warehouse stocks will be allowed for in full."

Record for Business—The Convention is reported to be a record for future business this year, and much of the business which has been held back pending settlement of the swells allowance controversy has been released. The attendance of wholesale grocers at this year's Convention is large.

A Canners' Market—Getting back to actual market conditions, it appears to be a sellers' market practically all along the line. Wholesale grocers are badly in need of supplies, and the shortage will become more acute as the spring comes on and the consuming demand picks up.

Future Tomatoes—Indiana packers have booked considerable business on future tomatoes, the sold-up condition of the market for spot Indiana tomatoes having stimulated futures buying. Canners are reported booking as follows: Standard 1s, 67½c; 2s, $1.00; extra standard 2s, $1.05a1.10; fancy No. 2s, $1.30a1.35; No. 3s standard, $1.40; extra standard, $1.45a1.50; fancy, $1.75; No. 10 standards, $4.50; extra standards, $4.75 to $5.00. Indiana tomato canners generally sell their product as "hand-packed."

Future Maryland Tomatoes—Maryland tomato packers quote futures at 57½c for standard 1s, 87½c for 2s, $1.27½ for 3s, and $4.00 on 10s, f. o. b. Peninsula factories, on 100 per cent delivery contracts. Packing costs have advanced, and canners are not just certain as to just what all of their supplies and raw tomatoes will cost them. In view of this condition it would seem that canners might exercise unusual caution in booking on 100 per cent delivery contracts this season.

Fruit Buying Begins—There has been quite a good inquiry for California canned fruit for spot shipment from the Coast during the past week. The demand for canned fruit has been lagging this season, but is beginning to pick up locally as the cold weather drives the cheap fresh fruits from the market. California canners have only limited quantities of fruits to offer, and they are maintaining the market on a firm basis. The situation among Northwestern fruit canners is also reported to be very strong at this time, with the pack of 1923 well cleared. One or two venturesome Northwestern canners have already named opening prices on 1924 pack canned fruits, but the majority of the packers are not yet willing to make known their price views for the coming season.

Pea Canners Withdraw—Several Wisconsin pea canners are reported to have already withdrawn from the market on futures, having booked sufficient business to take care of their anticipated production. Last year at this time, it will be recalled, the packers were just coming into the field with their opening prices. The market on standard 5s sweets and 4s Alaska is reported firm at $1.10 for straight cars, with $1.05 bid. Most canners are insisting upon their buyers taking a rather liberal percentage of standards along with their purchases of the choicer siftings. It is expected that the close of the Convention will find many more pea canners withdrawn from the market.

Maine as a Pea Canner—Maine canners have already contracted for double the amount of pea acreage purchases last year, and it is thought that the packing of Maine peas, undertaken in an experimental way last year, will be developed this season.

Corn—Maine canners are not yet ready to talk future corn, they say, and no prices have been named. Minnesota corn is reported to be selling well on future contracts at $1.30 for fancy Crosby. Fancy Illinois Country Gentleman is quoted at $1.30, with Wisconsin pack at $1.25, and Iowa at $1.20. Southern corn canners are beginning to talk futures. It is expected that Maryland and Delaware will pack more Bantam and fancy yellow corn this season than ever before. The market for spot Southern corn remains quiet, ranging from 92½ to 95 cents per dozen, cannery.

Salmon Quiet—Spring buying of canned salmon has not yet gotten under way in any volume, and Seattle holders quote the market unchanged at $2.25 on reds, $1.25 on pinks, and $1.20 for the small lots of chums which are still to be had. It is expected that there will be considerable buying from the Southern jobbing trade for spring requirements.

ST. LOUIS MARKET

Firm Tone in the Canned Tomato Market—Buyers are More Inclined to Buy Futures—There Is Only a Fair Seasonable Demand for Corn—Peas Well Sold Up—Trading in Fruits Is Light.

St. Louis January 24, 1924.

By "Missourian,"

Special Correspondent "The Canning Trade."

BUSINESS varies daily in the canned foods market here. One day buying is fairly satisfactory, while the next there is comparatively little business being done. The week's business, however, counts up quite well, because jobbers are commencing to buy after their inventories have been completed, and they know what they have on hand and what they must have.

Buyers are more inclined to buy futures than they have been doing, but because canners are inclined to place too high values on their packs, most of the buying is on a hand-to-mouth basis. It has been remarked by distributors here that if the grower and canner would work more in harmony with the jobber there would be a right good business and everyone would be making more money.

Tomatoes—There is a firm tone in the canned tomatoes market. They are always in demand, and buying is being done in a small way, and the volume reaches normal proportions for this time of the year. There has been a restriction in business to some extent, and the trade is awaiting for some real selling on the part of the packers before buying in larger amounts. The Southern market is unsettled. Canners do not care to grant inside prices, and distributors are not willing to buy freely at present prices. When spot stocks are obtainable cheaper than the prices at the factory, it has a tendency to curtail buying in the country. Canners are said to be negotiating with farmers for raw stock under contract for this summer, but the market has not been established in the Tri-States. The local trade in tomatoes as well as other canned foods seems to be waiting until after the convention before going into the market in a big way. No. 2s and No. 3s seem to be in better jobbing demand to fill gaps in stocks, but not so much for speculative purposes. Packers are making no efforts to push sales. While Tri-State statistics indicate that a considerable stock of the 1923 pack is still in the country, brokers have not found any large individual holdings. The short age of the Indiana pack and other Middle Western States undoubtedly resulted in a diversion of a large part of the 1923 output of the South into that territory.

Corn—There is only a fair seasonable demand for corn. Buyers are favoring standard grades from the South and West. Narrow grain Western corn is being bought in place of the depleted stocks of Maine corn. Fancy is scarce and the offerings

are not free except at full prices. Standards are moving well at retail, and this causes continued replacements. Packers are not pressing sales because of their light reserves. The cheap line of standards are usually off grade, while fancy lines below full quotations are often defective.

Peas—The market will be well sold up on peas of the old pack is the consensus of opinion here. The spot situation is much stronger than it has been. There is a tendency toward higher levels in many sought sizes. Business in futures is in seasonable volume, with greater difficulties developing in the placement of assortments, which include more than 35 per cent of standards. The big future trading in certain varieties and sizes of Wisconsin and York State is said to have been done, although considerable business is usually placed after the middle of this month. Many jobbers are after lines they cannot get at their figures. This is no surprise, because packers of Wisconsin peas refuse business except in desired assortments and at list prices. A jobber said here today: "Before full deliveries of sweet peas were made last fall buyers were seeking new prices. Some placed business in peas subject to prices not yet named. It is understood that this early business ran into considerable volume, and as buyers' contracts were offered freely well in advance of the 'regular' time for purchasing, packers, in the opinion of large factors, were 'spoiled.' There is still a volume of business which has not yet been placed and among packers who have not yet withdrawn entirely, assortments of 50 per cent high grades to obtain standard at all, are not uncommon. Advances following the canners' convention are in prospect."

Spinach—New California spinach will soon be shipped. Samples indicate the quality is about the standard for fall pack.

Succatash—Spot holdings of succatash are light and the demand fair. Most distributors ran short of this item during the early winter.

Fruits—Trading in California fruits has been light, although there has been a fair movement of stocks of California fruit recently. Stocks of all grades in the hands of distributors are sufficient to meet any reasonable requirement for perhaps 90 days to come, if not longer, and prices prevailing are far below replacement costs, with liberal offerings and a demand far below normal for this season. If there has been a slight improvement in the general trade interest in peaches, apricots, pears and cherries, it has not taken form in actual turnover of stocks, for the most attractive offerings have gone begging for nearly a fortnight.

The Government was justified in seizing 19,200 cans of spoiled salmon found on the shelves of some retail groceries and in several wholesale grocery houses here in the 16 days' period ending March 29 last, a jury in the United States Federal Court decided this week. The salmon were shipped here by the Northern Pacific Trading and Packing Co., of San Francisco, and analysis by the Bureau of Chemistry, United States Department of Agriculture, showed the food was putrid. In his charge to the jury Judge Faris said: "You are not supposed to consider whether people can eat putrid food. That is not the point. What may be unutterable filth to you may be atter of roses to a Siwash Indian."

Canning industries in the Missouri and Arkansas mountain region give indications of activities greater this year than in the last five years of rapid growth. Canning factories have been established in almost every town north of Cotter, Ark., on the White River Division of the Missouri Pacific Railroad. Tomatoes make up a larger amount of the production. Corn, beans, sweet potatoes and fruits are also canned.

CHICAGO MARKET

Royal F. Clark Elected President National Canners' Association —He Succeeds James A. Anderson—Warehouse Plan Has Been Adopted by Compromise Between the Wholesale Grocers and Canners at Buffalo Convention.

Chicago, January 23, 1924.

By "Wrangler,"
Special Correspondent "The Canning Trade."

HELL!! The good old Western Canners' Association has furnished the National Canners' Association with another president in the election of Royal F. Clark, of Beaver Dam, Wisconsin.

He earned his spurs as president of the Western Canners' Association and made a fine record. He will prove the value of his experience as president of the National Canners' Association. He has also made a good, forceful and resultful Chairman of the National Canned Foods Week Committee, and is a strong and interesting speaker.

As I once heard a man say, "he has got salt in his tongue," which means that what he says is never insipid or tasteless. He studies his subjects and knows what he is saying and how to say it, and is always full and bubbling over with a knowledge of the matter. "Out of the abundance of the heart the mouth speaketh" is the way it is described in the Bible, and the description has never been improved upon.

He succeeds James A. Anderson, who has made a fine record and who is a Western Canners' Association graduate, being one of the directors of that Association at the present time. The position of president of the big National Canners' Association is very exacting, and the duties and activities take almost the entire time of the man who holds it.

It ought to be a salaried position, for otherwise some of our ablest canners, who are not financially able, could not afford to aspire to the position. To ask a canner to accept such a position and devote practically his whole time to it, as has come to be the case, is an imposition and should not be done.

We will now have to have a canner for the chairmanship of the Canned Foods Week Committee to succeed President Clark, and he should be of good timber and a sacrificing disposition, for that is also an honor that means the devotion of much time and personal sacrifice.

I understand that the Warehouse Plan has been adopted by a compromise between the wholesale grocers and the canners at the Buffalo Convention, and if that is the case, retiring president James A. Anderson has built a place for himself in the Hall of Fame of the Canning Industry, for he and Frank Gorrell and others worked very hard to secure a trial for the plan, and in the face of powerful opposition from within and without his associations.

It took courage of the highest order—moral courage—to fight that battle. It is a step forward in the progress of the canning industry which should have been taken years ago and one which places the industry high upon a pedestal of public confidence of wholesomeness, safety and esteem.

There is no news here in relation to canned foods. The market is deserted by all, or most all the big buyers, and most of the more important brokers, for they are all at the Buffalo Convention, having a good time, I hope.

I could not go, as I had caught a deep cold and am at an age where I must be careful and take few risks. A big convention at this time of the year is always dangerous, as are all crowds and crowded sleepers.

Then, my youngest daughter, now grown, and who has children of her own, but who many years ago used to sit upon my lap and intimate that a smooth dime could be used in her infantile financial plans to advantage, and when I came across with it would hug me with such sincerity that it made me feel like a philanthropist, was in the hospital recovering from an operation, and would have felt aggrieved if I had left the city. She has been taken home entirely recovered today, for which I am deeply thankful.

If none of you fellows have never taken a kiddie on your knee and bought that philanthropic thrill with a dime or even a nickel, try it once. It beats the world and there is nothing like it. If you haven't any kiddies of your own, try it on someone else's kiddie. It works pretty well that way, but not quite so well as with your own brand and label.

It is evident to you and everyone else from this palaver that I am writing that there is no news about canned foods in this town this week.

Indiana has named some tentative prices on the 1924 pack of canned tomatoes—70c for 1s standard, $1.00 for 2s standard, and $1.40 for 3s standard, all f. o. b. Indiana. I learn that there have been a few contracts made at those prices, guaranteed against canners' prices for the season.

It is getting more and more difficult to sell Maryland tomatoes in this market all the time. Our buyers all want extra standard quality, largely for their own labels, and Maryland packed but few of that grade this season, at least they are not offered by the brokers. Then, Maryland canners are not willing usually to sell on approval of sample, but insist in selling on grade, and Maryland canners are usually very reluctant to sell for buyers' labels, and all these restrictions and hindrances conspire to hold the business in the West even at considerably higher prices.

CALIFORNIA MARKET

Drought Conditions Continue to Prevail—Irrigation Is Being Practiced—Annual Meeting Alaska Packers' Association —Annual Meeting Pear Growers' Association— Annual Meeting of the Cherry Growers' Association—Recent Suits.

California, January 19, 1924.

By "Berkeley,"
Special Correspondent "The Canning Trade."

BROUGHT conditions continue to prevail in California, with conditions becoming acute in some sections of the State. Irrigation is being practiced in some places, an unheard-of-thing for the month of January, and farm operations are being greatly delayed. Fresno, in the heart of the San Joaquin Valley, has had less than one inch of rain for the season, while Sacramento, in the Sacramento Valley, has had less than three inches. California, as a whole, has had less than one-third the normal precipitation to date, and the snowfall in the high mountains is negligible. Should spring rains be heavy and well distributed, late crops might make a normal yield, but a scarcity of water for irrigation is inevitable.

The drought is having quite a marked effect on the demand for canned spinach of the 1923 pack, and buyers are picking up such lots as are obtainable. The acreage this year promises to be light, and should dry weather continue much longer, a very marked decrease in the size of the pack will result. Fall pack spinach is in demand and seems to be above the standard usually set for this pack. Prices are firm at $1.25 for No. 2½s and at $4.75 for No. 10s.

California canned tomatoes are still in fair supply in this market, but there has been no change in prices since the publication of the 1923 pack statistics. The output was rather larger than was expected, owing to the dry fall, but the demand has been good and no one has excessively large holdings. Other markets are well cleaned up, and quantities of California tomatoes are being shipped to the Atlantic seaboard. Quotations in this market are on the basis of $1.15 for No. 2½ standards, although it is possible to pick up stocks from small packers at a slightly lower figure.

The export demand for California canned fruits has shown more life of late and sales have been made for shipment to countries that have been out of the market for some time. Germany has bought quite freely of dried fruits and has ordered some in the canned form, while Great Britain has also come into the market. Yellow cling peaches are getting short in standards and are quite scarce in seconds. In fact, the lower grades of all fruits are in light supply.

The most marked demand in canned salmon seems to be for pinks, with the market firm at $1.25. At the present rate of consumption it is held that available stocks of all grades will be cleaned up before stocks of new pack fish are available.

The annual meeting of the stockholders of the Alaska Packers' Association was held at San Francisco, Cal., on January 15, and President William Timson reported that business during 1923 had been fully as satisfactory as during the preceding year. Cannery operations yielded a profit of $344,747, while miscellaneous and insurance fund earnings amounted to $695,049. The assets of the company showed an increase from $12,492,573 to $13,143,772; inventories moved up from $4,385,936 to $4,631,190, and insurance fund investments totaled $2,769,225, as compared with $2,672,750 in 1922. The Association operated thirteen canneries in Alaska and one on Puget Sound during 1923 and made the following pack:

	Cases
Sockeye	8,068
Red	602,272
King	3,946
Coho	8,231
Pink	112,600
Chum	13,848
Total	748,965

President Timson advised the stockholders in his annual report that market conditions for canned salmon were fully as satisfactory in 1923 as in 1922, especially in the United States and in Australasia. The continued financial and industrial disturbances in Europe still have their detrimental effects on business, he said, although to a markedly less degree.

At the election of officers, which brought the meeting to a close, all the former officers and directors were re-elected, with the exception that L. E. Wood was made a director, succeeding R. L. Pratt. Mr. Wood is a vice-president of the California Packing Corporation and a director in the Canners' League of California, and his election to the directorate strengthens the bond between the Alaska Packers' Association and the California Packing Corporation.

The annual meeting of the California Pear Growers' Association was held at San Francisco, Cal., January 15, with about two-thirds of the membership of 1,313 represented. The annual report of President Frank T. Swett showed that, while the price of canning pears was the lowest since the organization of the Association in 1917, the prices received for shipping fruit were comparatively high. Officers were chosen at the meeting as follows: President, Frank T. Swett; vice-president, Peter J. Huth; secretary, F. A. Edinger, and directors: J. E. Bergtholdt, F. W. Dorn, Alfred L. Brown, R. C. Dorsey, F. A. Edinger, James F. Elliot, Peter J. Huth, H. M. Miller, E. C. Rand, Frank T. Swett and F. A. Wilcox.

The California Cherry Growers' Association held its annual meeting in the Underwood Building, San Francisco, Cal., on January 17, and a decision was reached to make a vigorous campaign for new members. The membership is now in the neighborhood of seven hundred. The officers chosen at the recent meeting are as follows: President and manager, F. W. Maddox; vice-president, E. A. Smith; sceretary, C. S. Long, Jr.; assistant secretary, A. C. Kramer; treasurer, W. W. Monroe; directors: F. W. Maddox, E. A. Smith, N. F. Coombs, A. C. Booth, F. T. Swett, C. Leland, A. R. Thomas, T. D. Bryan and C. S. Long, Jr.

California canners and growers are much interested in the suits heard recently in the Superior Court at Modesto, Cal., with Superior Judge Howard Peairs, of Bakersfield, presiding, the suits involving the alleged violation of a fruit contract. The suits were brought by the Pratt-Low Preserving Co. against Dr. C. W. Evans, charging violation of contracts to deliver peaches grown on his orchards near Ceres. One suit asked for damages in the sum of $105,120 and was based on a contract entered into by the grower and the company in 1916, whereby the peaches grown on a forty-acre tract were to be delivered to the canning company for a period of ten years. The complaint alledged that Evans delivered the crops grown in 1917 and 1918, but refused to make deliveries in 1919, claiming that he had sold the property to a relative. The other suit is for damages amounting to more than $600,000, and is based on a ten-year contract to deliver cling peaches grown on a one hundred and forty acre tract. The complaint sets forth that the grower failed to deliver any of the crop the first year the contract was in effect, or any subsequent crops. In the decision handed down Judge Peairs ruled that the contract was binding and advised that the only matter to be decided by the jury was the amount of the damages.

The Associated Grocery Brokers of San Francisco recently held their annual meeting at the Commercial Club and elected officers as follows: President, William Olney; vice-president, Frank K. Brown; treasurer, William G. Goldberg; secretary, William J. Boradori. These officers, with Frank Weyman, constitute the Board of Directors.

The Lang & Stroh Co., San Francisco brokers, will shortly move to 104 Davis street, where Haas Bros. were located for many years.

The Meyer & Phillips Co. has opened offices at 112 Market street, San Francisco, Cal., and has engaged in the brokerage business, specializing on canned products.

TRADE-MARKS DEPARTMENTS.

Conducted by National Trade-Mark Company,

Washington, D. C.

The following are trade-mark applications pertinent to our field pending in the United States Patent Office which have been passed for publication and are in line for early registration unless opposition is filed promptly. For further information address National Trade-Mark Company, Barrister Building, Washington, D. C., trade-mark specialists.

As an additional service feature to its readers, this journal gladly offers to them an advance search free of charge on any mark they may contemplate adopting or registering. You may communicate with the Editor of this department, or send your inquiry direct to the National Trade-Mark Company, stating that you are a reader of his journal.

The Foundation of A GOOD LABEL

The design may be beautiful and the inks of the best quality but if the paper isn't right the label will not be right.

A good label must have a good foundation---fine paper. It must be paper that will stay white with age and it must be the right finish for color printing purposes. Also it must have the strength and texture to give maximum production on labeling machines.

We test every lot of paper we receive to make sure that it fulfills all these requirements. We use nothing but the best quality of coated and uncoated papers made for us on our order and always by the same formula.

On this foundation we build---with the taste and skill of long experience---labels that help sell goods.

CONSULT OUR TRADE MARK BUREAU

We maintain a bureau of brands and trade marks for the benefit of our customers. Write us for particulars. The service is free.

SMILE AWHILE

A THOROUGH RE-FORMATION

Nash—I hear Mrs. Ringler reformed the man who had tried to rob her.

Spintler—Yes, she made his pug nose a Roman, knocked his chin back to his Adam's apple, concaved three of his ribs and curvated his spine.

WASTE

In a little backwoods town an itinerant salesman, undeterred by the extreme poverty-stricken appearance of one house, tried to sell the head of the family a certain article. He got the reply:

"Say, I only spent one dime in all my life for foolishness. An' that was for a pair of socks."

THE GOOD OLD DAYS

The honeymoon in the Garden of Eden was drawing to a close and Adam and Eve were having one of their lovers' quarrels.

"These biscuits are the limit. They're absolutely the soggiest I ever ate," growled Adam.

"Well, anyway, dear," retorted Eve, with dangerous sweetness, "you can't pull the wheeze about their not being as good as mother used to make."

EXPLAINED

"Why do you dislike me so, Jimmy?" asked the girl's suitor of her kid brother. "What have I ever done to deserve it?"

"Well, when you call on sis, you put the clock back an hour," answered the boy sullenly. "That makes me late for school and I get licked for it."

NONE LIKE HIM

Radley—Is Fillanson honest?

Hallman—Honest? Why, he's so honest that if he thought his gas meter wasn't going fast enough he'd tell the gas company.

OBJECTION OVERRULED!

"Your honor, I was not intoxicated."

"But this officer says you were trying to climb a lamp-post."

"I was, your honor. A couple of cerise crocodiles had been following me around all day, and I don't mind telling you that they were getting on my nerves."—Arkansas Utility News.

A SAVING STYLE

She was trying to reason with the poor boob on the day the monthly bills came in.

"You see, I simply had to have all these new things. Everything's Egyptian now that they've dug up Tutankhamen, and—"

"Yeah?" growled the brute. "Well, all I gotta say is, I hope they big up Adam next—that's all I gotta say."—American Legion Weekly.

YE DINNA INVITE US!

McTavish attended a christening where the hospitality of the host knew no bounds except the several capacities of his guests. In the midst of the celebration Mr. McTavish rose up and made the rounds of the company, bidding each a profound farewell.

"But, Sandy, man," objected the host, "ye're not goin' yet, with the evenin' just started?"

"Nay," said the prudent McTavish, "I'm no goin' yet, but I'm tellin' ye good night while I know ye all."

NOT THAT KIND

The manager of a local hotel, recalling his novitiate as clerk employed in a country wayside house, relates that one morning a guest came downstairs and complained to the proprietor that he had not slept at all.

"I was troubled with insomnia," he said.

"Don't believe a durn word of it," said the indignant host. "Had the place cleaned out only this spring. Show me one, if you can! Show me one!"—Philadelphia Evening Bulletin.

FOOLISH QUESTIONS

Irate doctor, shoving up window at 3 A. M. to see what the pounding is—Well?

Voice from below—No, dammit, sick.—Puppet.

EDITORIALS

LESSONS FROM BUFFALO—A careful observer, or looker-on, at the recent Buffalo Convention, remarked that the meeting was unique among Canners' Conventions because of the total absence of any note of pessimism, or of any note of optimism, in the addresses of any association or section or in the "lobby talk" of the multitude. And when you hearken back you find that he was a keen observer and absolutely correct. Last week we characterized the gathering as a well dressed, sleek and contented body of business men, and we reached that conclusion by the same method of deduction, without, however, defining its cause, as did the careful observer. Just record that fact, the absence of both pessimism and of optimism, as a pleasant contrast with the Convention spirit of the past five years. The doubt and distrust which then gripped the soul of every man in the business has been dispelled, and in their place has settled that comfortable feeling that the industry has arrived. Beyond all question of doubt, canned foods have taken their place as an all-important food staple which the people cannot do without, and will not do without.

This fact brings a responsibility upon the shoulders of every canner more exacting and more relentless in its punishment for negligence than ever rested upon the industry in all the years that have passed. Fortunately, every canner has come to the full realization that he must pack his goods to the best possible perfection; no canner could possibly be so benighted as to think that he can produce poor goods, get a customer once, and get away with it. Business is not done in that manner any more, not alone in canned foods, but in any other line of endeavor, and most of all not in canned foods, which are sold entirely on faith and confidence. The canner who would attempt such a procedure will find himself quickly sinking to the depths of depravity, where he belongs. And that is why all canners are set upon keeping their quality to a standard where the public will not even hesitate to continue as eager consumers, and that is why all canners feel confident and not depressed, and why confidence in continued good patronage of their goods is felt, where previously there existed only optimism that the market would consume the packs. It is a truly wonderful change, and one well worth careful preservation. The canner who would be a party to the breakdown of this new condition, through packing poor quality goods for a price or in the hope of getting through, ought to be taken by the rest of the industry to a swill pond and drowned.

But while he deserves that, we do not expect to see it come to pass. On the contrary, he will be allowed to live his wretched life amid the sordid company of the kind of brokers and buyers who would trade in goods of that kind. The time is fast coming when the canners who prostitute their industry through swindling the consumers with unfair goods will be forced to live alone with their shame and to consort with men of their own low grade, because no decent men will have anything to do with them, neither canners nor buyers. Canned foods must of necessity be sold on faith, as if selling to a blind man, because the consumer cannot see what she is buying, and the man who will betray that confidence is below contempt. That is the feeling that overspreads the industry and which the Buffalo Convention has taught. Pack good quality—a satisfactory article—and, like Monte Cristo, the canner will be able to say, "The world is mine."

THE WOMEN DEMAND IT—The most notable women of the nation spoke at the Buffalo Convention, and everyone of them stressed the need of the name of the canner upon each can of goods produced. The women are the consumers of canned foods, and these speakers are in direct touch with these real consumers of our goods in very section, and they know what these women want. And they are entirely right; but, even if they were not, what's the use of arguing with a woman? Mr. Wholesaler, Chain-store operator ad jobber's-label-canner, please answer. The women have made up their minds to know who packs the foods they are asked to provide for their families, and, all the arguments to the contrary notwithstanding, they are going to have their way.

But what right has any man to prepare and offer foods to the public without standing personally responsible to that public for them? We are surely not given to the popular cry of "There orta be a law," but, honestly, should not every provider of foods for the public be licensed, so that the State may know exactly who and what he is? And then be made to father his products down to their final consumption? He surely ought to.

Does the jobber's label do this? It most assuredly does not. If you want to know how much the jobber stands behind all the goods he puts his name and label upon, just be present when one of the Bureau of Chemistry food inspectors makes a seizure of some goods. Many a time the writer has seen a jobber proudly declare, 'yes, they are my goods, I stand responsible for them'. "Well, we have to seize some of these as being contrary to the Pure Food law, and we will bring the prosecution against you?" "What", the jobber would fairly yell, "No, Sir; (addressing the bookeeper, in thundering tones) where did we buy these canned foods?", and then proceed to produce a copy of the original order, the original invoice, shipping receipts and everything else that would fix the blame on the canner so that the Government might proceed against the canner, not the "man who stands responsible for the goods with our label on."

The name on the label will not destroy any jobbers' labels, however. The name of the producer responsible for the goods would appear just above or below the jobber's name, leaving the credit as the distributor of the goods to the jobber, and that is all he is entitled to. It will cause some little trouble in the handling of labels until the system has worked itself out, just as was anticipated about the original Pure Food Law, but no one would go back to the days without this Pure Food Law! And in a very much shorter time no one would willingly return to the days when the canner's or other producer's name did not appear on each package. The man who says that this Name on the Label amendment to the Pure Food Law is not necessary, and simply causes undue trouble, is the man who is unfamiliar with the subject, or seeking to retain something that does not belong to him. It is the most necessary thing in connection with all food law enforcement. And for the canner who aims to build a high reputation for fine goods it is an absolute necessity. What, then, can be said of the man who packs snide goods; of the one who packs the slop goods, the kind that give any industry a black eye? Oh, those trash packers should be made to place their names upon their goods, we hear from all sides! Important! You bet it is important, and it is going to be done. The women consumers are demanding it, and they cannot be denied, and the food law enforcement agents, want it, need it, and will have it.

CANNED FOODS WEEK—Will there be any canners in the country this year not participants in the big Canned Foods Week of next March? Last year we had to toast the noble four hundred (canners) who contributed anything towards this great advertising of their products. Will this stigma be repeated again this year? God forbid! If the canners of this country have not more grit and backbone than to allow themselves to become the objects of charity at the hands of brokers, machinery and supply men, wholesale and retail grocers, they may be considered pitiable objects in truth. But unless you have contributed $10 for each line of machinery used in producing canned foods you are a charity patient. There are only two kinds of canners—and it makes no difference what they can—those who contribute and help finance Canned Foods Week and those who do not. The former are real, honest-to-goodness canners, the other charity subjects. We doubt if there will be four hundred who do not contribute this time, but if there are they will not be termed the honorable, but the dishonorable. The canner too small to make a $10 contribution! Ah, there can't be any such! There is no excuse whatsoever. Send your contributions to The National Canners' Association, Washington, D. C., quick, if you have not as yet done so.

HE DIDN'T MEAN IT!

There is no telling what you will get out of a linotype machine—or a printer. If you don't believe this just note the comical errors that "get by" in all printed matter, not only in this sheet.

But last week was the limit. "Wrangler" tried to give the glad hand to President Clark, the newly elected President of the N. C. A., but the type—and a wopping big one at that—sent his greeting to Heli. Wrangler wrote: "Well, the good old Western Canners' Association has furnished the National Canners' Association with another president, etc." Instead of using, as an initial letter, "W," an "H" was used, with this result: "Hell, the good old Western," etc. Can you beat it?

Carver Building, Sharon, Penna.

We made the largest pack of Whole Grain Corn and Peas last year that we have ever made---120,000 cases and did it with less trouble, less labor, less fuel than we ever did a smaller pack due to our "Pressure Cooker."

We have had less leaks and swells than ever due to a uniform cook, the contents of every can cooked and cooled alike; opens with the same color as when it was placed into the can.

We think more of this machine than any machine we have in the plant. Not a bit of trouble in getting 3,000 cases or better per day.

Are Baked Beans Profitable To Pack?

By LELAND S. ARGALL, Sales Manager

MARSHALL CANNING COMPANY, MARSHALLTOWN, IOWA

[Note—The following was made as an address before the Bean Section at the Buffalo Convention; but we are receiving it now, so as to insure attention and not be lost in the mass of Convention matter next week.]

"Are baked beans profitable to pack?" is a question which can be answered in almost as many ways as there are canners of pork and beans. I would first answer it in two ways, my answers being prompted by my observation of the success and failure of many packers of this product. When a packer of pork and beans steadily increases his volume, pays dividends upon reasonable consistency and remains in business over a period of years without showing the scars of financial cracks and strains, it is a reasonable deduction, I presume, that that canner has found it profitable to pack pork and beans. So we will agree that one answer to the question is "Yes!"

On the other hand, if a canner of pork and beans pays but scant dividends, or none at all, and finally winds up in insolvency with the result that his factory is sold for but little more than the original cost of the smokestacks, I suppose it would be safe to assume that he had found it unprofitable to pack pork and beans, so we now have two answers to the question—"Yes" and "No."

Then, there are other answers; in effect, the same as these two, but carrying innumerable qualifications.

You will hear one manufacturer say that he finds it profitable to pack pork and beans because it enables him to make a longer profit on kraut; another, that the production of pork and beans is profitable because it enables him to see more corn, and still another, that he finds it profitable to pack pork and beans at a loss in order to discourage his competitors from packing red kidney beans, etc.

And so we find many canners resorting to strategy so intricate and obtuse that it is small wonder that the canners who are less versed in business wizardry are confounded by the competition they encounter when they try to make pork and beans bear its proper proportion of overhead expense and still show a profit.

I will not attempt to analyze the reasons for the failure of many canners to make a profit on pork and beans. Perhaps some of the reasons have already been suggested to you. Let us try to find out through what factors have contributed to the success of those few manufacturers who have demonstrated over a period of years that pork and beans can be packed profitably.

One factor is so aximomatic that it can be passed with but casual mention, and that is that the most successful manufacturer of pork and beans long ago standardized the quality of their product and have since maintained that standard without material modification except for improvements.

A second factor which largely hinges on the first is that they have developed an enormous volume of business. This has enabled them to so cut their cost through a proportionate reduction in overhead, increased purchasing power, etc., that they can sell their product at a very low price. (This, in turn, has stimulated further consumption.)

A third factor, and, I believe, the most important for our consideration, because it usually receives the least consideration, is that they have standardized their packages. The first two factors need no elaboration, but the third suggests many features which will bear analysis.

The principle of the standardization of packages is so flexible in its application that it is an equally potent factor in the profitable production of many varieties of canned foods. Please bear this in mind throughout this discussion.

The manufacturer who sells pork and beans in packages of one size only has many advantages over the canner who packs them in 1s, 1½s, 2s, 2½s and 3s. The former has an investment in one unit only of cans, cases, labels, can runway systems, filling and closing machines, etc., whereas the latter has an investment in three to five units of each. The manufacturer, with his investment in only one unit of machinery, can keep it operating almost continually, while the canner with five different units, finds several of them idle most of the time. And every moment a machine is idle it is increasing the cost of the merchandise it does produce when in operation.

The packer with the standardized package enjoys a quick turnover on cans, cases, labels, labor costs and other raw materials, whereas the one with five different packages is fortunate if he has even a moderate rate of turnover on the materials for one out of the five sizes he packs.

The packer with the standardized package can go out and put all his selling pressure on the one package. If a canner has one package to sell, and one only, he sells it with all the power and resources at his command, for he realizes that he must sell it or nothing. A canner with many packages to sell so scatters his fire that he gets a little business on each, and no real volume on any. In other words, the hunter who brings home the ducks is the one who draws a bead on one particular duck and brings it down, rather than shooting wildly into a flock of ducks and wounding many, but dropping none.

In addition, he is always handicapped by costs which are higher than those of the manufacturer who has arrived at a basis of economical production through standardization.

Time will not permit the enumeration of all the advantages which a canner may derive from the standardization of packages, such as the elimination of guesswork in figuring profits, etc. I have merely skimmed the top in the hope that the suggestions I have thrown out will start a line of thought in your own minds that will be productive of some definite conclusions of practical value to you.

It is one thing to advocate the standardization of packages, and another thing to bring it about. The reason we have such a conglomeration of packages of varying degrees of deception is because we are constantly trying to produce a package to fit a price instead of making a price to fit the package.

Let us take a concrete example. Canners are constantly being urged by jobbers to sell pork and beans at 77½c per dozen delivered, so they can be retailed for 10c per can. If a canner cannot produce a regular No. 2 21-ounce can to sell below, say, $1.00 per dozen to the retail grocer, he will cut the size of the package to an 18-ounce squat can, or a 16-ounce tall can, so it can be sold to the retailer by the jobber for 90c per dozen. The retailer will then sell it for 10c per can. The canner realizes that if the jobber must ask $1.00 per dozen, most retailers will sell it for 15c per can, thus making the price so high it will greatly retard the sale. In order to avoid this, he packs an 18-ounce or 16-ounce can, so it can be sold to the retailer at 90c per dozen delivered, and, in turn, sold to the consumer at 10c per can on an even change basis. This entails additional expense. New labels, cans and case must be purchased and carried in stock, and new machinery installed. Every change of this nature means extra expense all along the line, with proportionately higher cost and selling prices.

Now, let us say that the canner cannot sell an 18-ounce or 16-ounce can for less than 82½c per dozen delivered and make a fair profit. If he stands "pat" on his price, the jobber refuses to buy, giving as his reason that he cannot sell them unless they can go to the consumer at an even 10c per can. What nonsense! And yet that is the line of reasoning employed.

The canner has three alternatives: He can cut his cost 5c to 7½c per dozen by cutting the quality, accept the business at a loss and maintain the quality, or reject the business. No matter what alternative he chooses to select, the canner loses, and all because the jobber and retailer say that a can of pork and beans must be sold at 10c or 15c per can or nothing.

How many times have you seen your business on a product fade away into insignificance in a given market because the jobber and retailer insisted on a package that would sell for an even 10c, 15c or 20c.

On the other hand, if the jobber would pay 82½c per dozen delivered and insist upon pork and beans of first quality, the product could be sold to the dealer at 97½c, and the dealer, in turn, sell it at 11c per can, or $1.33 per dozen. In this way the canner, jobber and retailer would each make a living profit, the consumer would get a product of real quality, and all three in-

dustries would be benefited by the increased consumption of pork and beans that would result.

The jobber should not insist that the canner produce either a package or a quality to fit a given price, and the canner should not be so weak-kneed as to bow to the jobber's insistence. The price should be made to fit the quality and the package and the products sold for what it is worth and no more or no less all down the line to the ultimate consumer. This can only be done by splitting the nickel and making penny change.

So we conclude that the selling of pork and beans at a profit is inseparately bound up with the principle of the standardization of packages and the principle of making "penny change."

Less than 1c per can often represents the difference between a product of inferior quality and one of first quality. It has been customary for canners and distributors alike to pack and sell products of poor quality at little or no profit, and then endeavor to make their quality goods carry a double load. This is contrary to the first principles of sound merchandising. Consumers are attracted to the canned goods of inferior quality by the low prices and encouraged to ignore the products of real quality by prices which have been fixed excessively high to protect the seller against loss on the low-priced off-grade products. The resulting decreased turnover on high-quality products makes still higher prices necessary.

Every can of food of inferior quality sold hurts the sale of all canned foods. It destroys confidence and tears down good will, and in the long run nets a loss to every factor handling it. And yet an additional 1c per can from the consumer is all that would be required to yield the canner, jobber and retail grocer a fair profit, and, most important of all, give the consumer a quality product that would give full satisfaction.

You may think it a far cry from packing pork and beans at a profit to making "penny change,' but I have tried to show you that the two are inseperately linked together by the principle of the standardization of packages.

Let me summarize by the statement that one factor which will contribute materially to the canner's ability to pack pork and beans at a profit is the adoption of standardized packages; and that a general standardization of packages will be impossible unless the retail merchant is induced to sell his canned foods on an odd-change basis, as the chain stores are now doing. In other words, prices must be made to fit the quality and the package rather than the package and quality being produced to fit the price.

CANNING ITEMS, NEWS AND NOTES

Shediac, N. B.—Andre Paturel wants glass jars of the best quality for strawberries, raspberries, blueberries, jams and preserves, with prices and covers and machines for covering.

New York City—Iwai & Co., 233 Broadway, represent the Japanese Government in the rebuilding of the earthquake-destroyed Military Fodder Department, and want catalogues and full details, with prices, on can-making machinery.

Wilson, N. Y.—H. S. Ball, who has been factory manager here for some time, leaves on February 1st for New Westminster, British Columbia.

Dothan, Ala.—J. S. Mullen, P. O. Box 387, this city, is considering entering the business of canning in North Carolina.

The Department of Raw Products

"Quality" cannot be produced in the can unless quality products are produced on the farm. This Department will, therefore, seek the best thoughts of the country on better crops, and how to produce them, and ways and means of combating the enemies of such crops.

The assistance of all agricultural experts is sought and heartly invited, a way offered them here to reach the entire canning industry of all States; and we likewise extend to all our readers an invitation to explain their troubles and a k remedies. And by all means let those who have devised ways or descovered remedies give the benefit of their experience to those less fortunate.

"Quality" canned foods can only be attained by the co-operation of all canners towards the production of quality crops.

SPANISH GRAPES PROHIBITED ENTRY ON ACCOUNT OF FRUIT FLY INFESTATION

SECRETARY of Agriculture Wallace, as a necessary measure of protection to the fruit and vegetable crops of the United States, has authorized the prohibition of the further entry of malaga (Almeria) grapes from Spain on account of the recent finding that these grapes are subject to infection by the Mediterranean fruit fly (Ceratitis capitata). This decision was reached following a formal conference with importers and others in interest, conducted by the Federal Horticultural Board at the Department of Agriculture, January 4, 1924.

To provide for such prohibition and for any like control as to other countries or districts which may later be necessary with respect to imports of grapes, the rules and regulations supplemental to Notice of Quarantine 56, governing the importation of fruits and vegetables into the United States, have been further amended, effective January 18, 1924, to provide that grapes of the European or Vinifera type may be imported only upon the presentation of evidence satisfactory to the United States Department of Agriculture that such grapes are not attacked in the country of origin by injurious insects, including fruit flies.

The determination that this grape is subject in Spain to infestation by the Mediterranean fruit fly was made in the latter part of November, 1923, and this determination was later fully confirmed by the rearing of adult flies in numbers from maggots taken from imported grapes.

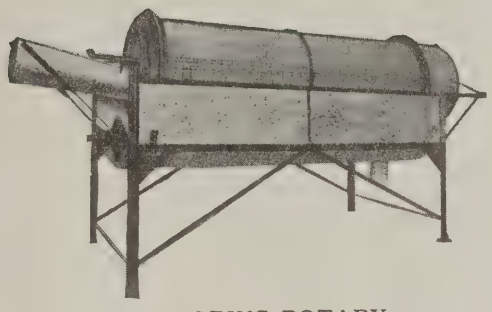
The Malaga Grape—Status Re Fruit Fly and Imports—The variety of grapes involved in this embargo is the hard, green grape imported from the Province of Almeria, Spain, but which is commonly known as the "Malaga" grape. It is Spain's principal fresh fruit export to the United States, and has been coming to this country for many years to the extent of several hundred thousand barrels (or, more properly, large kegs) yearly. The exporting season is a short one—practically all of the crop reaching this and other markets during the month of November and the first two weeks of December.

No suspicion has hitherto been entertained that this grape is subject to attack by the Mediterranean fruit fly, and there seems to be no previous record of such infestation. In fact, the record as to grapes in general indicates that this class of fruits is rather immune to attack by this pest, and this seems to be true even in Hawaii, where it is, perhaps, as abundant as anywhere in the world, and probably seriously infests a larger variety of fruits. This general record of immunity seemed to warrant the provision made under Quarantine 56 for the unlimited entry of this fruit. Nevertheless, inspection of this, as of all other fruits and vegetables, was provide for under this quarantine, and it is as a result of such inspection that the infestation referred to was determined.

The Almeria grapes intended for export to the United States this year totaled some 350,000 barrels, a portion of which had already been entered prior to the effective date (November 1, 1923) of Quarantine 56, and fully two-thirds of the total importation for the year had been entered and distributed prior to the discovery of infestation.

Preliminary Action Taken on Discovery of Infestation—Promptly upon the discovery of infestation, all shipments awaiting entry were held for determination of the proper course to be taken to safeguard the situation, and for such purpose the importers and handlers of these grapes were called in emergency conference November 27. It was learned at this conference that the imports would be over in two or three weeks, and that probably most of the remaining shipments were already en route. As an immediate measure of protection, it was determined to exclude all "lines" of grapes in which as a result of inspection infestation was found, and to permit the entry only of "lines" which seemed to be free from attack. The term "line" designates grapes originating in a particular vineyard, and, therefore, the finding of infestation in any of the barrels examined with respect to a particular "line" indicated that that particular vineyard at least had been invaded by this pest. Conversely, the failure to find infestation in any "line" was some, but not by any means conclusive, indication that the vineyard in question might not have been invaded. Importers and others in interest further agreed not to ship any excluded "lines" to Cuba or other West Indian Islands, inasmuch as the risk of establishment of the pest in the West Indian region from such shipments would be even greater than in the United States.

To aid in the inspection of grapes awaiting entry, and others en route, the force of inspectors at New York was increased to ten. Out of the 6,222 "lines" of grapes, involving a total of 198,425 barrels, which were offered for entry subsequent to the conference of November 27, on the basis of the examination of approximately one keg in fifteen, some 13,000 kegs were opened and examined. This examination resulted in finding infestation in 129 "lines," representing some 4,337 barrels of grapes, all of which were refused entry.



Facts Reported and Formal Conference Called—Following the emergency conference of November 27, a statement was drawn up and distributed under date of December 7, 1923, reporting fully on the finding of the infestation of these grapes and suggesting, par-

ticularly for southern districts, certain protective measures, more particularly with relation to the burning or disinfection of the ground cork in which these grapes are packed and which might possibly contain escaped maggots in various stages of transformation. This statement also announced a formal conference (held January 4) to determine future policy with respect to the entry of these grapes.

At the conference of January 4, the Spanish Embassy, the Merchants' Association of New York, and the leading interests concerned in the importation and distribution of these grapes were represented, together with erperts from the Department of Agriculture and official representatives—plant quarantine guardians and others—from some nine States, and the whole subject was fully considered. The mercantile and importing interests, while urging commercial and other reasons for a continuation of the importation of these grapes and offering for consideration suggestions as to possible means of safeguarding their entry, indicated their full realization that all risks which could not be adequately safeguarded should be given full weight in reaching the decision as to whether these grapes should be admitted or excluded, and expressed emphatically their opinion that the fruit and vegetable interests of the United States should come first and have the benefit of any doubt. They stated, however, that it was important that the decision should be rendered early, i. e., before the period for contracting for the next year's crop. The general status of infestation brought out at this conference forms the basis for the decision herein announced, and is embodied in this statement.

Amount and Nature of Infestation—It should be noted that the infestation of these grapes has beeen very slight from the standpoint of the consumer, so slight, in fact, that the original determination of it might not have been made except for the unusual expertness and skill of the Department's inspectors. For the most part, the grapes showed no exterior sign of attack—in fact, as a rule the infested berries were superior in appearance and would normally be eaten without suspicion by anyone. While, as a rule, only single berries were found infested, in one instance 29 larvae were taken from a single bunch of grapes. The amount of infestation is, perhaps, roughly indicated by the records of finding of upwards of 200 larvae in the barrels examined of the 129 rejected "lines." It is to be noted, however, that this finding was based, as already indicated, on the examination of approximately one barrel in 15 and on a critical examination of less, on an average, than 1/10 of the grapes contained in each barrel inspected. It is reasonable to infer that the percentage of infestation would have been fairly constant throughout the rejected "lines," and, therefore, if all of the barrels included in such "lines" had been inspected, we would have to multiply these findings by 15 and 10, which would indicate a possible content in such rejected "lines" of some 29,000 larvae.

The infested "lines" were distributed as to origin throughout the Province of Almeria, indicating a rather general occurrence of the fruit fly in that province. It is reasonable to infer, therefore, that the risk of entry of fruit flies adhered more or less generally to all of the imports of these grapes, whether or not infestation was actually determined.

Nature of Risk to the Fruit and Vegetable Crops of the United States—While it may be admitted that the risk from these grapes is in one sense minimized by their distribution throughout the United States and their fairly prompt consumption, probably unwittingly, larvae and all, the actual numbers of fruit fly maggots which may thus be imported, as indicated, must necessarily involve the emergence of many from the grapes and their transformation in the ground cork employed as packing, or in the crevices of the barrels, or otherwise on premises where such grapes are stored and handled. That there is nothing in the temperature conditions to which these maggots or later stages would ordinarily be subjected in this country which would prevent their successfully passing the winter and emerging as adult flies to attack the many fruits and vegetables which are hosts of this pest has been abundantly determined by experimental work conducted by this department and by other agencies. The establishment of this pest might, therefore, occur anywhere in the United States and undoubtedly it could maintain itself in very important fruit sections, probably extending well north into areas devoted to cultures of deciduous fruits.

Another phase of the matter is the possibility that the failure to note infestation of these grapes during the long period of years which they have been an important article of import may well indicate that the infestation in the Almeria district of Spain is of recent origin, and that, therefore, the risk as to future importations may become even greater than that indicated in this year's imports.

The enormous values of the investment in fruit and vegetable production in the United States, which has no counterpart in the world, makes it imperative that this risk, now for the first time determined as a very real one, should not be further assumed.

It is realized, with much regret, that this embargo will stop the import into the United States of an important product from Spain, and will eliminate from domestic use in this country a winter fruit which has always had an appeal and found ready sale.

The Fruit Fly Menace—Fruit flies are looked upon as, perhaps, the worst of all known fruit pests, and in many foreign countries they are now occasioning enormous losses to fruit and vegetable crops. Fortunately the United States has so far kept free from these pests. Of these the most widespread and destructive, undoubtedly, is the so-called Mediterranean fruit fly, a pest which may have originated in West Africa. The entry and establishment in the United States of this fruit fly would be nothing less than an overwhelming disaster particularly to the fruit interests of this country. The possibility of maggoty oranges, grapefruit, peaches, prunes, etc., would practically destroy the confidence of the public in these fruits, fresh or preserved, and even a small percentage of infestation would have its psychological effect on the salability and popularity of these products. Furthermore, the nature of the infestation, as already indicated, in the instance of these Spanish grapes is such that it is not possible to eliminate all infested fruit by inspection and selection, nor is there any known practicable method of disinfecting infested fruit in such manner as to fully safeguard its entry. Protected as they are in seemingly sound fruit, it is not possible to reach and destroy fruit fly maggots by any known means of poisoning or disinfection. For these reasons the prohibition of entry of any fruit or vegetable known to be

AYARS 1924 MODEL
New Perfection
PEA and BEAN FILLER

This Model Made For No. 1, 2, 3 and 10 cans.

HAS POSITIVE CAN FEED

REVOLVING HOPPER

New design, straight side, large at the bottom. The peas do not stick to one side and get cold. They are always level in the hopper at all heights and do not require any agitator.

CIRCLE SPRAY IN NECK OF HOPPER

SPLASH PLATE over cans so peas will not wash out on floor.

Brine goes in cans hot. Large heater in brine tank.

CHANGING GRADES.—Filler stops and all filled cans deliver to closing machine.—LARGE DELIVERY DISK—NO CAN—NO FILL.—WILL NOT WASTE BRINE.—NO RUBBERS to catch cans after they become worn—FILLS ABSOLUTELY ACCURATE—DOES NOT CUT PEAS—BAKED BEANS—Only filler for baked beans. Has separate measure and seperate saucer. If measure fails to drop part or all the quantity of beans the can will show slack to inspector.

Ayars Machine Company SALEM NEW JERSEY

more or less generally attacked in the country and district of origin is believed to be the only means of adequately eliminating risk.

The realization of the danger to the American fruit and vegetable crops from various foreign fruit flies was the particular basis of the general fruit and vegetable quarantine which became effective November 1, 1923. Under this quarantine certain classes of fruits and vegetables known to convey a distinct risk of being a means of bringing dangerous fruit flies and other pests to this country are definitely excluded. All other fruits and vegetables are brought under regulation and entry under permit for the purpose of inspection as a condition of entry, to determine any risk or danger which may not now be known or which may later develop.

SOME PHASES OF OUR FOREIGN TRADE.

By James A. Farrell, Chairman, National Foreign Trade Council.

(*Continued from last week*)

Our foreign trade is ever confronted by new problems. The most important phase of the situation today is that of making larger use of markets that hitherto have been regarded as secondary, while the main flow of our exports and imports was with Europe. The thought and study of those connected with international commerce must be devoted with renewed vigor to this question. Until Europe begins to make definite progress against the forces that now threaten its economic position, we should be seeking to establish a more permanent position in other markets to absorb our surplus production. And at the same time, as our requirements in raw material steadily increase, while Europe's ability to produce them either diminishes or fails to keep pace with our growing demand, it is the course of ordinary prudence on our part to expand our activity in seeking such materials in other markets of supply.

This is a very important factor of our situation today. The full employment of our people is essential to prosperity in this country. It is the expansion of our industrial establishment which makes such full employment possible. This industrial establishment needs, for its full occupation, large and constant supplies of raw material. In many lines, probably in most of them, such supplies are available from domestic sources. But in some lines, even among those which use domestic materials, our own supplies are not sufficient to keep the plants fully occupied, and must be supplemented by importations from foreign sources. Also there are not a few of our industries, which employ many thousands of men and women and disburse a great many millions of dollars annually in wages, which are dependent upon foreign sources for their raw materials. No rubber, for instance, is produced in this country, but there are manifold uses of it among our people. Crude rubber to the value of something like a hundred million dollars is imported annually. We produce 68 per cent of all the cotton grown in the world, and consume 37 per cent of it, but there are more plants for the manufacture of silk in this country than there are for the manufacture of cotton, and no raw silk is produced here.

AUTOMATIC END CURLING MACHINES

This device performs the operation of curling flanged edges of sanitary type can ends, or any other work where it is necessary to curl. Its adjustability allows the chute to be set at any angle to convey the ends to curling wheels, making it adaptable for any Open Back Inclinable Press. The curling prevents nesting and is essential to automatic feeding in Compound Applying Machines and Double Seamers.

The curled edge acts as a retainer for sealing compound and facilitates operation of seaming rolls. One set of hardened rings are included, extra rings furnished for additional sizes. Only the inside rings are changed, outside rings being provided with adjustment for variation in curl. The bearings are fitted with removable bronze bushings. All parts are interchangeable and readily removed for additional sizes. Two Curlers may be arranged behind our Double Die Automatic Presses.

Suppose for a moment, merely for the sake of illustration, that some elemental catastrophe were to remove any of the countries producing materials not found in this country. A vast reorganization of our industry, our commerce and our life would be necessitated. But would our commerce and industry stop? Not at all. The reorganization would be made and we should go on with intensified energy in new directions. Does that not suggest the wisdom and the importance of taking steps now voluntarily in the same direction that such a disaster would compel us to take. There never was a time in the history of this country in which opportunities were greater for intensive study of neutral markets in the absorbing and fascinating work of developing new sources of supplies and new business in our products.

The figure of our foreign commerce for this year indicates that there is already increased activity in non-European markets. Exports, particularly of manufactured articles, to Europe have been decreasing, but similar exports to other countries have been increasing. There are those who seem to think that this result is only temporary, and due to the diminuion of German trade following the occupation of the Ruhr. It may be, however, that there is an element of permanent development in it. Certainly it is the part of wisdom for us to strive to make it permanent.

For we must keep it constantly in mind that conditions of daily life in this country impel us, whether we consciously will it so or not, to maintain a certain amount of foreign trade in order to keep our own people remuneratively occupied, and to supply them with the things they need and want. This compelling impulse toward foreign trade will go on and intensify. It is as we are successful in our effort to make permanent advance in the newer markets, to which we have given our trade with Europe, that we shall gain lasting improvement in our whole trade, with corresponding benefit to all our people.

There are elements of difficulty in this program. Let us not forgett hat very often the overcoming of difficulties lends zest to the effort. Some of these difficulties are more than a litle puzzling. We shall meet the competition of other trading nations that feel as we do the necessity of expanding their trade. For the present, and as long as conditions of inflation continue, especially among the more active of the industrial nations, we suffer under the handicap of their lower productive costs. This is particularly true in Germany, where in the last few years the chief industrial plants have paid off their bonds and mortgages in depreciated currency and are free from that important element of overhead. Other nations may have different elements of advantage. Belgium and France have it to a lesser extent. The British, for instance, have more widespread systems of communication and more greatly ramified financial institutions with which to serve their international commerce. The development of such facilities should occupy part of our effort. We have proved, in numerous lines, our effectiveness in organization of production. No doubt we can demonstrate a similar effectiveness in organization for distribution, and this is a phase of foreign trade of paramount importance. Possession of effective physical agencies of commerce is of the greatest value. Production is the first; others are trans-

Other Originations:
Rogers Improved Kidney Wax
Rogers Green Admiral Peas,
Rogers Winner Peas.

LIGHT green, slender, round pod, 4 to 5 inches in length and almost perfectly straight.

Tender, meaty, brittle and entirely stringless even when ripe.

In appearance and season very similar to the old reliable Late Refugee 1000-to-1, having a strong vine with small leaf and heavy foliage.

Hardy and productive.

Without exception the most popular and desirable Greenpod variety for canner's use.

Now booking contracts, future delivery, 1924 crop.

portation, communication and finance. We need efficient American organization in all. This is particularly true of our merchant marine, with which highly important agency we are also encountering difficulties of our own production that are making it well nigh impossible at present to continue operations without large losses. It is now more than three years since the Congress enacted a law which declared it to be the policy of the United States to do everything necessary to maintain a merchant fleet under private ownership and in private operation. That law laid down a course of procedure for the United States Shipping Board and prescribed a rule of conduct for the Board in its execution. The clear purpose of the Act was to bring about the transfer of the government-owned war-built fleet to private ownership. Some progress has been made along that course, and as long ago as last April there were almost six million tons of ocean-going vessels under private American ownership, within a million two hundred thousand tons as much as was then owned by the Government.

The proportion of American commerce borne in American vessels, however, has been going down as the proportion of privately-owned vessels has been going up. And this has occurred during a period in which the Shipping Board has been making active efforts to obtain cargo for American ships. These efforts of the Board to secure cargo have had an effect which obviously forced privately-owned American ships out of operation. This has been done by a process of rate cutting, in order to get business, which, while it has not forced foreign competitors to lay up their ships, has made the business unremunerative and has compelled the withdrawal of privately-owned American vessels in overseas trade. It would seem that there should be some relation between the freight rate and the value of the commodities carried that would not necessitate an actual loss for the carriers.

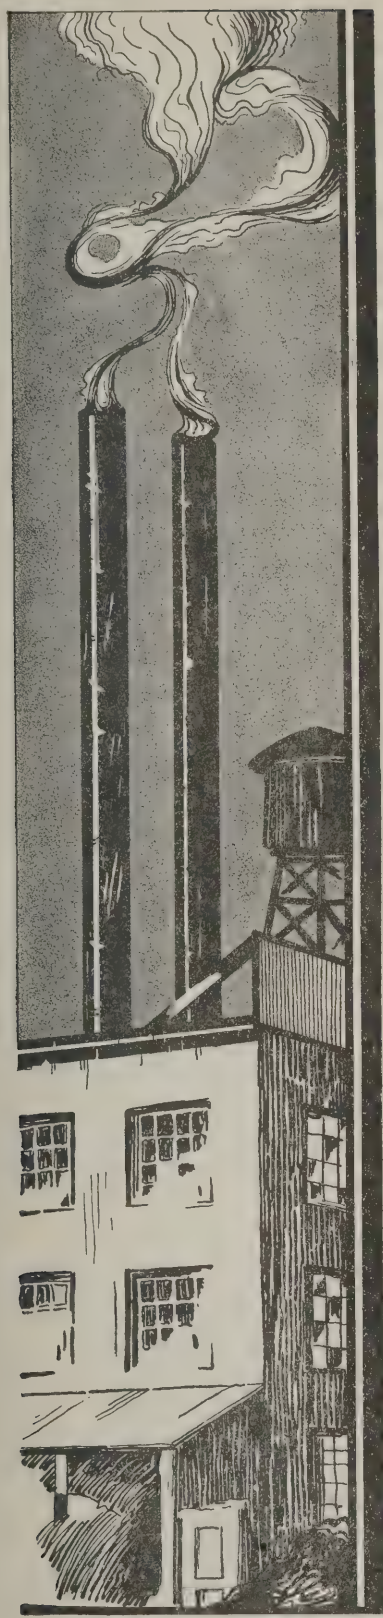
Of course, the producers desire and enjoy low ocean freight rates. Not only the producers of cotton demand them, but those producing other agricultural and industrial products. If there is, however, to be permanence in production and continuity in ocean-borne commerce, there must also be some profit; and a system which compels American ship owners to operate at a loss is not conducive to the upbuilding of an American merchant marine so necessary to the interests of this country.

German advance in shipping has kept pace pretty much with the procedure to which I have referred already by which German industry has written off its most important element of overhead and improved its capacity to compete with the product of other nations. The advanage of the depreciated mark has been used by German shipbuilding and operating interests, with the result that the recovery of the German merchant fleet is the outstanding fact in the shipping situation of the world. It is only five years since the signing of the armistice, as a result of which Germany was deprived of practically all her merchant marine. Today she has at least three-fifths as large a fleet of merchant vessels as she had before the war, and her present progress, although not as rapid as it was before the mark had reached the vanishing point, is still continuing.

These are but a few of the phases of foreign trade that call for sound and careful thought, and for the judgment of men of training and experience. Never has it been more important to the success of our commerce that we should have the benefit of sound training among its active men. We are entering a period which will see, I hope, a more determined effort than ever to establish ourselves and expand our trade in markets to which we have not heretofore given the attention they deserve. It is of high value in such efforts to have the services of men who have not only received the grounding in fundamentals of a careful course in foreign trade in an effective educational institution, but have had instilled into them, as one result of such a course, a readiness to live abroad and to devote themselves, as a career, to this interesting business. There are educational institutions in this country which are devoting much time and care to this training of young men for the foreign service both of the government and of private business. Business can help these institutions, and benefit itself, by finding or making places for their graduates.

Finally, the attention we have been giving to the troubles of Europe is reflected, naturally, in much of what we hear and read, until it seems, sometimes, that we are a little in danger of taking our tone from the obvious troubles of that distracted part of the world and allowing the more hopeful situation of our own and other countries to pass unnoticed. There is distinct improvement, as well as encouragement, here and elsewhere; even if the difficulties of Europe do not promise immediate, or even proximate, settlement. Canada's prosperity lies with ours. South and Central America are on the mend. Conditions are better in Australasia and South Africa. The Far East, India, the Dutch East Indies, Japan and even China are much better than they might have been; and finally, in the United States there is reason to expect a constantly improving situation in the nation's business.

JOINT REPORT OF CONFERENCE COMMITTEE



Conference Committee Makes Report at Seventeenth Annual Convention of National Canners' Association in Buffalo, N. Y., January 22.

The Conference Committees representing the National Wholesale Grocers' Association, the American Wholesale Grocers' Association and the Conference Committee of the National Canners' Association.

APPROVE AS A PRINCIPLE the canners' warehouse plan as applied to wholesale warehouse stocks only, as far as permissible under Federal, State and municipal food laws.

APPROVE AS A PRINCIPLE for the purpose of the wholesale grocer crediting the retailer for spoils which must be destroyed when and where found, that the wholesale grocer is to receive from the canner an allowance mutually agreed upon between wholesale grocer and canner at the time of purchase, or in the alternative, the adjustment of such losses to be left to the contracting parties.

APPROVE August 1st following year of purchase as the expiration of the guarantee period of sales for delivery from future pack, and the period of six months on spot sales, for both the wholesale and retail stocks.

THE SIGN OF QUALITY

STURDY MACHINERY BACKED BY SERVICE

SPRAGUE-SELLS and Peerless Canning Machinery will be the staunchest—the most efficient, durable and dependable that fine materials, experienced workmanship and sincere purpose can make them.

Every machine bearing our name will be backed by an unequivocal guarantee of complete satisfaction—or money refunded.

Field service—unstinted and gladly rendered will be constantly available to the users of our equipment—with a corps of experts at their command to aid in the solution of any problems that may arise.

The prices of our machines will be kept preeminently fair at all times by adjustment to conform with labor and material costs.

Our prices will be standard—one unvarying price to all. You purchase our machines with the satisfying knowledge that your investment is precisely the same as that of each and every other purchaser—no higher or no lower.

This is the platform upon which Sprague-Sells and Peerless Canning Machinery is offered. We believe it will win the instant and sincere commendation of everyone intimately associated with the Canning Industry.

From our two plants, at Buffalo and Hoopeston, we can supply practically every item of canning equipment.

Write us today for quotations on any equipment you may need, addressing your inquiry to:

HOPE BEYOND THE GRAVE

Dedicated to the Memory of William C. Leitsch
By Ex-President James A. Anderson

I cannot think of those who've gone
As being far away
From us who learned to love them so
And prayed for them to stay.

They sometimes seem so very near
That Heaven seems nearer, too,
And all the world seems brighter,
And life seems fresh and new.

The clouds of darkness roll away
And sunshine enters in
To give me strength and courage
Life's battles here to win.

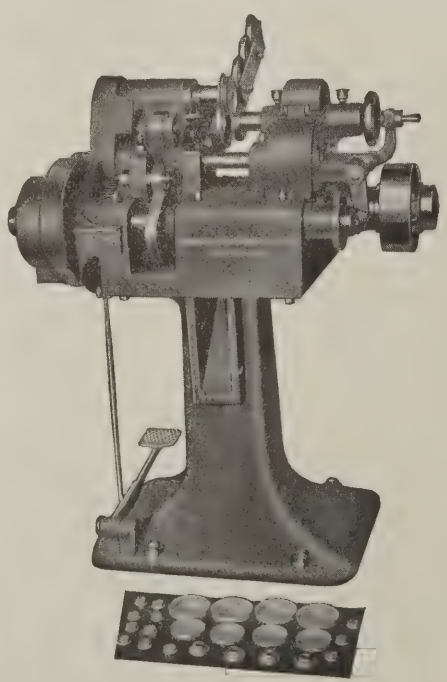
I seem to hear them speak to me
And tell me not to long
For them to come to earth again
And mingle with the throng

Where pain and sorrow and distress
Are given, that we may be
Loving, kind and merciful—
The emblems of Deity.

They seem to tell me not to grieve,
But rather to happy be;
A worthy, living monument
To their sweet memory.

They tell me of the sacrifice
Our heavenly Father made
In sending His begotten Son
A dying world to save.

Then how can we e'er doubt His love
Or His supernal power
To render right what now seems wrong
In this dark and trying hour?



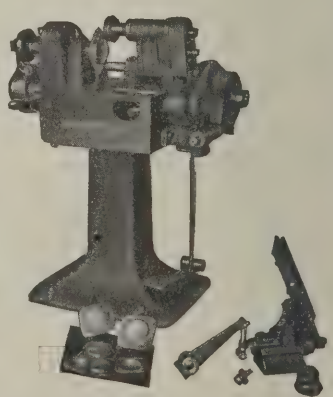
And oh, how sweet this mortal life
When we can understand
That when our work is made complete
He'll take us by the hand.

And lead us to that heavenly home,
To where our loved ones dwell;
And we shall meet them face to face—
Oh, how our hearts will swell!

With love and praise and gratitude,
How happy we shall be
To live with those we dearly love
Through all eternity!

The veil of tears will then be drawn
And we shall find the key
To God's redeeming, sacred love
And all His mystery.

Then let us put our trust in Him
And always faithful be
To Him who gave His life for us
And guides our destiny.



ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

We make every machine for "can-making."

An Ideal Viner FEEDER with Distributer

On Every Viner is Economy

Patented in U. S. Canada and France

No viner can do satisfactory work when its beaters are obliged to work on heavy mats or bunches of vines.

Separation of the vines by the feeder is, therefore, essential to best results.

Hamacheck Ideal Viner Feeders with distributor are the only feeders that thoroughly separate the vines. The savings effected, over the use of any other viner feeder, are so large that it is not unusual to hear pea packers say that Ideal Viner Feeders more than save their cost each season.

WARNER HAS ANOTHER GOOD YEAR

WARNER Inter-Insurance Bureau, which now writes upward of $88,000,000 of cannery insurance, reports another good year, showing a saving to its subscribers of $493,252.78 for the year 1923. During the 16 years that this Exchange has operated it has saved its patrons a total of $3,112,010.42, or an average saving of $6.58 per thousand insurance carried. In their report for the year, Lansing B. Warner, Inc., attorney for the Exchange, said:

"In 1923 we wrote a much larger volume of insurance than in any previous year, and the saving, which amounted to $493,252.78, is the largest aggregate saving for any year. We have greatly increased our capacity and facilities, which should result in the writing of a much larger volume of insurance in the future, and in still further betterment of our service.

"Every effort is being made on our part to perfect our organization, and we are striving each year to render better service. We are aiming to perfect a service which will provide canners with the most advanced form of coverage, the safest and most dependable protection, and the most economical insurance.

"Your Advisory Committee has faithfully attended our meetings, and has given much time and careful thought to looking after your interests, and this without compensation, and we wish to express to it our thanks and appreciation for its efforts and counsel."

CANNED REINDEER NEXT ?

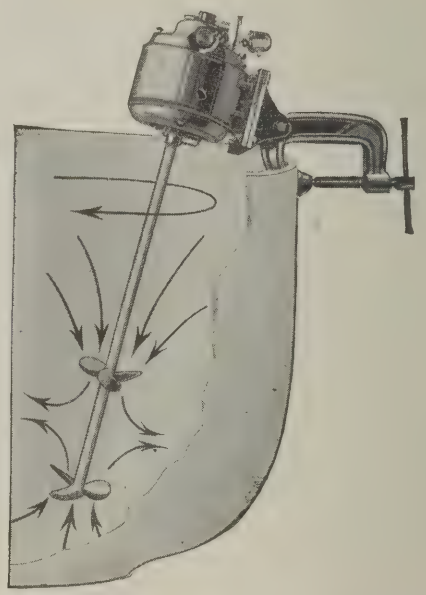
THERE are so many reindeer wandering over the Kamtchatka Peninsula serving no particular purpose to mankind that Consul G. C. Hanson, Harbin, China, informs the Department of Commerce of their availability for canning. Reindeer steak is a stable food of the Northlanders and a delight to the epicures of warmer climates, and there is every reason to believe that canned roast reindeer would be an acceptable item in the American housewife's panrty. According to statistical reports of Russian officials, it would be an easy matter to acquire 15,000 animals yearly from a single native belonging to the Koryaki tribe. The natives do not sell reindeer for money, because this is forbidden by their religious beliefs, but they very willingly exchange the animals for merchandise and provisions. It is believed that reindeer meat may also be exported by the refrigerating process.

NEW ORGANIZATION FORMED OF CANNERS' SECRETARIES

AT the recent Convention of the National Canners' Association a new organization was formed of secretaries of State canners' associations.

Officers were elected for the coming year as follows: President, W. E. Nicholoy, of the Wisconsin Pea Packers' Association; Vice-President, John P. Street, of the Association of New York Canners, and Secretary-Treasurer, C. L. Austin, of the Iowa-Nebraska Canners' Association.

The Board of Directors is composed of the above three officers, E. M. Burns, of the Northwest Canners' Association, and James F. Barker, of the Utah Canners' Association.



TAXI!

Drip—Let's walk around the corner and get a drink.
Drap—Hell, no. Let's run.—Jester.

A New Stirring Device

THE photograph shown below is fairly descriptive of a very ingenious and entirely new method of mixing liquids by a portable machine which can be clamped to any convenient tub or tank from twenty gallons up to one thousand in capacity.

This new method of utilizing "push-pull" propellers represents the latest scientific and most efficient means for the complete and rapid intermixing of liquids.

On the motor-driven shaft are attached two propellers so positioned and pitched that the lower blade throws the liquid upward to meet the stream of liquid which the upper throws downward. This causes a complete intermixing of the liquid mass without the danger of splashing or spilling, as the streams are brought together beneath the surface of the liquid.

It is to be noted that all moving parts with the exception of the shaft are outside the liquid, and that an extremely small surface of the metal is exposed to the action of the liquid being mixed.

Any concern that is now mixing any kind of liquid, thick or thin, by hand methods or the old-fashioned type mixers, will find that the new Hy-Speed Mixer, with "push-ball" propellers, will pay for itself in a very short time and insure a much better article.

It is stated by the manufacturer of this device that one concern formerly required a man's time for three days to make up a heavy thick liquid, at a cost of $15.00 for labor, which is now being mixed by a Hy-Speed Mixer in three hours at a cost of 15 cents for electricity. This is just one example of the great value of a scientifically designed machine over the conventional hand methods which have been in vogue for so many years.

If any of our readers believe that the above described device, which is sold in sizes varying from $37.50 to $110.00 each, can be used to advantage in any of their plants, just drop them a line and a complete circular describing this new, interesting article will be sent. The Alsop Engineering Co., 157 Water street, New York city, is making it.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

THE CANNING TRADE
THE Journal OF THE Canning AND Allied Industries
ESTABLISHED 1878

The Markets

BALTIMORE, FEBRUARY 4, 1924

WEEKLY REVIEW

Awaiting the Active Buying Which Canners Hope For—Prices Advance in Face of Quiet Market—Buyers Working to Hold Market Against Advance—Not a Time for Speculation —Market Strong and Never in Better Condition— Futures Selling Well—Eastern Tomato Futures Not Opened Generally—The Need of Horse Sense in Canning This Season—Corn Must Be Cared For—Increased Packs Indicated for 1924.

WAITING PATIENTLY-January has come and gone, and the inventory period has likewise come and gone, and the holders of spot tomatoes and other canned foods are still patiently waiting for that buoyant market which they hoped for, in the latter weeks of the old year, although no one promised they any particular amount of buoyancy. They were encouraged to believe that the buying would be better after the new year got well started, and we believe that this will eventuate, but it must be admitted that the waiting is stretching out a pace. It presents a really remarkable market condition, where the holders stand so firmly for what they consider their goods worth and where, in fact, in the face of a quiet market, the prices advance, and this, too, in face of larger statistics on tomatoes than many had brought themselves to believe would be shown. So while it cannot be recorded that buying has been resumed upon the basis hoped for, it can be stated that the holders are stronger than ever in their opinion of the market and that on tomatoes at least prices are on the advance.

The market is not dead, not by a long sight, for there is constant buying by both jobber and by retailer of the jobber, for the people are eating canned foods of every kind, and in a steady stream. So the stocks have to be constantly replaced, but as yet the buyers have not come in to cover any considerable portion of their wants in advance. Whether or not they will come in to buy in goodly blocks remains to be seen, and we are inclined to believe that, with tomatoes as with other items, they will try to cover in as quiet a manner as possible so as not to turn the market against themselves. There is possibly not a buyer but what knows that there is not a surplus of any kind of canned foods, but whether by coincidence or otherwise, they manage to operate in harmony and unison to hold the expected advance in prices back as long as possible. No holder had any right to expect a runaway market, and we sincerely hope that a runaway market will never take place, and we do not believe that it can take place. No. 3 standard tomatoes are about $1.50 now, and that is high enough, and No. 2 tomatoes are $1.00 in most minds, although quoted in various channels at lower figures. But $1.00 to $1.10 is high enough for the best consumption of No. 2 tomatoes, because at such figures the market will clean out, which would permit the 1924 tomato season to start with absolutely clean decks, as did the 1923 season. That is better than $1.25 2s and $1.80 3s with a whole lot left either in canners' hands or on the shelves of the retailers, which the public will not buy because of the too high prices. There is an expression in the stock trading market which might well be applied here, and it runs in this way: "Bulls and Bears always make money; Damphools and Hogs never."

As for the spot market, it may be reported as strong, with advancing tendencies; the buyers inquiring freely and a considerable proportion of steady buying, in small amounts, for immediate shipment. That applies to every article on the list, for not one seems to be neglected. The stocks in all items are getting noticeably low, and some reachinig close to the vanishing point. Peas, beets, stringless beans and even sweet potatoes and corn might be mentioned with particular emphasis in this direction. And there are many fruits, and most of the fish that can claim membership in this vanishing list. No one has ever seen the entire canned foods market in a more healthy condition; stocks low, consumption heavy, prices firm ot avdancing and the stocks in such strong hands that any slump in buying fails to produce lower prices or uneasiness. It may be late in the spring before any top-notch market prices are reached on any item, if they are reached at all, and the wise holder will not try to wait until the last moment. Read that stock market again.

UTURES—Western canners are finding the selling of futures very active and all that they could wish. Most pea canners have sold about as many peas as they care to put on their books at this itme, though, of course, there are some canners who have been lagging in this matter. The eastern or as generally called, Southern pea canners, opened their future market just about Convention time, and reports at hand say that they sold up in jig time. These prices were quoted in an earlier issue of THE CANNING TRADE and apparently they appeared attractive to the buyers. Some of the long-headed and old, experienced pea canners diagnose the pea market situation as to future, as one which it might pay to sell lightly on, and so have a fair amount of spots with which to trade when the season ends, cleaned up as it did this past year. So long as the quality of the canned peas is kept high the possibility of consumption is difficult to estimate, but it should not be overlooked that prices must be kept within reason. People will eat an immense pack of good peas at fair prices, but they will not pay fancy prices for canned peas and eat any large amount of them. Then on the other hand, if the intended acreage of peas is gotten out, and beyond all things is gotten up, with good growing weather and a favorable crop, well, future peas may be very attractive in that day. If the cannery equipment is sufficient to handle this maximum crop, all will be well; but a rush of peas from a heavy acreage and good crop would mean, on the average, a very decided lowering of quality. A lowering of quality would mean rejections on futures, a lowering market price and trouble. If the machinery is there, ready and able to handle the maximum load, or if the canner has backbone enough or horse-sense sufficient to allow the surplus peas to remain in the field and become dried peas, rather than to try to get them into the cans and so

spoil his entire average quality, the situation will take care of itself. From any angle at which you view the pea situation the absolute necessity of quality packing in 1924 stands out like a mountain would in the middle of the plains.

There has been some future tomato selling, but not a great deal in this great Tri-State region. As we have said, Indiana is said to be well sold up on futures, and some other tomato canning sections report good sales, but in this section future selling has not opened. At this time it is not known at what prices the canners may be able to contract their acreage. There have been meetings and consultations among the growers and growers' organizations fostered by the county agents. They are wonderfully well organized and able to dictate in a way that should make canners see their own lamentable weakness in this respect. The growers are together and stick together and can make their point, and in recent years have been wisely advised not to try to ride the canners rough-shod, in other words, to name terms upon which the canners of this section may be able to compete with the canners of other States. Under the community plant bed system they got better returns, as well as better quality, and as this will be extended to larger proportions this season, the growers are figuring upon better returns and are considerinig the payment of a premium for better quality. This should be done, and the Department of Agriculture has shown how. Something will shortly be known, and then futures in tomatoes will open.

Well known canners of corn have been booking future business mainly upon their own private prices, for buying good corn has become a task, if we can believe the numerous reports coming to hand. Much of the canned corn has become unacceptable to many consumers and they are voicing their displeasure with it. To many minds there are but two kinds of corn: good corn and bad corn, for, they contend, corn must be good or it is very poor or bad. This complaint has grown to such proportions that the corn canners can no longer ignore it. They must face the task in real earnest this season, and take pains to pack their corn at the right growing period, pack it carefully, with the proper condiments, and not too much sugar. This is why canners who are known to pack good corn are feeling the demand for futures, for the buyers want to cover their requirements with known quality. Some corn canners should emulate the example of the pea canners, and not be afraid to run much of it into the silo rather than so crowd their mechanical capacities as to reduce the quality of the whole pack. Better 25,000 cases of fine corn than 50,000 cases of mediocre or poor corn.

Preparations for the string bean pack are talked of on an increased scale for 1924. As with peas there are sections and canners going into this branch of the industry where they were never canned before. Care in this item must be exercised. The market is strong for a good article of string beans. There is no market for poor, tough off-colored or mushy string beans with abundant strings.

Fruits will have to be studied carefully this coming year. California held down its packs in excellent shape last season, in the face of immense fruit crops. Other sections did not have the crops. Fruits have not been selling as they apparently should have sold. Again the people have become particular and want quality, both in fruit and in the syrup.

Fish of all kinds is in strong position. Oysters are still rated upon the scarce and high list in this once great oyster region, and there is no hope of better prices and larger packs for this season.

NEW YORK MARKET

Demand Quite Active—Heavy Bookings of Future Peas—Prices on Southern Peas—Spot Peas Very Light—Some Future Corn Selling—Future Prices on String Beans—The Michigan Canners Announce Future Prices on Fruits—Trade Notes.

New York, January 31, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

MORE Buying Reported—Demand for the general line of canned foods has been quite active during the past week, with considerable buying of both spots and futures recorded. Wholesale grocers' inventories disclosed very light stocks of many staple canned foods items, and they are now in the market filling out their stocks in anticipation of a good demand during the spring months.

Future Pea Bookings Heavy—Business placed in future Wisconsin peas has been very heavy, and many of the packers have definitely withdrawn from the market, after having booked up to their expected capacity. Since the withdrawal on the part of the Wisconsin canners, Illinois, Michigan and Ohio canners have taken on considerable business, and Utah packers are said to be in the market for future contracts with the New York trade.

Maryland and Dalaware Peas—Southern packers have entered the market with offerings of peas on futures contracts, and have already received some large orders. Prices quoted by the Southern canners show some variation, the market beinig as follows: Early Junes, $1.20a$1.25; extra sifted, $1.50 to $1.60, and at $1.30 to $1.40, all for No. 2 tins, f. o. b. cannery, shipment when packed. No. 10 tins are held at $8.00 per dozen for extra sifted, and $6.25 for Early Junes.

Spot Peas—Stocks of peas available for jobbing trade in the New York market are very light, and holders are showing very firm views. The lower priced offerings are particularly scarce, while offerings of the fancier siftings seem adequate for the demand at the present time.

Future Tomatoes—Buying of tomatoes on future contracts, for Southern packs, has been rather quiet thus far. For shipment from country canneries, the market is 57½c for 1s, 87½c for 2s, $1.27½ for 3s, and $4.00 for 10s, all prices f. o. b. cannery. Some canners are offering on 100 per cent. delivery contracts at these figures. The market for prompt shipment Maryland tomatoes has remained firm during the week, with business of a routine character.

Future Corn—Southern canners are booking a little business on future corn at 90c for standard crushed, $1.25 for standard shoepeg, $1.30 for extra standard shoepeg, and $1.40 for fancy shoepeg. No. 10 corn is quoted on future contracts at $5.75 for standard crushed, and $6.00 for extra standard evergreen.

Western Corn—Mid-western canners are showing firmer views on standard corn of 1924 packing. Some are offering to book futures at 95c per dozen, but the general asking price appears to be $1.00 per dozen. If the Western packers hold to these figures, some of the business which normally goes to that territory should reach Maryland and Delaware this season. Minnesota canners are offering fancy Golden Bantam at $1.75 with fancy Crosby at $1.30. Illinois quotes fancy Country Gentleman at $1.27½ to $1.30 per dozen, while Wisconsin is quoting fancy Country Gentleman at $1.25. The market on future extra standards of Western packs ranges from $1.00 to $1.05, cannery.

String Beans—Maryland canners are quoting futures standard cut green stringless beans at 90c cannery. Wisconsin canners are quoting 20c higher on the same grade, offering futures at $1.10. Other grades of Wisconsin green stringless beans are quoted as follows: Extra standard cut, $1.25; fancy cut, $1.40; whole green stringless beans of Wisconsin pack are quoted on future contracts at $3.00 for fancy 1 sieve, $2.60 for 2 sieve, $2.00 for 3 sieve, and $1.60 for 4 sieve, all of the foregoing prices applying to No. 2 tins. On No. 10 tins Wisconsin canners are quoting $6.00 for standard cut and $6.50 for extra standard cut. Standard cut golden wax beans are quoted at $1.60 for 2s and $6.00 for 10s.

Sardines Strong—Demond for sardines continues steady, and canners have now only broken assortments remaining unsold to take care of the present buying movement. Prices are strongly maintained, and canners expect that within the next two months they will dispose of their entire holdings.

New Michigan Fruits—Michigan canners are early with their future prices this year, opening prices on berries and cherries having been named. Strawberries are quoted on No. 2 tins at $2.50 per dozen, in 20 degree syrup, $2.75 in 40 degree and $3.00 in 60 degree. No. 10s water are quoted at $9.50, with 10s in 20 degree syrup at $11.50 and 40 degrees at $12.50. Cold pack in bulk are quoted at 13 cents per pound in 400 pound barrels, 3 parts berries, 1 part sugar, and 12 cents per pound 1 part berries and 1 part sugar. Blackberries, No. 10s in water, offer at $8.00, with black raspberries, $9.00 for 10s in water, $2.25 for 2s choice, and $2.50 for 2s fancy. Cherries are quoted, No. 10 tins, at $11.50 for standard, $12.50 for choice, and $13.50 for fancy, with No. 2s at $2.00 for waters, $2.50 for standards, $2.75 for choice, and $3.00 for fancy.

California Fruits—While there has been some s. a. p. business booked on California canned fruit futures so far, none of the larger canners has announced prices. Most of the canners are holding only light stocks of 1923 fruits, so an early opening to the 1924 season will not be out of order. There is a strong market prevailing on 1923 pack, and a good buying movement is reported. Jobbers' stocks of canned fruits are limited and they are anxious to secure further stocks to carry them until deliveries of 1924 pack begin to come forward. With canners' holdings lighter than for several seasons past at this

time of the year, the situation is a strong one in all respects.

Salmon Dull—There has been very little interest shown in offerings of salmon during the past week, and the market remains unchanged both on spot and for shipment. Canners' holdings are not exeessive, however, and they are maintaining the market on a steady basis in anticipation of a good spring movement which will cut down stocks.

Frank E. Booth, of F. E. Booth Co., of San Francisco, well known canners, was in the market during the week. S. P. Sanford, salesmanager, accompanied Mr. Booth on his visit.

C. F. Sullivan, formerly in charge of the export department of Austin, Nichols & Co., is now manager of the canned foods department for H. E. Wood & Co., Inc. This latter firm has just been appointed New York sales agents for the Kings County Packing Co., of Aroma, California.

Gerald J. Coxe, of the Humbird Canning Co., pea packers of Humbird, Wis., ,was in the market during the week.

Hayden Dudley and Carl Weisl, comprising the firm of Dudley & Weisl, Inc., have opened a brokerage office at 76 Varick Street. Both Mr. Weisl and Mr. Dudley were former members of the firm of U. H. Dudley & Co. They are now operating brokerage offices in Boston and Philadelphia.

E. E. Chase, Jr., and E. E. Chase, Sr., of the Richmond-Chase Co., well-known canners and packers of San Jose, California, were in the market this week.

J. E. Barr, of the Minnesota Crosby Corn Exchange, with headquarters at Minneapolis, was another visitor along the Street this week.

Mr. Starr, of the Starr Fruit Products Co., of Portland, Oregon, was here during the week, stopping with W. D. Breaker & Co.

Norman J. Griffith, sales manager of the Stittville, N. Y., Canning Co., was another out-of-town canner here during the week.

ST. LOUIS MARKET

Buying Expected to Resume—Steady Demand for Tomatoes—A Halt Reported in No. 10 Tomatoes—Future Tomatoes Talked About—Peas Hard to Find—Advances in Future Prices—Corn Is Quiet—The Fruit Crop Unhurt.

St. Louis, Mo., January 31, 1924.
By "Missourian,"
Special Correspondent "The Canning Trade."

BUYING to Resume—Now that the canners' convention is over, and the final results of many points has been solved, the canned foods business will no doubt take on new life, although there are many items in the list of canned foods that show a season weakness, especially a week ago, when the weather was rather mild for this season of the year and many fresh vegetables came in the market from the South and California. Now that the weather is very cold, there is and will continue to be a good demand for canned vegetables.

Tomatoes—The attention of jobbers continues to be given to tomatoes. The Southern goods have been attracting buying in anticipation of further advances. The demand has been steady, although not in great volume. None of the large jobbers seem to be in need of goods and it will be a couple of weeks before the jobber will be in the market to replenish. Gallon goods ar not active for country shipment, because the market is rather disturbed recently by spot sales at low prices. Restaurants and other users of No. 10 are holding off. Canners are inclined to talk of futures and to be ready to book orders, but they want advances over 1923 opening, which the trade does not seem to take to.

Peas—Spot peas are scarce. First hands are nearly out, and holders in smaller markets all seem to have strong ideas. It is hard to find any at a price that is attractive. Futures favor the packer. Future trading has been checked by the position taken by the canner, to advance prices or make less favorable assortments, while the jobbers have been inclined to wait until after the convention. General advances made in new packs are likely to come at almost any time. The present packs are firm and scarc. From letters received here from canners, it is believed that advances may be looked for at any time. Packers believe that high cost of seed, cans, labor and other overhead expenses will necessitate higher prices. All districts have firm ideas as to values and insist upon contracts in assortments, so that the less favorable sizes and grades can be moved along with the kinds which are likely to be scarce.

Corn—There is not much life in corn. It is just about as dull now as it was before the holidays. Standard is not much in demand. There is not much of it spot and this is not urged to sell. The cheap lines are mostly sub-standards. Fancy is scarce.

Miscellaneous—Other canned vegetables, including spinach, beans, succotash, limas and other varieties are spasmodically inquired for. A limited trade is reported, with prices generally by the quality.

Fruits—Confirmation of the shortage of seconds and standards clings peaches, is seen in the restricted offerings and the stronger ideas of those who hold spot. Seconds of both cling peaches and apricots are scarce and higher. Standards are not very plentiful. It is hard to get specific assorts except in small quantities. There are more liberal supplies of choice fruits. There is a weakening in the spot market. It is due no doubt to the fact that among operators and speculators, there has not been the expected demand. Features of fruits and berries are being offered from the Pacific Northwest, and some trading has been concluded. It is undrestood that California packers are takinig on a few s. a. p. contracts with old customers, predicting higher levels on new pack fruits. Other varieties are inactive. Cherries, pears, pineapples, prunes and plums going into consumption in a very small way.

Information has been received here that Ples Akin has purchased the site of the Senaca, Mo., which was destroyed by fire recently, and will construct a tomato cannery on the ground. The debris of the elevators is to be removed at once and the new factory is to be completed by the time the new tomato crop is ready to market.

Fruit Crops Unhurt—The recent zero wather has not appreciably hurt the diversified fruit crops of the Missouri and the Arkansas Ozarks according to the reports of the St. Louis and San Francisco Railroad horticultural agent, who is just back from a tour of the region. Only peach buds suffered so far. These were reduced approximately 50 per cent., but the crop will not be reduced anything like this amount, he said. In explaining this statement he said that peach trees can loose more than half of their buds and still bear bumper crops, provided the trees are vigorous and the moisture last fall put peach trees in a vigorous condition.

Not much damage to the immense peach orchards in the Koshkonong district was caused by the zero weather according to R. M. Hitt, of Koshkonong, a prominent horticulturist. Not nearly so many buds were killed as in the Arkansas peach regions.

Strawberries are in excellent condition, and the Frisco Road has raised its second estimate of 918 cars to more than 1,000, because of the excellent condition of this fruit in Missouri and Arkansas. Last year the shipments of strawberries on the Frisco were over 900 cars, and in 1922, 2,200 cars, a record.

Apples and grapes have suffered no injury whatever, so far as could be ascertained. Cherries are looking good.

CHICAGO MARKET

All Hands Busy—Confidence Shown in the Future of the Market—Corn Advancing—Peas Selling Steadily—Tomatoes Quiet—Cold Weather Throws Demand Upon the Canned Product—Peas Steady.

Chicago, January 31, 1924.
By "Wrangler,"
Special Correspondent "The Canning Trade."

ALL Busy—The buyers and brokers are all back from the big convention this week and are all busy. The convention seems to have been entirely up to the expectations of everyone, and I have heard no criticisms of anything pertaining to the convention, except of the severity of the weather.

One close observer who was present said: "It was the greatest convention the National Association has ever had, and there was a large attendance. The machinery exhibit was very fine and complete. The exhibit of canned foods was small, but very attractive, and induced much favorable comment. The State of Illinois had a splendid canned foods exhibit."

The brokers report that the buyers appear to have imbibed confidence in the future prices of canned foods at the convention, and that they are inclined to place orders for peas, corn and tomatoes of the 1924 pack more liberally than last year.

Corn—No standard 2s corn can now be had in the Central West for less than 90c f. o. b. cannery, and most canners are

asking 92½ and 95c. There is a good demand for standard canned corn, but the inquiry for fancy quality is not so urgent as it was some time ago. Extra standard grade, however, is in good request.

There is a good buying movement for spot peas, and it will not be long before all the broken lots and assortments are cleaned up in Wisconsin.

Peas—Future peas are selling steadily, and wholesale buyers are contracting for their possible needs and private labels with more confidence than they displayed previous to the convention.

Tomatoes—Not so much interest is being taken in canned tomatoes as in peas and corn. Buyers seem to think that they will be advantaged by waiting a while before placing their orders for future canned tomatoes.

The movement of canned foods has been very much retarded by the very cold weather, and until Wednesday of last week all shipments to the retail trade of canned foods had been withheld for about ten days, as it was considered that the shipping was unsafe. These weather delays, however, do not curtail the consumption of canned foods to any important extent, for they give the retail grocers a chance to sell out some kinds and grades that would not have been sold except because of the lack of other kinds.

The destruction of fresh fruits and vegetables by the very general below zero temperature prevailing in the Mississippi Valley and the Great Lakes territory has been enormous, and is going to have a n important influence upon the canned fods spot market. Millions of bushels of white and sweet potatoes, turnips, beets, carrots, parsnips, apples and other fresh fruits have been destroyed by the heavy weather, and all this loss of food must be replaced by canned foods.

Shipments of fresh fruits from the South and from the Pacific Coast have almost been shut off by the freezing temperature. I know of the freezing solid of several cars of canned foods, though shipped in refrigerator cars, which shows the severity of the weather.

Canned foods, however, are not injured by being frozen if when received they are stored in a temperature of about 45 or 50 degrees and allowed to thaw out slowly. The edibility and flavor is not hurt by freezing.

The only risk sustained by their freezing is that if they are unloaded and stored in a temperature above 50 that the moisture will condense on the outside of the cans and spoil the labels and rust the cans.

MAINE MARKET

Some Future Business Done—Buyers Taking More Goods Than Ever—Stringless Beans Also Offered—Maine's Exhibit at Buffalo Convention Causes Much Interest.

Portland, Me., February 1, 1924.

By "Maine,"

Special Correspondent "The Canning Trade."

FUTURE Corn—While no prices have been openly announced on future Maine corn, there has already been great interest shown from the buyers, and some business has doubtless been signed up for 1924 goods. It is generally conceded that prices will be $1.45 and $1.70 for Crosby and Golden Bantam corn in No. 2 size, and $7.25 and $8.50 in 10s. Corn on the cob has also been put on the market by some canners at $7.25 for No. 10, $3.75 for No. 4, $3.50 for No. 3, and $2.00 for No. 2. One canner returned to Maine this morning after a short trip to some of his buying centers, and is very frank to say that buyers are ready for the goods, are taking even greater quantities than last year, and are showing only perfunctory objection to the prices.

Against this, of course, come the usual untraceable rumors that "some Maine packer" (isn't it funny he never has a name in these cases?) is quoting at this and that bargain price; but this is the wrong season for such arguments to carry any weight, the Maine canners knowing that their prices are no more than justified and that buyers will take the whole upput in due course of time and events.

Stringless beans are also offered at $1.30 and $6.00 for 2s and 10s. While these figures are advanced over the opening prices last season, several canners who had opportunity to accept additional contracts later in the year were obliged to ask $1.30 in order to cover costs, and those selling at the earlier figures admit that they canned beans last season at an actual loss.

At the Maine Canners' Association exhibit at the food show, much interest was shown by canners, brokers and buyers from all over the country in the very high quality of goods displayed. The fancy quality of Maine corn has long been known and appreciated in all markets, being, in fact, the first pattern from which all other corn packs were fashioned and remaining the standard up to the present time. Besides Crosby corn (the only white variety ever packed in Maine) and Golden Bantam, Maine canners also showed their cut green stringless beans, their infant pack of peas, and the well-known Maine blueberries. The cut green beans which are packed in this State are of a variety distinctive for appearance and flavor, and are in no way competitive with the strains used for canning in other sections. From the interest shown and the manner in which this display was received it is evident that the distribution of Maine beans will be largely increased in the near future. The peas displayed, the first to be packed in Maine, were of exceptional interest, and received words of highest compliment and encouragement. The blueberries also provoked much comment, and by some were even considered a novel production, regardless of the fact that Maine has been a large canner of berries for many years, and that these berries have been distributed over the whole country. Other lines of goods represented but not displayed were: Succotash, horticultural beans, baked beans, squash, fish flakes, fish cakes, sardines in all styles, clams, clam chowder and clam bullion, lobster, quartered apples and applesauce and mincemeat.

CALIFORNIA MARKET

Rains, Badly Needed, Have Come—Minimum Wage to Women to Be Enforced—A Care in Point—More Interest Being Shown in Fruits—Orders Are Coming for 1924 Hawaiian Pineapple—Tomatoes Show More Strength—Dry Season Affecting Pea Planting—Coast Notes.

San Francisco, January 31, 1924.

By "Berkeley,"

Special Correspondent "The Canning Trade."

RAIN Comes—The drought, which has held California in its grip most of this season, and which has already caused serious losses to farmers and stock growers, has been broken by a light storm, which visited the San Francisco Bay district this last week in January. Whether this welcome storm visitation will prove general, or whether it will be merely a flurry of rain, such as others have been this season, is a question; but it is hoped that it will be widely spread and long continued. The precipitation to date is woefully short of the normal; fields that should be covered with grass are brown and cattle are suffering acutely. California may have experienced seasons as dry in the past, but never before have so many depended upon crops. Normal crops in some lines are out of the question, and very heavy rains will be necessary to avoid losses in others.

Minimum Wage to Women—The California canning trade is much interested in the announcement that has been made to the effect that the Industrial Welfare Commission of the State will proceed to enforce the payment of the minimum wage to women employed in canneries. This decision was reached following an opinion rendered by Attorney General U. S. Webb. The Golden State Canneries, of Southern California, some time ago paid its women employes less than the minimum fixed by the Commission and offered to place the difference of $3,800 in escrow. It gave its reason for refusing to pay the full wage that the minimum wage had been attacked in the courts, and that if it was not upheld the farmers and fruit growers with whom it held canning contracts on a cost plus basis might have legal grounds to recover. The Industrial Welfare Commission sought the advice of the State's Attorney General, who said: "We would suggest, not having seen the contract between the farmers and the canners, that there would appear to be very great improbability of any possible right of action by the farmers against the canneries, so long as the canneries in good faith and acting reasonably in the prosecution of their business, complied with such orders as might be made by your Commission." Members of the Commission advise that this opinion greatly strengthens the position of this body in the present situation with the entire minimum wage law under attack.

Fruits—More interest has been shown in canned fruits during the past week than in a long time. The taking of inventories is largely over and the season of heavy consumption is at hand, with the result that there is a general stocking up on the part of both wholesaler and retailer. Buyers are finding that some

stocks are in very light supply, particularly on the lower grades. Very large quantities of dried fruits have been sold for export of late, and the same conditions which made the sale of these possible have stimulated the demand abroad for canned foods. There is scarcely an item in the entire list of California canned products that is in excessive supply, and prices are firm for the entire line.

Pineapple—Considerable interest is already being taken in the 1924 pack of Hawaiian pineapple, and orders are commencing to come in from many quarters. In speaking of this the Griffith-Durney Co., of San Francisco, recently had the following to say: "From practically all sections we are receiving unsolicited orders for 1924 summer pack pineapple, s. a. p. You, of course, understand that the principal reason for buyers placing their orders early s. a. p. is that they will be better able to get the assortments they want than if they delay until opening prices are announced. In other words, specifications or assortments are not scrutinized as carefully when we start in to book orders as they are when we have sixty or seventy-five per cent of our prospective pack sold. At that time we are, naturally, compelled to watch every order very closely, and in many cases have to revise them. Therefore, in order that buyers may be entered for what they require, it is vitally important that they get their 1924 summer pack orders in as soon as possible."

Tomatoes—The demand for California canned tomatoes is showing additional strength, and the sagging off in price that was predicted by some as a result of the publication of pack statistics has failed to materialize. It is possible to pick of stocks of No. 2½ standards at $1.10, but the pack of leading canners is selling steadily at a higher range. Almost every steamer that leaves for the Atlantic seaboard has a consignment of California tomatoes aboard.

Peas—The outlook for California peas for 1924 is none too promising, owing to the extremely dry season. Planting has been delayed and the acreage will doubtless be lighter than usual. Spot peas in this market are in demand, with stocks light. Considerable interest is being shown in futures at the prices named several weeks ago.

Coast Notes—A meeting of the California Farm Bureau Federation of Northern California was held recently at Sacramento, Cal., and the formation of the California Farm Labor Exchange was decided upon. The objects of this organization will be those of providing a clearing house for farm labor, particularly during the canning season, and of establishing a uniform rate of wages for farm help. The executive committee of the exchange will consist of one delegate from each country north of the Tehachapi. Farm owners deny that the move to establish uniform wages is one to make reductions, but state that it is intended to stop the practice of labor "stealing" through the offerings of higher wages. The recent meeting was attended by canners and representatives of various State developmnt organizations.

The Hawaiian Pineapple Co. had a very satisfactory year in 1923 according to the financial showing just cabled from Honolulu. The new income, after income tax and depreciation, amounted to $2,760,000, as compared with $1,822,017 in 1922. The outlook for 1924 is considered excellent.

Bisceglia Bros., of San Jose, Cal., contemplates the erection of a cannery at Isleton, Cal., in the heart of the asparagus district.

A NEW EDITION

OF

"A COMPLETE COURSE IN CANNING"

SOON TO BE READY

Thoroughly and completely revised, in every detail, by the highest authority and leading food technologist of the world.

OFFERED

¶ As the finest, most comprehensive and most authorative treatise ever published on the canning, preserving and pickling of all food products, and for the making of condiments, preserves, frust juices and specialties.

READY ABOUT MARCH 15th, 1924.

¶ A HISTORY—There were about a dozen books on canning on the market at the time "A Complete Course In Canning" was first published, 1902; and several have attempted the market since; but they all failed for the same reason: they were either a mere collection of formulae (the times and ingredients) or were too highly technical and scientific for ordinary use. As its name implies, A Complete Course In Canning was written to cover the entire subject, from the building of the cannery, the contracting of the crops, and their procedure through the factory to the warehouse, and in such language as the variest beginner could understand. It was based upon the best proceedure of that day, and in the four revisions since, has been kept well up to the most modern methods. This latest revision brings it not only fully abreast of the times, but rather in advance of them. There is no man in the business but what will find this work a welcome visitor to his desk-—a real necessity.

¶ We published some of those other works for the authors and we have known them all, and we unhesitatingly recommend this new edition of "A Complete Course In Canning" as the finest thing ever offered the industry.

IN THE MEANTIME.

¶ The old edition of the book has been exhausted, except for one case of books which was caught in a flood, caused by a bursting City main. We have rebound these books, the only damage to them being a slightly wrinkled appearance to some pages. We are offering these at $4. per copy, instead of $5. the price of "A Complete Course In Canning".

The price of the new edition will probably
be $10. though this is not definite, as yet.

SMILE AWHILE

RACED THE TIES

"There goes a great track man."
"He looks like a hobo to me."
"He is."—Oregon Lemon Punch.

A WITNESS' ESTIMATE OF THE JURY

A certain lawyer had found the witness difficult to manage, and finally asked whether he was acquainted with any of the men on the jury.

"Yes, sir," replied the witness, "more than half of them."

"Are you willing to swear that you know more than half of them?" demanded the lawyer.

"Why," retorted the witness, "if it comes to that, I'm willing to swear that I know more than all of them put together."

A NEW VARIETY OF HARDWARE

"Say, Rastus. dat sho' is some keen-lookin' razor yo' got. I bet it'll shave mighty good."

"Yeah, dat's a good razor all right, but Ah don' use it fo' shavin'."

"Yo' don't. Den whut does yo' use it fo'?"

"Ah uses dat razor fo' social pu'poses."

HIGHBROW ENGLISH

A kindly but somewhat patronizing landlady was inquiring of the professor's young bride as to her prospective summer outing.

"Our plans thus far," replied the bride, a little distantly, "are only tentative."

"How delightful!" the landlady exclaimed. "I'm sure you will enjoy camping out more than anything."

Customer—Give me that currant pie in the window.
Clerk—Excuse me, sir, but if you brush the flies off it you'll find it's custard.—Banter.

Women are hanging everything on their ears nowadays, except bath tubs.—Bison.

"Look, papa, Abie's cold is cured and we still got left a box of coughdrops."

"Oo, vot extravagance. Tell Herman to go out and get his feet wet."

Ford—Your engine is coughing badly again.
Henry—Shouldn't wonder. I had its muffler off last night.—Pennsylvania Punch Bowl.

Governess—How old is a person who was born in 1894?
The Modern Child—Man or woman?—London Opinion.

She—Anyhow, girls don't ask for pin money like they used to.
He—You're right, they've nothing to pin any more.—Pitt Panther.

WOULD YOU?

I'd like to be a could-be
If I could not be an are.
For a could-be is a may-be
With a chance of touching par.
I'd rather be a has-been
Than a might-have-been by far,
For a might-have-been has never been,
But a has-been was an are.—Cornell Widow.

"Did you say that he has music in his soul?"
"Why?"
"His shoes squeak."—California Pelican.

She—I can tell a lady by the way she dresses. Can't you?
He—I never watched one dress.

Kidd—Tomorrow is my wooden wedding anniversary and I can't think of a thing to give my wife.
Kidder—Nonsense, man; use your head.

Vol. 47 BALTIMORE, FEBRUARY 11, 1924 No. 25

EDITORIALS

A POSTPONEMENT—We are sorry to break a promise with our good faithful readers, and we promised them the Convention Report this week. We thought in making that promise that we were careful, conservative and would be able to carry it out with a good, big, stiff drive. We did it last year—the Convention was held in Atlantic City, January 22 to 26, and our Convention issue was dated February 15, and we have done this for many years. But in making such promises we sometimes have to 'figure without our host,' and we did so this year. We are necessarily dependent upon the expert Court reporters who transcribe all that is said, and we must have their transcripts before we can put the matter into type. It is a huge task to 'take down' an immense Convention such as this, requiring as many as five men at a time, and not many men are capable of doing this rapid work. We are glad to say that they made an excellent job of this Buffalo Convention, but they were slow this year in getting out their transcripts, slower than usual. Instead of having the first of these transcripts by Monday morning, January 28th, and continuing right along until completed that week, the first reached us on Monday February 4th and the finals have only just come to hand as we write this. They say they have done a good job, and they have, but all of us have slowed down. After all it will make no material difference, because next week will be here before you know it, and shortly after that you will forget all about the Convention—it will be a thing of the past,—ancient history. So why fret? We simply wish you to understand how and why our promise was not kept.

You will find a departure, this year, in our Convention report, in that it will be set in large, easily readable type. First ourselves and then "The Canner" are to blame for 'spoiling' the industry in the manner of our Convention reports. No other trade journals report the word for word deliberations of their Conventions. Where that is desired the Associations do it themselves, as with the National Wholesale Grocers, the National Food Brokers and many others, who publish their proceedings in pamphlet or book form. Back in the early days of canners' Conventions The Canning Trade began this style of reporting, and has never gotten out of the bad habit; and our competitors, of course, had to follow our lead. But because of the mass of matter it had become customary to print the report in what the printer calls '6 point type', so small that it can be read by most men only with the greatest difficulty, the idea being that the record was there, for those who wished to delve into it, but the truth is that the use of this small type saved paper—number of pages—ink, and all the expense of an even larger edition. And in passing we wish to just drop the hint that these Convention issues are expensive.

You will find our report this year readable—not "every last blooming word that was spoken," but deleted of the surperfluous, retaining, however all the essentials and all the addresses which are helpful. There must always be an amount of "pleasant remarks" and addresses along the line of "inspirational talk," which help lighten the meetings and are enjoyable, but, like the old cocktail before dinner, not necessary in a business consideration. And of course no Convention issue ever gives the complete report! We could never get done.

THE 1924 ALMANAC—We are pleased to announce that in answer to the incessant clamor for the 1924 Almanac of The Canning Industry, that it is about ready and will be mailed to you on Tuesday of next week. Always a most handy, welcome little booklet we believe this year's Almanac will be found more serviceable than any of its predecessors. There have been added the complete statistics of all leading canners' crops, the acreage, the yield per acre, and total yields in all States, and prices paid by canners to growers on all crops and in all States; the Labeling law requirements of Canada and Wisconsin and other laws affecting the industry are all set forth together with the usual great mass of statistical data so needed by every man handling canned foods. The Almanac will be mailed to every subscriber in good standing, and we suggest that you keep a good look out for it. They will disappear, and they cost $1 apiece to replace. Among the most anxious for this useful little compila-

tion of the industry's activities are the jobbers and wholesale grocers, and the leading brokers.

Extra copies may be obtained if spoken for early, as the supply is usually quickly absorbed. Not a few houses equip their representatives each with a copy of the Almanac, and many brokers find it a very acceptible present for their good buyers. All orders on the books will be filled at the time the general mailing is done.

A WISE Consideration of Future Selling—One of the best defenses of the practice of selling future canned foods, which we have seen lately, came from the pen of that leading canner and real merchandizer of canned foods, John T. Dorrance, President of the Campbell Soup Co., and appeared first in the Journal of Commerce, New York, and was later reproduced in The Optimist, the little house organ of that aggressive company. He says:

> There is no use in harboring altruistic ideals about the brotherhood of businessmen walking arm in arm, each protecting the other's interests for the sheer love of the thing. The matter of the interrelation of jobber and canner must be placed purely upon a basis of business economy.
>
> The canner must obligate himself to the grower for his raw materials and to the can manufacturer for his cans, and purchase fuel as well as all other supplies and equipment necessary for his business. This all represents obligations which become accounts payable which must be met.
>
> The unfortunate part of the matter is that these bills all fall due at the time when the burden of manufacture is the heaviest and when the canner's own time is occupied all day and most of the night.
>
> When these obligations become realities and there are not sufficient orders on the canner's books to insure the necessary credits to carry his pack, there is only one recourse left—to sell some goods immediately to realize cash.
>
> Thus is produced a situation that is the source of most of the trouble in the canning industry. The jobber is prone to regard the difficulty of the canner as an opportunity to drive a shrewd bargain—in fact, to consider it as a buying proposition greatly to be desired. However, this is a grave mistake, as the plight of the canner has unfortunate reactions on the jobber.
>
> This mental strain on account of finances has many detrimental effects, the first of which is the inclination to stretch the raw products as far as they will go to fill just as many cans as possible. This deteriorates quality, as may be noticed in canned tomatoes where, as happens only too often, there is as much juice in the cans as solid fruit.
>
> Sub-standard canned vegetables are the curse of the industry. The consumer who opens a can of too mature corn, of antiquated limas or off-quality tomatoes becomes an active enemy of canned foods and a spreader of prejudice. And because of that one offender there is grief for the ninety and nine that have given no offense. And in all this misery both the wholesale and the retail distributors are full partners.
>
> All of this is especially true of canned tomatoes and corn, which are packed in the main by country canners of modest financial resources. Peas have had the advantage of much stronger future buying than either of these two vegetables, and the great improvement in both the quality of canned peas and the market for them can be largely laid to this fact.
>
> Jobbers can encourage the packing of quality canned vegetables by buying futures in a liberal way, and many broad-gauge merchants realize the fact.
>
> There is no necessity for overbuying, or buying against estimates for increase in business, but it is wise and businesslike to buy a reasonable quantity.
>
> Such a policy will strengthen the jobber with his trade, as he will be able to get the very best products when he arranges early in the season, through future contracts, for canned vegetables with definite quality specifications.
>
> 1923 witnessed a large pack of all the important canned vegetables. 1924 will very likely see a still larger one, but consumption will be equal to the strain—provided thoroughly satisfactory quality is insisted on and maintained. And this quality can only be had by means of the co-operation of the jobber with the canner.

Increasing Exhaust Time to Remedy Pinholing
Written for "The Canner" by John M. Richardson
Save Your Pack and Reputation
from the Losses of
Improper Exhausting
From coast to coast there exists a fine appreciation of the necessity to provide adequate means of combating the terrible losses occasioned by discoloration, pinholing and springers in color fruits.
The most prominent scientists and leaders of our industry are unanimous in their opinion that lengthening the exhaust reduces pinholing and springers to a minimum; also low temperature exhausting in water drives the air from the bottom of the can without disintegrating the fruit at the top.
A-B Water Exhauster accomplishes both in an entirely automatic, simple and dependable manner permitting large capacity in small floor space.

A Consumer's Viewpoint

Of The Interpretive Labeling of Canned Fruits

By *Anne Pierce*

Director New York Tribune Institute

An Address before The Fruit Section at Buffalo

A NUMBER of years ago I remember hearing Felix Adler say that he had been talking for twenty years to audiences about the abolition of child labor in factories and fields, and that he never got up without increasing wonder that it should be necessary to talk to a twentieth century audience in the land of the free on such a subject.

I feel a little bit that way about talking on labeling to a group of men as intelligent and well meaning as I have always found canners to be. The label on a can of goods is the manufacturer's direct appeal to the woman who is going to buy of him a sealed package of food to feed her family. It is all she can know about it till she gets it home and opens it. Now, obviously, what she wants is not only the truth on the label, but all of the truth as far as essential details go, all the facts that have any bearing on helping her to decide which can to buy, to fit it to the special purpose she has in mind, and to determine whether its quality and its price are related to her needs and her purse.

"Try It On" Yourself—Suppose that you were going to buy a suit of clothes in a sealed box. What would you want to know about it? And wouldn't you be more interested in what the maker said to you on the label than in what the clerk in the store, who had a dozen other makes of suits to sell, told you about it? You would want to know its size and the vintage of its make. How long it had laid in the box. You would want to know its color and style. You would want to know whether it was fitted for evening or morning wear. You would want to know that it was clean and had been made under sanitary conditions.

It wouldn't interest you to know that that suit was 80 per cent wool if you didn't know whether that was a good wearing mixture or not, and whether a fair relative price was asked. You wouldn't care about cabalistic signs up in the corner conveying some secret meaning to the job, would you?

If you had read advertisements of manufacturers who made a fine suit of clothes and nation-wide it was admitted, and if you had worn his suits and liked them, you would want his name as a safeguard and guide—not the name of the man who merely sold the goods for him—and next year might be selling some one else goods under the same label.

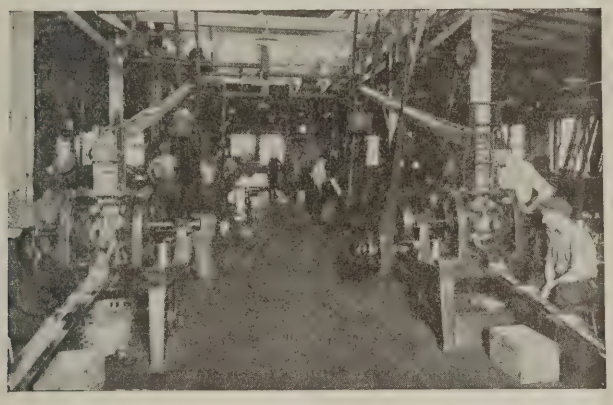
The Manufacturer's Name—There is no subject in food work that I feel more positive about than this—the manufacturer's name on the label. It is absolutely essential to the identification of the product you want to buy. Something else just as good or better in the distributor's opinion, next year under the same label, is bad merchandising. This is not a question of fraud, gentlemen; it is a question of identification, quality and taste and being able to get what you want when you want it. I have no quarrel with the middleman; in our immense and complicated country, with our distribution problems, he has a real function to perform. But that is no reason why he should pose as a manufacturer and producer when he isn't. Let his name go on the label, too, if you like; he may be better known than some manufacturers, true. But the minute you get to making a mask of the label, a false face, suppressing vital information, even if you make no misstatements, you are weakening your sales program.

And not only is it disastrous from the standpoint of identification for the consumer, but it is even worse in its reaction on the manufacturer, for no one can take the same pride in his output if he isn't responsible to the public for it. Brands in the old country that go down from generation to generation and are as proudly kept up as the family portraits, never would it have happened if some one else signed them. You can't do a fundamentally wrong thing, gentlemen, and not have all sorts of undesirable results circle out from it that you have never thought of or desired. You have started a law and it works out to the end—the circles spread to the shore; you can't stop them when you have once sent the pebble skipping.

I know one or two wholesalers' brands that are as fine as any manufacturers, but only one or two, and you can't build your house on exception—and it won't hurt even these distributors to give the manufacturer who has helped build their reputation a place on their label, as a co-partner. Think of books with only the publisher's name on them? How long would people write or care what they wrote if the publishers said: "Here I take all this risk—I sell this and distribute it, why should the authors's name be on the book?" Just as much sense in one as the other. Food for the body is just as important as food for the mind, and the author or manufacturer not only has a right to his good fame as well as to his money return; but it depresses his producing power, and so is bad for the community if he does not get it. Think that over. And get behind Congressman Johnson's bill for the manufacturer's name on the label. We have had that kind of a bill in Congress for 15 years or more to my certain knowledge—the whole industry and the consuming public will be better off when it passes.

The Golden Rule—Just try it on—this labeling idea or something you buy—but don't make and see how simple it really is. The good old Golden Rule we treat too much as a matter of sentiment—it really is just hard common sense and plain justice. It doesn't say that you must do more for your neighbor than yourself; that you must cheat yourself any more than you should cheat him—there is no maudling destructive unselfishness in it. It's just fair play, with no loss to anyone—"Do unto others as you would they should do unto you."

Now, this really applies to labeling canned goods, though it may seem a far cry. And, viewed from the selfish standpoint, it seems to me that it is to your own interests to sell the consumer just as hard as you can on the label, for the label not only is your salesman on the shelf in the store, but it goes right on home with the woman and keeps on talking to her.



More Than the Truth—Now, what does a woman want to know about a can of fruit or vegetables or soup? She wants to know what's in it with enough definiteness to enable her to fit her needs—they may be different at different times. She may want a small peach in a light syrup for the children's breakfast one day, and she may want a large peach in a thick syrup for dessert the next day. Hasn't she a right to know which she is getting? It isn't any question of being cheated—it's merely a matter of being able to know exactly what you are buying in a sealed package.

She may want to know whether there are enough pieces to go round or not—how many the can will serve. She may care whether they are deep colored or light, large or small for a fancy dessert. Twenty or thirty or fifty per cent syrup may mean very little to a woman. The labeling clauses of the food plainly call for labeling in terms that the layman understands, and why hunt for trouble by putting percentages that mean nothing to the person for whom the label is written, and may make you legal trouble on a technical variation that has no real meaning. If you tell the woman that the syrup is light, heavy or medium, she learns what she wants to know, and you have safe limits within which to operate and meet natural fluctuations in products and processes.

If vegetables are wanted for soups or stews and are going to be cooked to death anyway, the same quality as to appearance and size and color is not necessary, and the frugal woman wants to buy with this in mind at a proper difference in price. Quality designations should be plain within certain broad limits—all this fancy choice and fine, standard, extra standard and substandard, the minute they depart from plain dictionary meanings, or are used in some special way, are only misleading. What right has anything to be substandard, and unless you have the whole list of designations in front of you at once, the relative meanings are entirely lost.

Who knows whether a pea is the better or the worse for being wrinkled or smooth? A woman's judgment would be rather against the wrinkles on general principles as a sign of age. What does refugee bean mean to the average buyer? It should be rather pitiful in general—a refugee is something outcast and forlorn, something on the run. How many know that they are

choice stringless beans by breeding and nature unless you tell them so? Of course, a woman may buy and stumble about and find out by experiment and, perhaps, get a poor can of refugee beans and think that's the kind they naturally are! But is that salesmanship? To overcome inertia and meet competition, don't you want that label to sell your goods over someone else's? To help the woman decide that your can fits her needs?

Some labels meet these points, but many don't. To use ambiguous terms on the label or be silent on salient points of interest that inform the buyer as to quality, appearance, flavor and size; to use trade terms that mean nothing to the layman, isn't all that just whispering in your own ear, instead of using the label to inform and sell the buyer. Aren't you missing an opportunity?

Then, too, people buy for special uses. Constantly I am asked if it is all right to give canned vegetables to children or to aged people; if the liquid should be poured off or kept; if they need to be boiled before using. Some people can't use salt or sugar and want to know if there is any added. Just plain, honest description of the leading characteristics of the contents in terms the layman can understand—that's all we want on the label. Simple as A, B, C,

Size and color mean much to the average person. Indeed, I think the growing tendency to eat with our eyes—that is a bit stupid, for often the bigger, brighter products lack flavor; it's a bit bourgeois of us to go in so much for mere size. But be that as it may, people want to know size and who knows at first blush whether a No. 1 pea or a No. 6 is the smallest or the largest, and the same applies to can sizes; large size means quality in some cases, and sometimes smallness does.

I have always to stop and think what a No. 1, 2 and 3 can means, and in a recipe it is disconcerting, for even if you get it relatively, it doesn't give you a real amount in weight or measure. And the amount you get for your money is a most important point. Why does the net weight always get tucked away in some unseeable place in the smallest legal type possible? It is something to be proud of, and it means a good deal to the woman not only in buying, but in serving and using the can's contents. Don't hide the weight information. If you must use signs and symbols, interpret them for the layman.

This may seem absurd to you who are immersed in the detail of the thing. But it is not a bit obvious to the woman who buys. And to whom is your label addressed? Your fellow-manufacturers and jobbers or the retailer and the buyer? The retailer with his varied stock isn't much more en rapport with your mystic statements on the label than the woman is. It might pay to be more simple with him.

You may say that nobody reads the labels, anyway. Well, perhaps they would if labels were more interesting and informative. We are all eye-minded; we are more impressed by something visualized than by words. The movies prove that. So a picture of any kind is a great opportunity for either information or deceit. That is the reason for the food ruling—that an accurate statement in words and a misleading picture constituted a misbranding. We newspaper folks know that to our sorrow. You may use all the words at your command to correct a picture and never get it over. The cartoonist cuts much deeper into people's minds and emotions than the editorial writer. A point is stamped on your mind when it is pictured. This is a fine selling point and should be vigorously used, but not misused on the label.

"Grow or Go"—Educational Publicity—It seems to me that, with the lengthening seasons for fresh fruits and vegetables, the vitamine and the botulinus agitations working together somewhat against the cab, though not necessarily so, and the steadily growing interest in foods, and increasing intelligence about them on the part of the general public, and women in particular, that canned goods must be sold more definitely and more aggressively than they have been in the past.

You have as ever the tremendous advantage of everreadiness, of easy storage, of no loss for spoilage or leftovers, of not time and truoble in preparation, and no waste and garbage to handle. All these are great assets in any community, even a metropolitan one like New York, where the markets display everything all the year 'round. We have had fresh peas and string beans all winter at 30 cents a pound, and they cost that in June.

In the smaller communities, however, and among the greater number of people you are still the great extender of the season of fresh vegetables. Even the orange has very little on the canned tomato when it comes to vitamine value, and you have a great advantage as to price. Do you tell anyone about it?

Spinach is the worst vegetable in the world to clean, and the best to feed to children. Many women struggle between the two facts and long to use the canned product, but don't dare. Do you do anything to spread the story of its safety, food value and special uses? More iron in spinach than the raisin ever thought of having, but they do all the talking and you do the "ironing," so to speak.

Competition is very keen these days; nothing sells itself; the best of things have to be aggressively sold and distributed or they don't move. Isn't it a mistake not to use the label first of all to its limit as a salesman? I'm not sure that a good recipe on the back of can wouldn't sell it very often—and your canners' associations have put out some corking recipes in your publicity sheets lately. I've been lured into using some on the Tribune Institute pages, and we think we have a pretty good command of the field after seven years' steady kitchen and laboratory and research work. A woman will carry 'round anything that's got a recipe on it that she never heard of before. There is a witchery about it. We've tried it, and we know.

Any woman who looks at a can of peaches and sees nothing but just something to dump (unchilled even may be) into a cut-glass bowl and serve to get rid of making a dessert isn't going to buy half as many canned peaches as the one who knows the trick of making a peach shortcake out of season, peach pie with merangue, gelatine with the peach juice and the sliced peaches set in the jelly-like fruits in aspic. peach mousse and creams.

This is a little off-side, but no one can meet competition nowadays without publicity, advertising. You should have heard what the department stores had to say on that when the New York strike suspended publication of the newspapers. Without the advertising they were largely paralyzed. We couldn't print any advertising unless we printed all—the competition for space was so keen, and they paying for it. It pays to tell your story, and tell it not so someone may get it, but in terms that no one can misunderstand, and to keep on telling it.

Summing Up—To sum up: Put on the label, in the simplest possible everyday terms, the facts that help the women to identify the product, and fit it to her needs and purse. This will include the manufacturer's name, weight, plain, quality designation, covering general designations of size, flavor, number of pieces. nature of syrup; whether light, medium or heavy; accurate picturing as to size, color and quality, and distinctive features of pack as to process or raw material, if such exist. Why differentiate a product, seal it in a can, and tell no one about it, leaving the buyer to find out by experience?

We evolve many difficulties and complications as an industry grows, and drag them along after us, when, with a little thought and initiative, we could really cut free from them. It's not so difficult as it looks if you have an open mind, want to do the thing right and think clearly. Even the church is getting down to fundamentals; they found they had to or shut up shop. Surely the canning industry might do the same without being deemed radical. If you stop growing, you die; you do not merely stand still.

My best wishes to you for progress in the future, commensurate with the innovations that you have wrought in food handling in the past.

NO WEAK SPOTS IN THE CANNED FOODS SITUATION

SAYS the weekly circular of the Grocers' Supply Co., of Wausau, Wis.: "Now that the 'BATTLE OF BUFFALO' HAS BEEN WON (if you know by whom, you have a better slant on it than we have), let's get down to cases and clean up the FEW REMAINING FUTURE PEAS. Brokers and buyers who were at Buffalo last week may be more or less hazy as to just what conclusion was arrived at by the Conference Committees at their joint meetings on the swell guaranty muss, but they all went home with a firm conviction that there are NO WEAK SPOTS IN THE CANNED FOODS SITUATION, either spot or future.

"The situation on future peas has been strong from the start, and is gaining additional strength day by day. This is especially true of standards. It is just as hard to place orders at $1.10 today as it was at $1.00 or $1.05 a few weeks ago. $1.15 may be the prevailing price on standard No. 4 Alaskas and No. 5 sweets in the near future. Indeed, they are selling at that price today. Many canners are entirely sold up and off the market.

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

The Department of Raw Products

"Quality" cannot be produced in the can unless quality products are produced on the farm. This Department will, therefore, seek the best thoughts of the country on better crops, and how to produce them, and ways and means of combating the enemies of such crops.

The assistance of all agricultural experts is sought and heartly invited, a way offered them here to reach the entire canning industry of all States; and we likewise extend to all our readers an invitation to explain their troubles and ask remedies. And by all means let those who have devised ways or descovered remedies give the benefit of their experience to those less fortunate.

"Quallty" canned foods can only be attained by the co-operation of all canners towards the production of quality crops.

WHAT IS A PUMPKIN—WHAT IS A SQUASH?

By C. G. Woodbury, Director Bureau of Raw Products Research, National Canners' Association, Washington, D. C.

THE growing of pumpkin and squash for canning is not confined to any single region nor characteristic of any single locality. The directory of the canning industry lists pumpkin canners in California, Colorado, Connecticut, Delaware, Idaho. Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Hampshire, New Jersey, New York, Ohio, Oregon, Pennsylvania, Tennessee, Utah, Vermont, Virginia, Washrington and Wisconsin, a total of 31 States. It is of interest to note that tomatoes are canned in 34 States, peas in 23, and corn in 24.

What Is a Pumpkin—What Is a Squash?—The question is often asked: "What is a pumpkin and what is a squash—where does one leave off and the other begin, and just what is the difference anyhow?" Frankly, that is a question I am unable to answer, and I've been unsuccessful so far in getting any of the experts to answer it for me. It seems to be agreed that there are three distinct botanical species represented in the group of vegetables we call squash and pumpkin. These are Cucurbita pepo, C. maxima, and C. moschata.

L. M. Bailey, in the Cyclopedia of Horticulture, recognized everywhere as a standard authority, has this comment on the pumpkin-squash "complex":

"The terms squash and pumpkin are much confused. In Europe the large varieties of Cucurbita maxima are known as pumpkins, but in this country the fruits of this species are known usually as squashes. In America the words pumpkin and squash are used almost indiscriminately, some varieties in all species being known by those names. The field or common pie pumpkin are C. pepo, so are vegetable marrows; also, the summer squashes, as the Scallop, Pattypan and Crookneck varieties. The Hubbard, Marblehead, Sibley and Turban kinds are C. maxima. The Cushaws, Canada Crookneck, Japanese Crookneck, Dunkard and Sweet Potato pumpkin (or squashes) are C. moschata. The fruit stem is a distinguishing characteristic of the ripe fruits. C. pepo and C. maxima, and C. maxima and C. moschata apparently do not intercross. C. pepo and C. moschata have been crossed, but it is doubtful if they intermix when left to themselves."

Twenty-five or thirty representative pumpkin (or squash) canners, in all parts of the United States, have listed for me the varieties they are using and which they regard as making the most satisfactory canned product.

The list includes the following: Boston Marrow, New England Sweet or New England Sugar or New England Pie, Large Cheese or Sweet Cheese or Kentucky Field, Connecticut Field, Winter Luxury, King of the Mammoth, Yellow Sweet Potato, Golden Hubbard, Golden Oblong and Yellow Cushaw.

Which of these are pumpkin and which are squash? Botanically this list classifies as follows:

Cucurbita Maxima—
- Boston Marrow,
- King of the Mammoth,
- Golden Hubbard.

Cucurbita pepo—
- New England Sweet (or New England Sugar or New England Pie).
- Winter Luxury,
- Connecticut Field,
- Golden Oblong,

Cucurbita moschata—
- Large Cheese, Sweet Cheese, or Kentucky Field.
- Yellow Sweet Potato,
- Yellow Cushaw or Crookneck.

It is obvious, then, that so far as botanical science goes in determining what are pumpkin and what are squash, "you pays your money and you takes your choice."

The conclusion is that the names squash and pumpkin, as applied in ordinary usage, are purely arbitrary and correspond to no clear-cut distinctions which may be found in nature. In ordinary usage, some varieties of exactly the same botanical species are called pumpkin and some are called squash.

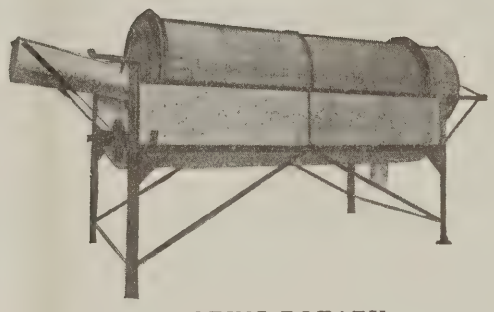
The Goevrnment Defines Pumpkin-Squash—The question came before the National Canners Association Research Laboratories a few years ago and was taken up with the Bureau of Chemistry. At that time an informal definition was prepared for the Bureau of Chemistry by the Bureau of Plant Industry, as folows:

Pumpkin—All the horticultural varieties belonging to the species Cucurbita maxima Duchesne are properly termed squash, and the canned product derived from the fruit of this species should, therefore, be labeled "squash.' However, in view of the fact that the name pumpkin is quite generally used as a popular name for squash, the Department will not object to such designation when applied to products of the better grade of this species."

This would seem to offer a perfectly clear guide to practice so far as the varieties are concerned which belong to the botanical group Cucurbita maxima. The varieties in this group which are most used by canners, it will be remembered, are Boston Marrow, King of the Mammoth and Golden Hubbard. The definition does not cover the varieties in the other two groups, most of which are called pumpkin in common usage.

Soils.—While there are some differences in production practices in different regions, they are, in general, quite similar. It is recognized that these vegetables do best in a warm, fertile loam soil. They are not as particular in their requirements as some plants, however, and in many cases yield well on heavier soils, provided there is sufficient readily available plant food, and the season is reasonably warm without too much fall rain. In the Middle West a good corn soil is generally a good pumpkin soil. Further north warmer, sandier loams are used. In some sections "new ground" is available and is the favorite location, while in the Northwest fertile bottom lands are preferred.

Fertilizers.—In the East commercial fertilizer is applied liberally, in the Middle West occasionally, and in the West and Northwest rarely if ever. One Tri-State canner recommends 600 pounds per acre of a fertilizer carrying 5 per cent. nitrogen, 8 per cent phosphoric acid and 3 per cent potash. Another recommends a 4-8-4 analysis. Fertilizer is used frequently to supplement barnyard manure. Manure is used often without commercial fertilizer, especially where the plants are grown in hills.



Rainfall and Quality.—The relation between moisture supply and dryness of product has received particular attention in the Northwest. Some canners comment on the effect of unusual rainfall in June and July in making the product more moist. The practice followed by some of blending varieties in order to improve consistency had to be modified in some places on account of the unusual seasonal conditions. One canner has the following suggestive observation: "The greatest influence on the quality of squash is maturity. Our results this year with irrigation demonstrated this very conclusively. During the early season the size of the squash is made, and plenty of moisture at that time will give size, but it is the late fall that gives us maturity and starch. A great many years we do not have frost here that will kill the vines before the early part of November, although we narly always have some heavy rains during the early part of September, and we find that when we have a fine October, with late frosts, we get a better quality than in any other way. We try to pack our pumpkin so that it will stand as molded out of the can, and just creamy enough so that a spoon will cut through it easily and with a bright golden color. This year our season

was not quite as favorable as a year ago for the development of the squash, and a good many packers did not get the quality they did a year ago, but where we irrigated our fields late in August and allowed the whole month of September and part of October for the development, we were able to maintain the same quality we had a year ago, when we had a late fall without frosts."

Seeding.—Rates of seeding vary from two to four pounds per acre. One careful canner in the Tri-States estimates four pounds per acre to plant and replant, using five seeds per hill and thinning to two plants. Another in the Middle West allows five to eight seeds per hill, hills eight to nine feet apart, thins the plants to two or three, and estimates 1⅛ pounds of seed per acre. The distances apart vary from six to ten feet, 8x8 being a common distance. In the Northwest the tendency is shown to get away from the hill system, and seed in rows with a garden drill, thinning to two feet apart in the row. It is claimed by some that this arrangement permits more efficient use of irrigation water. Seed is generally planted about one inch deep. In Iowa one canner has worked out an interesting system of planting 10 seeds per hill, with the depth rather carefully graded from one inch to 2½ inches. If the seed is not planted "on a slant," this canner advises soaking half the seed for 24 hours before planting. The soaked seed will come up quicker, giving the same result as shallower planted seed in the other method.

Yields.—Yields vary so widely that neither reported figures nor averages mean much. Actual normal yields per acre given by canners from different localities are as follows: West and Northwest, 8 to 30 tons, 15 to 25 tons, 15 being a good average; 12 tons; 8 to 12 tons without irrigation. Middle West, 12 to 20 tons when planted in open. Ten to 12 when planted alone; 10 to 15 tons; 8 to 9 tons. East; about 10 tons; 4 to 15 tons depending on season, fertility of soil, etc.; 6 to 10 tons; 5 to 20 tons depending on soil and season; about 6 tons.

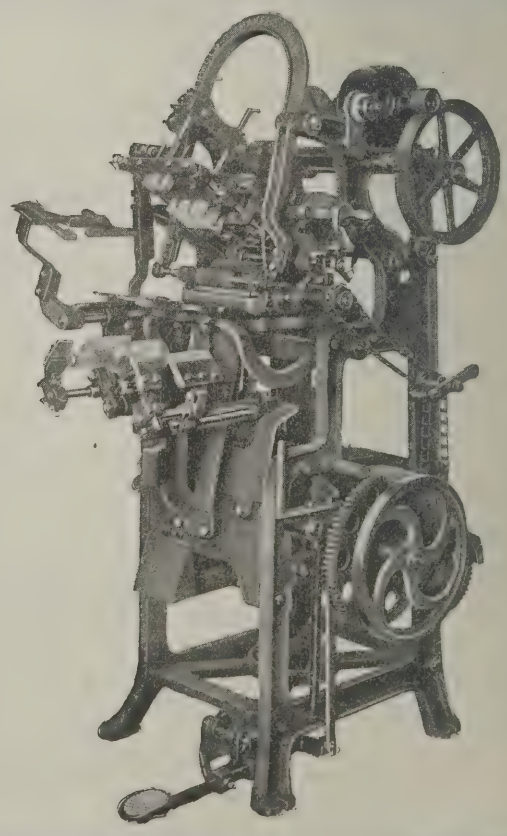
Intercropping—In many the well known practice is followed of seeding pumpkin with corn. The trend of the best opinion is distinctly away from this method and toward growing pumpkin and usqash bythemselves as a separate crop. The increasing use of the corn binder on middle west farms is one factor in the situation. While the crop can probably be produced at lower cost when planted with corn, yields are often lower also. Where pumpkins are grown with corn and the corn binder is used, the pumpkin may be windrowed ahead of the binder and harvested later. A boy is sent ahead of the binder to kick the pumpkin out of the way.

A careful and experienced observer in Iowa recommends, as a result of his own experiments, that pumpkin be grown separately although the pumpkins as a companion crop do not reduce the corn yield materially, perhaps ¼ to ½ ton per acre.

One middle west canner, well know for his skill both in quality canning and in crop production, has the following practical observations:

"We have intercropped with corn to some extent, but not made it a regular custom as it did not show a great advantage. We have tried mixing the corn and pumpkin seed together and planting the mixture. We have also tried putting corn in one planter box and pumpkin seed in the other, thus planting alternately two rows of corn and of pumpkin. The first plan was not good as it gave such an irregular stand. The second method produced good crops, sometimes we thought rather more than half a crop of each, but is a little inconvenient to harvest as the two rows of corn and two rows of pumpkin must be gathered separately.

"A third method of intercropping of corn we use sometimes when our early sweet corn has a thin stand we replant by hand with pumpkin seed. This has two advantages. First, that it enables us to get a full crop from the land as it is not practicable to replant with other sweet corn because the replanting would not mature with the original crop and so would be lost. The second is that since the stand of corn is thin the pumpkin vines will receive sufficient sunshine to make a crop.



"A practice quite common among our growers is when planting corn alongside a pasture to plant several rows of pumpkins next the pasture fence to prevent livestock from crowding the fence to reach the corn. While this is only a small acreage in any one field, it makes quite a considerable in the aggregate. However, the majority of our acreage is planted separately."

A few canners make a distinction as to variety with reference to intercropping. One eastern canner grows his field

PEA and BEAN FILLER

This Model Made For No. 1, 2, 3 and 10 cans.

REVOLVING HOOPER

New design, straight side, large at the bottom. The peas do not stick to one side and get cold. They are always level in the hopper at all heights and do not require any agitator.

HAS POSITIVE CAN FEED

CIRCLE SPRAY IN NECK OF HOPPE

SPLASH PLATE over cans so peas will not wash out on floor.

Brine goes in cans hot. Large heater in brine tank.

CHANGING GRADES.—Filler stops and all filled cans deliver to closing machine.—LARGE DELIVERY DISK— NO CAN NO FILL.—WILL NOT WASTE BRINE.—NO RUBBERS to catch cans after they become worn—FILLS ABSOLUTELY ACCURATE—DOES NOT CUT PEAS—BAKED BEANS—Only filler for baked beans. Has separate measure and seperate saucer. If measure fails to drop part or all the quantity of beans the can will show slack to inspector.

Ayars Machine Company SALEM NEW JERSEY

and sugar pumpkin with corn, his Boston Marrow always alone. One New York canner says he grows his pumpkin in corn, his squash as a separate crop. Only one canner is unequivocally in favor of intercropping. He is in the middle west and says he gets his best pumpkin when grown with corn. A neighbor, however, and a large operator, prefers growing pumpkin entirely separate on account of better yield, although he adds there is more damage from bugs when the crop is by itself.

The general sentiment, based on canners' experience is strongly in favor of separate growing.

Canners' Experience with Varieties—It is difficult to draw any very clear cut conclusions in regard to varieties from the evidence at hand. Probably a list including Boston Marrow, Sweet Cheese, Large Cheese or Kentucky Field, Connecticut Field, and New England Pie would account for three quarters or more of the pack.

Experiments on pie quality were carried on two or three years ago by the Home Economics Department of the Iowa Agricultural Collage in cooperation with the Horticultural Division. As a result of the investigation the statement was made at the Iowa Canners' Short Couse, with which many canners may not agree, that all pumpkins are of the same pie-making quality and that the canner's problem is entirely one of tonnage.

Many canners use Boston Marrow entirely. One Western canner does not encourage planting of common yellow field pumpkin, because it is too light in color and the product is too wet. The Kentucky Field is reported to be less susceptible to squash bug than other varieties.

Boston Marrow and Sugar pumpkin are favored by some because of the fine grain and deep rich yellow color. Connecticut Field is rated as not as fine in texture, but fair in color, while Kentucky Field has good texture, but not such good color.

Several canners have experimented with the Green and Warted Hubbard, but have discarded them because of the difficulty in scraping the pumpkin from the hard rind. Where cyclones are used there is a tendency for bits of dark-colored shell to sift through into the product. Red Hubbard is considered good quality, but difficult to grow and a poor yielder. These reports, however, are from the Tri-States, which are probably too far south for any of the Hubbard group to be well adapted to the climate. King of the Mammoth is spoken of highly as a good variety of pumpkin for this section. Boston Marrow is widely and satisfactorily used also.

New York State and Michigan canners use Boston Marrow, Golden Hubbard, Connecticut Field and New England Pie.

In the Middle West canners use more Kentucky Field, although Connecticut Field is used extensively also. One experienced Middle West canner, in comparing these two varieties, states that Kentucky Field is adapted to growing further south than Connecticut Field, produces more cans per ton, has good color, and better flavor. Winter Luxury is regarded very highly by canners who use it, but it is not generally grown for canning. Probably Kentucky Field or Large Cheese is the leading canning variety from Ohio to Nebraska.

Blending of Varieties—Many canners are convinced that blending of varieties gives a superior product. Improvement in consitency, flavor and color are among the advantages claimed. The usual blend reported consists of about one-quarter pumpkin to three-quarters squash, such as Boston Marrow.

Saving Seed—Judging from reports received, many, if not most, canners feel that they have better assurance regarding the quality of their seed if they save it themselves. Many methods are used, depending largely on the quantity of seed required. In Iowa one man at the cannery, giving only part of his time to the work, saved 1,000 pounds of seed. The basis of seed saving is selection, generally at canning time, of pumpkins which approach nearest to the canner's ideal as to color and thickness of flesh, color of rind, size and smoothness or depth of creases.

The following are practical pointers from experience in seed saving:

(1) "Seed is dried in shallow trays 3 or 4 inches deep. Seed should be put in not over one inch deep and should be turned over every other day. Keep the trays in the shade."

(2) In one cannery in the West the seed is saved from selected individuals at canning time, placed in boxes, watered so as to rot the pulp quickly, thoroughly washed, and spread out to dry. The seed is separted from the rotten pulp by passing over a screen shaker under a strong stream of water to wash the pulp through the screeen.

(3) One Northwestern canner gives it as his experience that Eastern seed after two or three years gives a product which

NO. 2-C AUTOMATIC BODY MACHINE WITH NOTCHING AND SOLDERING ATTACHMENT.

Our No. 2-C Bodymaker as shown with notching and side seam soldering attachments and automatic blank feed, has a capacity of 150 lock and lap seam sanitary can bodies per minute.

This entirely automatic high speed machine is adjustable for all sizes of sanitary cans up to No. 3 size. All adjustments are combined so as to maintain correct alignment of working parts when changing for sizes.

The construction of this machine is unusually heavy, weighing complete 9000 lbs. and the adoption of crank movements permits a high capacity and insures a smooth operation, free from vibration.

The combination friction and clutch is provided with control levers conveniently located and arranged so that the soldering attachment continues to operate, if the forming mechanism is momentarily stopped.

This is a strictly high speed machine complete, in every respect and embraces many unique features necessary to the requirements of a modern sanitary can making line. For further particulars apply to

McDONALD MACHINE CO.

Mfrs. of Automatic Presses, Can Making Machinery, Dies, etc.

7600 South Racine Avenue **Chicago, Illinois.**

is more watery and of poorer flavor, and for this reason doubts the advisability of saving seed.

(4) A New York canner states that after the seed is cleaned through screens in the packing room it is spread on ventilated shed platforms, and adds that some canners use apple evaporators for drying seed.

(5) An Ohio canner scrapes seed out of selected pumpkins by hand and places the seed in barrels for 24 hours, after which it is put into a squirrel cage about 10 feet long with a ¾-inch mesh wire with a fine stream of water playing on it. When thoroughly washed and seed is spread out very thinkly on wrapping paper to dry in the sun.

(6) Another canner in the same State runs the seed from fancy selected stock through a rotary screeen, and then through a second rotary screen under a heavy spray of water, after which the seed is spread on a dry floor and stirred frequently.

(7) An Illinois canner selects very deep creased red pumpkins for seed, and drys the seed in the sun.

(8) Another Illinois canner with long experiencee in seed saving described his method as follows:

"We save our own seed, selecting out pumpkin of the proper size, shape and color as they pass over the conveyor to the stemming table. These are then cut open and inspected for ripeness, color, thickness, grani and flavor of the meat. The seed from the accepted pumpkin is placed in a perforated bucket and washed by turning a stream of water into it with force enough to stir the seed around as well as washing it. When washed the seed are spread in broad, shallow trays with bottom made of wire mesh which are kept in a well-ventilated room, and the seeds turned daily until dry. We have found that either artificial heat or sunshine will seriously reduce the vitality of the seed."

(9) An Indiana canner states that after taking seeed from the pumpkin it is permitted to stand in barrels for two or three days until slight fermentation is started. It is then washed, placed on the roof and sun dried.

Insect Pests—The insects which at times cause serious losses are the striped beetle, the squash bug, and the squash vine borer. The beetle may be controlled by the use of a 2 per cent nicotine dust applied with a hand duster Many entomologists advise the addition of lead arsenate to the nicotine dust.

There is no thoroughly satisfactory control for the squash bug. Some very interesting results were obtained last year in Illinois by th use of calcium cyanide. It may be that definite recommendations can be made on this another year.

The vine borer can be controlled only through field sanitation. Destruction of dead vines and plants promptly after harvest, harrowing of infected fields in the fall and deep plowing in spring to prevent emergence of the adult moths, and the use of early trap crops to protect the main planting, are heelpful in reducing loss from the squash vine borer.

LIKE "PULLING TEETH"

THE F. F. O'Brien Brokerage Co., of Milwaukee, characterize the job of getting orders accepted in their most recent circular. They say:

" 'Pulling Teeth' is a mighty easy job when compared to the task of 'Finding Needles in a Haystack.'

"We are wondering whether 'Finding Needles' isn't just a bit easier than securing confirmations from reputable pea canners on future orders.

"Confirmations are hard to get, even when the orders are for assortments of siftings and qualities and at prices in line with market quotations. Canners in many instances have withdrawn from the market entirely, and in others they must limit additional bookings in orders specifying certain smaller siftings.

"Wisconsin canners are 'sittin' pretty.' Spot stocks are light and future bookings are heaviest in the history of pea canning in the State. A 'healthy situation,' we would say, for Wisconsin canners, while buyers who have already covered on spots and futures sure must have that satisfied 'feelin'.'

"Prices have advanced noticeably on the larger siftings of both sweets and Alaskas."

Other Originations:
Rogers Improved Kidney Wax
Rogers Green Admiral Peas,
Rogers Winner Peas.

LIGHT green, slender, round pod, 4 to 5 inches in length and almost perfectly straight.

Tender, meaty, brittle and entirely stringless even when ripe.

In appearance and season very similar to the old reliable Late Refugee 1000-to-1, having a strong vine with small leaf and heavy foliage.

Hardy and productive.

Without exception the most popular and desirable Greenpod variety for canner's use.

Now booking contracts, future delivery, 1924 crop.

THE MORRAL CORN CUTTING MACHINE

Either Single Or Double Cut

THE MORRAL CORN CUTTING MACHINE is the most durable, simple and efficient cutter you can buy. It has the most positive feed of any cutter in use.

The Morral Cutter will cut large ears, nubbins and pieces of ears, without clogging like other cutters and for this reason you can secure a larger yield of cans per ton with the Morral Cutter than with any other type of cutter.

We furnish special attachments for the Morral Cutter for cutting Golden Bantam Corn and with these attachments the Morral Cutter will cut the Golden Bantam Corn more satisfactorily than any other cutter in use. If you have any cutters that you would like to replace with new and up to date machines let us know what you have and we will make you a liberal allowance for your cutters on the price of new cutters.

We make the MORRAL CORN HUSKER, either single or double and we also make the MORRAL LABELING MACHINE.

Our machines are guaranteed to do satisfactory work, or money back if they fail to do so when set up and operated in accordance with directions furnished.

It will pay you to write at once for prices and further information.

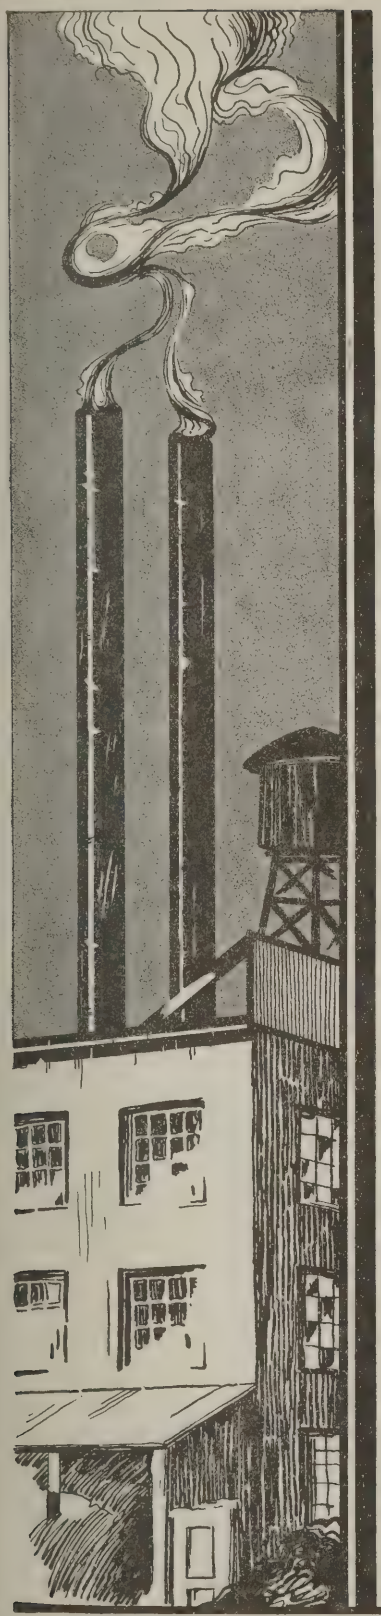
Address before opening Session Buffalo Convention

I'M WONDERING if there are many here today that can declare themselves in my class, by having attended three Canners Convention in Buffalo—1896, 1907 and 1924? I know this is going back—way back—nearly thirty years, and I'll plead guilty to having been a pretty small boy during that 1896 Convention, but I wore a canners' badge, just the same, and you bet your life I considered myself a part of that convention. As I look back upon it, the thing which stands out prominently in my mind is not the swinging doors where you could see men's head and feet, though, of course, such pre-dry institutions were essential then to the successful conducting of a convention, and, of course, we know they are not essential today; but the dominating print on my memory is the extremely limited amount of machinery exhibited and the confused fashion in which the exhibition hall was arranged in 1896. Somehow, it seems to me as if this confused exhibit which had no regular aisles, nor uniform spaces, no regard for whether large machines totally obscured the exhibits of smaller ones—must have been typical of the arrangement and operation of the old canneries. I feel that today's exhibit, orderly, uniform, intelligently planned and arranged, likewise typifies the cannery of today. To credit the machinery and supply manufacturer entirely for this wonderful change occurrinig within the short span of twenty-eight years, would not be fair. Nevertheless, I feel certain that we have contributed materially to advancing this industry and making it of greater service and value to its owners and to the public.

But the greatest single factor in bringing about this change has been improved quality, coupled with the ever-increasing size of the cities of this country which has brought a tremendous demand for food that can be transported at all seasons of the year; food that does not spoil and food which will lend variety to the table. For the last few years, each canners' meeting has had as its dominant note this word "Quality." We've heard it repeated until some almost think it a by-word rather than a watchword. I wonder if this isn't partly caused by many men feeling that quality can be produced only in very limited amounts and that to get quality, quantity must be drawn and quartered. This is far from correct. While quantity does unquestionably produce greater numbers than quality—yet quality can also produce great numbers; numbers fairly comparable with those produced by quantity and with this great advantage over quantity—an almost certain profit to both the producer and the consumer.

And don't forget, the consumer is "the other side of the can." Sometimes I feel there are lots of canners who visualize their product as disappearing permanently into the interior of the freight car on their siding, to be consumed there when the switcher pulls the car away. They allow their employees to use identical glasses. They totally fail to see Mrs. Smith struggling to balance the family bank roll against all of the demands made upon it; laying out 15c or 20c or 25c for a can of good wholesome food, to help bring health and a varied diet to her family—and making a real sacrifice when she buys that can. Now, what does Mrs. Smith think when the other side of her can isn't up to the mark; when some canner or cannery employee was so short sighted as to only see that can going into the freight car and couldn't see it going into Mrs. Smith's kitchen—paid for by old man Smith's hard earned coin? Does she feel any great pride in her marketing ability? Does she send one of the kids back for another can. Does she feel she's been cheated? You answer these questions; answer them emphatically next summer at your factories by looking yourselves and making your employees look clear through all the walls right into Mrs. Smith's kitchen.

You all know the formulas for producing quality; they've been stated many times. In fact, they are repeated so often that I sometimes think of the physics teacher who was trying to explain to his class the tremendous powers of steam. Holding up an empty tin can be asked—"Who can tell me what to do with this can to make it produce extreme speed and great destructive energy?" One boy answered—"Tie it to a dog's tail."



You know that isn't the ultimate possibilities of a tin can. You know there isn't a large city in this country that can feed itself satisfactorily for 10 days if the tin cans stop rolling into it. And yet, the total bill last year for canned foods, an absolutely essential necessity, was in round figures a billion dollars, or less than $10.00 per person; while the auto expenses of the country are estimated at over six billion dollars, or a taxi bill of more than $50.00 each. They've developed the auto industry since that 1896 Buffalo Convention and put it across by a quantity, quality program. I believe a quantity quality canners' program will cause the little old tin can to come somewheres near catching the taxi, even if the dog is tailless.

You may wonder why a supply man harps on this. Well, you demand of us, and we are glad to look beyond the freight cars at our factories. We see our machinery and supplies in your possession and use. We believe in this industry. We know it's worth—we commend it's products to our friends and help them to buy intelligently. We're proud to have a small part to play in this great essential industry, and we want to do our bit toward making it greater.

At this season of the year it is customary to try to make a forecast for the balance of the year, and I presume at this time many of you think that such a forecast is more or less superfluous. Judging by the way the year has opened up this would seem to be a reasonable presumption. Employment is pretty general in all parts of the country. Wages are very high and with them comes the assurance from every producing source that they are not building up inventories, but, on the contrary, are filling actual orders. As long as this condition prevails we are bound to have prosperity. 1920 and 1921 are still close to our minds and most of us haven't forgotten the lessons that they taught. If we will just keep on remembering them; keeping on producing what we sell and not what we think we would like to sell, there is no reason why we should have other than generally healthy business conditions for some time to come. The Federal Reserve System has practically eliminated the possibilities of a money panic. If they will watch credits as closely in 1924 as they did in 1921 and 1922 they can eliminate a merchandise panic. But just keep in mind that an unemployed man does not buy canned foods in anything like the volume that he buys when working full time. So watch the employment situation and figure that if unemployment hits the industries of this country in the fall of 1924 it is going to effect deliveries. But if you follow the old rule and make what you sell, not only will 1924 be prosperous but you will have a fine chance for prosperity in 1925.

I have one suggestion to leave with you in closing. You have laboratories to examine the finished products and train men to do this work. The soil and seed part of the game are being handled by other trained men—but how about the mechanical side of your factories? Are you training men there? Some State Associations have short courses and they are fine. Why not a free school of mechanical training during each national convention? If you think well of it, our association, as ever, stands ready to co-operate.

I wish everyone of you much prosperity in 1924. It's going to be a good year. Let's drive the Quantity-Quality Program hard each day we run in 1924, and then 1925 will be an even better year.

SPRAGUE-SELLS and Peerless Canning Machinery will be the staunchest—the most efficient, durable and dependable that fine materials, experienced workmanship and sincere purpose can make them.

Every machine bearing our name will be backed by an unequivocal guarantee of complete satisfaction—or money refunded.

Field service—unstinted and gladly rendered will be constantly available to the users of our equipment—with a corps of experts at their command to aid in the solution of any problems that may arise.

The prices of our machines will be kept preeminently fair at all times by adjustment to conform with labor and material costs.

Our prices will be standard—one unvarying price to all. You purchase our machines with the satisfying knowledge that your investment is precisely the same as that of each and every other purchaser—no higher or no lower.

This is the platform upon which Sprague-Sells and Peerless Canning Machinery is offered. We believe it will win the instant and sincere commendation of everyone intimately associated with the Canning Industry.

From our two plants, at Buffalo and Hoopeston, we can supply practically every item of canning equipment.

Write us today for quotations on any equipment you may need, addressing your inquiry to:

PRESERVERS MET WITH THE CANNERS

Held Annual Convention in Buffalo

The National Preserve and Fruit Products' Association held its annual meeting at the same time the National Canners' Convention met in Buffalo, and, among other things, adopted a resolution authorizing the employment of a "Judge Landis" of the preserving industry as applicable to themselves.

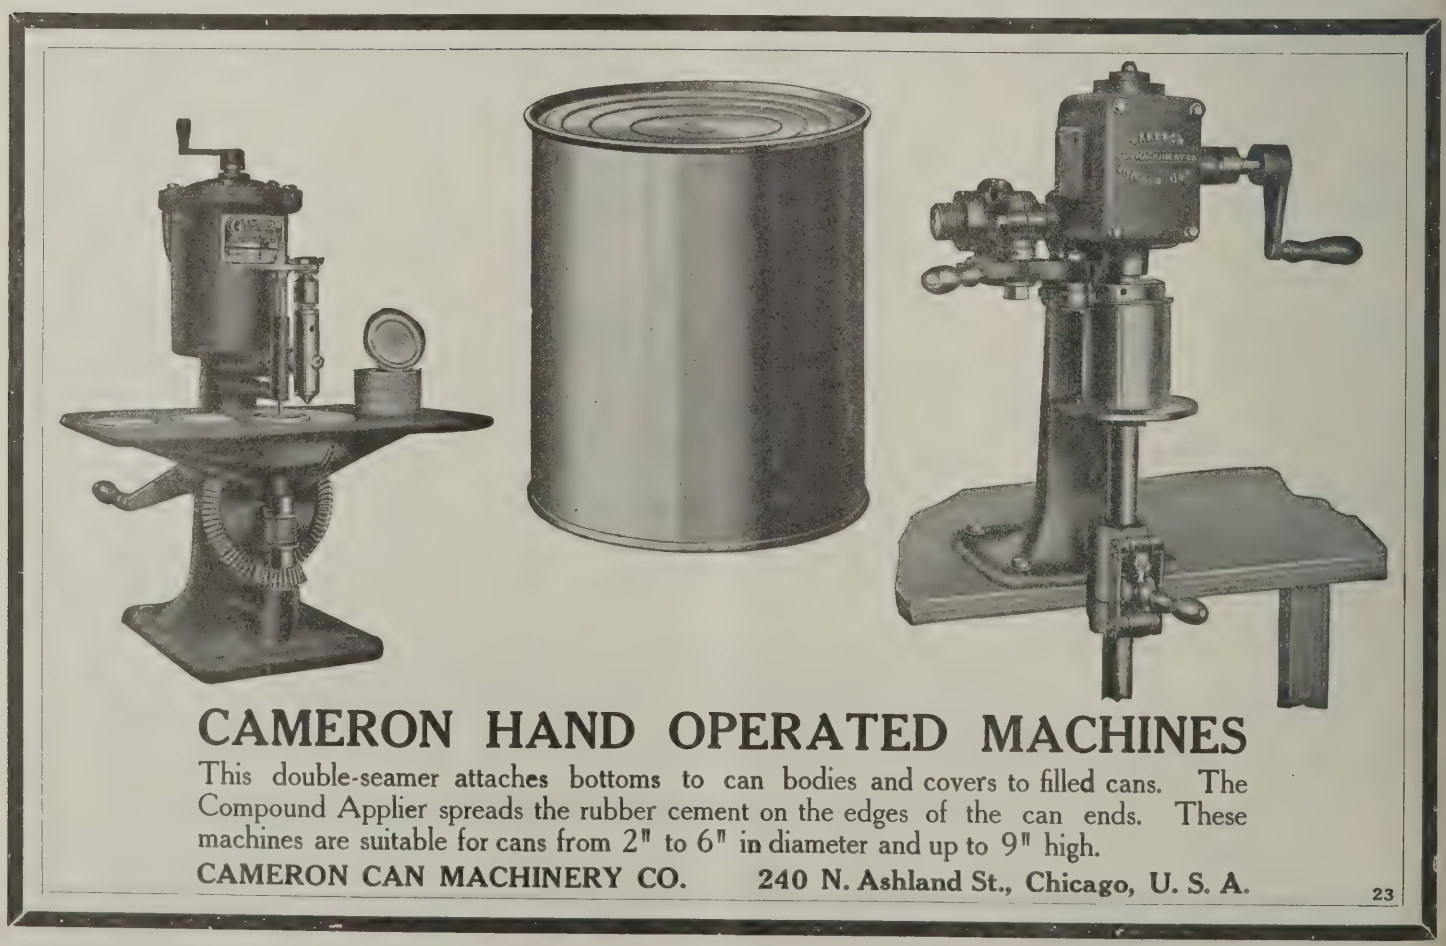
The duties of the new business manager or supervisor will be to visit all factories of associate members and to install sanitary standards, to which the factories will have to adhere, to enforce the observance of the pure food laws by all members.

The association also adopted a resolution providing for the labeling of all products with the name of the manufacturer and other straightforward information as to quality of their products.

Sufficient money was subscribed by members of the association to carry through their program, which is also to include an intensive advertising campaign.

George Andrews, of Humbert & Andrews, Brooklyn, president of the association, said that it is the association's intention to keep the Government out of their business by conducting it in such a way that Government interference will be unnecessary.

The following officers were re-elected: George Andrews, president, New Nork; Paul Delaney, vice-president, Brooklyn, N. Y., and George P. Williams, secretary-treasurer, Kansas City.



OVER 1,500,000 CANNED FOODS WEEK STREAMERS DISTRIBUTED

General Assurance of Co-operation for National Canned Foods Week, March 1-8, and Tremendous Demand for Literature Herald Success for Forthcoming Event

WITH eight representative organizations behind it—the National Association of Retail Grocers, National Chain Store Grocers' Association, National Wholesale Grocers' Association, American Wholesale Grocers' Association, National Food Brokers' Association, Canning Machinery and Supplies Association, Glass Container Association and the National Canners' Association—National Canned Foods Week, March 1-8, promises to be a great success.

This is attested by the fact that a new record has been set in demand for the now famous red, white and blue Canned Woods Week streamer, for close to 1,500,000 of these streamers are now being distributed. An idea of the size of this demand may be obtained when it is known that year before last 325,000 streamers served for the entire campaign.

Canned Foods Week Club Luncheons to Be Popular—The idea of canned foods luncheons being served at clubs during Canned Foods Week is being received enthusiastically in all parts of the country. The National Canned Foods Week Committee is getting many inquiries from clubs, such as the Rotary, Kiwanis, Optimist, Lions and University, with the result that canned foods menus are being prepared showing the quantity

of canned foods of each variety it will take to prepare a luncheon for one hundred persons.

This will be placed in the hands of all the clubs interested, and in addition at least three sample addresses on the canning industry are being prepared and will be sent along with the menus, thus making it possible for any club which has no members that are familiar with the canning industry to have an up-to-date address on the history, growth and extent of the canning industry.

Mr. Sam Gorsline, of the Chicago Rotary Club, has sent a letter to 1,350 rotary clubs throughout the country, which reads, in part, as follows:

"My club—The Rotary Club of Chicago, 'Old No. One'—is planning a Canned Foods Luncheon for Tuesday, March 4th. Every item on the luncheon menu will not only be canned foods, but it will be the best of its kind and packed by a Rotarian, wherever he may belong—to your club or some other. This is easy to do, as the best canners in the country are Rotarians. There will be a menu card in the shape of a can. Special favors in keeping with the occasion will be at each Rotarian's place. The entertainment features will be a snappy talk on canned foods by the President of the National Canners' Association, Rotarian Roy F. Clark.

"Why not feature 'National Canned Foods Week' at your Club Luncheon? Here is an opportunity to show Rotary's place in one of the most vital industries of our country and in a novel way. Let's prove that Rotarian canners are 'serving best' by packing wonderful products for the world's dinner table.

"Please hand this letter to one of your members whose classification is canned foods, food broker, wholesale or retail grocery, or any other classification interested in Canned Foods Week, March 1st to 8th. The National Canners' Association and allied industries are making a big drive to popularize canned foods. This is your opportunity to serve your industry.

"I will be glad to send a copy of our proposed menu, if you wish. In the meantime hand this to your local member who handles canned foods and let him go to it."

Every Street Car to Advertise Canned Foods Week—Members have already been advised that the Eastern Advertising Co. will give a complimentary showing of car cards advertising Canned Foods Week throughout New England. We are now advised, through the Street Railways Advertising Co., of New York, that this courtesy is to be extended to practically all the remaining street car cities of the United States. The cards will be in the cars from early in February to the end of Canned Foods Week.

The cars carry 30,000,000 passengers daily, and the advance showing, stimulating interest in Canned Foods Week, and the display of the cards during that week, should very materially add to the success of the campaign.

The value of the car space and the expense of the cards is said to represent at least $25,000.

Canned Foods Week Electros in Demand—As an evidence of the spirit of co-operation shown in connection with Canned Foods Week, especially regarding the

HAMACHEK IDEAL VINERS

The special features of Hamachek Ideal Viners, that make them the most efficient and most durable viners on the market, are covered by the following patents:

electroplates for advertising Canned Foods Week on members' letterheads, the chairman of one committee has ordered twelve two-color and six one-color electros.

A sample newspaper advertising page has been mailed to each of the Canned Foods Week local chairmen. It outlines a plan for the solicitation of local advertising during the week. Any chairman who has not received his copy will confer a favor upon the National Canned Foods Week Committee by communicating with the Washington office, so that one may be forwarded to him at once.

A GOOD, LIGHT RUBBER APRON

ALTHOUGH rubber-coated fabrics are really the ideal materials for protection of the clothing and body from water and acids, the use or rubber aprons in the past has been limited to those departments requiring the heaviest types of aprons.

The great weight of the old-style rubber aprons has been found uncomfortable and inefficient for general use in the canning industry, while those rubber-coated aprons that were light enough for such use did not give the service required. Consequently, the only light-weight aprons that could be purchased were practically an oilcloth proposition, and such aprons will not give the long wear desired by canners. Despite the low price of substitutes, their short life meant a high price in the long run.

Now, however, a new type of rubber apron has been developed by the plant of William M. Gross, of Sharon, Pa. This newly developed apron combines the light weight of the low-grade aprons with the high quality and great durability of the high-priced heavy aprons. This apron is made in a large size, 34 inches wide by 44 inches long, and weighs only 16 ounces.

Despite its light weight, the apron will give unusual wear in all canning, packing and bottling operations; it is extremely soft and comfortable, permitting efficient work by the wearer; it will resist all fruit acids and water, and will give maximum protection at minimum cost. The manufacturer claims this Bear Brand Apron to be the most efficient and most economical canner's apron sold. He is desirous of getting in touch with canning supplies' jobbers, for whom he has a good proposition.

BARD PAYS TRIBUTE TO CANNED FOODS

An anonymous poet in Buffalo dedicated the following poem to the canners assembled in Buffalo for the National Canners' Association Convention:

Foods that are canned in this fair land
Are surely in the lead;
Put up in sizes large and small
To meet the family need.
Fresh from the orchard, farm or sea,
And sealed up tight for you and me,
They're good for grown-ups and for "bairns"—
The foods that come in cans.

They're fresh and wholesome, sound and clean—
Great Scott, but they are good!
No ptomaine bugaboo need worry you,
They're the safest kind of food.
Scientific test has proved them best,
They're vitamins and all the rest,
Ready to serve from nature's hands—
The foods that come in cans.

Red ripe tomatoes, peas and corn,
Jams, beans and pumpkin, too.
Fruits still wet with the dew of morn,
And fish from the ocean blue.
From tropic climes to the arctic pole
You can find these foods to cheer your soul;
They fill you with pep and tone up your glands—
The foods that come in cans. —Anonymous.

The Markets

BALTIMORE, FEBRUARY 11, 1924

WEEKLY REVIEW

Futures Control the Market in All Sections—Corn and Tomatoes Join Peas in the Good Demand—Common Standard Corn Should Not Be Packed This Season—Fruits the One Disappointing Feature of Market.

BUSINESS ALL IN THE FUTURE—The contagion of future buying has spread from the West and is now raging in all parts of the country, and very noticeably in this Atlantic coast region. We report this in the manner of the Health Department reports, but, naturally, this is not to be taken as indicating any panicky buying of futures, nor that the market has gone wild. The East was entirely free, or nearly so, of future buying and selling up to the time of the Convention; but this has all changed, and hence this description of it.

Those who predicted the importance of the Buffalo Convention were right in their surmise—apparently the buyers of the entire East waited for that event, and now, feeling satisfied with the outcome, are busy covering their requirements, at least in good part. Write your own slate as to the cause of this, whether it be the settlement of the swells controversy, or what not. For ourselves we regard it as the result of the contact with canners of all kinds, from every section of the country, and the confidence they radiated in the business as it is and as it promises to be. No one could mingle with the crowd at Buffalo and come away feeling anything but thoroughly satisfied with canned foods as is. Certainly the settlement of the long dispute upon the matter of swell claims, if it is settled, helped clear the situation and lent encouragement to many buyers to go ahead. And possibly not a few canners felt relieved that some sort of an agreement had been reached; but, taken as a whole, the canners had come to the Convention with definite ideas as to the values of their goods, for the new packings, and they would trade only and when the buyers met those ideas as to prices. There may have been some buyers who thought they could club the sellers into submission, or that they had scared them into accepting their terms by the long wait and inactivity; but if there were any such they quickly changed their minds when they reached the Convention and found, first, that the canners were confident of themselves, and, secondly, that Western buyers were not neglecting opportunities to cover their wants with the styles and kinds of goods they wanted. And those who had not covered by the time they came to Buffalo, went home and advised and set in motion quick action, and the Eastern buyers had to follow suit.

So today the canned foods market is a future market in peas, corn, tomatoes, string beans and all else, with the possible exception of canned fruits, and there has been some little action in them.

TOMATOES—Standard quality tomatoes for future delivery are quoted at 57½c to 60c for No. 1s, 87½c to 90c for No. 2s, $1.27½ to $1.35 for No. 3s, and $4 to $4.25 for No. 10s. At these prices the canners are not eager sellers. They are taking a few, with hardly any showing of interest, because they feel that spot prices will continue to rule firmer and firmer as spring comes on, and because of this that future prices will undoubtedly improve and not recede. Moreover, there is as yet nothing certain as to the costs of raw products, and no tomato canner cares to go heavily into futures until he knows what his raw stock is going to cost him, and he is wise in this action. There is a kind of "comfy" feeling to have some futures on the books, but they do not want so many that if they are forced to "average up" to cover losses on goods sold early they will be compelled to sell too many futures to come out even. In fact, we believe that the canners generally have come to the conclusion that futures must pay some profit—stand their share of profit—or they do not want them on their books. That is a wonderful change from the olden days, and it is as it should be. Futures should not be sold, except at a certain profit.

The buyers know this, and they are taking goods of the kind they can reply upon and covering their wants to a quite generous proportion. Out in Indiana, and the Central West generally, the canners seem further along with their futures than in the East, and it is beginning to be hard to find any canner there willing to take more business. They are going carefully about it, and when they find that they can add another customer to their list without endangering those already on, and at the right price, they are adding to their future sales, but only then. And they are asking in Indiana from $1.45 to $1.50 for extra standard No. 3 tomatoes, which reminds one of the old differential once enjoyed by New Jersey. No. 2s are held at $1.07½ up, which Eastern tomato canners might do well to ponder on.

Spot tomatoes continue to advance about 5c per dozen per week, and this hardly keeps pace with the ideas of those who have any supply of spot tomatoes of quality. We are more inclined to quote tomatoes, spots, as nominal than to give figures for them, which means that it is a matter of settlement between the seller who has them and the buyer who wants them. Mention of $1.00, $1.50 and $5 00 for the 2s, 3s and 10s arouses very little interest among holders.

CORN—Again the West reports the sale of future corn as quite satisfactory, and with the better grades of corn in the East the same thing is true. Buyers everywhere, both East and West, seem anxious to buy standard corn at 90c, but we respectfully refer both canners and buyers to the remarks of Mr. James Moore before the Corn Section meeting at Buffalo. The canners cannot lift the corn consumption demand by themselves; they need the help of the buyers as well. The ordinary run of standard crushed corn should be tabooed this year. The canners should refuse to pack it, and the buyers should not tempt them by saying that they must have a cheap seller. About the only place that this cheap corn can find an outlet is the cheap boarding house, low-grade American plan hotels and such like,

where they use it as a side dish, on the style of the old Raines Law Hotel sandwich, which no one was ever expected to eat. But when sold for this purpose it becomes the worst kind of an advertisement for all canned corn. Mr. Moore is absolutely right—there is a good market for good corn, and the people will pay a fair price for a good article, but the trouble is that the bulk of the corn canners will not take the trouble to produce it, because the buyers are hungry for this cheap seller. Pack the fodder in the silo and give the consumers "roasting ear" corn, and you will see corn consumption grow and become manly, even like unto peas. Note, for instance, that the Eastern corn canners opened crushed corn at 90c—same as in the West—with extra standard at 95c; whole grain Evergreen at $1.05, but that standard shoepeg corn is quoted at $1.25, with extra standard at $1.30 and fancy shoepeg at $1.40 and up. And Maryland is adding Golden Bantam to its list this year, and may be counted upon to produce a fine article, but it will not be sold at a low price.

Spot corn is dragging, though it cannot be said to be weak.

PEAS—The future market is almost closed on peas, and he is an unfortunate buyer who has left his requirements until now before covering. Most Wisconsin and New York State canners, as well as most canners everywhere, have closed their books on futures. The Southern pea canners named their prices and closed out, or what might be considered as a closing order or notice to the buyers, advanced their prices about 10c all along the line, in less than a fortnight. "That's peas and quality." Come on, corn, get on the Band Wagon!

THE MARKET—Mixed vegetables show a decline this week, with No. 2 now quoted at 90c. Oysters, due to the favorable weather, are again being quoted: 5-oz. at $1.50, 4-oz. at $1.40, 10-oz. at $2.85, and 6-oz. at $2.65. Shrimp remains unchanged at $1.75 for No. 1½.

Fruits are causing their friends worry in that they seem quiet in every section. No. 2 preserved blackberries are advanced this week to $2.00, but otherwise the fruit market remains very quiet and dull.

NEW YORK MARKET

Market Demand Pronounced Steady—Corn Is Neglected—Unsatisfactory Weather for Best Consumption—Maine to Increase Pea Pack—Maryland Will Can Golden Bantam Corn—Tomatoes Strong—Fruit Is Quiet—Notes of the Trade.

New York, February 7, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

STEADY Canned Foods Demand—While there have been no developments of sensational character in the local canned foods market during the week, a good, healthy volume has been put through, and the market continues to display a steady to strong tone. Distributors are not coming into the market for large quantities of spot stocks in individual orders, realizing that the supplies held by canners are so limited that any big buying movement would probably start a price boom. Most of the jobbers are content to "follow the market" and buy in small quantities for immediate requirements.

Corn Neglected—There has been comparatively little interest shown in corn during the week, and the markets have held quotably unchanged. The booking of futures is rather quiet on both standard and fancy packs. Chain stores are featuring standard corn at 10 cents per can, and report quite a healthy movement at that figure.

Unsatisfactory Weather—Thus far the winter months have not been productive of the expected consuming demand for canned foods. We have had very little consistently cold weather, and no real snow storm. One local trade factor said: "I expect that the market will continue uninteresting until we get a real cold snap or snowstorm. If we would only get a spell of weather that would tie up the movement of fresh stuff at low prices for just about one week you would see some real fireworks in the canned foods market." Canned fruit demand has been particularly affected by the mildness of the weather thus far, and the comparatively plentiful offerings of fresh fruits at low prices.

Canned Foods Developments—There will be two developments of outstanding importance in the Eastern canned foods producing sections this year. The State of Maine, having found it possible to can peas of good quality, will increase its pack of this commodity. Maryland is expected to come to the fore with a fair production of fancy Golden Bantam corn. Maryland has the corn, and it is only a question of the willingness and ability of the canner to pack a fancy article that restricts the market for Maryland's canned corn. Quality should be the watchword this year, and with a close observance of the quality slogan, increased business will come to the packers.

Tomatoes Are Strong—The canned tomato situation has shown a strong undertone on all sizes during the week. Jobbers realize only too well the firm statistical position of the Maryland situation, and are buying only in limited quantities at prevailing prices. It is believed that any heavy buying movement would be reflected almost immediately in an upward movement in prices. Future tomatoes are attracting some attention at the price levels recently named.

Asparagus—Business in future asparagus, on the prices published in the last issue of Canning Trade, has been rather quiet. California canners, however, are faced with very high packing costs this season, and this is naturally reflected in the opening price basis.

Salmon Trade Dull—Very little interest has been shown in offerings of salmon for Coast shipment during the past week. While jobbers are carrying only light stocks, demand is likewise light, and they are not stocking extensively in advance of requirements. It is believed, however, that the trade will begin to buy soon for the Lenten season. Chums are still to be had at $1.20, f. o. b. Seattle. Pinks are held at a minimum of $1.25 f. o. b., while reds hold at $2.25 to $2.35, offerings at the inside figure being reported as light. Canners declare that California sardines have cut into the pink salmon business with the Philippine Islands to a material extent during the past few years.

Fisheries Hearings in Washington—Alaska canners are vitally interested in hearings now in progress before the House Committee on Merchant Marine and Fisheries regarding salmon conservation in Alaska. D. A. Southerland, delegate to Congress from Alaska, is fighting the Government rulings, which, he claims, turn over the fisheries to the "fish trust," composed of canners. In a speech against the Government program, Delegate Southerland said: "When in the year 1922, by executive orders, fishery reservations were created in Western Alaska and the people protested against the administrative methods adopted by the Department of Commerce, whereby the valuable fishing grounds were turned over to the Fish Trust and independent fishermen were denied their right to pursue their calling within waters where they had formerly exercised that right, the Department gave to the press and to the people in explanation that one magical word 'conservatism,' and thus suspicion was allayed. There has been no destruction of our Alaska salmon supply in any one season since the beginning of the canning industry such as has taken place within the reservations during the past season, and this deduction has taken place with the sanction and approval of the Department of Commerce under the suspension of all fishery laws."

Canned Fruits Quiet—Trading in canned fruits for Coast shipment remains quiet, although the market is showing a firm tone. Export buyers, however, are reported to be operating rather extensively in the California market, turning their attention to choice and fancy grades, now that standards and seconds are so well cleaned up.

More Pea Buying—Future peas of all packs are attracting buyers' attention, and the situation remains very firm. Indiana and Illinois packers are now active in the market, following the withdrawal of many Wisconsin packers. Maryland and Delaware canners are also getting a good business.

Notes of the Trade—Austin, Nichols & Co. announce that they have taken over he business of A. Etheridge & Co., Inc., well-known wholesale grocers, of Rome, N. Y.

Lew Bulkeley, well-known Chicago food products broker, has been on the Street this week.

Thomas Roulston, Inc., well- known Brooklyn chain-store operators, are featuring the "Hart" line of peas, corn, etc., packed in glass by Wm. R. Roach & Co., of Grand Rapids, Mich.

A. W. Edwards, of the Winters Canning Co., of Suisin, Cal., left this week for the Coast, after a short visit in the local market.

Fred Magee, well-known lobster canner, at Ft. Elgin, N. B., was in the market during the week.

S. R. Pollard, of H. G. Prince & Co., of Fruitville, Cal., was in the market, visiting his brokers, George A. Mendes & Co.

Col. W. R. Roach, the prominent Michigan packer, was here during the week.

R. I. Bentley, president of the California Packing Corporation, is in town this week, visiting the J. K. Armsby Co.

Frank Van Camp, prominent canner, of Los Angeles, was here during the week, visiting his brokers, North & Dalzell.

A. F. Wentworth, of the Fairmont (Minn.) Canning Co., was in the market during the week.

Biddle Purchasing Co. announce the opening of a branch office at Baltimore, under the management of F. S. Price, Jr.

ST. LOUIS MARKET

All Hands Optimistic—Realization of Impossibility of Lower Prices Causes Buyers to Get Busy—Tomatoes Not Plentiful in Spite of Large Pack—Shortage of Fancy Corn—Most Pea Canners Withdrawn on Futures—Fruits a Puzzle.

St. Louis, February 7, 1924.

By "Missourian,"
Special Correspondent "The Canning Trade."

OPTIMISM—Those canned foods brokers and distributors who attended the Canners' Convention returned feeling quite optimistic regarding the outlook for 1924 from a selling viewpoint. While those who are back say canners believe the situation rather favors them and more trading in futures will be done this season than there was last,, when distributors realize that no cheaper prices than those prevailing last season can be named on the various packs. Distributors want as low basis as last season, while canners say that there will be advances owing to increased cost. The principal packs discussed, the brokers and distributors say, were tomatoes and peas. Canners have already booked so large a volume of futures that they can about dictate their own terms, and in many cases are not looking for business.

Tomatoes—Future Southern tomatoes are talked about more than any other item. Buyers are not willing to pay the prices asked by canners. Distributors are wondering where the large pack in the Tri-States has gone, as offerings do not indicate any uneasiness to unload. Gallons are unsettled, as there is only a moderate demand for them, as the impression prevails that a larger percentage than usual was packed in No. 10s last season. Users of gallon are going slowly, and are buying as they need replacements.

Corn—The spot market on corn is quiet, but firm for fancy and steady in standard. The market is largely concerned in spot holdings, as futures are not so much talked about or traded in as tomatoes and peas. The general shortage of fancy makes the situation rather favor the holder. There is no pressure to sell on the spot or in the country, and dealers prefer to cover as they need supplies.

Peas—With future canned peas practically withdrawn by the larger factors in Wisconsin, Illinois and Michigan, with few offerings from Minnesota, the pea situation has reached a position that leaves little to be guessed concerning the future strength. Trading in spot peas from Wisconsin and other Western packing centers has been of small importance, stocks being closely cleaned up. The free buying of futures earlier in the season has given many of the large distributors some protection, and as they cannot buy to advantage as to price, grade or assortment, they are inclined to hold off. Canners have rather the best of it and are not pushing sales, as they are comfortably fixed and look for a stiffer market as the season advances. Cheap peas cannot be found except in odds and ends in lots of a few hundred cases.

Asparagus—Some s. a. p. orders for new packs of asparagus have been placed, but no definite line on the probable opening has been secured.

Miscellaneous—Succotash, string and stringless beans attract little buying interest.

Fruits—Canned fruits occupy an unusual position in the market. They are probably the least interesting in distribution circles among canned foods of whatever description. There is practically no demand in evidence in the local trade, and, despite reports of the depletion of cling peaches of standard and second grading, neither appears to be attracting buyers. The fact is that both can be bought below cost basis on the spot, and as stocks are plentiful there is no desire to anticipate. Futures, in the opinion of the trade, will not be taken until very late this year, unless an unusual movement should clean up holdings of 1923 pack available here and on the coast. Keifer pears are moving in a restricted way, and apricots, cherries and Bartlett pears have had a fair call in some markets. There is little demand for pineapple and berries, and fruit salad is not going at all. Declining prices have been noted in many lines, and offerings of futures are at higher levels which contemplate increased packing costs.

CALIFORNIA MARKET

Crops Helped in Most Sections—Seeding Progressing—Asparagus Prices About Same as Last Year—Heavy Demand for California and Utah Peas—Pea Planting Is Late—Spot Stocks of Fruits Low—End of Dunkley Case—Coast Notes.

San Francisco, February 7, 1924.

By "Berkeley,"
Special Correspondent "The Canning Trade."

THE Crops—The rain which ushered in the last week of January proved rather light in California, but was widespread and most timely. Crops were suffering severely and farm work was being held up by the drought when the storm broke. February has been ushered in by a storm, and there is a much better feeling than was the case ten days ago. The rainfall to date is still far below the normal, and there is but little snow in the mountains, but the situation is no longer an acute one. Farmers are getting seed into the ground as fast as possible, and there is still a chance that some crops will be good.

Asparagus—The California Packing Corporation has named tentative prices on the 1924 pack of canned asparagus, as has been announced, these being guaranteed as a whole against the formal opening price list when named. The prices quoted are f. o. b. San Francisco or Sacramento, canner's option, for shipment in straight or assorted cars with other canned foods of its pack. The list was published on page 12 of last week's issue.

The prices conform quite closely to those named last year and seem satisfactory to the buying trade. Other packers have not seen fit to put out opening rates as yet, but are expected to be in the field at an early date. The drought caused growers of asparagus much anxiety, but the recent rain has relieved the situation greatly, and if late rains are experienced, the output can easily be a normal one.

Peas—The demand for peas of the California and Utah pack has been very marked of late, and most packers are sold up to the expected output of the grades mostly in demand. Planting in California is about three weeks late, and there is a likelihood that the acreage will be reduced this season because of the drought. The size of the crop is problematical and depends largely upon the weather during the present month.

Fruits—The market for California fruits is more active than in many weeks, and prices are very firm. No statistics have been compiled of unsold stocks in first hands, but it is known that these are low. Standard cling peaches seem to be attracting the most attention, with prices in this market ranging from $1.75 to $1.85, according to the prominence of the packer. It would occasion no surprise if prices in cling peaches were advanced shortly by leading interests.

Salmon—While most salmon packers are holding their stocks of pink salmon firmly at $1.25, there is some shading of this price by smaller interests, and buyers are being attracted by these offerings. It is also possible to pick up Alaska reds in this market at less than the opening price of $2.35, but most of the fish offered at a lower price come from Southeastern Alaska.

The Dunkley Case, which has been in the courts for many years, has again come into the limelight, marking what may be the final step in a case of much importance to California packers of fruits. A decision has just been handed down by H. M. Wright, special master, appointed by the late Judge Van Fleet, of the United States District Court of California. It has to do with suits brought by the Dunkley Co. against the Central California Canneries and others for profits and damages for infringement of the so-called Dunkley peach-peeling patent. The Dunkley Co. contended that fruit canners had profited by the use of the device in the amount of about $11 a ton, and de-

anded royalties aggregating millions of dollars. Special Master Wright held that the devices used by defendants since 1915 did not infringe and that no profits or damages has been shown during the year and a half subsequent to the issuance of the patent in 1914. A nominal allowance of 25 cents a ton was awarded on the theory of "reasonable royalty" and the costs were equally divided between the plaintiff and the defendants. The patent involved had been acquired by Swift & Co. interests, and suits were brought against various canners in 1915. In the first cases tried Judge Van Fleet held the patent valid and ordered an accounting. The late Judge Trippet held the patent void, as did also District Judge Hand, of New York. The recent decision is hailed as a great victory by fruit canners and growers, as the award was made nominal and the machines now in use are held to be non-infringing.

Coast Notes—The California Canning Peach Growers' Association handled about 42,000 tons of peaches during 1923, according to a recent report, and of this amount packed about 10,500 tons, the balance being purchased by other canners. Approximately 550,000 cases of peaches were packed by the organization and about sixty-five per cent of the pack has been marketed.

The Pacific Pea Packing Company, Oakdale, Cal., is preparing to enlarge its plant next season, and will pack tomatoes and cucumbers, as well as other vegetables. It owns quite an acreage of peaches, figs and grapes, and will soon be in a position to operate the plant much of the year.

The Fred B. Neuhoff Co., which conducts a packing and brokerage business in the southern part of the State, has opened offices at 2 Pine street, San Francisco, and is prepared to handle general lines of California products, in addition to its own. The concern was recently incorporated with a capital stock of $250,000.

Charles E. Virden, of the Virden Packing Co., San Francisco, Cal., recently attended the conference of the directors of the California Development Association, held at Coronado.

S. Mueller, of the H. J. Heinz Co., Pittsburgh, Pa., was a recent visitor at San Francisco.

W. L. Weinmann, of the Griffith-Durney Co., San Francisco, Cal., is making a visit to the Hawaiian Islands, where this concern has large pineapple packing interests.

CHICAGO MARKET

Heavy Winter Weather Helps Canned Foods Consumption, but Hampers Shipping—Corn Advancing—Future Corn Moving Slowly—Central West Cleaned Out of Tomatoes —Hard to Find Spot Peas—The Wholesalers Begin to Put in Effect the Swells Plan.

Chicago, February 7, 1924.

By "Wrangler,"

Special Correspondent "The Canning Trade."

WINTER Weather–More heavy weather has been the rule this week, and snow with blizzards and drifts are now in evidence.

Transportation has been blocked to some extent, and surface street traffic in this big city has been embarrassed and tangled up.

Shipping weather for canned foods has been scarce, and but little has been done for fear of the goods freezing in transit. Purchases by wholesalers in carload lots have been arriving in good shape free from frost where they were shipped in refrigerator or frost-proof cars; but smaller shipments, less than carload lots, which are more likely to be exposed to the action of the weather, have been withheld, and distribution is, therefore, to an extent stagnated.

Canned Corn—There has been some buying of spot corn in standard and extra standard grades, and it seems now to be about positively established that the cheapest canned corn, No. 2 cans, obtainable at the factories in the Central West, is held firmly at 95c per dozen, factory. All the 90c and 92½c bargains have been pretty well cleaned up.

Wholesale grocers are buying some canner corn, paying as high as 95c for standard and $1.00 for extra standard, f. o. b. canneries, and though there have been quite a number of purchases, they have not been large, seldom exceeding a carload lot and frequently being less than carload lots.

Future Canned Corn—Futures in canned corn have been going very slowly, and I can hear of but very few contracts that are being made. Most canners are asking $1.00 per dozen for standard canned corn, 1924 pack, f. o. b. factory.

Canned Tomatoes—Brokers have about quit looking for canned tomatoes in Indiana or Ohio—the lots are so few that they are concentrated into the hands of one or two canners, and are not available to the other brokers. The supply in the Central West will soon be entirely eliminated.

Buyers are beginning to talk about Utah canned tomatoes and California tomatoes. The trouble about handling them in this market is that these States pack No. 2½ tomatoes and do not pack any No. 3 tomatoes. The No. 3 is the favorite size here, except that quite a number of No. 2 size is handled. There has been some buying from the West on No. 2 and No. 2½ tomatoes, but only a few experimental lots have been brought in so far.

This market is going to Maryland and Delaware for supplies of canned tomatoes for immediate shipment. Futures in canned tomatoes are not selling well. Buyers are not favorably disposed as to the prices that are being asked for canned tomatoes of 1924 pack, and are of the opinion that they ought to be sold for less money.

Canned Peas—Now and then a little assortment comes out of its hiding place in Wisconsin and is offered on this market, the result being that the lot is sold out in a day or two. These lots are very scarce. However, the fact that they are to be had at all is usually the result of an accident in the delay of labels or because parties who have bought, subject to approval of price or samples, have concluded not to take the goods.

It may be truthfully said that Wisconsin is entirely sold out of peas, with just the few exceptions mentioned.

Future Canned Peas—Futures in canned peas have sold heavily, and Wisconsin canners seem to be well satisfied with the amount of future business which has been placed with them. They are going ahead making preparations for a large pack of canned peas, and a half a dozen or more new canneries are being erected in various localities in that State, thereby increasing the prospectiv outlook for 1924 pack.

Fruits and Berries—Several Michigan canners are naming prices on 1924 fruits and berries. Prices named are somewhat higher than last year, and buyers re reluctant on that account to take hold—still some contracting has been done for future delivery.

There are some spot canned berries, cherries and fruits held in Michigan or by Michigan canners in Chicago warehouses, unsold. These goods are now coming on the market rather slowly, and the canners are evidently inclined to feel out the market as to whether or not better prices can be obtained than the opening prices at the beginning of the season, or whether it would be more advisable to close out the goods at the present prices than to continue to hold them.

The Western Canners' Association will hold its annual convention in April as usual. The location has not yet been selected by the Board of Directors. It is quite likely that several Sections of the National Canners' Association will hold meetings at the same time and place in cooperation with the Western Canners' Association and the State Association in whatever State the meeting is held. The location will be decided now very soon, and applications will be made for special railroad rates. It is thought that no exhibit of canned foods or machinery will be held in connection with the convention, as April is too soon after Canned Foods Week, and the machinery exhibits are only held in connection with the conventions of the National Canners' Association.

SOME FUTURE PRICES NAMED.

Indiana canners are quoting future prices on tomatoes about as follows, f. o. b. canneries, 1924 pack:

No. 1 Standard	.70
No. 2 Standard	1.00
No. 3 Standard	1.40
No. 10 Standard	4.90
No. 2 Extra Standard	1.10
No. 3 Extra Standard	1.55
No. 10 Extra Standard	5.25

They are quoting futures on canned pumpkin, f. o. b. Illinois canneries, as follows:

No. 2	.75
No. 2½	.90
No. 3	.95
No. 10	3.00

Wisconsin canners are quoting 1924 prices on beets in sanitary enamel lined cans, f. o. b. canneries, as follows:

Count.	No. 2 Tin	No. 3 Tin	No. 10 Tin
Cuts	$1.10	$1.35	$4.50
Sliced	1.25	1.45	4.90
7/over	1.15	1.45	..
10/over	1.45	1.60	..
15/over	1.75	2.05	..
20/over	..	2.35	..
30/over	..	..	5.40
40/over	..	..	6.35
60/over	..	..	7.75

Quite a quantity of beets have been contracted at above prices, it is understood. Some canners are asking a little more, others a little less.

SWEDISH BRISTLING FISHING POOREST IN TWENTY YEARS.

A REPORT received by the Bureau of Foreign and Domestic Commerce from Acting Commercial Attache H. Sorensen, under date of November 5, 1923, quotes from "Norges Handels og "Sjfartsidende" as follows:

"In the case of Sweden the brisstling fishing this year has been still worse than that on the west coast of Norway. Gothenburg dailies have characterized it as a complete failure, and class it as the poorest in twenty years.

"Due to the lack of raw material, the anchovies factories will not be able to fulfill their contracts, at least not of the finer qualities. It is not expected that matters can be improved, as the quality of the fish loses toward the end of the fall.

"As a result of the lack of supply from Swedish waters, the Swedish fish-canning factories have purchased their fish from the fisheries in the Christiania Fjord and paid such high prices that the Norwegian factories were unable to bid in competition."

BOARD OF DIRECTORS MEETING

National Canners Association, Ball Room, Hotel Statler, Monday Morning, January 21 1924

JAMES A. ANDERSON, President, in the Chair

Mr. James Moore presented the report of the Finance Committee. "I would call attention to the fact that the National Canners' Association is truly an association in the handling of money matters, he said. "If any of you have any question as to how funds are raised for the Association, or for what purposes they are disbursed, all you have to do is to read Exhibits A and B of the printed report which has been distributed. You will find land and buildings listed at $55,557.86. The actual market value of the land and buildings of the National Canners' Association is between $125,000 and $150,000. By that I mean the realizable cash value of that property; consequently, the net worth of the Association, as stated in the report, aggregates about $175,000, and on the basis that we gauge our own net worth, that should be advanced by nearly $75,000. I am frank to say I am carrying in my mind with considerable pride the belief that the net worth of the National Canners' Association is today approximately a quarter of a million dollars, and I think that every member of the Association can review the record of the Association since the calamitous year of 1920 with a great deal of pride, and can see in the financial statement the result of the wonderful work that has been done during the past year."

Co-operation Between the Houswives and the Canners

By Mrs. Julian Heath
President National Housewives League

I have been privileged today to enter your conference, representing, as your President stated, two organizations—the National Housewives' League and the State Federation of Women's Clubs. In speaking of them, I wish that you would from the very beginning not look upon them at all as women's clubs, or just a women's organization, or just some sort of social or philanthropic affairs, but as representing the trade and business of housekeeping. Therefore, I enter your conference representing a trade the same as you gentlemen represent a trade; so, if you can get that into your consciousness, you will help me to try and put before you the things that I believe will be beneficial to both.

To our credit there stands the establishment of public markets, sanitary conditions everywhere. I won't begin to tell you any stories about the sanitary conditions in the selling of foods. You remember the unsanitary conditions of years ago, the goods all exposed and in open packages. You could hardly sell those goods now. That improvement is something that the Housewives' League has done.

The City Federation of Women's Clubs represents 385 clubs in Greater New York. These are organized for various purposes, and represent about 200,000 women. They function entirely through the Home Economics Committee of the City Federation. So you have two great bodies here today, trying to enter into conference with you to get some adjustment for the betterment of both.

In bringing up things, however, I always have a chance to explain to the women that in the majority of trade organizations they have done more good to improve their industries than any food laws, pure food laws, ever did. Your organization, I believe, has been constructive in its work, and, of course, you have been defensive. The Housewives' League will be defensive but I want the housewives of the country to know that the National Canners' Association is trying to improve its industry and trying to improve canned foods. That is perfectly true.

Now, what is the housewife's objective in regard to canned foods? I am not going to say to buy more canned foods, but I am going to say, to use canned foods intelligently and rightly. That is the main thing. She must make her menus intelligently, and to do that she may have to buy more canned foods, but her main objective is to use canned foods intelligently.

Sometimes I wish there could be a new name for what we represent—home economics—not that that is not broad enough to take in everything we do, but that has been narrowed down to just cooking. If there is anything that the housewife, the intelligent housewife, dislikes, it is to feel she is thought of as nothing but a cook. What we want to do is to make housekeeping easier and better and to do housekeeping intelligently. That is the mission of the Housewives' League. Also, we recognize that the so-called housewife's page is not the woman's pages of the papers and magazines. You and I well know that we have plenty enough recipes for chocolate cake, and all those things. In fact, we use only about one or two all through our lives. What we want is to have housewives' pages—what the canned foods output is; what the National Canners' Association is doing, etc. I read all the main papers. I read all the trade papers. I wish every trade paper had a housewives' department, so that we could talk back to you. I have a chance to talk to you now, and I will do it. We should have a department in those papers.

Back in the days when the housewife went into the kitchen to prepare the foods, she knew what she had and what she was going to turn out. The housewife of today must know the same thing, and the only way she can know it is by having the maker's name on the package, so that she can go to her organization and find out exactly how things are made. That trade-mark is your protection. It is your protection if you have goods of quality. It is the only protection the housewife has, and I am hoping and I am preaching, and I know that the day will come when the housewife will buy nothing at all except those goods on which the maker is brave enough—I will say frank enough—to put up name. I am looking for the time when a man who puts up trade-marked goods will not sell his goods with a private label. I know that that time has to come. It is not here just now. I know we are all conservatively inclined to wait, but some time the Housewives' League, if someone else does not, may present put on the label. I do not believe that that obtains only to foods, but to everything. I will take women's wear. There is more plunder in some of the women's wear today than in any other industry because the maker's name is not on the label. There is more profiteering and more woste on some of those things because the label is not there. That must come some time.

Now, as to that label: I am not one who believes that the label shall be so plain—I don't mean clear, but plain, not fancy—that it will not be attractive. It was my privilege to be at a conference where they tried to talk about simplified containers, where they talked about uniform labels and packages, size, and all that sort of thing. I was not sympathetic, because I believe that the consumer has learned to know certain labels and certain shapes, and does not want to give it up. There is some psychology there, and for the good of a manufacturer he must have a

distinctive label and a distinctive package. You would not like to see all the ladies in standard clothes, and I don't believe we want to standardize our packages. I am telling you that for your benefit.

We want something descriptive, not too fancy; we want the goods labeled as to what they are. And don't put that all on in small lettering, so that the women will have to hunt for it, or be so tired that they won't hunt at all. I think the time is coming, if you are really going to sell canned foods, that you must begin to put the nutritive value on your cans. That is a point in the right direction. Why, only yesterday I was talking with a lady who said she never used canned foods because they had no food value. Hardly a day passes that I am not asked as to whether the food value of canned corn is the same as fresh, and the same with beans. The time is coming when the nutritive value will be put on that can, and the housewife will not take the nutritive value from anyone but the packer; not from magazines or papers; it must be the packer's responsibility.

I was talking with a lady yesterday, and she said that the recipes for the use of those goods should be on the can. That is perfectly true. It should be on the can how best to use the contents. We do not need all the favorite recipes, but there should be one as to the best way to cook string beans. A lady told me that some time ago she heard her domestic say that she washed corn two or three times before she used it after taking it out of the can. Please, Mr. Packer and Mr. Manufacturer, give your own recipes as to how best to use your goods, and put that over to the housewife. I think that that is so very important. Put on your can the best way to use your kind of beans; how best to use your beans, your corn, your tomatoes, and all those things. I say that I think that is so very important.

I would say this to you with regard to your Canned Foods Week: I think it is very interesting. In connection with that week the thing that the housewife is looking for is bargains, and she is inclined to look for the bargain and not for quality. Your money could be spent to put over constructive information, and tell the housewives about what the National Canners' Association is doing, the work that Mr. Gorrell and all you people put into it. That will bring results, and you will have the interest of the consumer. You have a close-up of the National Canners' Association. Please give that close-up view to the people.

Another thing you had in 1923 something about the food value of the pumpkin, and a lot of women would like to hear about it. You talked about it in convention, but the housewives never hear a word about it. The food value of the pumpkin is never put over to the consumer.

Then you have another item: "What the Government Is Doing to Help the Canners." The housewife does not know what the Government is doing. The people know so very, very little about those things. I have quite a bunch of publicity which I have gathered up from time to time. I brought this with me, the day I left home, about the Housewives' League in various parts of the country. I also had a communication from Australia. We have a league over there, and there they haxe a boycott on potatoes. I would also like to mention this, which will interest you, to show you how the situation is working out. This clipping came to me from London. Our Secretary, Mrs. Victor H. Morrison, is in London, and she has been talking about what they call tinned goods—they do not call them canned foods over there. This is a report which states that after several technical investigations as regards tinned food, they report that while there may be special risks of their own, they are not large, and are, for the main part, readily guarded against, and the canned foods are undoubtedly safer, etc.

I want to tell you that the housewives themselves are alive to every report that comes out in regard to these things. We receive all kinds of inquiries, and we keep right up to date on all these subjects.

I have in mind that some day there will be a producers' and consumers' service bureau, at which information will be given from thee producer and manufacturer to the consumer, and information from the consumer back to that producer, so that we can have a real, fine producer-consumer-manufacturer conference. At any rate, I want to make one plea: Please remember that the housewives and the buyers are looking not only to their own tables, but they do want to see that the restaurants, hotels, and those people buy the best goods, bearing the names of the makers, so that there will be So-and-So's corn, and So-and-So's beans. That is the great big dream that I am looking forward to—identified goods, identified down to the last minute.

OPENING SESSION

National Canners Association, Ball Room, Hotel Statler, Monday Afternoon, January 21 1924

PRESIDENT JAMES A. ANDERSON in the Chair

"America" was sung by those present. Rev. Charles D. Broughton, Rector of the Church of the Ascension, Buffalo, pronounced the invocation.

Secretary Gorrell then announced the Committees on President's Address and Nominations.

THE PRESIDENT'S ADDRESS

I believe it was 17 years ago in the city of Buffalo that this organization was formed, and Mr. George Bailey, whom we have the honor to have with us on the rostrum today, I might term the father, the first president, of this Association.

It is a great pleasure to reflect back upon the work done—or, at least, I might say, started—in this city so many years ago, and it is a real pleasure to refer to the work that has been done since then. Every president in his place and in his particular term has performed his duty nobly and well, and seemed to fit into that particular time to bring about the purposes and objects of this great Association, and the success that this Association has attained today is the outgrowth of the earnest and untiring efforts of those splendid characters who have preceded me, and who have so earnestly and faithfully performed their duties and labors.

We have been able to increase our membership very materially, as you will notice from the report; the number of cases has increased from practically 19,000,000 cases to practically 50,000,000 cases, and this has not been the result, ladies and gentlemen, of just this administration. By no means. It is the result mainly of the splendid labors performed by those who have preceded this administration, and going on, following in their footsteps, and following the work they have carried out, and the program that they have set has enabled us to put this Association today upon a firm foundation, on a businesslike foundation, built on that great structure which these men have started and have builded, and which we are completing.

Now, I think it fit and proper that we here refer to two of our members who have passed to the Great Beyond—two of our former Presidents, Mr. Hasserot and Mr. Leitsch. You see here two vacant chairs surrounded by flowers, representing these splendid characters, and when I think of these men— pardon me if I should be a little sentimental—but, gentlemen, I feel that sometimes in our business rush and in our every-day business affairs we do not give enough time to sentiment. We do not give enough time to the real things of life, and those things that elevate us in our own organization and make us the big, broad. liberal-minded men and women that these two gentlemen were to us in their splendid character and in their service.

A year ago at this time our mutually beloved friend, Billy Leitsch, was with us. How we loved him and how he loved us, splendid character that he was—always willing to serve, shedding a ray of sunlight wherever he went; his influence was felt for greater and nobler things wherever we saw him, and to think of him is to drink from a fountain of fondest memories, that inspiration that leads us to greater thoughts and nobler deeds.

Pardon me for reading this. This is composed as a tribute to that wonderful friend of ours, Billy Leitsch. The thoughts of him gave me the inspiration to write these few lines that I am going to read to you.

(Here Mr. Anderson read his poetical tribute to W. C. Leitsch, as published in The Canning Trade of February 4th, 1924.)

CHAIRMAN ANDERSON—The next speaker is Ogden S. Sells, who represents the Canning Machinery and Supplies Association.

(Mr. Sells' excellent address, "The Other Side of the Can," was printed in The Canning Trade of February 11th.)

CHAIRMAN ANDERSON—It affords me very great pleasure now to announce the next speaker, Mr. Charles P. Whiteman, President of the National Food Brokers' Association.

(Mr. Whiteman brought hearty greetings from the Brokers' Association.)

CHAIRMAN ANDERSON—It is a real pleasure to introduce the next speaker, who represents an association which we depend upon very largely, and which association is an absolute necessity and essential along the line of conveying our products

from the original producer to the final consumer. While the brokers, as I have said, act as a medium between the canner and the distributor, you will recognize the fact that canners and distributors sometimes look at a certain object from a different viewpoint. That is often true when you come to consider the price of the article, and in some cases they become just a little bit suspicious of each other, although they are always willing to get together, and do finally get together, and we find them splendid good fellows to work with, all working to accomplish the same good end.

It is a very great pleasure to me to introduce President Herscher, of the National Wholesale Grocers' Association, with that smile of his which brings us all to the unity of the faith.

(President Herscher extended greetings and an expression of good-will from the wholesalers.)

Whereupon, at 4:00 o'clock P. M., the opening session adjourned until 8:00 o'clock P. M.

GENERAL SESSION

National Canners Association, Ball Room, Hotel Statler, Monday Evening, January 21 1924

JAMES A. ANDERSON, President, in the Chair
(It opened with community singing)

CHAIRMAN ANDERSON—Mr. James Moore will now make the report of the nominations and elections.

MR. JAMES MOORE—The Nominating Committee presents the following as its recommendation for the officers and directors of the Association for the ensuing year:

President—Royal F. Clark, Beaver Dam, Wis.

First Vice-President—Robert M. Barthold, San Francisco, Cal.

Second Vice-President—E. F. Trego, Hoopston, Ill.

Secretary and Treasurer—Frank E. Gorrell, Washington, D. C.

DIRECTORS.

G. R. Garretson, Inderrieden Canning Co., Chicago, Ill.
John L. Baxter, H. C. Baxter & Bro., Brunswick, Me.
John E. Diament, John E. Diament Co., Cedarville, N. J.
Lawrence A. Judd, Pearl City Fruit Co., Honolulu, T. H.
Frank Van Camp, Van Camp Sea Food Co., Los Angeles, Cal.
Frank Warren, Warren Packing Co., Portland, Ore.
Richard Gilliam, Richard Gilliam Co., Montvale, Va.
Clarence Turmail, Vallonia Canning Co., Vallonia, Ind.
Harry P. Strasbaugh, Aberdeen, Md.
Wm. A. Miskiemen, Illinois Canning Co., Hoopeston, Ill.
J. Neuman Numsen, William Numsen & Son, Baltimore, Md.
Henry S. Bird, Medomak Canning Co., Winslow Mills, Me.
L. S. Brotherton, Bozeman Canning Co., Bozeman, Mont.
R. F. Clark, Central Wisconsin Canneries, Beaver Dam, Wis.
F. A. Harding, William Underwood Co., Boston, Mass.
Roy W. Heemingway, H. C. Hemingway & Co., Syracuse,
H. H. Hankins, William Lanning & Sons, Bridgeton, N. J.
W. F. Rudiger, National Packing Corporation, Ogden, Utah.

I move the adoption of the recommendation of the Nominating Committee and election of officers and directors as proposed.

Which motion was duly seconded. Mr. Moore was instructed to cast a ballot for the organization, making the list as read effective for the following year.

MR. Moore—I have cast the ballot.

CHAIRMAN ANDERSON—I have very great pleasure in introducing to you Mrs. Anna B. Scott, expert cooking and food economist of The Philadelphia North American.

WHAT THE CONSUMERS DEMAND

I DO not wish to address you as "canners," gentlemen. I prefer to "can" that term, and call you by your truer name—magic gardeners. For it is almost a matter of magic that you provide the kitchens of this nation with a year-'round garden of all the good things grown by Nature—a garden in which the housewife does not even have to lean over to gather the vegetables or risk her limbs climbing a ladder for the fruit. So you are helping to banish backache as well as to make summertime a daily season.

I do not know what kind of wands you carry on your sleeves, but I do know you have transformed the pantries of this nation into perpetual provider of well-nigh perfect provisions, and have brought field, orchard and vineyard within arm's reach of even the short-armed. I know you have done more than any other group to freshen and vitalize the food supply of the people. Whatever else you may not be, you are the magicians of the daily menu.

Despite my youthfulness, I have been working at the food problem for fifty years, and I was not among those who were afraid of canned foods when they first became popular. From the first I have appreciated not only their convenience, but their goodness and the wide range of delightful dishes that could be made from them.

And before entering into details today, I want to say I think you do not fully appreciate the possibilities of your own products. I say this because I have seen members of your trade marvel at "canned food" meals I have prepared. Yes, I have seen them look astonished at dishes which had all the appearance and flavor of those made from fresh-picked material.

May I remind you here that the average first-class canned foods is superior to a large part of the so-called "fresh" fruits and vegetables sold in the markets? Many of the latter have been handled and kept for several days or even weeks, while your best products are picked at the moment of perfect ripeness and scientifically cleaned and put under seal before flavor or freshness have had a chance to feel the withering touch of time.

What I am about to tell you is the fruit of experience. In my career as a cooking expert, which includes every phase from catering to a family of four to serving hundreds at a time. I have found canned foods the best friends of the fine, well-balanced meal; of the banquet; of the informal snack or the picnic luncheon. I never have found a place where they did not fit, and I have found them fit for any place.

So it is a privilege as well as a pleasure to face you today and testify to the excellence and economy of your products.

Going on, Mrs. Scott recommended, among other things: Number of portions should be mentioned on the can; cans should be dated; one good recipe should be printed on each can, and recipe changed periodically.

For your information I wish to state that Mrs. Scott gave a broadcast over the radio at Philadelphia every day during Canned Foods Week last year, and the North American, one of the greateset newspapers in the United States, gave us a splendid editorial each day, and Mrs. Scott represents that splendid newspaper. I think it is fitting and proper that we should make mention of this fact in her presence here, and we appreciate it very much.

The next speaker really needs no introduction, because we all know him too well, Mr. McLaurin, president of the American Wholesale Grocers' Association.

President McLaurin Entertains.

Out in the lobby this afternoon a gentleman asked me what I was going to talk about, and I told him that I did not know, that it depended entirely upon what sort of an audience I met with, and, indeed, whether I had any audience at all. It is pretty difficult, I think for a man who does not know how to write a speech, and before I get through I am sure you will all wish I had done so; but not being able to write n address, it becomes necessary to do the next best thing, to get away with it, and that is to come here and stand up and look into the faces of a lot of people, study them a little bit and try to decide just who they are and where they come from and what they are thinking about, and then light out and talk a ltitle bit.

Now I was delighted, Mr. President, as I sat here on this platform and looked out at this audience to find that it was really pretty well sprinkled with the ladies, God bless them. I don't know how you feel about it, but when I get on the platform and talk to a bunch of sober-faced men they all look alike to me. When I get up before a hundred or a thousand and look at them,, I cannot tell one from another, but as soon as I see the ladies sprinkled around it gets up a fellow's inspiration and gets him talking, and he finds something to talk about. Of course, that means that I love the ladies. Even my wife accuses me of that. The minute I get home from one of these long tripe and I start in to unload something on her, she says: "Wait a minute. Now tell me about that lady you met on the sleeper. I want to know all about her first.' (Laughter.)

(Mr. McLaurin talked most interestingly, in an impromptu manner, for nearly one hour, touching business and politics, and held his audience as only he can do.)

CHAIRMAN ANDERSON—We will now have the report of the Comittee on Containers, by Dr. Elwell.

Following President McLaurin, the chairman called upon Mr. Philip A. De Puyt, of Rochester, N. Y., president of the National Retail Grocers' Association, and he made an excellent business address.

Dr. Elwell's important paper withheld.

CHAIRMAN ANDERSON—Dr Elwell, you need not fear but what we will back up this proposition and find out where we are at. All we want is what is right and just, and we are going to have it because it is right and just. And again I thank your committee for the splendid work you have done and the report that has been given.

(Whereupon the general session adjourned until Friday, January 25, 1924, at 10 o'clock A. M.).

TOMATO SECTION

Ball Room, Hotel Statler, Tuesday January 22 1924

George E. Diament, Cedarville, N. J., chairman, presiding.
Richard Stringham, Woods Cross, Utah, Secretary.

THE CHAIRMAN—I will appoint as a nominating committee the following:

Mr. Wallace Roberts, of New Jersey, Chairman.
Mr. Burt Powers, of Indiana.
Mr. Walter O. Hoffecker, of Delaware.

The Chairman Reports.

During the past year the Tomato Section has held one meeting, that is since the Atlantic City Convention. That meeting was held in Baltimore at the time of the Tri-State Packers Association meeting in May, and at that meeting there was some discussion about the falling off in consumption of canned tomatoes. I would recommend that every canner, this year especially, be very careful to keep an accurate cost of packing tomatoes. Raw products are increasing, cans and cases will probably cost us more money this year, and it certainly is very important we should know what our goods are going to cost us, so that we can sell them at a profit.

In the last few days we have all received a report from the National Canners' Association of the packing of tomatoes during the past year. I do not know whether any of you have stopped to analyze that report or not, but it seems to me it is worth while to stop for a moment and analyze that report. The report calls for 14,672,000 cases of tomatoes. That is, all sizes reduced to three. This pack has been exceeded only three times since the National Canners Association has been gathering statistics. That was in the years 1914, 1917 and 1918. The last two years, 1917 and 1918, were the war years, and in those years the Government required a great many tomatoes. Now, take it for the six pre-war years, the average pack was 11,600,000 cases. For the five war years, counting 1914 to 1918 as the war years, when the war started in Europe—of course, we were not in the war during all that time—but for the five war years the average was 13,500,000 cases, and for the five post war years it is 10,500,000 cases. Now, compare these figures with the pack of last year, and it shows us we must not fool ourselves into thinking that the consumption of canned tomatoes is going to warrant a pack of 15,000,000 or 18,000,000 cases this year. If we do, if we go into this and make up a pack of 15,000,000 to 18,000,000 cases, we certainly are going to see some very low prices for them next fall, and some of us are going to stand a chance to take a loss on some of the tomatoes that we pack.

Of course, there is one thing that we want to have as our watchword, and that is "QUALITY," and if we pack quality tomatoes we certainly can get clear of a larger pack of quality tomatoes than we can a pack of ordinary tomatoes.

The first speaker on the program needs no introduction whatever to this audience. He is known probably by nearly every canner in the room. It gives me great pleasure to present Dr. Bigelow now, of the National Canners Laboratory at Washington, D. C., who will address us.

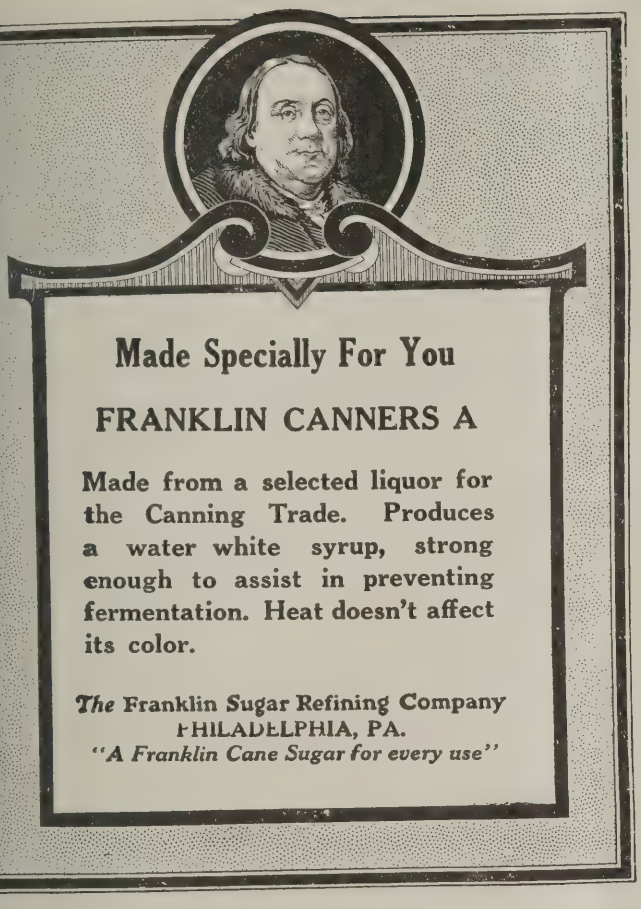
(Dr. Bigelow requested that his remarks be not taken down, and that he would send copy later. His address will, therefore, appear in another issue.)

We are indebted to Mr. Frank Hundley, who is going to take the place of Mr. John S. Souder on the program. He will speak on "Tomato Products in Indiana." Mr. Hundley is vice-president of the Indiana Packers' Association. It gives me great pleasure now to introduce Mr. Hundley.

Tomato Products In Indiana

By F. M. Hundley

Vice-President Indiana Canners Association



INDIANA is becoming one of the foremost tomato-producing States. If you do not believe it, just drop over to Elwood, Ind., and get in touch with their officials, and they will soon tell you that the farmers in Indiana grow practically all the tomatoes of the United States, and they believe it so strong that they are only asking the packers to increase the price 50 per cent for tomatoes during the season of 1924, and they have gone so far as to threaten to destroy crops, spot growers, and do many other things to those who would dare to grow tomatoes for less than the price they ask. They further intend to contract the acreage themselves, and re-sell same to the packers, and, after deducting their commission, they propose to distribute what is left to the growers themselves. They have a plan to compel the canner, if possible, to do something that is contrary to free American government, and if the Indiana canners submit to this movement, the packers from other States will soon have no competition from Indiana.

Indiana does have the soil, climate and many other things that makes it rank high as a tomato-producing State; in fact, it is a well-known fact that tomatoes in Indiana have more nearly approached the correct amount of citric acid, salt and sugar than any other section of the country, and with the ordinary season we will get a very excellent color. But I think I would be safe in saying that if the Indiana tomato is short on any one thing it would be salt, and we feel that a little salt added to each can of the tomatoes makes a wonderful improvement in the taste, and the first impression the buyer or the housewife gets of the goods is satisfactory, if he or she tastes them. I would not have packers from other States believe that all is sunshine in Indiana with the packer, because he has his griefs as well as all other packers. His worse enemy is possibly the frost in the spring and frost in the fall, and next to that is his everlasting battle with mold and bacteria.

I think one of the greatest steps that has been taken in the tomato-products business in Indiana has been the work done by the Purdue University on tomato-seed improvement, in which they have been engaged with untiring energy for the past five years, with the result that the seed is wanted by all packers, and orders this year for thousands of pounds had to be refused from all parts of the United States. In the beginning they selected the best strain of Greater Baltimore seed that could be obtained, but this was found to be very badly mixed with cherry, pink and many other types of tomatoes. They have now developed this strain of Greater Baltimore seed until, from a selection of 30 plants in 1920, they produced seed for 1921 that made 22.19 tons per acre, and each year has shown a very decided improvement on the yield over their test plots. They are continuing their efforts on this line by making crosses to still further increase the yields, rather than to allow them to decline, which would be the natural result if work was not done along this line.

They are also trying to determine some cause for blossom end rot, and if possible to stop this damaging factor in the tomato business in our State. However discouraging it may be, the experiments have disclosed that this disease is more largely prevalent in the larger types of tomatoes, and that smaller types are bothered with this disease less. They have also discovered that this factor is related, to a great extent, to the shape of the tomatoes, and that the pointed fruits are less susceptible to this disease than the flattened types. Purdue tells us it will be at least two years before anything definite can be worked out along this line. They have also been working upon color, which, of course, is to be desired by every canner, and they have found that color is not dependent upon certain kinds of fertilizer, such as nitrogen, phosphorus or potassium, but upon the application of such fertilizer as was needed by a particular soil for the best growth. If interested in this phase of their work, write for Bulletin 259 for fertilizer recommendations. It has been found that a good red color is best developed at temperatures ranging from 68 degrees F. to 85 degrees F.

Purdue is now producing a wilt-resistant strain of Greater Baltimore seed which they claim they can furnish us in abundance in another year; however, the wilt has not bothered Indiana much up to this time. On account of the early frost of

1924 MODEL
HANSEN PEA AND BEAN FILLER

1—All undesirable features of the old **Hansen** have been eliminated.

2—It has only **one-half** the gears, **one-half** the shafts, **one-half** the clutches, **one-third** the brackets or supports, and occupies only about **one-half** the floor space of any other filler on the market.

3—It has **no brine tank,** no float valve, no stuffing boxes, no hopper agitator and **no funnel rubber.**

4—It has eliminated **all waste**, for it is impossible to overflow the can. It has no brine tank to overflow. It **stops automatically** in case the cans fail to reach the filler. The mixing head and plates are entirely enclosed, making it impossible for brine to escape should the plates become damaged or cut.

5—It is the **only filler** that complies with the laws of sanitation, because it can be taken apart and **really cleaned.** Besides, the brine is **not exposed** in any way to flies or dirt, because the briner encloses the brine instead of being surrounded by brine in an open tank.

Hansen Canning Machinery Corporation,
Cedarburg, Wisconsin.

1923 it was impossible to get any yield tests, but records have shown a very decided increase over the best seedsmen types of seed used. We canners in Indiana feel very grateful for the work of Purdue, and in addition to all this work they are conducting short courses on the canners' problems, such as production of tomatoes, power-plant problems, tomato-pulp manufacturing, general manufacturing problems, processing tomatoes, closing-machine demonstrations, and many other very vital matters with the canner.

Indiana canners are proud of their products for the most part, and believe in their goods, and for that reason they stand back of their goods until they reach the consumer, if necessary, and for that reason are 100 per cent back of the warehouse plan as the best means of adjusting losses on claims for swells, and believe that canners all over the United States should back the National Canners' Association in this step forward.

Indiana canners, like all other persons, are liable to make mistakes in manufacturing, but they would like to prevent the mistakes being passed on to the consumer, and thereby creating prejudice against the industry as a whole, and, further, they think the warehouse plan gives them an opportunity to determine the cause of their trouble, and in that way have an opportunity to correct the mistake that was made, and create a greater desire for canned foods on the part of the final consumer.

Indiana canners have confidence in the industry, and believe that it is only in its infancy, and that many uses may yet be found for tomato products which have not yet been thought of, and that many of these uses may be disclosed by the untiring efforts of some of the progressive canners and the efforts of the Research Laboratory of the National Canners' Association.

Some of the machinery men opened the eyes of the canners by making what is supposed to be a very stimulating wine from tomatoes. Possibly some of you canners know about it. I also had a superintendent at one time who found, to his surprise, that he could make a beverage that would outclass the present-day "White Mule," and would not kill you, either, but he found, with the group of labor that he had, it would be best not to tell anyone how he conducted this experiment; so it remains a secret. But, really, I think the tomato has many medicinal properties, and that it is possible that something along that line may be developed soon.

When the little infant, who is just beginning to eat, relishes the tomato so well, and the Government, since and during the war, recommends it in the rations of the soldiers and sailors, I somehow think it has some properties and possibilities that are yet undeveloped.

A large percent of the Indiana packers have modern factory buildings and warehouses, well lighted, ventilated and sanitary. Of course, we have plenty of room for improvement. I think where most packers of the whole country fail is in their washing systems and water supplies. A canning factory without an abundant supply of good, clean water is as useless as a sea-going vessel on dry land, and, of course, an abundant supply of water without the proper equipment to apply same to the tomatoes is useless. We Indiana canners had an excellent opportunity to find this out during the season of 1923, when the soil, on account of the very wet weather, adhered very tightly to the skins of the tomatoes, and while we might get by with a low mold count, we still would not have the kind of a product we should have to sell to the very best buyers in the country. The very best washing systems are none too good.

I think the canning industry, as a whole, should try to improve the factory conditions and surroundings, until they would be pleased to have the most fashionable lady step in and see how the goods that she would later purchase were produced.

Quality counts. This is the only thing that will ever bring the consumption of canned tomatoes up to the point where there will be no danger of overproduction. I do not believe it is fair to the industry, as a whole, to permit canners to pack tomatoes in puree made from skins and cores, and put them on the market, and when the prices are quoted that product has a depressing effect on tomatoes everywhere, as well as creating a bad influence with the housewife. I think one of the hardest factors to overcome now in the production of quality canned tomatoes is the labor situation. Since the war labor has become very hard to control, and even the women have become so independent that it is almost impossible to get them to peel tomatoes as well as they would wish to have them done for themselves, if they were buying them off the counter. It does not make any difference about the amount they are paid; in fact, the more they are paid, the more careless and independent they become.

Indiana has the soil and many other natural conditions for quality, but is short on labor. As one large manufacturer said when driving through the country: "Every farm should have tomatoes growing, but we do not have the labor to care for them. It is a shame you do not have some of our labor, or we have some of your good Indiana soil."

I am very much afraid the large buyers of tomato products are too much interested in price rather than in quality, and in making future purchases they try to grind the packer down to a price where he is unable to furnish the quality that he should furnish, and please every customer who purchases. We find the chain stores are getting to be the great avenues of distribution of all kinds of tomato products, and mostly find they are very close buyers; but it seems to me it would be far better if the buyer for these institutions would sit down with some good packer who knows his costs and figure out just what he should pay for these goods and leave the packer a reasonable profit. I sometimes think one of the great troubles with the packers, as a whole, is the fact that they leave their selling too much to their brokers, whose interest centers in the sale only, and I am not saying anything against the broker, but what I am trying to say is that it is the duty of the packer to make the personal acquaintance of a number of the largest buyers with whom they are dealing. I like very much the method of handling of purchases of some of the largest buyers of certain kinds of tomato products, because the packer is permitted to make the personal acquaintance of the purchasing agent who usually is well posted on many phases of the manufacturing of tomato products, and in that way the packer learns a great many very valuable facts in the handling of his industry. I admire the purchasing agent who is willing to tell the packer his defects, and I also admire the packer who is progressive enough to get all the information out of such individuals as he can, and then apply them to his own industry.

Indiana is a Quality State on tomato products rather than a quantity State. We Hoosiers like to think of our State as a quality State on tomato products rather than a quantity State, for, in fact, when we compare our record of production along with that of Maryland, Delaware or California, and especially that of Maryland, we can hardly imagine that we are to be considered from a quantity standpoint, while I believe in Indiana, in proportion to their production of raw tomatoes, packers do pack more diversified lines and greater quantities in proportion than such States as Maryland or California; but the thing that Hoosiers are proud of is their quality of canned tomatoes. There certainly is some reason why the Indiana tomato commands a better price in all markets than many other tomatoes which are packed by well-known and old-experienced packers, and I think it is because the tomato itself is a little better, and the Indiana packer has worked to make the raw product better, and, for the most part, his efforts have been to make a finished product that would be excelled by none.

We Indiana canners can neither break nor make the market by the goods we produce, because our quantity is not sufficient, and I should think Indiana tomatoes would have an uplifting influence on the market prices on account of the fact that they are almost always quite a little higher than prices named by other States. I find that since records have been kept in 1908 that the good old Hoosier State has produced less than 7 per cent of the canned tomatoes produced in the United States, and the State of Maryland has produced from 25 to 40 per cent annually of all the canned tomatoes produced in the United States.

Indiana, on account of the excellent flavor of her tomato, the good color and the well-balanced proportions of acidity, sugar and salt, is rapidly coming to the front as a pulp-producing State for some of the largest buyers of the country, and I think there is but one thing for the Indiana canners to do to hold this trade, which is a good business for them on account of the shortage of labor, is to get prepared to handle these tomatoes as rapidly as they come in and properly sort and wash them and keep all parts of the machinery in the most sanitary condition possible, and the good buyers will continue to come to Indiana to fill a large part of their requirements. The very things that I am mentioning here we are applying more strenuously this year at all our factories than we ever have. Further, if we have a tomato crop, we expect to grade them so that the grower will know that they have been graded and so that the buyer and the consumer as well will know that he is getting nothing but the cleanest of food, and, of course, above everything else, so that the Hoosier canners can lie down to pleasant dreams rather than lay awake wondering how high the count will be.

A great part of this problem lays with the farmer who produces the raw product, because if he could be compelled to bring you the proper type of raw product, most packers would handle it under such sanitary conditions that it could be nothing less than excellent. Personally I would be much in favor of some system of grading tomatoes whereby the Federal Food and Drugs Department would do the grading with the farmer rather than

molest the goods after they are scattered all over the whole country, and, personally, so far as our company is concerned, we would be willing to pay for this service if it could be done in all of Indiana, or, better still, throughout the country. Every form of inspection of foods has been at the wrong end, and, in my humble opinion, we will never reach the point of perfection that we all desire to reach until we place the inspection where it belongs—on the raw product.

After that, if a packer has a dirty, filthy plant, or does not clean and keep his equipment in sanitary condition, then it is time to work on the packer. The Government does not inspect meat itself for cholera hogs, but they inspect the hogs when they arrive, before the packer has placed his money in them, and so should they handle tomatoes likewise.

I presume the problems that I am here discussing are more easily controlled in States where they raise their tomatoes under irrigation, or where the weather is not so changeable as it is in Indiana, but since the Government does recognize the wisdom of inspection of dairy cattle for tuberculosis, the hog for cholera and many other diseases, the tomato products after being purchased and finished for bacteria, yeasts spores and mold, I am unable to see why it is not time for them to increase the force of inspectors and put their efforts where they properly belong—on the raw product. Very few farmers would think of attempting to sell rotten apples, moldy wheat, corn or oats, yet the same fellow will bring you anything that will hang in a tomato crate, and get very angry at the packer if he refuses to accept same, and really thinks he is acting on his rights to do so.

The National Canners' Association has made some wonderful strides in all departments of its work, and I think if we, as canners, would co-operate with the National Canners' Association more closely and be willing to discuss our views on the matter of the handling of tomato products, and the inspection of same, something could be worked out that would be for the interests of both the packer and consumer. I have never been very heartily in favor of the system of inspection of canned foods heretofore proposed, because it commences at the wrong point; but if it commenced with the producer of the raw product, the troubles from there on would be very easily controlled.

We cannot expect the National Canners' Association officials to get our viewpoint of these matters, and see all things as the canner himself sees them, unless we enter into the discussion of matters with them. It is not right now, and never has been, for the canner to accept damaged, bursted, decayed, under-ripe, over-ripe or otherwise damaged tomatoes from the farmer; but any system of inspection that has ever been introduced leaves the matter legal so far as the grower is concerned, and so long as he thinks there is some possibility of his getting by with it, he will continue. But just as soon as you put some authority back of the matter, the practice will be discontinued. Some say if the grower's load is not good, send him back home with it; others say dock him for the exact amount of bad tomatoes in the load, as determined by an inspection of several crates; but I say both methods are wrong, but possibly all that can be done under the present conditions.

THE CHAIRMAN—I believe we have Mr. Radebaugh here now, and we will have him as our next speaker. As I told you before, Mr. Radebaugh is the county agricultural agent for Cecil county, Md. He has done a great deal of work down there in growing tomato plants, and he is going to tell us now how to do it. (Applause.)

(Mr. Rodebaugh explained his plant bed methods as he did recently at the Tri-State meeting, making, as he said, the same address on this occasion.)

THE CHAIRMAN—I am quite sure that Mr. Radebaugh is doing a great work in Maryland, and we members of the Tri-State Packers' Association feel that he is on the right track in the growing of tomato plants. I think that he has given us some very good data this morning, so that we can all go home and use it to our advantage.

Mr. Hauck just arrived in the city, and you will now ask him to give us his addres on "Raw Stock Standardization." It gives me great pleasure to present Mr. Charles W. Hauck, Investigator in Marketing, U. S. Department of Agriculture, Washington, D. C.

(Mr. Hauck again explained the Government's efforts to formulate standards for raw products bought by the canners. His plan is not different to that explained before the Western Canners' Association last fall, or again before the Tri-State Packers' Convention in December, both of which addresses were reproduced in The Canning Trade.)

THE CHAIRMAN—There is no doubt but what we all buy tomatoes at times under a standard price that are not worth the standard price, and if some method, some means could be devised whereby we could pay for value received, it certainly would be a great benefit, it seems to me, to the canning industry, because some farmers will take advantage on a flat price and put everything in to the canner and expect him to accept it. I am sure we all enjoyed the paper that Mr. Hauck read to us this morning, and I hope we will all be benefited by it.

MR. McKINNEY, California—May I ask, Mr. Chairman, in regard to the proposed standards, whether the purpose eventually is to make them compulsory, or whether they are merely a helpful effort to accomplish progress in those directions where it can be accomplished, a better receiving system?

MR. HAUCK—We have not in mind at all ever making the grades compulsory. We expect to follow the same practice and procedure in the use of grades for cannery products that we have before with the grading of fresh fruits and vegetables. In no case are those compulsory. They are entirely optional with the buyers and the sellers. If a man is buying potatoes in New York, for instance, and wants to buy on the United States standard, he has something definite he can buy on, and knows that he can expect to receive when he specifies United States No. 1 potatoes whether he buys them from Maine or Michigan or any other State. He may, if he likes, buy them just like he used to do 10 years ago, without any definite standard at all. That is his option.

THE ELECTION

MR. ROBERTS—I have asked Mr. Hoffecker to make the report of the Nominating Committee.

MR. HOFFECKER—Your committee were entirely unanimous in their selections, and beg to recommend and report to this convention the name of Elliott O. Grosvenor, of Paoli, Ind., of the Tomato Products Co., for Chairman of the Tomato Section, and Mr. William E. Silver, of Aberdeen, Md., as Secretary of the Tomato Section; and in order to get the matter thoroughly before the Convention, Mr. Chairman, I move the adoption of the report of the Committee.

The motion was duly seconded and carried.

Adjourned.

The Model Kitchen and Dining-Room, at the Canned Foods Exhibit, Buffalo.

PUMPKIN SECTION

Iroquois Room, Hotel Statler, Tuesday January 22 1922

Mr. E. S. Thorne, Geneva, N. Y., Chairman, presiding

THE CHAIRMAN—This Section, I believe, is the youngest of the family, and all I can do is to report that it is healthy and growing. The activities of this Section have not been very numerous during the past year, and the duties of the chairman have not been at all onerous. The Section is interested, of course, in all the general activities of the Association, and they are deeply interested in many of them.

There are one or two definite recommendations that I would like to make. First, that the use of the No. 3 cans be discontinued and No. 2½ cans be used instead. It is not economical to use two sizes so nearly alike, and the No. 3 fills no requirements that I know of that cannot be just as well filled by the 2½.

The Chairman would also recommend that this Section be enlarged to take in other vegetables that do not now have an

entire Section devoted to them, like spinach, asparagus, rhubarb and so forth. Those recommendations can be taken up later.

It is usual, I think, to appoint a nominating committee, and I will appoint as such committee Mr. Cannon, of Delaware; Mr. Hill, of Iowa, and Mr. Mitchell, of Illinois, to report before the close of this meeting. I think it is usual in the Sections to nominate both secretary and chairman.

THE CHAIRMAN—The first on the program this morning we will have the pleasure of listening to Mr. Herrington.

"ESSENTIALS OF A GOOD PUMPKIN PACK"

I BELIEVE there is no product which we pack that I have given more study to and entered upon the packing of with more fear and trembling than I did that of pumpkin. I had seen so much poor-quality-packed pumpkin that I came to the conclusion that most packers did not know how to pack it.

I would then put at the head of the list of essentials first a **good packer.** By that I mean a packer who knows how, and knows quality when he sees it, and one who knows what he is going to do before he does it.

The experimenting of packing certain products covering a period of three or four years has cost canners a considerable amount of money.

The time was when the canning business was in its experimental stage, but that time has long passed. Knowing what we are going to do before we do it is a great deal better than knowing what we have done after we have spoiled a good pack, or made **standards,** when we should have had **fancies.**

I have seen packers get good raw products and then let some "flunkey" at forty cents an hour, who pretended he knew, put up their entire pack of pumpkin, and never cut a can until they were all through. They got what they paid for.

We are prone to do too much by guess, or we let "George" do it, and pay him forty cents an hour.

That is what you call "skilled labor," skilled in the art (?) of making standards or substandards out of what should have been **fancy.**

The experimenting on our products should be done in our laboratories, either our individual ones or the National Canners'.

There is a lot of valuable information in our Washington office, if we ask for it, but ask for it before we are ready to use it.

I would put second on my list of essentials a good enamel-lined can.

We all know, or should know, that there is something in the composition of pumpkin which makes it very severe in its action on the ordinary tin container.

Just what constituent is responsible for this action cannot be stated, but all pumpkin with a varying degree of rapidity removes the tin coating almost completely.

This matter was the subject of very exhaustive study by a technical committee representing the National Canners' Association, American Sheet and Tin Plate Company and the American Can Company as far back as 1915.

They packed pumpkin grown in several States in cans made from plate with a wide range of coating, and in all cases the result was the same—the tin was removed from the inside of the can and became a part of the contents.

While salts of tin are not toxic, yet the absorption of tin by canned pumpkin is extremely important in its effect on the appearance of a can and contents. Since the detining process cannot be prevented by a heavier coating of tin, it is imperative where the pumpkin is to be **fancy.**

The third essential, therefore, would be a **good raw product.** In this there will naturally be a variance of opinion as to the best variety of pumpkin to use. I am not prepared to say what variety is the best.

There are so many good varieties that what I might think is the best would, in another packer's opinion, not be the best. My experience has been that the blending of two or more varieties is better than the using of one variety.

Also avoid the using of partially green or immature pumpkins which the farmer will always bring in unless carefully checked up, and which your employeees will use unless carefully watched.

THE CHAIRMAN—We will next have the pleasure of listening to Dr. W. D. Bigelow. (Dr. Bigelow's address on "Pumpkin" will be published later.)

MR. CANNON—Have you found that the higher temperatures that you suggest here have a tendency to eliminate any possibility of flat sours?

DR. BIGELOW—Yes, although with pumpkin, as with corn, though to a less extent, it is of vital importance that the product be absolutely cold before it is stocked solid in the warehouse. Now, with the large cans especially it is hardly practicable to make sure of that in your cooling bath. It is best to leave space in your warehouse or put them, as you do, I think, in rows until they cool, or narrow stacks, and then put them in the warehouse, necessitating a second handling. But I say the higher temperatures are a safeguard against flat sours.

MR. MITCHELL—One question that was mentioned, and that is on the enameling of the cans.

DR. BIGELOW—There are several enamels used. I really think in using these high temperatures and long cooks every packer should cook a small, experimental pack first and see what he is doing to his enamel; see if the enamel does impart a glaze. It is certainly a severe test on the enamel to give any such cook as this. We know that it would make corn inedible.

THE CHAIRMAN—We will now have the pleasure of hearing from Mr. C. G. Woodbury.

(Published in The Canning Trade ot Feb'y 11, 1924)

THE CHAIRMAN—I hoped we could have a little discussion of the recommendations made by the Chair. For the benefit of those who did not come in until later, I will say the first was that the 2½ can be used instead of the No. 3, and the second, that it be recommended that this Section include some of the other minor vegetables. I should like now to add a third, that the use of the enamel lined can be recommended.

MR. CANNON—May I ask, in the adoption of the No. 2½ can being recommended for other articles where No. 3 can has been generally used?

THE CHAIRMAN—In New York State, at the recent meeting of the State Association, they passed a resolution recommending the adoption of the 2½ can for all purposes for which the No. 3 can is now used in New York State. That would be pumpkin, squash, tomatoes, beets, rhubard and sauerkraut. Of course, they do not expect it is going to be done all at once, but I think a good many of the canners in New York State are not going to quote the No. 3 this year. I know several of them are not.

MR. DICKINSON—We have found in our own home, and I have heard other housekeepers make the same statement, that the No. 2½ can holds just enough for two large, fat pies, just the kind we like. The No. 3 will make two good pies and some over, but not enough for three good big ones, and inasmuch as it is going to help the consumption of our product if we get the very finest result as it goes on the consumers' table, I think we ought to push the 2½ can that will make two big, fat pies.

I move that this section recommend to the trade that in the future we use the No. 2½ can in preference to the No. 3.

The motion was seconded and carried.

MR. MITCHELL—I move that the resolution as to the use of enamel-lined cans be adopted by this section.

The motion was carried.

THE CHAIRMAN—We will have the report of the Nominating Committee, Mr. Cannon, Chairman.

THE ELECTION

MR. CANNON—Your Nominating Committee wishes to recommend the following names for election: For chairman we nominate Mr. Merritt Green, of Marshalltown Canning Co., and for secretary Mr. Benjamin A. Nott, of the firm of W. R. Roach & Co., of Grand Rapids. These are the only two nominations that are required to be made.

Motion seconded and carried, whereupon the meeting adjourned.

BEANS SECTION

Chinese Room, Hotel Statler, Tuesday January 22 1924

Evan Reicheldorfer, Chillicothe, Chairman, Wax and Green Bean Section.

Steuart Hemingway, Syracuse, N. Y., Secretary.

Merritt Greene, Jr., Marshalltown, Iowa, Chairman, Baked Bean Section.

Evan Reicheldorfer, Chillicothe, Ohio, Secretary.

CHAIRMAN REICHELDORFER—The first address on the program is on the subject of "The Growing of String Beans," by Mr. C. H. Sears, of Chillicothe.

The Growing of String Beans

By C. H. Sears
Sears & Nicholls Canning Co., Chilliothe, Ohio.

IT is often said that the canning industry is based primarily upon agriculture. This is, no doubt, an acceptable proposition, but it would perhaps be more nearly the truth to say that agriculture is a fundamental part of the canning industry. The canner, therefore, should thoroughly familiarize himself with the agricultural requirements for any given crop, and even the technique of culture, harvesting, etc.

The growing of string beans has become an ever greater and greater problem for the canner because of the lack of help in the rural communities and the dislike of what help is available to bend their backs in harvesting the beans. Whatever acreage is secured, however, should be made to yield the maximum tonnage in which the following suggestions may be of some value:

There is an impression in some quarters that string beans will grow almost anywhere, and even where other crops will not grow. This is a mistake. String beans need just as careful attention to the selection of soil, plant food and culture as any other crop. The string bean is a legume, and with proper inoculation will require but little nitrogen, although there must be plant growth sufficient to carry a maximum crop. The demand for potash seems to be light for this crop, but it must have an abundance of phosphate. The element of phosphate is what determines the number of blooms, the number of pods and the number of seed units in the pods. Therefore, it largely determines the length of the pods. In the Middle West practically all the land is deficient in this element, but usually well supplied with potash. Many growers make a mistake in supplying the bean crop with too much nitrogen, causing too much vine, so much so that the producing blooms are shaded to the detriment of the crop. As in all other crops, the one food element which is shorest will limit the crop to that tlement.

Many growers depend upon manure, thinking it the perfect and ideal kind of plant food. This is very, very far from the truth, especially for string beans. Ordinarily manure will analyze about 10-2-8, and I submit that 2 per cent of phosphate is not enough to grow anything, let alone string beans. You must, therefore, balance up your manure with phosphorus and, perhaps, some potash, so that the plant food in the soil will stand more nearly 2-10-8 or 2-16-8, instead of the manure analysis of 10-2-8.

Beans should be planted in rows wide enough apart so that cultivation can be done easily and effectively. I do not recommend regular drilling in the row as the best method of planting. If possible, put about two beans in a hill and place the hills from 8 to 12 inches apart. This permits the light and air to surround the beans and the entire crop is more easily secured by the pickers.

An excellent method to follow to conserve the moisture in the soil and to encourage the plants to take on additional supplies of plant food is to stir the surface of the ground frequently during the picking season. In fact, a shallow cultivation right after each picking will keep the vines fresh and keep them bearing.

Just a word about harvesting. Under present conditions, beans must be grown where they can be harvested promptly and at the proper time. This is accomplished in two ways: first, by having the crop grown in small, isolated tracts where a small supply of help will handle but a small patch of beans. The beans in these isolated areas are usually assembled at a given point, sometimes strung at the same point and then trucked to the canning factory. The other plan is where the canner grows a more or less large acreage of beans himself, where large aggregations of pickers are available. In whatever manner the crop is handled it should be picked thoroughly and picked often; that is, the crop should be picked while the beans are small, as under this method the vines will bear much longer. If the first setting of beans is allowed to go to seed or to grow to large sizes, the vines will become exhausted and cease to bear.

The packing of string beans, however, is becoming more and more uncertain as to supply of raw material, due to the inability of canners to get the crop grown and picked. As long as we must depend upon hand-picking for this crop the consuming public must expect to receive a constantly diminishing supply of this excellent vegetable.

A MEMBER—How far would you plant the rows from each other?

MR. SEARS—About thirty inches.

A MEMBER—Can you give us some further information concerning inoculation of the bean?

MR. SEARS—I have never practiced inoculation on string beans.

A MEMBER—I would like to ask, could you give me any information as to yield per acre? What are your extremes, either way?

MR. SEARS—Well, I believe we generally consider about 1,500 to 1,600 pounds to the acre is a fair average crop of beans, but the differences in yield of string beans are so wide, depending with us on the wide diversity of soils which we use, and the different kind of people who handle them, that they run from nothing up to three thousand pounds to the acre. Our grand average at one plant this year was only 772 pounds. We had a very light crop. At another factory the yield was 1,437. Those were light yields. For this year they will run ordinarily 1,500 to 1,600 pounds, but I do not think it is a record crop. A few of our good growers this year must have gotten around 3,500 to 4,000 pounds to the acre, which, in the average price of around three or three and a half cents, would run into about this figure. Three to four thousand pounds is not uncommon for a very good crop of beans.

A MEMBER—What kind of soil do you find most satisfactory?

MR. SEARS—We find the clay soil is more satisfactory, because you do not overgrow the vines and they have not the nitrogen to grow them.

A MEMBER—How about sand with plent of phosphate?

MR. SEARS—That is all right. At our Michigan factory it is all sand.

A MEMBER—They cannot stand any wet feet, though, can they?

MR. SEARS—No. They should be well drained.

A MEMBER—I should like to ask if any of you have had any trouble with nematode disease?

MR. SEARS—No. We don't seem to have that disease. I am not familiar with the disease you name.

THE MEMBER—I would like to ask the gentleman how much seed he uses per acre?

MR. SEARS—We figure on half a bushel to the acre. About 28 to 35 inch rows would give us about half a bushel of seed to the acre.

THE MEMBER—You can grow a lot more if you just double that.

A MEMBER—In the picking of beans, is it necessary to stay out of the fields until the dew is off in the morning?

MR. SEARS—Mr. Greene asks the question whether it is necessary to stay out of the fields in the morning when the dew is on. There is a little tradition to that effect, that handling beans when they are wet is bad. I do not think our people pay any attention to it. They are probably more concerned about getting their clothes wet than hunting the beans.

CHAIRMAN REICHELDORFER—The next address is by Mr. L. J. LeMay, of Rochester, N. Y., on the subject of "String Beans from the Buyers' Viewpoint."

These meetings heretofore have discussed the growing and packing and even matters relating to accounting on string bean plants, but as far as I know we have never really had the buyer's viewpoint on string beans. I am sure that Mr. L. J. LeMay is eminently qualified to give us information along that line, and, personally, I look forward with a great deal of pleasure to hearing from him on this subject.

THE BUYER'S VIEWPOINT OF STRING BEANS

The first consideration of the buyer, I think, has always been quality. The question of quality covers a good many things from the buyer's standpoint, and also from the seller's standpoint.

The quality I believe is what, when we approach a buyer, or the buyer approaches us, he wants to be assured of. And the buyer's judgment of quality is based on uniform grading, uniform color, freedom from stems and blow ends, whether the beans are stringless or not, the flavor and the fill of the can.

And another very important item is: Has the seller followed out the grading in packing his beans as laid down by the National Association?

All those points are the points that the buyer considers; and he wants to be sure in selecting the lot of beans that he is selecting for his use that they will pass according to his standards.

The critical buyer demands that the grading be true. In other words, he wants No. 1 sieve beans to be true No. 1 sieve, not mixed with No. 2s, not mixed with 3s or 4s or anything else; but they must be No. 1s; likewise, No. 2s must be 2s, and it is up to the packer to see that his grading is absolutely true and uniform all the way through the cans.

Another thing that buyers have mentioned to me, and that probably they have mentioned to many of you gentlemen, is: a lack of uniformity as to the size for grading. In other words, some grading machines for No. 1s are 12/64ths and some slightly larger than that. Some for No. 2s run 14/64ths, some run 14½, and a little better larger. Some No. 3s run 17/64ths, and some run 18 and over 64ths, resulting in the fact that many buyers, on account of the lack of uniformity of grading, unless they are thoroughly acquainted with the product of certain factories by handling them in the past, hesitate about buying them.

From the buyer's standpoint, he demands and is entitled to uniformity of sizes of grading by all packers of beans.

I am not prepared to say that 14/64ths should be the size used for No. 2 sieve, or 17/64ths or 18/64ths for No. 3 sieve, but I do think that the grading of No. 1s, No. 2s and No. 3s should be uniform with different packers, so that we can go out to the buyers and assure the buyer that our No. 2s are all No. 2s, that all 3s are run through the same graders, and are all practically graded about the same size.

Another very important item from the standpoint of the buyer is deliveries on future contracts. The average buyer issues an order for what he thinks his requirements for the season will be. He knows as well as we all do that the canner has no control whatever over weather conditions; cannot assure him that his deliveries are going to be 100 per cent. So that, in a measure, he, with the seller, is taking a crop risk.

The buyer, however, is not satisfied to take a risk beyond the crop risk. He is not satisfied for the packer to sell more than what that packer could expect to secure from a reasonable crop return, and it is very hard to convince a buyer sometimes that your sales have been limited. But if you could assure the buyer—and he has a right to know just what your requirements are for delivery—what arrangements have been made for packing—and you can assure him you have not sold beyond what is a reasonable yield from that acreage—you have gained the confidence of the buyer, and you have satisfied him.

A buyer in accepting short delivery and accepting your explanation feels when he does so that his troubles have not ended. your troubles practically have ended, because you have satisfied one man. He, in turn, has got probably a hundred people to satisfy to your one.

I have found from the standpoint of price that the buyer is practically always willing to pay what is considered a fair price for his product. We occasionally have some buyers who, no matter what you give them, are looking for some concessions in price, and they are always willing to accept concessions in price is readily granted; but as a general proposition the buyer is willing to pay a fair price for his goods, provided he gets the quality he is looking for.

There is another very important item on the beans that the buyer is looking for, and I believe that if it is given proper consideration by everybody the consumption of beans will be increased very materially, and that is, packing of beans that are free from strings—packing a stringless variety of beans.

The buyers today, not in a great many cases, are passing up No. 4 sieve and No. 5 sieve of refugee beans because the majority of them, in fact, have strings on them almost as heavy as cotton twine, and the consumers are passing up that quality of beans, and the buyers, in turn, of course, are passing them up, also. I think that if the stringless variety is presented to the buyer we will find as ready and as big a sale for what I consider the low grade—No. 4 and 5 sieve—as we have today for No. 2 and No. 3 sieve beans.

CHAIRMAN REICHELDORFER—I am going to turn the meeting over now to Mr. Merritt Greene, the Chairman of the Baked Bean Section.

(Mr. Greene here took the chair.)

BAKED BEAN SECTION

CHAIRMAN GREENE—First, we will listen to an address on the question of "Are Baked Beans Profitable to Pack?"

(This was published in The Canning Trade of February 4th.)

CHAIRMAN GREENE—Mr. Stickle has very kindly consented to talk to us on the subject of "Supplying Dry Beans for Canners."

SUPPLYING DRY BEANS FOR CANNERS

By B. A. Stickle

Some thirty-odd years ago Michigan beans were handled by individuals and their individual effort; there was no uniformity of grade; there was no means of arbitration; no way of settling disputes; no uniformity of terms. Every man had his individual way of doing business. The jobbers at that time recognized the need of establishing uniformity of grades, costs and terms, so they organized the Michigan Bean Jobbers' Association.

In Machinery Hall, Booth of the 20th Century Machinery Co.

We are not perfect by a long ways. We have a lot of enemies, and still we have a lot of friends. I think the baked bean packers as a whole are friendly toward the Michigan Bean Jobbers' Association. Any of you who have had arbitrations before the Association, I believe, have had a square deal. Te majority of rejections, questions of quality of Michigan beans that are referred to our inspector or to our Arbitration Committee are decided in favor of the buyer, which goes to show that we are impartial, but it also goes to show that the buyers as a whole are fair and that they do not want to reject unless there is a just cause for doing so. That, of course, is a generalization; it is not always true.

We have had some objections to our grades from the canners, principally in the matter of quality. The canners would like to see a better grade bean; they would like to see a bean that they would have to put no work on in their own establishment whatsoever. The wholesale grocer would like trade discounts. And the brokers would like more brokerage.

But we are getting along pretty well in the distribution of beans, with very little trouble.

During this development in the handling of beans in Michigan there have been no noteworthy changes except during recent years. A number of farmers' co-operative organizations have been established. I attended a meeting of growers at Owosso last Friday. There were 200 or 250 growers present. And it was admitted by the Chairman, also the Editor of the Michigan Grains paper, ad two or three other prominent farmers, that the co-operative organizations in Michigan and their selling agency had not done what they anticipated they would do.

I do not think that is a criticism of the selling organization; I just think the farmers thought that the middleman—and in this particular instance the bean buyer—was a crook; he was robbing them; but he has gotten into the bean business now, and they are friends.

Now, they are looking out for some other way of revolutionizing things, stabilizing the market and getting, on the whole, higher prices for their goods.

At this meeting Mr. Churchill—I don't know whether he is in the room at this time—talked and explained very clearly the way in which the California lima bean growers operate. Some of the growers in Michigan thought possibly that the same scheme could be worked out in Michigan. But they overlooked the great difference in the way beans are handled in Michigan as compared with California. In California when beans are harvested they are all hauled to public warehouses. There they are cleaned and piled for the account of the farmers, unless, of course, they are turned over to the Association; then they immdiately become Association property.

In Michigan we have about forty to fifty thousand bean growers. I imagine that the average acreage would be about ten acres to the grower. We have little lots of beans scattered all over the State, principally in the central part, which are delivered to local elevators. These elevators are equipped, most of them, with hand-picking machinery, where girls are employed to pick out faulty beans. It would be quite a job to organize forty or fifty growers scattered over thirty or forty counties. So, I do not believe an organization similar to the lima bean growers would ever develop or could prove profitable in Michigan.

The Lima Bean Growers' Association, as I understand it, handles about 50 per cent of the lima crop of California. But the lima crop is concentric; there is no competition in the United States except on Madagascar limas; wherever it may be growing over a wide territory, it would still have competition with New York State and in a small way with Montana, Idaho and California and Colorado; it would be mighty difficult to get enough of the crop under control so that you could stabilize the market.

And when they talk about stabilizing the market, I sometimes wonder if the grower does not have in mind never seeing a decline, but always seeing an advance. There is considerable fluctuation in the lima market, and it is pretty hard to keep track of. We cannot keep track of it ourselves.

I really believe, gentlemen, that we have much in common. You are interested in quality, sufficient quantity and fair prices. Certainly we can put a fair-priced can on the shelves so that the consumers will use it and give us a volume of business.

CHAIRMAN GREENE—Is Mr. Harrison in the room? Wm. H. Harrison was going to talk to us on the subject of "Processing of Beans."

(Mr. Harrison did not respond.)

CHAIRMAN GREENE—Before we call on the Committee on Nominations, I have just a few brief remarks in connection in a general way with not only the bean business, but business in canning.

The year 1923 has passed into history, and it will be remembered by those engaged in general business as o fairly satisfactory one. There was an extraordinary activity early in the spring, followed by a recision and readjustment. For the last half of the year there has been a considerable volume of production in many lines, though buying has been conservative. One advantage of conservative buying is the avoidance of duplication in orders.

In a general way, the prosperity of the canners, as well as other business men in the country, is dependent to a great extent on our agricultural prosperity. If the farmer is in a position to buy and has the money to spend, it means that we have the opportunity to be prosperous, also.

For the farmer there was rather a steady improvement in purchasing power up to October. Even at that date the exchange value of Michigan farm products was but 71 per cent of the 1923 price. In November prices broke badly, and by November 15th hog prices fell to the lowest level since December, 1921, while beef cattle were lower than in any month since February of this year. The December 1st price of corn was the lowest since last April.

I simply bring out these figures, not from a pessimistic standpoint, because I believe if anyone needs to be optimistic, it is a canner.

Of most vital interest to all is the outlook for 1924. Nearly everyone is optimistic about the first half of the year. Possibly some of these make the wish father to the thought. It is expected, however, that there will be many residences built in cities. It hardly seems reasonable to suppose that the production of motor cars can equal that of last year. For the nation, as a whole, there should be an improvement in the purchasing power of the farmer. The uneven trading ratio of the farmer may be expected to result in a steady, though slow, improvement in prices of his products.

Should industry continue active, domestic demand will doubtless hold as well. There seems to be little hope of increasing exports to Europe, and this is one of the things that, to my mind, has caused the present situation of the farmers, to some extent.

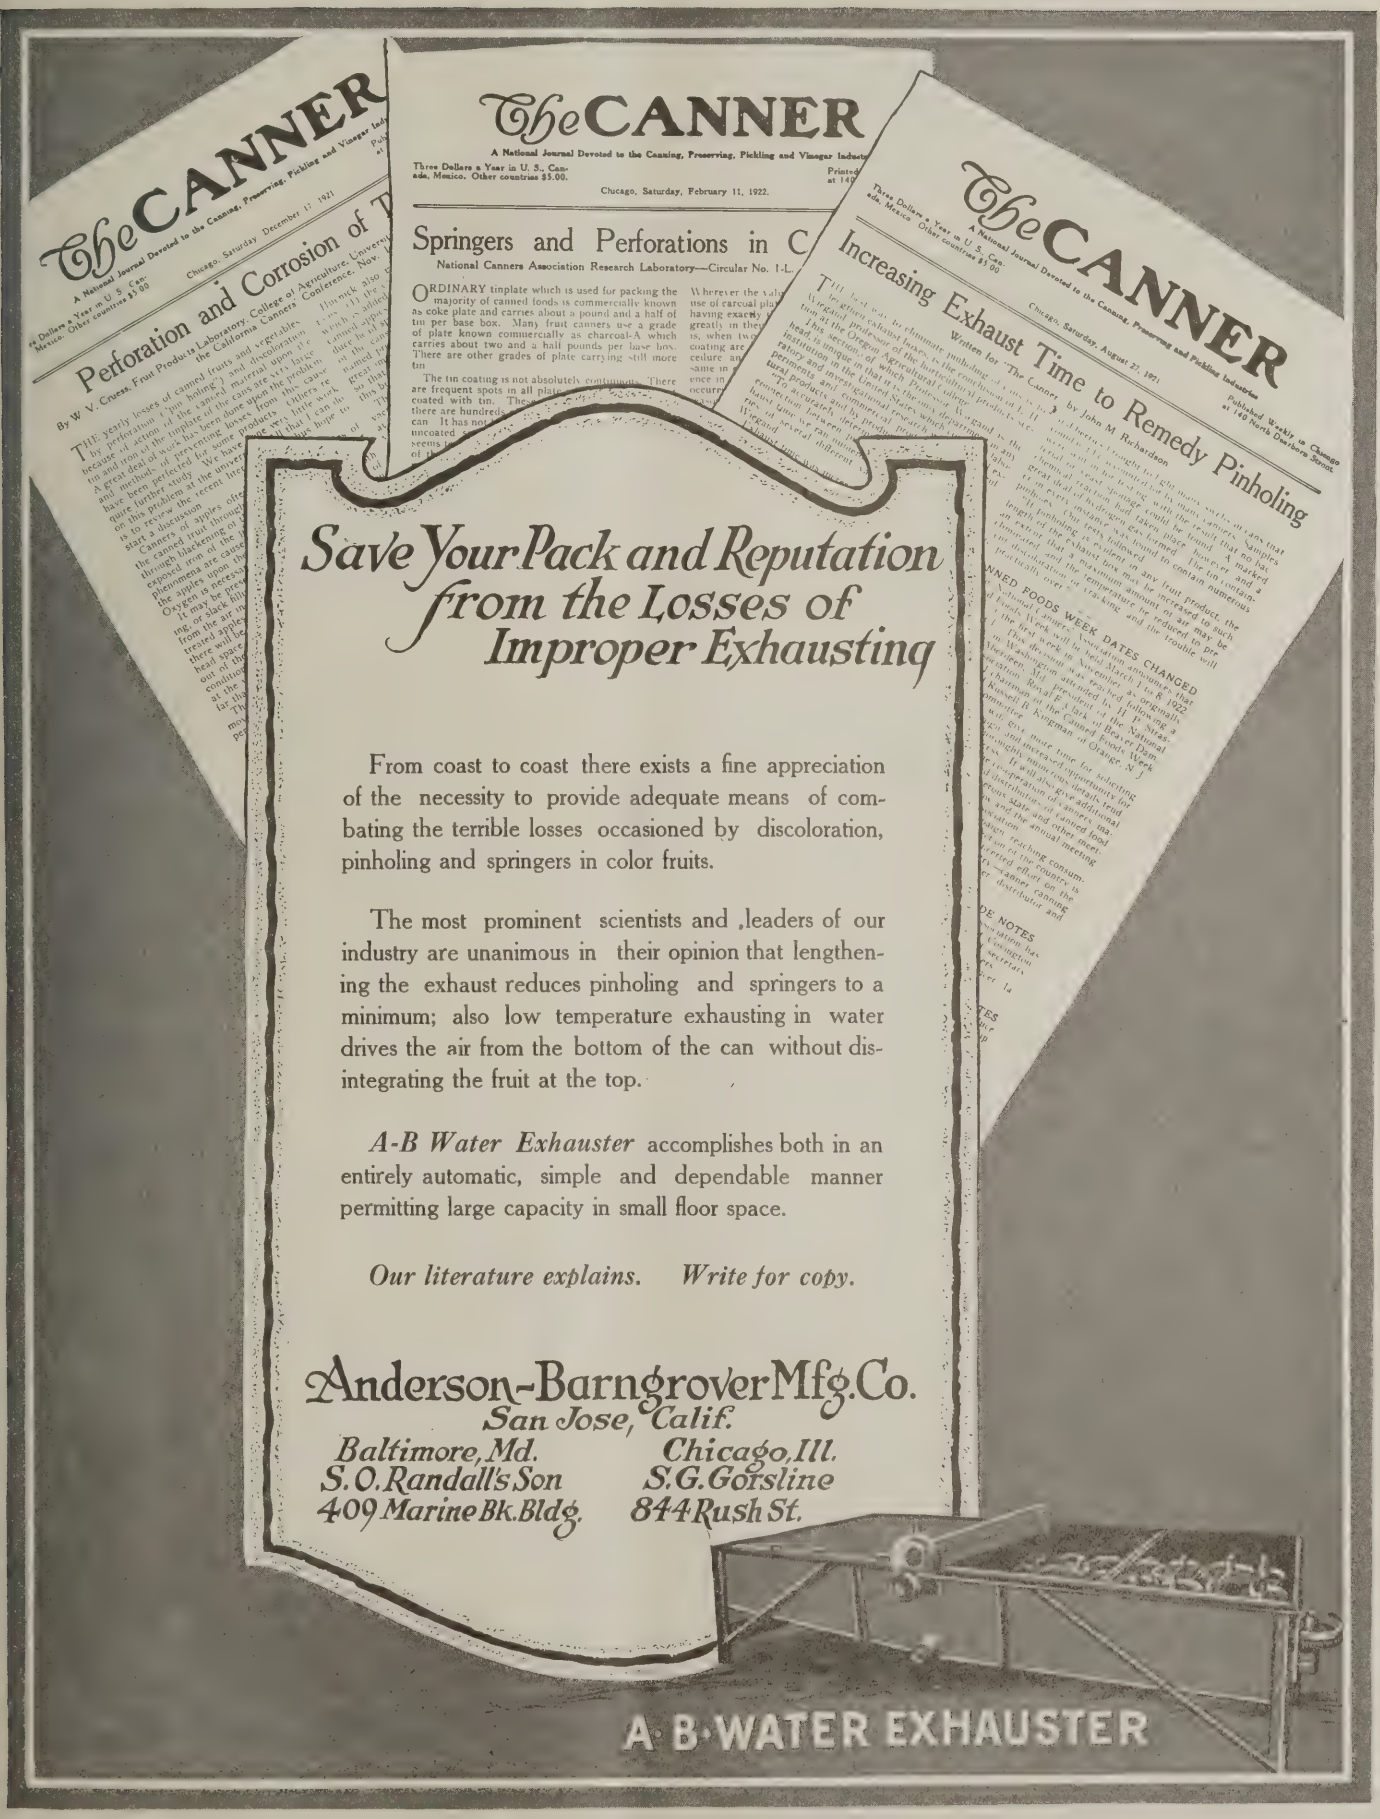
The exports of corn, wheat, oats, barley, rye and beef have dropped off tremendously in 1923 as compared to 1922. As an example, export corn was 159,000,000 in round numbers in 1922; this year only 40,000,000 bushels; wheat, 216,000,000 bushels in 1922, as against 159,000,000 bushels this year. And about the same ratio in the other products of the farm, with the exception of pork products, in which there has been a slight increase—a billion three hundred and forty million pounds for the first eleven months, a billion three hundred and forty million pounds of pork in 1922, as against a billion eight hundred million in 1923.

Should industry continue active, demand will doubtless hold up well. In Europe, our chief outlet, crops are good, and this means a minimum of imports of grain. Exports of pork products are already exceedingly large.

One of the Windows in Buffalo, A Clothing Store.

Some figures gotten from the Department of Agriculture show that while in November the price that the farmer was getting for field corn—and I simply take this one commodity and it does not apply to others—the price last November was 111 per cent of the price he got for the same commodity in 1913. At the present time when a farmer goes to purchase commodities, the average cost of the commodities that he can buy for the same amount of corn, the same bushels, or tonnage, whatever you wish to call it, he can buy only 72 per cent. That is, in other words, with an increase of eleven per cent in the price for his corn, he gets 28 per cent less in his purchasing power.

I simply wanted to bring those points out for your information.



Is the Committee on Nominations ready to report?

THE ELECTION

MR. J. D. FULLER (Chairman Nominating Committee)—The Nominating Committee nominates for Chairman of the Baked Bean Section Mr. Evan Reicheldorfer, and Secretary of the Baked Bean Section, Mr. Dan Gerber, Fremont, Mich.; Chairman of the Wax and Green Bean Section, Mr. Sorenson, of Gillette, Wis., and Secretary of the Wax and Green Bean Section, Mr. Robert Thorne, of Geneva Preserving Co., Geneva, N. Y.

CHAIRMAN GREENE—Is there a second to the nominations as read? Motion seconded and carried.

The meeting then adjourned.

Increasing Exhaust Time to Remedy Pinholing
Written for The Canner, by John M. Richardson
Save Your Pack and Reputation
from the Losses of
Improper Exhausting
From coast to coast there exists a fine appreciation of the necessity to provide adequate means of combating the terrible losses occasioned by discoloration, pinholing and springers in color fruits.
The most prominent scientists and leaders of our industry are unanimous in their opinion that lengthening the exhaust reduces pinholing and springers to a minimum; also low temperature exhausting in water drives the air from the bottom of the can without disintegrating the fruit at the top.
A-B Water Exhauster accomplishes both in an entirely automatic, simple and dependable manner permitting large capacity in small floor space.

PEA SECTION

Ball Room, Hotel Statler, Wednesday January 23 1924

Wednesday morning, January 23rd, 1924, 10.00 o'clock A. M.
Charles H. Hunt, Oswego, N. Y., Chairman, presiding.
Fred A. Stare, Columbus, Wis., Secretary.

CHAIRMAN HUNT—I will announce on the Resolutions Committee Mr. Henry Burden, Mr. J. D. Fuller, New York, and Mr. E. D. Cosgrove, Minnesota.

(Chairman Hunt then briefly renewed the activities of the section since the Atlantic City Convention, all of which were reported in these columns at the time.

Mr. J. E. Dudley, Jr., of Madison, Wis., who has given great study to pea aphis, has kindly consented to come here and give us a talk on the work which his department has done, and they certainly have done some wonderful work.

THE pea aphis is a constant crop hazard, and may increase to injurious numbers at any time during the growing period of the crop. The only natural limitations of its spread and increase are latitude, weather conditions and natural enemies. It is likely to prove most destructive in years when peas are hardest hit by adverse weather conditions, because these conditions are, as a rule, more favorable for the development of the aphis. In other words, the aphis is likely to do its greatest damage in years when the pea crop is smallest, and vice versa. This means much to the grower and canner.

In presenting this subject of pea aphis control I shall try to make it sufficiently popular to deserve your interest and yet give enough definite facts so that you may see what has actually been accomplished and what still remains to be tackled.

I believe this subject might well be taken up in three divisions. 1. What investigations the pea aphis problem includes; 2. What has been done toward solving the problem, and, 3, what remains to be done.

First, as to what the project includes. If you will pardon me for repeating some of the statements made at your last convention at Atlantic City, I think perhaps I shall be justified in restating the basis on which scientific work is performed. As has been said many times, science is responsible for seeking after and presenting the absolute and unqualified truth. This must be the first and fundamental consideration. When considering all phases of the pea aphis project, one is soon struck by the tremendous number of angles which present themselves as having the potential ability to effect in some way the prevalence of pea lice and their control through activities of man. We are faced rst with the biolfiogy of the insect and that of all its natural enemies; also with its reaction to climatic factors. We are dealing with an insect occurring under natural conditions and affected by the interaction of these natural conditions upon each other, and thence on the insect itself. It is not only desirable, but quite essential, that a thorough study should be made of the biology and behavior of the insect and its enemies and the effect of climatic conditions upon it, and again upon its enemies. Not only will data accumulated from these studies offer help in the control measures, but it is entirely possible for an insect of this kind to determine the effective relation of the natural factors to its control and benefit thereby without resorting to the use of insecticides or other artificial means of control. These factors which have been just mentioned alone entail an immense amount of work, and there is practically no limit to the extent to which such studies could be carried on did time and funds permit. Another great division is the effect on this insect of practices developed by man himself, and herein lies control proper. Artificial control is the first method to which we naturally look when facing an outbreak of some new or little known insect, and it is natural that it should be so, because it requires far less time and study to control insects directly than it does to work out their control by nature. The control of certain insects, such as the Colorado potato beetle, the potato leaf hopper, cabbage worms and some insects infecting foliage fo trees is a comparatively simple and exact process. With other insects, however, including some of the most injurious with which we have to deal. such as the Hessian fly, many scale insects of trees and certain plant lice, control is a complicated, variable proposition and often combines both artificial and natural methods of several kinds.

The aphids in general are rather difficult to control effectively by simple direct measures. They are not regular in their appearance or abundance from year to year. or even from month to month. The pea aphis in particular increases at an alarming rate in from ten days to two weeks during June, and this increase is so rapid that it is doubtful if any economical method of control could kill them off as fast as they are born. Therefore, to exhaust all the possibilities of holding it in check, we must delve into every factor which in any way deters its multiplication. In other words, the pea aphis problem, like mapping out the highways in a heavily congested district, you start out on one main road, soon find it branches, each branches several times, and so on; and yet before the work is completed, every one of these branches must be investigated to see just where it leads. It is quite probable that when the pea aphis problem has been completed a large amount of the data assembled will be figuratively thrown away, not actually so, for it will always be kept in files for the benefit of other workers tackling similar problems, but to al intents and purposes it will have served merely as stepping stones on which we have mounted to success, and will be of no further value in the control of this insect. A small amount of information will suffice for us to control the aphis, and still the tremendous volume was necessary in order to examine all possibilities and eliminate those which did not prove up.

Second, it will certainly be of interest to discuss what has been done. As it was impossible this past season to work on all phases of the project at one time, it was deemed advisable to concentrate for one season at least on control measures, paying what attention we could to some of the biological factors. This was done because we wished to establish at least one definite fact which would be of some benefit in alleviating the damage caused by the pea aphis. During May and early June, before it was possible to test definite control measures in the field, considerable time was spent in studying what we call life history and behavior of the insect, its rate of increase in the spring, its host plants, its parasites and predacious enemies, its habits of flight, etc. About the middle of June intensive tests with nicotine and calcium cyanide dusts were made in the field. At the same time this work was being done in Wisconsin, cooperating entomologists were also spending sometime on this national project in New Jersey, Maryland, Kansas and California. I may safely and truly say at this stage of the game that it is the consensus of opinion that nicotine dusts will give effective control of the aphis under favorable conditions of temperature, humidity and wind velocity, and also that effective control, i. e., a kill of 85 percentage or more, will not result under unfavorable weather conditions. Tests with cyanide dusts have not been continued long enough for me to speak definitely as to the results to be expected under various conditions, but in certain tests a high percentage of control has been secured under a greater latitude of weather conditions than with any other dust. These experiments with calcium cyanide dust will be pushed next season.

It seems probable that control by means of spraying will not compete with dusting in broadcast peas. This is because the percentage of control is not quite equal to that secured with the best dusts, and because of the time consumed in application, and injury to vines resulting from the use of sprayers.

You are aware that these are very general statements, and from one year's results it is necessary that they be such, for I hesitate to say definitely that a certain percentage of nicotine in a dust can be relied upon to give a certani percentage of control without so qualifying the statement to include various weather conditions, sections of the country, means of application and thoroughness of application that the original statement would

be nullified. We may seem very slow in reaching definite recommendations, but once they are given the canners we do not expect to have to take any of them back. I might say, however, that ni Maryland ,where row peas are largely grown, results with dust containing 2 per centage free nicotine was very satisfactory. The applications were made with power or traction dusters, using effective trailers and hoods to confine and distribute the dust among the foliage, the temperature was relatively high, and the work was done most thoroughly. In California many tests with nicotine dusts applied by means of a power duster and long canvas trailer gave a high percentage of kill. In Wisconsin certain tests with nicotine dusts gave satisfactory percentages of killings, while in other tests under different weather conditions results were not satisfactory. With calcium cyanide dusts used largely in Wisconsin, the percntage of cyanide which will prove most effective and economical without injury to the foliage has not been definitely established, but future work appears to be most promising of good results.

Much time and effort was spent in Wisconsin developing booms, trailers and other mechanical devices to attach to dusters, as well as mechanical devices to control the aphis. In the course of this work a boom 24 feet lnog in thre movable sections was devised. To distribute the dust 144 holes, graduated in size, were bored in the bottom of this boom. A second type of boom 16 feet long was devised and tested. It is triangular in shape and the bottom angle is a continuous slit, its width adjusted by thumb screws. In one experiment a very even distribution of dust resulted, and by another year it is hoped that much more may be said of this boom. Several types of trailers and drags were developed to better knock the aphides off the vines and confine and distribute the dust at it leaves the boom. It was most evident that by the use of a trailer a noticeably higher percentage of aphides was killed, but it is realized that unwieldy and liable to get out of order, and I rather doubt if it all this extra paraphernalia attached to a duster makes it more will be found practicable to recommend the use of these devices to the average grower.

In view of the rather discouraging results with dusts and sprays, an attempt was made to devise a machine which would collect the aphides as it was driven through the field. After much experimenting, a machine called an aphidozer was constructed which was found to operate very effectively in collecting the aphides from the vines. After various changes had been made in the machine, particularly in the speed of the paddle wheel, a catch of 86 percentage was made, determined from careful counts of the aphides present before and after sweping. From various other collections we were able to arrive at comparative figures of the individuals present in an acre of peas, and I imagine some figures may prove interesting to you, if not alarming. From June 29 to July 6 a total of 28 pounds 5 ounces of aphides was collected from about 5¼ acres of peas. Careful count showed that it took 26,000 aphides to weigh one ounce. This gives an approximate of 12,049,800 individuals caught from the 5½ acres, and if this was about 82 percentage of the number in the field, the total present would be nearly 15,000,000, or roughly 3,000,000 per acre, what we might call a buggy field. At the time peas were swept there was no apparent injury to the vines, blossoms or pods as inspected both by officials of the canning company and members of the station force. It appeared from subsequent observations, however, that the blossoms sustained some injury from the rapidly revolving paddles, and that the yield suffered thereby. It is confidently expected that this difficulty may be surmounted by sweeping peas before they are in blossom, by reducing the speed of the paddle wheel, by using brushes or other material to tip the paddle, or by a combination of these methods. This aphidozer is still in the experimental stage. I can say that as a mechanical collector it did about all that insecticides would do under Wisconsin conditions, but the possible injurious effect upon the peas is still to be worked out. Should this machine prove it to be efficient, it has several marked advantages over other artificial means of control. It would be what we constantly have in mind when searching for control of injurious insects—fairly cheap both in its original cost and in its operation and upkeep. It could be used in nearly all weather except during rain, and perhaps more important still, the thousands of predators caught with the aphides could be liberated into the pea fields again to clean up aphides which the machine had left. In fact, a method to accomplish this liberation has already been worked out.

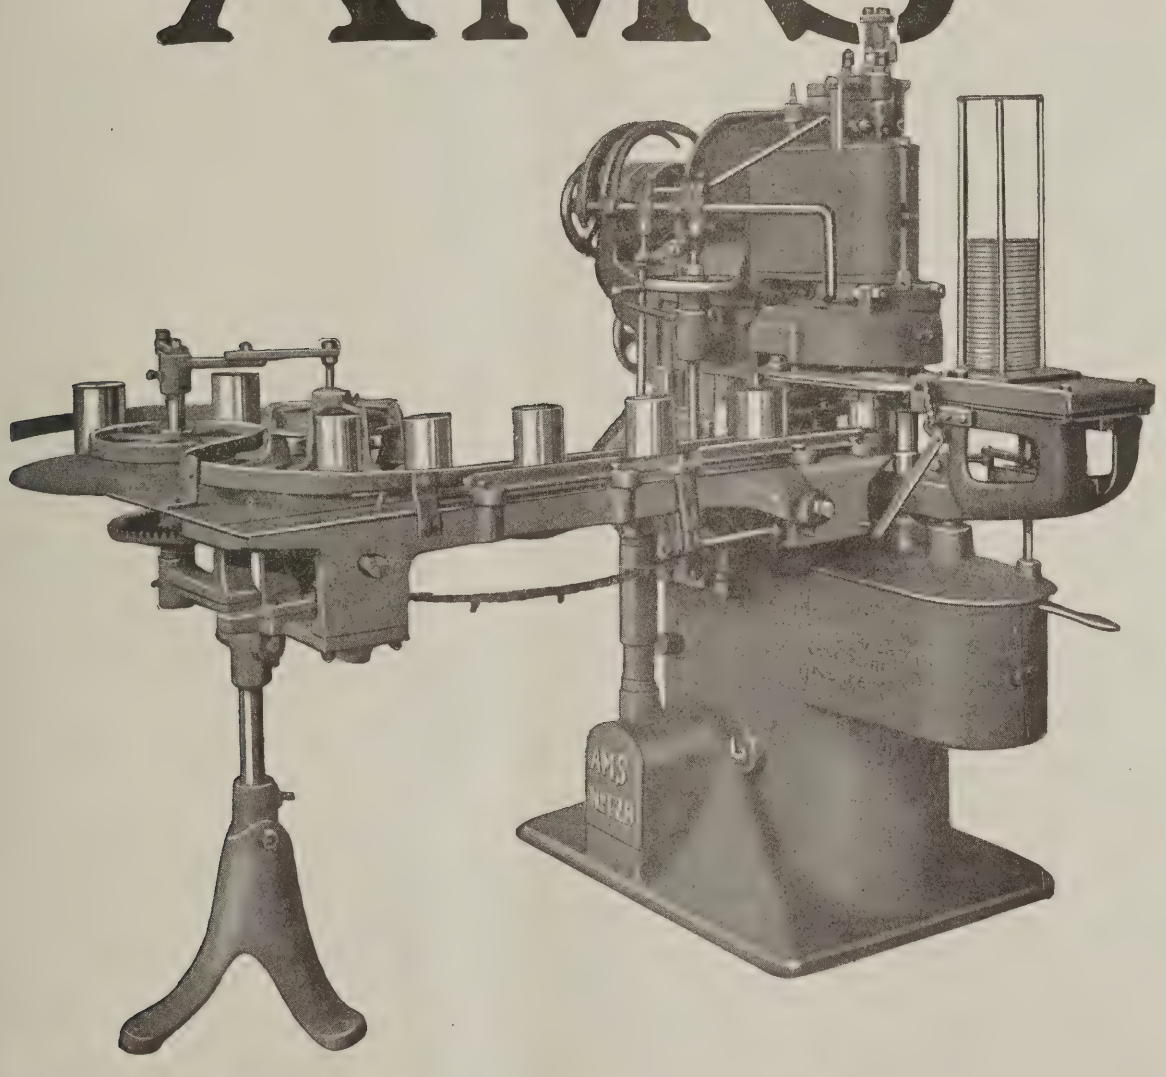
It is too early in the investigation to attempt any statement as to control of the aphis by its parasites, predacious enemies, and the fungous disease; but perhaps I could hazard the statement that the aphis usually receives a serious setback from the combined effect of these enemies, but nearly always after it has done its damage. The array of enemies is always a little way behind the aphis until in the late summer or fall it overtops the aphis and nearly exterminates it. This, however, does not save the crop of peas which was out in May or June.

An opportunity was offered to make several observations of interest to canners. It has been claimed that certain varieties of sweets are immune from the attack of the pea aphis. This supposed immunity was clearly demonstrated on one occasion in a large field containing Admirals and Advancers adjoining each other. The Admirals, which were supposed to be immune, contained an average of 40 aphides to about 1½ square yards, while the Advancers contained 700 aphides in a like area. Both varieties were in the same stage of development, and a decided immunity is clearly shown under this heavy infestation.

It is often claimed that a heavy driving rain will clean up an infestation of the pea aphis. An excellent opportunity to observe the effect of rain occurred when, on June 7, we were visited with a heavy downpour lasting over an hour. Previous to the rain a large field of sweets had been carefullv inspected with a view to dusting it the next day. The following morning it was found that a majority of the nymphs or young aphides had disappeared from the vines and the infestation was cut down about two-thirds. However, the adults seemed to be about as numerous as the day before. Three hours later an accidental observation showed that the adults were giving birth to living young at a rapid rate, and by noon thev had produced from three to six living young apiece and the infestation had more than doubled since morning.

In 15 pounds of aphides collected with the Aphidozer from 2½ acres, a total of 1739 predacious enemies those which actually catch and destroy the pea aphis, was found. This was probably not over 70 percentage of the predators which were present and shows that these enemies must be a factor in control.

Upon two occasions large flocks of red wing blackbirds were noticed in fields and when four or five were shot and dissected, their mouths, crops, and gizzards were found to be full of aphides. It was estimated that each bird contained the undigested portions of 250 aphides. When one realizes the immense array of enemies constantly preying upon the pea aphis, it is hard to understand how any are left until one realizes that there can be 15,000,000 on a 5½ acre field and that they can more than double their numbers in one morning.



As an instance of cooperation, a most gratifying event occured at Madison this winter in the form of a Canners' school. During the week of December 10, 150 canners representing nearly 70 canneries out of the 115 in the state gathered at the College of Agriculture to gain information through lectures and demonstrations of various phases of the canning industry, soils, innoculation, new varieties, insects and diseases. I should say that in this case the pea aphis was not responsible for the success of the school, but rather Mr. Nicholoy, secretary of the Wisconsin pea packers. Such gatherings are most advantageous in clarifying mutual problems and engendering the spirit of co-operation.

Lastly, I might say a few words on what remains to be done, or at least upon what we intend to concentrate next summer. A conference of entomologists and canners particularly interested in this project was held at Washington, November last, and the season's work was carefully viewed and recommendations made for next season. The conference voiced its opinion as follows: Observations show that the pea aphis has appeared in destructive abundance in some section of the United States every year; that it has been a generously serious pest sporadically; that it is becoming more firmlv established and is rapidly growing in importance. Also, the evidence indicates the possible serious effect on quality when the aphis occurs only in moderate numbers.

It was their opinion that there was a serious lack of knowledge on the bionomics of the aphis, that is, the relation of the aphis to its environment and natural enemies. About this I have already spoken. Moreover, this tvne of information is absolutely essential as a fundamental basis for control. It appears that there may be a critical period during any outbreak when an artificial check properly administered will delay the insect's development long enough for the natural enemies to come in and overpower it. A study of this possibility obviously necessitates much time, effort and co-operation. As regards control measures, it was the opinion of the conference that it was desirable to continue the experiments with various dusts, elaborating upon the percentages, methods of application and influence of weather conditions. In regard to farm practices, it was realized that there may be a direct relation between in-

For 1924 it's—

AMS

Many new improvements make it Better than Ever.

STANDARD OF THE WORLD

jurv by the pea aphis and certain farm practices. Much information should be obtained and detailed study of different farm practices already in effect or possible to employ should be made, practices such as rotation of legumes, trap crops, time of planting, methods of cultivation, resistant varieties, etc. As regards mechanical devices of control, this phase has scarcely been touched, and the possibilities of improving the existino machinery or developing new devices is immense.

Therefore, in making this progress report, there has been very little of the nature of definite recommendations which I could give you. It is a big problem of a big industry, and by careful, efficient, business-like efforts its solution can be developed.

CHAIRMAN HUNT—The next speaker on the program is Mr. W. E. Nicholoy, of Madison, Wis.

WISCONSIN LABEL REQUIREMENTS

By Secretary W. E. Nicholoy
Wisconsin Pea Canners Association

Before taking up the subject "Wisconsin Label Requirements" I would like to give you just a brief history of our present labeling law.

You all remember the various committees established in many of our cities during the World War and shortly thereafter. Most of you remember the Fair Price Committees. Milwaukee had one of these. Its chairman, Mrs. George Chamberlain, petitioned the Division of Markets to invesitgate the profits of distribution of several food commodiites, among which were canned peas.

Alvin C. Reis, at that time counsel for the Division of Markets, made the requested invesitgation and appeared before the Miilwaukee Fair Price Committe. The determination of profits in the distribution of canned peas, he explained, was practically impossible because of the lack of uniform intelligible labeling of the diifferent varieties, sizes and qualities. In the discussion that developed, it was apparent that there was a considerable consumer interest. The reporters present caught this interest and made a news story of it. And the usual thing happened—they did not get the story quite as presented by Mr. Reis. But it made a good story.

The Division of Markets immediately thereafter began a further study of canned peas and started to formulate labeling requirements. In this work they had the encouragement and assistance of one of our leading wholesale grocers, who, for some time, had shown on his labels the size, number and variety name. With this original order in shape, the Division of Markets held a public hearing to which canners and wholesale grocers were invited on March 24th, 1920. Almost to a man, Wisconsin canners present voiced a strong protest. As a result a committee of canners and wholesale grocers was appointed by the Division of Markets. Many hearings have since been held, two orders have been published and withdrawn, and on August 14th, 1923, General Order No. 11-R of the Wisconsin Department of Markets was published effective June 1st, 1924.

I have gone into this somewhat in detail because I want you canners from other pea canning states and you jobbers and brokers to get that idea that Wisconsin canners tried to put something over, out of your minds. The child was left on our doorstep. But now that we are into it, I want to say to you further that we are not ashamed of our adopted child. In fact, we are just a little bit proud.

We feel that the consumer has an honest right to know and be able to determine the contents of the can from the label. We know that she is interested. Investigation and demonstrations have proven this. If you doubt it try it out in your own home town on your own friends outside of the canning industry. But ot make this possible we must have a uniform, intelligiible system of labeling.

What do the present designations mean to the consumer? What do they mean to you? I have been in the canning business for a good many years and I would hesitate to guess the contents of the can unless I knew the label. So would you. The only person who knows the contents from the label is the one who applies the label or gives instructions as to its appliication. Small wonder the consumer can't tell and she never wilil be able to tell until we have a uniform intelliigible system of label. Our chief regret is that the Wiisconsin law, or a similar one, is not Federal Law.

Mr. Reis, counsel for the Department of Markets, said before the last annual meeting of our association, "I will say that if it turns out that this order is working to the dertiment of the canners and that the narrow-minded attitude of certain jobbers becomes so tremendous that it threatens the industry, I shall withdraw the order, for I do not intend to tolerate any regulation which works for the annihilation of one of the state's greatest industries. The order is not intrinsiically unreasonable. It does not demand a label, but merely specifies wording where a label is used. In this respect it is more lenient than any order issued by the Department of Markets. Orders as to cheese, potatoes, cabbage and honey not only specify the wording but demand a brand or label embracing that wording and do not permit marketing without a label. The order, though requiring certain wording, does not forbid the use of other wording. Again, the order is not as grasping as the potatoes orders for insatnce, which prescribed certain grades and forbid the use of any other grade terms, or the cheese standards which established Wisconsin fancy and Wisconsin No. 1 grades, and do not recognize any such thing as Wisconsin "standard" or Wisconsin "extra standard" grade. The pea labeling order is the weakest, most puerile ever issued by the Wisconsin Department of Markets. The order, however, has tremendous scope like all other orders of the Department of Markets, in that it affects all the products packed in Wisconsin. It is unlike the Dairy and Food Regulation which applies merely to goods sold within the state and is designed for the protection of domestic consumers only. Our order affects all peas packed in Wisconsin, regardless of destination and regardless of whether under canners' or jobbers' label. Ninety-five per cent, of Wisconsin cheese and Wisconsin potatoes goes outside the state. Yet every Wisconsin cheese and every sack of potatoes bears the grade mark as required by the department. The basis of this broad regulation is two-fold: (a) The protection of the consumer against deception and misrepresentation. (b) The more fundamental basis, however, which certainly is at the bottom of the cheese and potato regulations is the purpose to build up the reputation of a Wisconsin product and protect that reputation upon the markets of other states."

Right here it might be interesting for you to know that two years ago 15,000 cars of potatoes went out with compulsory inspection. Wisconsin potatoes on the Chicago market sold on a par with Idaho potatoes and 40c above Minnesota, whereas five years ago before there were regulations, Wisconsin potatoes were 60c below Minnesota and $1.00 under Idaho. This does not mean that compulsory inspection under the Wisconsin Department of Markets has raised the price for Wisconsin potatoes—it simply means that it has raised the quality of Wisconsin potatoes and labeled that quality so that it could be easily recognized. Mr. Reis said further, "The argument based upon reputation does not apply with equal cogency to mere variety and size labeling requirements, but it is the argument and the degree of deception which these regulations avoid by affirmatively requiring that the label bear, in words of a common school education, the designations size 1, size 2, etc., rather than resort merely to those nebulous expressions such as Sifted, Extra Sifted and Tiny Sifted which are intelligible to you, but to no one else; or to the phrase Early June as to peas which never saw early June. Let me say in concluding that I can see that regulations in this matter ought to be national in the interest of uniformity and justice to parties dealing in several states and if you can put through a national regulation I shall revoke the state orders, but you have talked for two years about national regulations and have got nothing. In anticipation, however, of the time when there may be a national order, it is written into the marketing law that in such an event the state requirements must conform to the Federal requirements. But I will go further and say that if a national regulation is issud I shall not merely make the state order conform to it, but I shall revoke that order and let the Federal Government handle the situation. In the meantime, so long as the Federal Government does nothing and its statutes are mute upon the point, the Wisconsin orders will stand if they do not work out to your detriment, and I sinicerely hope that you come to be proud of them rather than ashamed of them and that they will mean to you that you can say to your trade that Wisconsini demands the labeling of variety and size and quality, that not only is your Association behind this thing, but also your State of Wisconsin is additional authority in back of it and you can trust the Wisconsin label."

Profitable Advantages

These are the outstanding advantages experienced by increasing numbers of canners the country over who use

Wyandotte Sanitary Cleaner and Cleanser

for all their plant cleaning work.

They know by the feel and smell of their equipment that it is sweetly and wholesomely clean.

They know that it is thoroughly rinsed, free from even the cleaner itself.

They know that the equipment is unharmed and consequently has a longer life of usefulness.

They know also that their cleaning costs are on a profitable basis because of the protection Wyandotte Sanitary Cleaner and Cleanser insures to the quality of their products.

Now, gentlemen, we are proud of this regulation, but we are not selfish. We want the consumer to know that she can trust the Wisconsin label and we hope that eventually Federal regulations, which are mandatory, will be promulgated and that the consumer will be able to trust and believe in every canned foods label, especially canned peas.

CHAIRMAN HUNT—Would you care to mention the fact that peas, when shipped into Wisconsin from outside, will be subject to the same regulations?

MR. NICHOLOY—Yes. General Order No. 11-R applies equally to peas shipped into the State of Wisconsin by outside canners or outside jobbers. That does not mean General Order No. 11-R reaches the outside canner or the outside jobber, but it does mean that it reaches the Wisconsin retailer or wholesaler who handles them. So that any of you who are shipping peas into Wisconsin after June 1st, 1924, must have your labels comply with the Wisconsin labeling requirements.

MR. GREENBAUER—Mr. Nicholoy, I would like to ask if I am a canner in Wisconsin and I want to ship some peas outside of the state to a certain jobber, and he wants to furnish me labels to put on those peas, is it necessary in that intance that this regulation applies?

MR. NICHOLOY—Yes, sir. If the labels are applied within the State of Wisconsin they must conform with the Wisconsin labeling requirements.

MR. GREENBAUER—There is nothing in the regulations to prevent shipping unlabeled peas?

MR. NICHOLOY—No, sir. And there is nothing in the regulations which says where on the label these designations must appear. It merely tells you the size of type which you must use, and there is nothing in there which prevents the use of the present designations which you are using.

MR. DICKINSON (Illinois)—Mr. Nicholoy, may I ask if you have done anything in an attempt to disignate quality?

MR. NICHOLOY—The Wisconsin Department of Markets originally had that idea in mind, but I want to say to you that when this order first came out it just scared the canners stiff; they thought they were ruined forever, and I guess it scared some of our wholesale grocer friends even worse, with the exception of some of our Wisconsin jobbers, who were in favor of it, and becaue of that we thought best to use our f-forts to get the Wisconsin Department of Markets to pass up quality requirements for the present time.

Personally, I believe that the quality should go on the label, but there is a big difference of opinion in that, Mr. Dickinson.

MR. CLARENCE SEARS (Ohio)—May I ask if peas may be shipped into Wisconsin unlabeled?

MR. NICHOLOY—That is rather a serious question. Peas could be shipped into Wisconsin unlabeled, but they could not be sold there before a label was applied, in which case the label must comply with the Wisconsin order. I believe that is a correct statement.

CHAIRMAN HUNT—I might state that the special committee working on our definitions and standards had quite a problem in front of them on account of the regulations which have been adopted in Wisconsin, and pamphlets were passed out to you, from which you will find that we took this question up with Mr. Nicholoy and they have concurred with these regulations and the regulations which will be adopted by the section today will be workable in Wisconsin, so that they would not be misbranding or packing things against these regulations.

CHAIRMAN HUNT—The next speaker on the program is Dr. J. Russell Esty, Washington, who will speak to us on "The Relation of the Degree of Contamination to Sterilization."

The Relation of the Degree of Contamination to Sterilization

By J. Russell Esty
National Canners Association Research Laboratories

IT has long been recognized that different kinds of food undergo different types of decomposition, such as the souring of milk, the decaying of meat, the rotting of fruit and vegetables, the moulding of berries and the fermenting of fruit juices. We are also well aware of the fact that canned foods that are insufficiently processed or packed in defective containers will spoil within a short time under certain conditions.

With the development of bacteriology we now recognize three classes of organisms as exceedingly active in bringing about these changes, namely, yeasts, moulds and bacteria. They are too small to be visible to the naked eye, and can only be seen when greatly magnified by means of the compound microscope, hence the term micro-organisms is applied. They are the smallest living beings of which we have any knowledge, and are both our friends and foes.

The yeasts affect practically only those food substances which contain a large amount of sugar, such as fruits, tomatoes and preserves, where as the moulds will attack all classes of foods to some extent. These two classes of micro-organisms, yeasts and moulds, are not especially heat resistant, the temperature of boiling water being sufficient to destroy them within a few minutes, and consequently are insignificant in the preservation of foods by heat as employed in the canning processes. On the other hand, bacteria are the most abundant and the most vigorous of the micro-organisms. They are the most serious enemy to food, bringing about different types of decomposition dependent upon the kind of food and the class of bacteria acting upon it. They comprise numerous varieties differing among themselves as widely as the common plants of which we are more familiar. These microscopic forms average about 1/25,000 inch in diameter and about 8 billion can be crowded into a mass about the size of a pin head.

Bacteria attack any kind of food suited to their growth and multiply rapidly under favorable conditions, i. e., proper nutritive materials in a moist state held at a suitable temperature. Each bacterium grows best at a certain temperature, at which, provided other conditions are suitable, reproduction takes place at least every 30 minutes. In such a case it has been estimated that its progeny at the end of 12 hours would be 17,000,000, while if it occurred once an hour, the same number would be produced in 24 hours. On the other hand, if held at a less favorable temperature, so that it would reproduce itself once in four hours, its offspring at the end of 16 hours would only number eight. This illustrates the importance of refrigeration in handling food. Cooling does not kill bacteria, but merely prevents or retards their growth.

The majority of bacteria grows best at 70 to 100 degrees F. The average canning plant during the summer months has about this temperature, and affords such bacteria conditions that permit rapid growth. Experiments made to determine the rate and extent of decomposition of the raw foods—spinach, peas, asparagus, corn and string beans—when naturally and artificially contaminated with certain organisms and held under different conditions of temperature, show conclusively that these raw products decompose rapidly at 90 to 100 degrees F. At lower temperatures bacterial changes develop more slowly and not to such a marked degree. Hence, any step that can be taken to reduce the temperature of the raw product held for canning or the time of holding it greatly prevents gross contamination. This decreases the possibility of spoilage both of the raw material and, as will be seen later, of the canned product, since great numbers will be produced within a short time if growth occurs.

For rapid growth in foods, bacteria also require a certain amount of moisture. On account of this, fruits and vegetables that are thoroughly dried do not spoil. Drying does not kill bacteria, but they cannot multiply without water. This point is important in connection with the storage of the raw product at canning plants. A well-ventilated place should be provided in order that the surfaces of the food material may be kept dry, which will retard spoilage.

Bacteria may be divided into distinct groups, according to their characteristics and the functions they perform. We have, for example, the disease-producing organisms which cause typhoid fever, diphtheria, tuberculosis, etc., as compared to the non-disease-producing bacteria such as the majority of the forms found in the soil and those active in the manufacture of cheese, vinegar and sauerkraut. Some bacteria have the power of producing different gases, such as carbon dioxide, hydrogen and hydrogen sulphide, and which are responsible in the case of

Service Counts

bacterial action for the production of "swells" in canned foods. Other organisms produce different kinds of acid without gas formation, accounting for "flat sours" in certain canned foods.

There is also a marked variation in the heat resistance of different organisms ranging from those which are destroyed at the pasteurization temperature of milk, including the large majority of the disease germs, to some which are able to survive several hours' continuous boiling and over a half-hour exposure to 15 pounds steam pressure.

Of especial interest and demanding our most serious consideration is this latter group, since the destruction of these resistant forms or some means to control their development is absolutely essential in order to prevent subsequent spoilage of the pack.

Bacteria will continue to grow and multiply until certain conditions arise, such as (1) the change of temperature, (2) the alteration of the food material due to the by-products formed by their own activity or to those formed by other kinds of bacteria growing at the same time, (3) by conditions arising from natural sources, when they either die or pass into a dormant stage known as the spore. Those which have this property of producing spores are known as spore-bearing as contrasted with non-sporing bacteria in which life is short under adverse circumstances.

The function of the spore is to preserve the species until favorable conditions arise under which it can again grow and multiply. Spores of some varieties are capable of resisting extremely high temperatures for a long time, as compared to the non-spore forms, and also are many times more resistant to disinfectants, chemicals, and to all other known adverse conditions. They may remain alive for years and resist drying and extreme cold over a long period.

In this spore state, bacteria are abundant in the cultivated soil, and are present on pea-pods, corn husks and spinach leaves. They are also on the surface of different vegetables, such as beets, asparagus, tomatoes and string beans. When vegetables have been bruised and allowed to stand exposed for a long time, or have in them decayed portions, in which millions of organisms are active, the degree of contamination is unlimited. Vegetables in this condition are generally laden with numerous resistant spores and make favorable the further development of these organisms with a large increase in numbers of resulting resistant spores.

Furthermore, the careless disposal of waste products and spoiled canned foods are important factors in the distribution of resistant organisms and contribute to the contamination of the soil and premises surrounding the canning factory. We know that food may become contaminated with these same bacteria that have caused spoilage of previous packs if traces of the different stages of the canning operations and from machinery with which the food comes in contact shows the presence of the spoiled material are still present in the vicinity of the factory and come in contact with the raw material at the time of its preparation for canning. The examination of material obtained from same bacteria all along the line, and clearly demonstrates that they can easily gain access to the can.

In this connection it should be emphasized that the organism causing botulism (B. botulinus), the only known spore-forming bacterium that produces a poison in certain canned foods, is frequently associated with decaying plant material. Favorable conditions for its growth in soil probably occur when decaying vegetation furnishes the necessary food material. In this way the organism probably continues to exist and occasionally increases its numbers. This possibility should be fully appreciated in canneries and utmost care exercised in the disposal of the waste products. The assumption is justified by experimental evidence that the most resistant spores of B. botulinus may not be introduced into the cannery on the fresh and sound vegetables and fruits, but are more likely to be produced under unsanitary conditions of waste disposal. Vines, leaves and decayed material show the presence of this organism in much greater numbers than on specimens of foods such as beans, cucumbers and olives. The distribution of these spores in nature also shows that plant material undergoing decay and fermentation as, for example, vegetables, moldy hay and eosilage, is a common habitat and furnishes favorable environment for its continued existence. Therefore, the possibility of contaminating the material being canned should be reduced to a minimum by using all practical means for the disposal of spoiled material.

The presence of a few organisms in the food at the time of processing clearly indicates that the raw product was fresh, sound, promptly handled and prepared in a sanitary manner. On the other hand, numerous bacteria and spore forms in food material is evidence of contamination from one or more of the following conditions: (1) the raw material has been either improperly stored, held under improper conditions for too long a time or carelessly handled, (2) the equipment has not been thoroughly cleaned, (3) lack of cleanliness and care in the preparation of the food on the part of those responsible for it, or (4) delay in processing after the food material has been canned.

Canned foods in which bacteria can produce spoilage must either be so handled that these organisms cannot grow in them, or else they must be killed and subsequent contamination prevented. In order to accomplish this, several factors must be considered. The time necessary to sterilize, or process, as it is more commonly understood when applied to canning, varies with each food. This depends upon the rate the heat penetrates into the center of the container and the time necessary to destroy at a certain temperature a definite number of resistant spores in that particular food.

Our laboratory results conclusively show that the number of spores present in the food markedly influences the sterilizing time and that individual spores of the same organism vary in their heat resistance. The majority of spores in any solution are not especially heat resistant, and as the time is prolonged fewer spores remain alive, until finally the most resistant ones succumb. The number of these most resistant spores vary in proportion to the total number of spores present in the solution. For example, if there are 10 of these most resistant spores in a solution containing 100,000 spores, there should be one in every 10,000 if equally distributed in 10 sets of 10,000 each, and only one spore in 10 sets in which each set contains 1,000 spores. In other words, the chance of obtaining these occasional most resistant spores becomes less with fewer spores in the solution. This explains why all cans of any product do not spoil when subjected to the same heat treatment.

The results of our laboratory tests were confirmed by experimental packs of approximately 14,000 cans of peas and corn inoculated with different numbers of the same organism and subjected to different processes. The organism used in this work was isolated from a "flat sour" can of corn and grows readily at temperatures from 60 degrees to 145 degrees F. The retort thermometer and pressure gage readings were checked by means of a standard chemical thermometer inserted in the retort door. The temperature was carefully controlled by hand, and uniform heat circulation was obtained by sufficient bleeds. The processing was done in an ordinary vertical retort filled about one-third full of water. The cooling was accomplished in the retorts under pressure, but without excessive strain on the cans. Heat penetration tests were made by means of thermocouples on four to six cans of corn in each run in order to determine the rate at which the heat penetrated representative cans. The temperature at different parts of the retort was also checked by means of thermocouples. Special attention was paid to the details of uniformity in the pack as to consistency, grade and initial temperature.

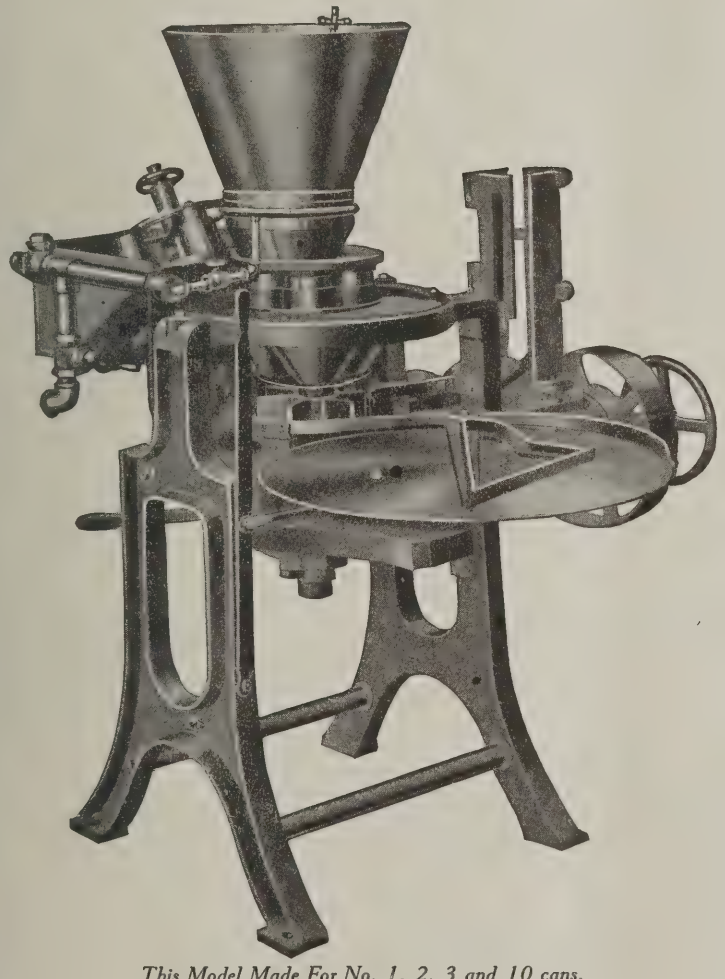

TABLE I.

Per Cent of "Flat Sours" in No. 2 Cans of Peas Experimentally Inoculated With Different Numbers of Spores and Processed at 240 and 250 Degrees F.

AYARS 1924 MODEL
New Perfection
PEA and BEAN FILLER

This Model Made For No. 1, 2, 3 and 10 cans.

REVOLVING HOOPER

New design, straight side, large at the bottom. The peas do not stick to one side and get cold. They are always level in the hopper at all heights and do not require any agitator.

HAS POSITIVE CAN FEED

CIRCLE SPRAY IN NECK OF HOPPER

SPLASH PLATE over cans so peas will not wash out on floor.

Brine goes in cans hot. Large heater in brine tank.

CHANGING GRADES.—Filler stops and all filled cans deliver to closing machine.—LARGE DELIVERY DISK— NO CAN NO FILL.—WILL NOT WASTE BRINE.—NO RUBBERS to catch cans after they become worn—FILLS ABSOLUTELY ACCURATE—DOES NOT CUT PEAS—BAKED BEANS—Only filler for baked beans. Has separate measure and seperate saucer. If measure fails to drop part or all the quantity of beans the can will show slack to inspector.

Ayars Machine Company SALEM NEW JERSEY

Uninoculated controls incubated at 98 and 130 degrees F.

*One can became hard swell, the other a flat sour after an incubation at 130 degrees F.

I. Per cent of "flat sours" in No. 2 cans of peas experimentally inoculated with different numbers of spores and processed at 240 and 250 F.

II. Per cent of "flat sours" in No. 2 cans of corn experimentally inoculated with different numbers of spores and processed at 240, 245 and 250 F.

The table summarizing the results of the experimental pack of peas in No. 2 cans shows that as the number of spores of the same organism is increased the time necessary to sterilize them is also increased. For example, basing the spoilage on the per cent of "flat sours" in any lot, we see that a cook of 40 minutes at 240 degrees F. produces approximately one per cent in 211 cans containing 60,000 spores, whereas a cook of 45 minutes at 240 degrees F. is necessary to destroy all but approximately one per cent of cans containing 609,000 spores of the same organism. It will also be seen that the per cent of "flat sours" increases in proportion to the number of spores present. For example, a cook of 27 minutes at 240 degrees F. gave 42 per cent "flat sours" in normal uninoculated cans, as they were processed, while 10.9 per cent "flat sours" resulted when 60,000 spores were present, 48.9 per cent when 600,000, and 91.9 per cent when 3,000,000 were inoculated. Again, a cook of 40 minutes at 240 degrees F. showed no "flat sours" in cans containing 60,000 spores, 4.4 per cent containing 600,000, 8 per cent containing 3,000,000, and 70.8 per cent containing 10,000,000. Furthermore, by increasing the time of the cook to 45 minutes, only 6.2 per cent "flat sours" resulted when 10,000,000 spores were inoculated into similar cans. This large number of spores, namely 10,000,000, represents excessive contamination and would only occur when the product had undergone considerable decomposition.

This table also shows that the contents of the uninoculated cans at the time of processing contained less than 60,000 spores of the resistance of the organism tested as seen by comparing the per cent "flat sours" developing in control cans with that in cans containing 60,000 spores. Control cans processed at 240 degrees for 27 minutes gave 4.2 per cent "flat sours," while those containing 60,000 gave 10.9 per cent; also, controls processed at 240 degrees F. for 36 minutes gave no "flat sours," but 7.8 per cent developed in cans inoculated with the above number.

It is realized that the resistant organisms present in the normal cans are in all probability of different types than the one inoculated and safe to assume that the heat resistance would differ for the different groups.

The results obtained when processing at 250 degrees for different times show the same relationship of the degree of contamination to sterilization. In these runs the following number of spores were used: 340,000, 34,000 and 3,400. On account of this the results at 250 degrees do not afford a direct means of comparing different runs at 240 degrees. However, it is seen that the spoilage increase with large numbers of spores as shown by per cent "flat sours," and that as the process time is increased, a product containing a definite number of spores becomes more nearly sterile. To illustrate, a cook of 250 degrees for 12 minutes sterilized normal uninoculated controls, while the contents in one of 150 cans containing 3,400 spores of the same organism became sour; in those containing 34,000, five "flat sours" developed in 131 cans, and in those containing 340,000, 35 "flat sours" developed in 112 cans. In cans containing 34,000 spores and processed at 250 degrees for different times, the following per cent of "flat sours" developed, showing a great reduction in the spoilage as the time was increased—8 minutes, 58.9 per cent; 10 minutes, 25.8 per cent; 12 minutes, 3.8 per cent, and 15 minutes only one can in 200 became sour. The results at 250 degrees also indicate that less than 3,400 spores of this organism or any of equal resistance to that one tested were present in the normal cans when processed. A cook of 250 degrees for 10 minutes showed 4.2 per cent "flat sours" in control cans, and 9.5 per cent in cans containing 3,400; also, a cook of 250 degrees for 12 minutes showed no "flat sours" in controls, and one of 150 cans containing 3,400 spores of this organism.

The table summarizing the experimental packs of corn in No. 2 cans processed at 240, 245 and 250 degrees shows the same effect of number of spores as those obtained in canned peas. A large number of cans of white evergreen corn was inoculated with 900,000, 90,000 and 9,000 spores of the same organism, and the results recorded in terms of per cent "flat sours." It will be readily seen that the spoilage (per cent "flat sours") is consistently greater when 900,000 spores are heated than 90,000 for any process. Your attention is, however, called to the fact that in two instances, and then when the spoilage occurs in only an occasional can, the per cent "flat sours" appears to be slightly greater in the cans containing fewer spores. I refer to the results on the cooks of 240 degrees for 130 minutes and 250 degrees for 84 minutes, in which one can in 154 and 155 cans, respectively, containing 90,000 spores became sour, while 25 cans each containing 900,000 spores appeared to be sterile when given the same treatment. These results are hardly comparable, since only 25 cans of the latter were tested, as against 154 and 155 cans, respectively, in which 90,000 spores were present. It is believed that if at least 150 cans had been tested with 900,000 spores, some spoilage would have occurred in these cases.

We are not yet in a position to state how many spores may get into the can in any factory, the kinds or their heat resistance upon which the process depends. Conditions which influence their production and destruction vary in the same plant from time to time and in different canning sections. These points deserve careful consideration and much research is necessary to establish certain fundamental factors operating and controlling them which have a direct bearing on the safe processing of canned foods. We are planning an extensive investigation covering these points in connection with our experimental packs.

These results warrant the following conclusions:

1. Spoilage of canned peas and corn is materially increased when the number of spores is increased.

2. Given the same amount of contamination, spoilage of canned peas and corn is materially reduced by increasing the process time at any temperature.

3. Comparing the sterility results of uninoculated controls with those obtained on cans inoculated with different numbers of spores of the same organism, the amount of contamination in the normal cans of peas used in these tests at the time of processing appears to be less than 3,400 spores of the same or greater resistance to the organism tested.

CHAIRMAN HUNT—We are deeply indebted to Dr. Esty for this instructive talk along these lines.

We are fortunate in having with us this morinng Dr. F. C. Blanck, from the Bureau of Chemistry, who will talk to us on

GRADES OF CANNED PEAS.

By Dr F. C. Blanck

In my consideration of the subject assigned me today I realize very keenly my own lack of that wealth and breadth of experience in the grading of peas which is yours, and I trust that you will consider my own personal limitations in an adequate consideration of this subject.

During the past year or more the various trade journals have contained numerous articles on this subject which have expressed clearly and precisely the view of many leaders of this industry.

In addition, you are all very familiar with the requirements of the new Wisconsin and Canadian rulings on the marketing of this commodity.

Furthermore, women's and consumers' organizations, the household editors of many of our leading papers, as well as home economic experts, have actively taken up this problem of grades or qualities of canned fruits and vegetables, with the idea of educating the consumer to buy more intelligently and to gain and secure a more informative type of labeling.

The present definitions of the United States Department of Agriculture for the various grades of canned peas have

HAMACHEK IDEAL VINERS

long been recognized as not being truly descriptive of the trade practices in the selling of this article. To secure a revision of these definitions, a committee on pea standards of your section has been active in the formulation of tentative definitions which more correctly express present-day practices.

At your meeting in Milwaukee last April I believe I had the pleasant opportunity of indicating to you the procedure by which definitions and standards for food products are adopted by the joint committee on definitions and standards, and also some of the desirable and important factors in the formulation of an enforcible definition.

Subsequently it was my good fortune again to participate in the deliberations of your standards committee, which resulted in the publication, I believe last November, of the tentative definitions which are before you for adoption or revision at this meeting.

In consequence of the wide discussion which the subject has had from so many experts, I feel strongly my personal inability to bring to you important constructive help in the solution of your difficulties from the definition standpoint.

My experience of five or six years in the examination of canned peas from a regulatory or food control official's point of view is dwarfed into insignificance by your long practical experience in the manufacture and sale of this important food product. Therefore, it seems more pertinent and perhaps more helpful for me to bring to your attention certain features of these tentative definitions as I view them from the food control official's or regulatory officer's point of view.

I note, or I noted after I reached the meeting room this morning, a revision of the first printed form of these definitions which corrects some of the points which had occurred to me. Notably, the insertion of the descriptions of the canned pea variety and one or two other omissions, and also a change in the phraseology of the definition for the standard quality of peas.

The point or points which I wish to bring out more particularly are the apparent difficulties of avoiding the use of certain terms or expressions in defining these various qualities, which terms are not capable of precise definition. I have in mind such expressions as "practically;" I have in mind such expressions as "reasonably." I also have in mind the phraseology in the present definition for "Standard Quality Pea;" that is, peas which are fresh but may be more nearly mature peas. That is: How close can that maturity approach full maturity and still be considered as a standard quality pea?

I have discussed these terms and their lack of definite character with many of my fellow food officials in the country. I have discussed it with members of your committee, and I realize that each and every one of you gentlemen, as practical pea packers, realize the difficulty and the possibility of variable interpretations when we are using terms which cannot be closely, accurately and definitely defined.

Yet, I must frankly confess that I know of no better terms; I have no suggestions to make; I know no better terms which could be used than those terms. The thought, however, that I wish to bring out in connection with the use of these terms is the possibility of the personal equation of the examiner of the article. That is one point you have got to consider at all times, and that is the different judgment of the individual examiner in his interpretation of what constitutes "practical" and "reasonable," and so forth, in his interpretation of any of these qualities of canned peas. That same difference, that same personal equation, of courrse, comes up again when a regulatory official has to consider a given case involving these definitions.

Another point which has occurred to me also, and on which Mr. Nicholoy touched earlier this morning, is the desirability of having uniformity in definitions and standards. If I interpreted his remarks correctly, he indicated that the State of Wisconsin, Bureau of Markets, was willing to adopt definitions and standards for canned peas if the Department of Agriculture in Washington were to adopt definitions and sirability of having uniformity in definitions and standards. industry. Is that correct?

MR. NICHOLOY—Providing your regulations were mandatory.

MR. BLANCK—Even at the expense of repetition, I think it is essential that I again repeat certain considerations which I discussed at the meeting of your section in Milwaukee last April.

As Mr. Nicholoy has just stated, the question involved is whether or not definitions and standards adopted by the Department of Agriculture in Wahington may or may not be mandatory in their character. As far as the present Federal Food and Drug Act is concerned, there is only one mandatory provision in that law, and that is a statement of the quantity of the contents.

If these definitions and standards, or rather these definitions for canned pea qualities which you gentlemen have been considering now for sometime, are adopted and promulgated by the Department of Agriculture, that will not mean that a pea packer must label his cans of peas as "fancy" quality or "choice" quality or "standard" quality, or with the variety of the peas on there, nor will it compel him to put on his label the canned pea sizes. If these definitions and sizes are adopted by the Department of Agriculture, they can only be used so far as the present phraseology of the Federal Food and Drugs Act is concerned in determining whether or not a given shipment of canned peas moving in interstate commerce is misbranded—adulterated under the terms of the law. That is, a shipment labeled as fancy quality early peas, and a statement as to size, if those statements appear on the label, or if the product is invoiced and they do not appear on the label, if the product is invoiced to indicate the quality, variety an size of peas contained in the shipment, and the shipment does not conform either to that label declaration or to the invoice and description of the product, then action under the federal law is taken on the basis of such definitions as are now before you for consideration.

I hope that I have made my point entirely clear that there is at the present time nothing mandatory under the federal law regarding the labeling of quality, variety or size of canned peas, or any other product that goes into interstate commerce, that the only present mandatory requirement is an accurate statement, a conspicuous statement of the quantity of the contents of the container.

From the foregoing considerations you can readily appreciate and realize the difficulties which confront all of us in the proper formulation of these definitions, and the absolute dependence of the food officials on you as an industry to supply these definitions in a form you as an industry can support.

I trust that as a result of your further discussion at this meeting you may be able to arrive at a common, acceptable, clear understanding of the various qualities of canned peas and the factors that differentiate them, and that you may be able to present a schedule for adoption which will adequately express present-day practices, and which schedule may then be used as a basis for commercial tranactions, regulatory work and for the education of the great consuming public. I thank you. (Applause.)

THE CHAIRMAN—Mr. Stare, our secretary, has consented to give us a talk on statistics along the line of his paper at Milwaukee a year ago. He has prepared these charts, and I am sure it is one of the best things the section has got to listen to.

(Mr. Fred A. Stare exhibited a series of charts, showing in a clear and comprehensive manner the annual statistics of peas, but his remarks are meaningless without these charts, and are therefore not reproduced. They were reported with the charts at the time originally given by Mr. Stare.)

CHAIRMAN HUNT—We are certainly indebted to Mr. Stare; we know that he is exceedingly busy, and I know the section greatly appreciates it.

At this time the meeting is open to discussion. I would like to have the question of the adoption of the definitions of standards and grades taken up. The special committee has revised them and sent them around for you to look over and think over, so that if there is any discussion which you care to bring before the meeting at this time I would like to have it, so that we can adopt them and present them to the Department for adoption.

There was discussion on Canadian standards and tolerances of splits, after which:

MR. BURDEN—I move that the Pea Section of the National Canners Association adopt the tentative definitions and standards submitted by the committee on that subject, and refer them to the U. S. Bureau of Definitions and Standards, with the request that if it is desired they succeed the present existing definitions and standards. The motion was carried.

CHAIRMAN HUNT—The question of coding came up. The committee did not do anything about it, but as chairman of the section I would strongly urge that every canner see that his labels are properly coded, so as to aid our conference committee on the question of swells. That is going to be one of the important things, to see whether the goods are in the

Automatic Strip Feed Presses

One of the most important and essential operations to be considered in making cans is the automatic production of the ends.

To meet the requirements for this very particular operation, we call especial attention to our No. 31 E. Automatic Strip Feed Press, such as shown.

Adjustable for all dies up to and including 6'', either round or square. The press is furnished with change gears for handling 3 to 20 cuts per strip and simple means to accommodate variations in length.

Feed mechanism is automatic, fool-proof and eliminates dangerous hand feeding. Operated in connection with our Presses, we supply Curling Machines and all other automatic can making machinery.

McDONALD MACHINE CO.

hands of the retailer, and are not returned to the jobber, and from there to the warehouse. If the labels can be taken off the can and marked on the back, it will be very easy for identification as to whose goods they are, what year they were packed and the claim can be passed on without question, and if that is taken care of it will simply be a matter of the conference committee finding the solution of the swell problem with the jobber.

I would like to hear the report of the nominating committee.

THE ELECTION.

CHAIRMAN NOMINATING COMMITTEE—The Nominating Committee has unanimously agreed to present the name of Fred A. Stare as chairman, and B. C. Olney, of Rochester, New York, as Secretary.

I move the election of Fred A. Stare as chairman and B. C. Olney as secretary. Motion seconded and carried.

CHAIRMAN HUNT—The Resolutions Committee; have they anything to report before we adjourn.

MR. BURNEN—I think the only resolution, perhaps, that is necessary at this time would be one of appreciation for the services of the retiring officers, and I will offer this for your consideration:

Whereas, The important questions that have come before the Pea section during the past year have entailed on the part of its officers an unusual amount of detailed work, including attendance upon important conferences on the subject of definitions and standards requiring unusual time and travel;

Be it resolved, That the Pea Section of the National Canners, in session at Buffalo, N. Y., January 23, 1924, hereby expresses its sincere and grateful recognition of the service of its retiring president, Mr. Charles H. Hunt, and of its Secretary, Mr. Fred A. Stare

I would like to move its adoption. Is it seconded?

(Motion seconded) and carried.

CHAIRMAN HUNT: If there is nothing further to come before the meeting, we will stand adjourned.

An adjoudnment was then taken.

Canning Machinery and Supplies Association

Fillmore Room, Hotel Statler, Wednesday, January 24th. 1924

Mr. Frank C. Engelhart, president, presiding.

THE PRESIDENT—This is, as you know, my last day as your presiding officer. It has taken some time to attend to the duties of president, but I can assure you it has been time well spent; and I am cretainly thankful to you for having given me the honor of serving you.

The real work of the Association comes in the two months preceding the convention. I think all of you will agree that the Machinery Exhibit is one of the finest we have ever had, and that is all the result of Mr. Hanna's work. It has taken a lot of his time. He has made many trips here, and it takes a lot of study to figure out how to make the show a success when you are limited in space. We could have used twice the space we have; but with the little space we had I think Mr. Hanna has done wonderfully well.

I think you will agree that the attendance at this convention is one of the greatest we have had in the last seven or eight years, and I think most of the credit for this should go to Mr. Millar Sells, chairman of the Publicity and Entertainment Committee, and his associate workers. You have no idea how much time and effort Millar has personally given to this work. It was the first time, I think, he was ever called upon to do such work for the Association, and I think he came through in a fine way, and all I have to do is just to compliment him on the things he has thought of to do to bring the crowd here, that I never would have thought of; and I certainly would recommend to the incoming administration that they fix upon Millar Sells as a permanent chairman of the Publicity and Entertainment Committee.

We will now have the report of Mr. Scott, the treasurer.

MR. SCOTT: Mr. Chairman, I am pleased to report this morning that the treasury is in a substantial condition. Perhaps you are aware of the fact that the detailed report is taken up at the annual meeting of the directors, to be held a little later, when the accounts are audited.

The amount on hand on April 10th, 1923, as shown by the report at the directors' meetinig held at Chicago on the above date and audited by the finance committee at that meeting, was $21,555.84. We have received since that time $12,650.00, making a total of $34,205.84. Out of this amount must come the expenses for this present convention. Based on previous yaers we estimate that expense at $12,771.48, which would leave a balance in your treasury of $21,424.36. A large part of this amount is in the bank and drawing interest.

It was moved and seconded that the report be adopted.

The motion was unanimously carried.

THE PRESIDENT—We will now have the report of our Secretary, Mr. Hanna.

MR. HANNA—I have no lengthy report to make. I usually report upon our membership. We had last year 164. We have lost 12 and have taken in 10. If we had had space for these pepole we could have increased our membership at least 15, but we did not have it.

I wish also to say, in connection with your President giving me the entire credit for the exhibit at the hall, that I have had splendid help from all our officers. I also wish to say that the custodian and all the help at the hall have been most kind; and I think your exhibit is equal to, if not a little better than, any we have ever had.

THE PRESIDENT—The next item on our program is an address by President Anderson, but he has not arrived yet, so we are going to call on Mr. Frank E. Gorrell, secretary of the National Canners' Association. (Applause.)

MR. GORRELL—I came before you last year with an apology, but I do not think that any apology is necessary today. Like myself, you men come here to work, and you know just what it means, just as well as I do, the responsibilities that we all have in trying to make this convention a success. I do not know whether I said it last year or not—and I do not care—I am going ot say it again: This convention would not be a success if it were not for the Machinery and Supplies Association. I am going a little farther. I am going to tell you that the National Canners' Association would not be a success if it were not for the Machinery and Supplies Association; and I challenge anybody to take exception to that statement.

I have often wished that I was a canner and had enough money to show my appreciation to every one of you members by buying some of your products. You know, it is so easy to say things; but sometimes you like to have substantial evidence of such expressions.

Gentlemen, I cannot do anything except to say what I have, and I want to tell you this from the bottom of my heart; the canning industry is entering on a great era, a broader era, bigger in every way than it ever has been before. The part that each of you has taken in making the canninig industry bigger and broader and more important cannot be measured. The fight that the National Canners' Association has been making since 17 years ago today, when it was organized in Buffalo, has been for quality; and ti is the machinery man who has helped to make that quality possible.

Did you ever stop to consider the wonderful inventions in canninig machinery? What other industry has gone ahead in the past any faster in its inventions? Some people say that the automobile has. There was a man who tried to tell me, the other day, that the automobile industry had made more rapid advance in inventions than the canninig industry. I will admit thta it has made a more rapid advance in dollars and cents—I was talking with Mr. Sells about that and he frankly admitted it—but if you will think of the crude machinery of 30, 20 or even 10 years ago, and look at it today and just compare it and determine what you have done, you will appreciate it.

I was impressed with the statement made by Mr. McLarin the other night: "This is really a glorious age for us all to live in." Just think of what has happened in the last five years. Just think how far we have gone ahead. Perhaps some of the things that we are accepting today are not as good as the old things, but we can make them as good; we can make them better; and, gentlemen, as far as I am concerned I would not give the last five years of my life, and what years I may have yet coming to me—few or many—for them. I think I have seen more; there has been more accomplished; every one has done more; very one has pushed and kept up with and gone ahead of the times.

All Packers, Before Placing Contract For Their Can Requirements, Should Consider:

1st: Quality
2nd: Service
3rd: Equipment

Our many years of experience in Can-making enable us to produce Cans of A-1 quality.

Our large and efficient corps of closing machine experts, our location on two railroad sidings, our dock on the water-front enable us to give the service required.

Our connection with closing machine manufacturers enables us to gives the latest, speediest and best closing machine equipment.

Can you see any reason for not letting us take care of your requirements in the manner you desire?

Put your troubles up to us.
Inquiries appreciated.

Metal Package Corporation of New York

Executive Offices: 110 East 42nd Street, New York City.

PLANTS

SANITARY CANS

BOYLE PLANT,
BALTIMORE, MD., MASPETH, N. Y. BROOKLYN, N. Y.

If there is anything at any time for which you want to call on me, no matter what it is, you know I am the same old Frank Gorrell. I thank you. (Applause).

THE PRESIDENT—I am sure we all enjoyed everything Mr. Gorrell said to us. I do not think it will ever be necessary for him to make any apology. We would rather have him talk right from the bottom of his heart. Thank you very much, Mr. Gorrell.

The next speaker on our program will be Mr. Charles P. Whiteman, president of the National Food Brokers' Association.

MR. WHITEMAN—I bring you greetinigs from the Brokers' Association, which I have the honor to represent. I never have talked to machinery men and supply men before, and I really do not know what I could say to interest you; but I do know and can say this with all sincerity: that the brokers are vitally interested in anything that has to do with the food industry of this country. That is our business. We are behind anything that has to do with it. Naturally, then, we are behind you fellows morally or in any other way we can be, because, as I said in introducing Mr. Engelhart yesterday, if it were not for the machinery we could not have canned foods. If you did not have an engine in the automobile the automobile would not be any good. So, if we did not have the machinery we could not have the canned foods. So the brokers are really dependent on you fellows for what they make their living out of.

I hope the future will be as bright for you as it looks for us. We thiink we are going to have a good year in 1924; in fact, from all reports I get from all sections of the country things are starting out pretty well this year for everybody. We get this report from the east, west, north and south.

Gentlemen, this is about all I can say to you. You certainly have our good will and our moral support. I thank you. (Applause.)

THE PRESIDENT—The next speaker on our program needs no introduction here. He has some wonderful ideas and he has helped me a great deal during the past two years as vice-president. I know he is going to have a very important message to deliver to you now. Mr. Finch. (Applause).

MR. FINCH—Mr. President, ladies and gentlemen, as I came up on the mezzanine, a little while ago, one of our members looked at this paper and said: "Good Lord is that your speech?"

I am sorry I have to read it, but I get nervous and I cannot always remember to give you the thoughts I would like to give you in an impromptu address.

(Mr. Finch then read his paper on "The Superintendent," a copy of which follows:)

THE SUPERINTENDENT

By President E. E. Finch.

IN talking to you on the subject of "The Superintendent," I am perhaps imposing somewhat on your good nature to the extent of givinig voice and expression to that which is more or less a hobby of mine. I am also going to ask you to please pardon the use of the personal pronoun "I," and the reference to personal experience and observation for the reason that only by such reference may I hope to put my though before you in a definite manner.

The word "superintendent" applies to one who is in charge of certain work and upon whom rests the responsibility of the successful conclusion of that work. The superintendent is sometimes dignified by the appellation or the title of production manager or factory manager, but after all, he is just a plain, everyday superintendent and at the same time the biggest man in any institution.

In the early days of the beginning of our commercial empire the superintendent was recognized as one of the important men in any manufacturing plant. Before the days of hectic selling efforts, advertising campiagns, system, specialists and experts, we picture the manufacturing plant where quality was the first consideration, where consecutive employment was a badge of honor, and where an honest day's work the honest effort of every employee. The employer arrived at his office in the morning in the garb and dignity of the gentleman of the day, but his first act was a conference with his trusted bookkeeper and superintendent. He looked upon this superintendent with the confidence and often with the affection of a brother, and why not? They no doubt had grown up together. The families had borne this close association for generations. The superintendent had followed in the footsteps of his father and his grandfathr before had held the position with honor. Through successes and adversity they had fought the good fight together. The superintendent was a man of importance—a man whose word carried instant responsibility, whose recommendations met with consideration, but the times have changed and the conditions today are far different than those on whic were built the foundation of our present tremendous commercia activities.

With the development of modern business the importance o production was overshadowed by the seeming importance of pur chasing, advertising and selling, and this has been true fo thirty or forty years. Only recently has the importance o better production methods begun to be realized. A year o two ago this association apprciated that we ought to do some thing to aid the canner in reducing his cost of production. W felt that a combination of our varied interests, with the broa knowledge gained by years of experience, should enable us t submit in some concrete form definite plans, drawings an recommendations that would benefit the food packer. A com mittee was appointed and did some work but failed of definit results for many reasons, but the principal reason was that w were approaching the proposition from the wrong angle.

If a man has an abcess somewhere in his head, the surgeo doesn't cut off his head to cure it, but rather pulls a tooth o treats an antrim or locates the cause and eliminates it. Tha is the way we must approach the work that we must do if we ar to help the food packer to reduce his cost of production. W cannot go to him and say—"You must discard your presen systems, plants, equipment, etc., and put in something entirel new"—but we must try and locate the cause of excessive cost and gradually treat that until it has been remedied.

In the present-day business of the manufacturer of foo products, the analysis of the fundamentals that constitute manufacturing industry may be divided into three classification as follows:

First—The securing of raw materials and supplies.

Second—Manufacturing of such raw materials into the finished product.

Third—The disposition of the finished product.

Under these three divisions are grouped the multiplicit of activiites that carry on a successful institution. The pur chasing is done through a purchasing department, with a pur chasing agent at its head. According to the size of the institu tion there may be one or more purchasing agents or the owne himself may occupy that position. Granting that all things ar equal, that the purchasing agent has a reasonable knowledge o his business, one purchasing agent may do as well as another and the manufacturing institution is not able to particularl lower its cost of production through the activity of the purchas ing agent. And yet every purchasing agent is an importan man in his institution.

Takinig up the third classification—that of selling—we fin grouped under this the sales manager and possibly his assistants handling salesmen or brokers, the advertising manager an manager of the credit department. All of these are importan individuals. When the owner calls a conference, all these me and the purchasing agent are called in. Their advice and recom mendations are very carefully weighed and considered. But between the first and third classifications is the production de partment and the poor old superintendent. I am not going t criticize the superintendent. but rather I sympathize with him There are some very wonderful ones. In a great many in stances, over an experience covering 17 years in the visitin of a great variety of plants where liquid and semi-liquid prod ucts are put up, I feel justified in saying that my personal ex perience has been that ninety per cent of the superintendent fail to receive the help and the consideration that their depart ment entitles them to. They are not very often called in con ference. Their recommendations are not very often recognize or appreciated. The purchasing and the sales departments ma produce a condition that the best superintendent in the worl is unable to combat. but if censure is made, the production de partment is the recipient.

I am not finding fault with the purchasing department o the sales department or any other department. I am simpl putting before you the conditions that exist. I do feel that should hold a brief for the superintendent. Of the hundred yes, and I may say thousands of superintendents that I hav met and known personally. I have yet to find one single indi vidual but what was absolutely conscientious and desirous o benefiting the institution by which he was employed. I hav yet to find one single superintendent that lacked in loyalty o effort, but I have met hundreds of superintndents who lacke in knowledge on nearly every subject that was of vital im portance in his work. When I say every subject, I do not mea that he knew nothing about the subject. but he did not kno enough about each of them. Usually, this lack of knowledge i due to the fact that the superintendent is not given the oppor tunity to acquire it. Personally, I have found in hundreds o

cases that the owner is very loathe to allow his superintendent to gain valuable information. He is afraid that it is going to put too many new ideas into the superintendent's head and afraid it is going to cost the owner money. It is a very short-sighted position to take and is again entirely due to conditions and not to a desire. Let me give a few illustrations.

Not long ago I visited a plant in the city of Cleveland, where they needed new equipment. I talked to the boss, and among other things he had ordered a labeling machine. He thought he was buying an automatic labeling machine, while he was actually buyinig a label paster. When I said to him: "Why don't you let your superintendent go into this matter and determine the kind of machine you need," he replied: "The superintendent don't know anything about what he needs."

In Indianapolis I talked to a very large concern—packers of food products, two or three years ago, and when I asked if I might talk to his superintendent, he said "No, sir, you will be giving him crazy ideas and the first thing I know he will want a lot of machinery."

I can refer you to 25 superintendents who are capable men and yet are afraid to walk into the office of the owner of the business and tell him that they need any new equipment. They will tell you or me that they need it and they will be glad to have you or me talk to the boss, but they don't dare do it.

To briefly sum up, let me present these facts:

First—We want the packer of food products to pack better quality goods, to pack more goods, to make more money. This naturally, will indirectly benefit us, but it is not so much the benefits that we may gain, but it is rather the obligation that we owe for past benefits that should actuate us in taking action.

Second—The money made in a food packing industry is not made by the purchasing department or by the sales department, but it is made in the production department.

Third—The production department being of this importance should receive, and the superintendent should be given the consideration the situation demands.

Fourth—For the benefit of the industry as a whole, we should render such help and aid to the superintendent as is within our power.

Fifth—That the superintendent shall gain in knowledge and wisdom and render a greater service to his employer.

Sixth—The employer does not deliberately prevent his superintendent from improving his condition, nor does the superintendent refuse to learn more and better ways of doing his work. Therefore, the situation is due to conditions and not to desire.

I have put this proposition to 25 men, each of them the head of a large industry, and some of these industries employ thousands of people, and in every instance they have said that "We had not thought about it before, but anything you can do to help our superintendent helps us and we are for it."

Obviously the next point is how might we as an association, help the industry by hleping the superintendent? First, let me say that in many states there have been arranged short courses at the agricultural colleges for cannery superintendents. Thus a start along better lines has already been made. We can supplement that work. We can help to a broader understanding of what production really means. You know, production is not cooking or processing or packing—it is not machine speed or gross output. It is every step from the selection of the seed, the selection of raw materials, the selection of containers, labels, cases, as well as equipment that goes into the handling of the product from the time it is grown until the finished case is loaded into the car to be shipped to the customer. It is not mechanics or chemistry. It is light and good air, pleasant surroundings, friendship, courtesy, loyalty, honesty, knowledge, enthusiasm and executive ability.

Visualize a superintendent in a plant that is old and dirty with unpleasant outward surroundings, poor quality of raw materials, inefficient equipment, no knowledge of the inner policy of his firm, lacking in authority, no inspiration, no instructions except to produce. What can you expect of the product that comes from such factories that may only partially resemble this description? There are a lot of them like it.

We can help the superintendent and thus help production. We can hope to attain the ideal condition to a degree by first having the superintendent at these conventions. We can have for him programs daily that are especially for his benefit—speakers to address him, who are authorities in their particular lines—men who will present to him subjects about which he is anxious to know the answer—not the discussion that he may hear at sectional meetings, which may be good, but rather the problems of his own:

How better to handle help?

How much will good light and good air increase efficiency?

Why—is temperature control?

The story of the tin can and the glass jar.

Why is a wood box better than a paper carton—better for shipping—or is it?

What is the value of a trade mark to a factory worker?

Why do machines ever give trouble? If they work part of the time correctly, why not all the time?

What is the value of a continuous system?

Why is it that a lineup that is speeded to 100 containers per minute only averages 60 per minute for the month?

These are only some of the hundreds of questions to which he would like to know the answer. What would it mean to the industry as a whole if there were present at this convention 1,000, yes, 2,000 superintendents?

If we want to benefit the industry we must voluntarily help that industry and by showing the way to improve quality and cut costs. To do it we must work with the superintendent—to work with the superintendent, we must have the hearty endorsement of his employer—to secure that endorsement, the employer

In Machinery Hall, The Exhibit of F. H. Langsenkamp.

must know that our purpose is altruistic and that we have no paritcular axe to grind—that we honestly and sincerely want to give something for which we ask absolutely nothing in return.

Gentlemen, can we do it? It is a wonderful opportunity for us to give of our experience, our knowledge and if necessary, of our money. I submit this thought for your consideration. It is something that if properly handled may result in a great good, but it needs the analysis of searching inquiry and unprejudiced contemplation.

That is my hobby. I would like you to think it over. I thank you. (Prolonged applause.)

THE PRESIDENT—The subject that Mr. Finich has talked about, I think, is a very important subject to all of our members. We had the thought of trying to inaugurate his idea at this convention; but it is so important that we thought we had better postpone it and try to work it out in conjunction with the National Canners' Convention; and I, therefore, recommend it to the new Board of Directors and suggest that they take immediate action on it, and I am sure they will.

Mr. Jimmy Anderson, the president of the National Canners' Association, as you know, lives out in Utah. He has to attend meetings and conventions and sectional meetings all over the country, and he has given about 90 per cent of his time to the Association. I think it is wonderful that they have been able to have a president of that character, and I take great pleasure in introducing Mr. Jimmy Anderson, th president of the National Canners' Association.

MR. ANDERSON—It is mighty nice to listen to those things, anyway. I know that Mr. Engelhart is sincere and I know that he is absolutely honest in his convictions; but after all, I just feel that it would not be right for the impression to be left that I have made any very great sacrifices. Just pardon me for a little personality in this and a personal reference; but to tell you the honest fact, gentlemen, even though I have taken advantage of an opportunity, for that is what it means, as the opportunity rolled by, why I just grabbed it, and in doing so I have gotten a whole lot more out of it than I could possibly put

into it in serving. It has just been a real pleasure and I hope it has made me a little bigger and a little better; and it has, because in coming in contact with the men whom I have, in traveling over the country, you know I just cannot help but partake of the good things they have, their good traits of character, and try to embody them with what little I have, and it makes me bigger and broader and better, and fits me better to serve and to do more good and to help my fellow-man; and that, after all, is the great thing that makes for success in this life. Money is just a medium to help us do those things, that is all.

I was very much interested in the remarks that have just been made—I am sorry I did not get ot hear them all, but I was attending one of the other Sectional meetings and could not get here—but your part in our great industry is mighty important, and a lot more important than many of us canners ever imagine.

I just want to refer, a moment or two, before going to my notes here, to what was said about co-operation with superintendents. I will tell you what I think about the superintendent knowing something about the machinery end of it, and the convention end of it, and all the way through. I just thought that my superintendent was important enough, and his work was important enough, that I wanted him to come on to this convention, all the way from Utah; and I paid all his expenses and let his salary go on just the same, and let him have all the fun he wants to; and this year and last year I brought him on to the convention, and it is up to him to tell me what we should have in our factory in the way of machinery—that is what I am paying him for—and if he does not muster up enough common sense to know what is best, I will try to find some one who has that sense. But fortunately my superintendent has got it. He is just a young fellow whom I brought off the farm. He is no expert—he does not claim to be an expert—but he is just a home-made boy, and he knows a lot more than some fellows whom I might import from a way-off some place else; not that experts from a long distance are not all right, but believe me, right around you are a fine lot of men, who, if you will say, "We want you in our organization; we trust you; we will place responsibility in you," will make good. See what you can make out of them. They may make mistakes, but they do not make the same mistake twice. You make mistakes, too.

I want to say that your end of the work plays a mighty important part in the production of our goods.

I am just going to say right here that I had the pleasure of listening to your Prsident yesterday. He has paid me some compliments and I am going to pay him some; and I am just as honest in paying them to him as he was ni paying those compliments to me. He gave us yesterday one of the nicest little addresses on adveritsing that I ever listened to. I am proud of the work he has done, and you are, too; so I need not elaborate on that.

You people do a lot of advertising and have done it. It is absolutely necessary in the machinery line. If you have some new improvements we want to know it; but you will have to tell us about it or we will not know it.

These machinery exhibits are one of the finest things that were ever gotten out. A convention without a machinery exhibit is a frost. It don't tak much to produce a frost in Buffalo (laughter). It would be the same in New Orleans.

There is another point I am going to tell you about in advertising. You know, there is a little fable told of the lion being the king of the forest. Out in the forest there was a lion roaring just something terrible, and along came a tiger and said to the lion "What makes you roar like that and make such a noise?"

"Why," replied the lion, "don't you know that by that great roaring and noise I advertise myself all over this country, and as a result I am called the king of the forest?"

A little rabbit close by listened to the conversation between the tiger and the lion, and he thought, "Well, if that's what it does, I am going to try it out." So he goes back to his little nest in the forest and he fills his little lungs and makes all the noise he possiibly can. A coyote recognized the familiar voice and hopped over there, and the result was that Mr. Coyote had a splendid supper that night; and the moral of the story is "Do not advertise unless you can deliver the goods." (Laughter and applause.)

There is another thing I want to tell you of, which you know very well, but we know it better than you do; and that is the improvements you have made in machinery in the last few years. Why, take eight or ten years ago, I know we would come away out here in the east to get a machine; that is, we would get the frame and foundation work and the things that went to make up the outside, and so on, and a picture of it and so forth—we would get all that and get it in, and we would figure we had to get it in very early in the season, before the factory started, because we figured that we had to do a lot of trimming to get it to work before the season began. Now, that is the way a lot of the machines came. They were not milled and trimmed down so the machine would work nicely, and it was not hard to understand why, if a machine was rated at 100 cans a minute, it would run about 25. That used to be the condition of some of the machines. Well, today it is a very different story. I am glad to note that you people have improved along your line of industry as the canning people have improved along their lines. Oh, I am willing to admit that some of our factories were no better than your machines, and we were no better in our processing and in our methods than you were in your machine work; but we now have this thing to the point where neither you nor I need to offer any apology for our industries. We need you and you cannot get along without us. We cannot get along without each other. It is a great thing to work together, and the beauty and pleasure of it all is to know that you have joined with us and we have joined with you, and we are going to work out these problems together.

I am going to tell you something now that will please you. I think I am safe in saying that two-thirds of the factories throughout the country have not enough machinery. Now, they just haven't enough, that's all. I go through some of these factories and find out that if future sales are good they will go to work and conrtact for five hundred or six hundred or maybe one thousand acres, and if you go through their factories, what have they got? They have a five-hundred-acre equipment. A man who does that is a menace to the community and the industry. Then when Mother Nature comes along, as she does every year, and produces the products in the season thereof—and Mother Nature is a mighty good servant to us—and that big sunlight comes down and matures that crop rapidly, as it does every year, and we know it is going to come, and they cannot take care of the crop, we get all kinds of stories, and then at the end we bewail and say "Oh, the season was so short." With this unusual stuff you would almost think they lived in California (laughter). But anyway, that is what they say. They blame it on nature, that it was so unusual. Well, they must have darn poor memories or they would remember that that unusual condition existed the year before and the year before that and the year before that, and ever since they have been in business. It is because they have not enough sand and common sense to equip themselves with enough machinery to take care of what Mother Nature gave them. I want to tell the canners around the country that they haven't enough machinery. It would be much better to have machinery for a 15-hundred-acre plant and only plant one thousand acres than to have the reverse condition. Instead of getting a lot of standard stuff that sells for $1.00 a dozen, you should have the fancy stuff that sells at $1.50, and in about one season you have paid for all that machinery. That is what you get. I have tried it out. They call me the extravagant canner out in Utah. But extravagant or not, I am going to tell you how I started in. Pardon the personal reference, but I want to show you how an extravagant canner can produce something.

In 1909 I bought my little concern out. I had run it for four years and under my management it had lost money because I did not know anything about the canning business, but was learning; and so the rest of the stockholders got disheartened and they were going to put me out; and before they could I offered them enough money to buy them out, so I could go into the canning business. I know that our industry is underfinanced; but that is what we did. We put out that year six thousand cases. I immediately went to work and installed a lot more machinery, and the followiing year I began to put out quality. Before that we were in bad shape. A lot of the other states were in the same condition. I went into the market and when I got down to California those fellows would say "When you fellows get to producing goods like they do in New York, we will talk to you." I listened to that a while. I will tell you what Mr. Tuttle said, in California, in introducing me. He said "I want to tell you a little story about Jimmy Anderson—I believe he was the first one to come in and see me in California—and I gave him a great big order because I felt sorry for him. I was afraid when he went out on the street the cows would eat him up." (Laughter.)

That was the condition. I went after quality and put in the machinery, so that when Mother Nature brought it along, I could take care of it. I said "If I can't beat them I will quit." And to show them where I was at I would have them bring their stuff down and cut it, and have mine cut, and it was just fine, and I walked away with the business right along.

Well, anyway, here is the result: Now I am putting up from 350,000 to 400,000 cases. Now, what is the result. I

QUALITY LABELS

ARE MADE BY

THE HOUSE OF STECHER

We excel in Designs of Artistic Merit

Our Labels are the Highest Standard for Commercial Value

Ask for our Superior Line for your Fancy Grade.

Stecher Lithographic Co.
Rochester, N.Y.

Other Originations:
Rogers Improved Kidney Wax
Rogers Green Admiral Peas,
Rogers Winner Peas.

LIGHT green, slender, round pod, 4 to 5 inches in length and almost perfectly straight.

Tender, meaty, brittle and entirely stringless even when ripe.

In appearance and season very similar to the old reliable Late Refugee 1000-to-1, having a strong vine with small leaf and heavy foliage.

Hardy and productive.

Without exception the most popular and desirable Greenpod variety for canner's use.

Now booking contracts, future delivery, 1924 crop.

Rogers Bros. Seed Co.

Originators
Breeders & Growers
Chicago U. S. A.

have worked on that principle of installing enough machinery to take care of the situation, to take care of the stuff when it came in; and instead of selling the stuff for $1.00, at a standard or sub-standard rate, below cost, I produced fancy quality and sold it for $1.50, $2.00 and $3.00 a dozen. It is easy enough to buy that extra machinery when you get the extra price for your goods, I do not care what an article costs if I can only get a profit on it. That's the way I figure my business.

As I say, that is the way to get quality in the pack; and if every canner would equip properly with the machinery you are producing—and we are proud of the fact that you are producing good machinery now—if they would do that we would not have to talk quality so much, but we will always have to talk quality as long as they do not do that.

THE PRESIDENT—I am sure we have all enjoyed the address of Mr. Anderson, and if we would all follow his advice we would be better for it, and the industry would, too.

I will now call on Mr. Roy Clark, the newly elected president of the National Canners' Association. (Applause.)

MR. CLARK—Any one who has been active in Association work feels a thrill of friendship when they appear before the Canning Machinery and Supplies Association; and I say that from the bottom of my heart. There have been times in the past when the National Canners' Association have seen threatning clouds. We can remember very clearly the last cloud that rose on the horizon; and we could come to your Association at any time—night or day—for counsel and assistance, and it was given not only freely, but we knew that it was given in the interests of the canning industry throughout the country.

You have referred, Mr. President, to my just having been elected president of the National Canners' Association; and I feel the responsibility and likewise appreciate the honor; but I know that I am going to have the co-operation of your Association on any problem that might arise.

I think that as times have gone by we have realized how much we could get out of the kind of co-operation that Mr. Anderson has referred to.

I want to say that I am optimistic as to 1924, and I am not so concerned as some individuals are in this country over the fact that the United States has practically cornered the gold and that the export business has fallen off so rapidly. I find that the export business has never amounted to much over 10 per cent and that the home business has been the real American industries. I believe, however, that wages are going to remain—I will not say remain—I do not believe that wages are going down, but that there is a possibility of wages increasing; and I believe that that is for the interests of the canners.

There is one thing, however, my friends, that must be understood by the wage earner, and that is that they will have to follow the increase in price of commodities used by them. They must realize that they cannot expect even the maintennace of the present level of wages, or an increase in wages, without paying more for the commodities that they have to purchase. I believe that if labor and capital—and particularly labor—was left alone to work out the solution of the many problems that are confronting them today; I believe if the professional politician would leave them alone for even a short space of time, that we would come to an agreement in this country which would mean greater prosperity; and while I would not for a moment attempt to make a political speech, as a business man I feel like saying that it is up to us business men, and up to labor not to send back from Washington some of those professional politicians who have only in mind their present advantage, but let them go to work the same as you have to work and the same as I have to work. (Applause.)

Now, I say I am optomistic, but I am optimistic only if we put quality into the goods that we manufacture and distribute. I believe the time has come when quality must be the watchword not only of the manufacturer, but of the distributor; and it does not make any difference to me whether you are manufacturing a machine, whether you are canning a particular commodity, whether it be wearing apparel, whether it be stoves, if we are going to maintain that present level of wages, or if we are going to have higher wages, and if we are going to ask the wage earners to pay higher prices for the commodiites they buy, they have a right to insist that quality be marked upon every product that they purchase; and that is really a new condition facing the business men in this country.

Another thing so far as it affects your industry and mine is that of advertising, which Mr. Anderson has referred to. I do not suppose there is another industry in the world that has been so lax in the method of advertising their products as the canning industry. It is a wonder somtimes to me that the per capita consumption of canned foods is where it is. The National Canners' Association, and the great men who make up that body—who made up that body years ago—saw the necessity of establishing research laboratories and making large grants to universities to prove that canned foods were safe. Enough of the products got into the market to satisfy the present users of canned foods to convince them that they are backed by the word "Economy" and "Convenience;" but what have we done to educate the non-users of canned foods to be users of canned foods? You well know that it has been a subject that has been very close to my heart for years, and as chairman of the Canned Foods Week Committee I have worked hard for the last two years to get something started. I have made before frank confession to you that this movement did not have the support that it should have had from the canner. Oh, I think they gave us their support in thought, but not in money and money is what creates advertising.

Now, we have had support from your Association and your individual members, and if I were to speak the truth I would say that only for that, the campaign of 1923 and 1924 would have gone on the rocks for lack of funds. Why should I not stand before you and tell you of my appreciation of that support?

But I will recommend shortly that this be handled from the National Canners Association office and the funds be paid out of the treasury, I think that we have reached a point where we can take over this work and do away with solicitation from our own members. I know we will have your support. You are intrested in a greater distribution of canned foods. It is your problem as well as ours—not as great a problem, perhaps, with you as with us—but nevertheless, you are interested in the greater distribution of canned foods.

During the campaign of 1924 letters were sent out by our good friend, Mr. Gorsline, to all Rotary Clubs; and we are going to attempt to put on a canned foods luncheon, not so much from an advertising standpoint as from an educational standpoint. We are going to ask the Kiwanis and Lions Clubs to do the same thing. Mr. Grosline has done a lot of work so far.

I was handed this menu, gotten up by the proprietor of a well known restaurant in Chicago—Henrici's—a man dealing in foods and serving foods; but nevertheless he gave enough of his time to the study of canned foods to determine whether or not such a luncheon could be served. The menu reads: "Canned Olives, Canned Pickles, Tomato Soup, Canned Crackers, Tuna Fish, Canned Meat, Corned Beef, Roast Beef, Corned Beef Hash, Canned Sweet Potatoes, Canned Peas or Canned Corn, Canned Fruit Salad, Canned Combination Salad, Canned Fruits, Coffee, Canned Cream."

But that did not come from a canner; that came from a restaurant man who had made a sufficint study of our products to convince him that it was in the interests of his own business to write a menu like that.

Now, I want to say further that my attention was just called today to the fact that the National Vegetable Growers' Association have voted one million dollars to be expended in advertisinig green products. That will affect your business. It will affect my business. It will affect 99 per cent of the wholesale grocers' business. It will not affect so much the retail grocers' business. One million dollars has been voted for that purpose. I wonder what would happen to the convention if I should go in Friday and ask that they vote one million dollars?

MR. ANDERSON—I will vote with you.

MR. CLARK (continuing)—Now, I mention that fact simply to indicate that it is necessary that some action be taken along the lines of that taken by the National Vegetable Growers' Association to let the public know what we have to tell them.

I know you will give me that assistance and co-operation in 1924 which will make my presidency a success. I pledge to you my unqualified support, co-operation and confidence. I thank you. (Prolonged applause.)

THE PRESIDENT—The next thing on the order of business is the Reports of Committees. As it is gettinig late, I think we will suspend with that. Is there any unfinished business to come before the meeting?

MR. ST. JOHN—Mr. President, a few minutes ago the door opened and one of our old members came in, and I think that this member is entitled to recognition, and I would like to call her "The sweetheart of the Canning Machinery and Supplies Association." I refer to Mrs. Harris. Let us give her the glad hand. (Applause.)

THE PRESIDENT—I am sure the Association will be very glad to have Mrs. Harris say just a few words to us.

MRS. HARRIS—You must know that I am intensely interested. I am now in my seventy-fourth year. Mr. St. John and the others have always been very kind and considerate to me. Of course, now a lot of the ladies come to the front

and I feel I am a back number; but I want you to know that I am as interested today as when I satrted in. I thank you. (Applause.)
officers. As you know, there is to be a new president elected this year.

THE PRESIDENT—We will now come to the electoin of

MR. AMS—Mr. President, I need not dwell upon the activities of the man who has given so much time and attention to the affairs of the Association as our vice president; so I take great pleasure in nominating Mr. Finch for the office of president.

The nomination was seconded by Mr. White.

THE PRESIDENT—It has been moved and seconded that the nominations be closed and that the secretary be instructed to cast a unanimous ballot for Mr. Ernest E. Finch for president. All in favor say aye, contrary no.

The motion was unanimously carried.

THE PRESIDENT—Mr. Finch, you are elected president.

MR. FINCH—You elected Frank because he is a nice fellow. You know, you cannot be president of any association unless your friends elect you. I figure you are all my friends, and I cannot do anything without your help.

I promise you I will do my best. (Applause.)

THE PRESIDENT—Nominations are now in order for vice president.

The Exhibit of the Arabol Mfg. Co., In Machinery Hall.

MR. ST. JOHN—I would like to nominate Mr. Sidney Steele, who is an old member of the Association.

The nomination was seconded by Mr. May.

THE PRESIDENT—Mr. Steele has been nominated and the nomination has been seconded. Are there any other nominations?

THE PRESIDENT—It has been moved and seconded that the nominations for the office of vice president be closed and that the secretary be instructed to cast a unanimous ballot for Mr. Steele. All in favor say aye, contrary no.

The motion was unanimously carried.

THE PRESIDENT—Mr. Steele is elected vice president.

This year we are losing two very good directors, each having served two years—Mr. Kellogg and Mr. Guelf. They both have been very good workers and I know we are going to miss them. Nominations are now in order for the vacancies caused by Mr. Gordon H. Kellogg and Charles P. Guelf, retiring from the board.

MR. FINCH—We have in our Association a branch of the industry that has not been represented on the board, that has grown to be a very large branch, and that is the glassware and cap industry. We have several large concerns down at the hall and I feel they should be represented on the board. I would like to place in nomination Mr. Will P. White, of the Anchor Cap & Closure Corporation.

The nomination was seconded by Mr. Cole.

THE PRESIDENT—It has been moved and seconded that the nominations be closed and that the secretary be instructed to cast the unanimous ballot of the Association for Mr. White as director. All in favor say aye, contrary no.

The motion was unanimously carried.

THE PRESIDENT—Mr. White, you are elected a director of the Association.

MR. WHITE—I thank you very much. It will a great pleasure to serve with the new officers.

THE PRESIDENT—The vacancy caused by Mr. Guelf retiring from the board is now open.

MR. GAMSE—We have a gentleman in Baltimore of whom we think a great deal. He is connected with one of the large can companies in Baltimore, as sales manager, and he is president of the advertising club. I take pleasure in nominating Mr. Frank O'Brien, of the Southern Can Company, as one of the directors.

The nomination was seconded by Mr. Jones.

MR. O'BRIEN—Mr. President, in view of the many outside duties which I have, I wish that Mr. Gamse would withdraw that nomination. I thank you very much for the honor.

MR. GAMSE—If it is your wish, I will do so.

MR. SCOTT—I am pleased to put in nomination the name of Mr. A. B. Clark as his successor, knowing quite well that he will fill the position quite as well as anybody except Charlie Guelf.

The nomination was seconded by Mr. St. John.

THE PRESIDENT—It has been moved and seconded that the nominations be closed and that the secretary be instructed to cast a unanimous ballot of the Association for Mr. Clark, as dirctor. All in favor say aye, contrary no.

The motion was unanimously carried.

THE PRESIDENT—Mr. Clark is elected.

The officers are all elected now; therefore, I will appoint our former presidents to escort the newly elected president to the chair; therefore, Mr. St. John, Mr. Scott, Mr. Ams and Mr. Sells will escort our new president to the chair.

(President Finch was then escorted to the chair amid prolonged applause).

PRESIDENT FINCH—It is a very great honor to be escorted here by such gentlemen. They are the very finest in the world.

Gentlemen, we have been here a long time and we have had a very wonderful meeting; but we are anxious to get out and get down to the hall; therefore, a motion to adjourn is now in order.

MR. SELLS—I move that we adjourn.

The motion was seconded by Mr. Engelhart and unanimously carried.

Whereupon, the meeting adjourned.

FRUIT SECTION

Chinese Room, Hotel Statler, Monday, January 23 and Thursday, January 24 1924

Edward S. Reynolds, Sturgeon Bay, Wis., Chairman, presiding.

THE CHAIRMAN—The meeting will come to order.

In making an actual survey of the work of the fruit section for the year just past, and of our dreams and hopes for a national standard for fruits, it does not look as if we, as the Fruit Section, have made much progress in that line, but as far as sectional standards are concerned I believe we have made great headway.

In other words, New York State and the State of Michigan a year ago adopted sectional or regional standards for both of those regions, and have had a year up to this time to put the same into practice. New York State and the State of Michigan are the last two sections to come into line as far as regional standards are concerned, and now we have the Pacific Northwest, who have worked on regional standardization of fruits in that section, California, the State of Michigan and the State of New York.

We should be able at this meeting, at this session or the next, to get together on other sectional standards, in order to arrive at something in the national standardization of fruits. This has been the dream of the fruit section for a long time, and I hope we will see it come to pass.

In the matter of packs for 1923, the total packs for the year which Chairman Holt, of Oregon, last year inaugurated, shows us that we have slipped some, as far as the total number of cases of canned fruits in the country is concerned. The greatest falling off in the packs is in the State of California, and the total has fallen from last year's 24,431,385 cases of canned fruits to something like 20,865,000 cases of canned fruits.

The largest falling off, as I have said, is in the State of California. The Pacific Northwest has had an increase, and the other sections have had slight varying decreases.

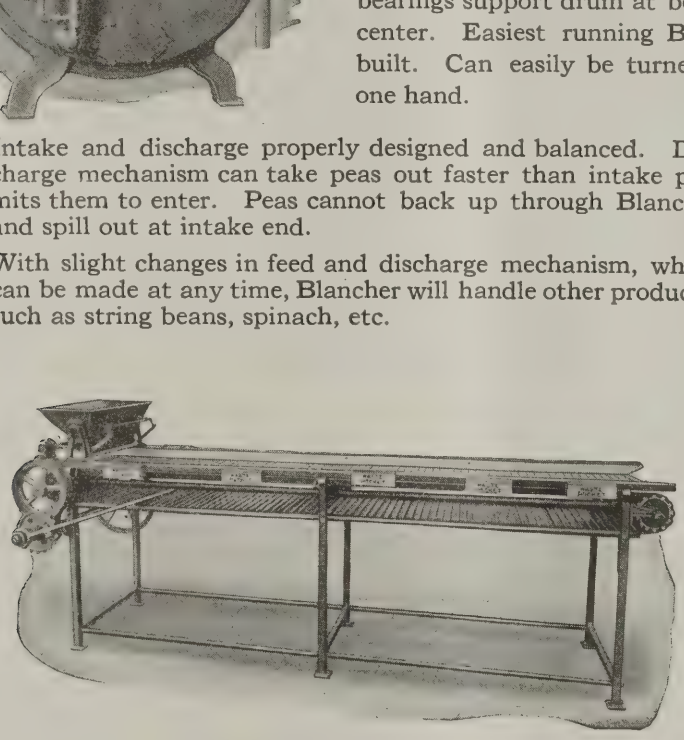
SPRAGUE-SE

Sprague-Sells Blancher

Four construction points that make the Sprague-Sells the Blancher you want:

1 Cylinder securely fastened to spiral at all points. Result—no chance to grind and cut peas between spiral and casing. Rigid construction insures long life. Impossible for casing to crack or split.

2 Worm and pulley drive. Oil-less roller bearings support drum at both ends and center. Easiest running Blancher ever built. Can easily be turned over with one hand.



3 Intake and discharge properly designed and balanced. Discharge mechanism can take peas out faster than intake permits them to enter. Peas cannot back up through Blancher and spill out at intake end.

4 With slight changes in feed and discharge mechanism, which can be made at any time, Blancher will handle other products, such as string beans, spinach, etc.

This does not include the pineapple pack and other miscellaneous packs in the country, but it does cover in a fairly accurate measure the packs in New York State, Michigan, the Pacific Northwest, Utah, Colorado, Ohio and Wisconsin.

We are very fortunate in the opening of this session to have President Anderson with us, and I would like very much to have him give us a few words.

(President Anderson then made one of his excellent addresses.)

THE CHAIRMAN—I will ask Mr. McEwing to read the minutes of the last previous meeting.

THE CHAIRMAN—In the announcement of committees I have appointed the committee on nominations as follows:

Mr. Preston McKinney, of California, Chairman.
Mr. McEwing, of Michigan.
Mr. Van Eenwyk, of New York.
Mr. Ewald, of Iowa, and
Dr. W. E. Elwell, of Maine.

For the committee on resolutions I have appointed:

Mr. L. Meulendyke, of New York.
Mr. Holt, of Oregon.
Mr. E. E. Chase, of California.
Mr. Frank Gerber, of Michigan, and
Mr. P. Larmon, of Chicago.

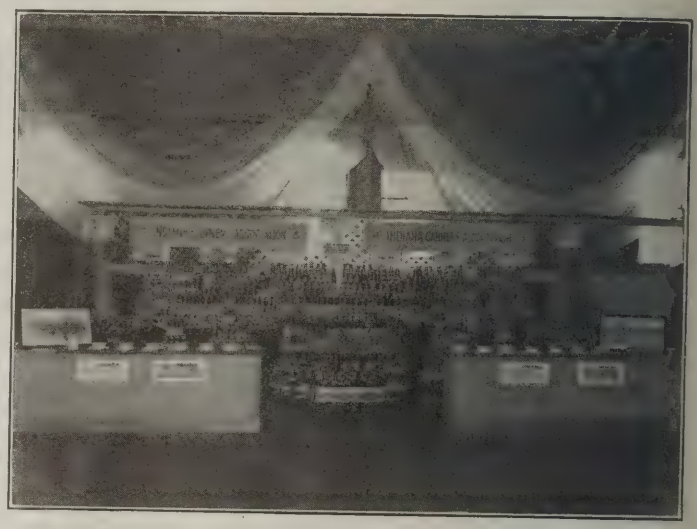
The first address will be "The Pacific Northwest and Its Relation to the Growth of the Fruit Canning Industry," by Mr. Leon S. Lyon, of Eau Claire, Wiscnosin. Mr. Lyon.

THE PACIFIC NORTHWEST AND ITS RELATION TO FRUIT CANNING.

In the course of his talk Mr. Lyons said:

I never realized the value of the West as a fruit district until I was moved into the Eastern section of the country. In my home in Wisconsin last year we were very glad to get Yakima peaches at from $1.35 to $1.65 for a crate, for which in Portland or Seattle we would pay seventy-five or eighty-five cents. I went one day to one of the local markets and asked for some apples—some eating apples. They brought me some. I had been used to Wenatchee apples—and I spoke about the quality and size of those he brought me. The man apologized and said, "Well, these are all local. I am very sorry that we haven't anything better, but the Wentachee apples are not in yet."

Then again, a couple of years ago I happened to be in a market down in New York, and I saw Oregon prunes that I had been glad to get four or four and one-half cents a pound for my trade in Portland, selling in New York two for five cents. I thought there was quite a difference in price, and the possibilities for the fruit canner, in addition to the natural retail men must be getting a good share of it.



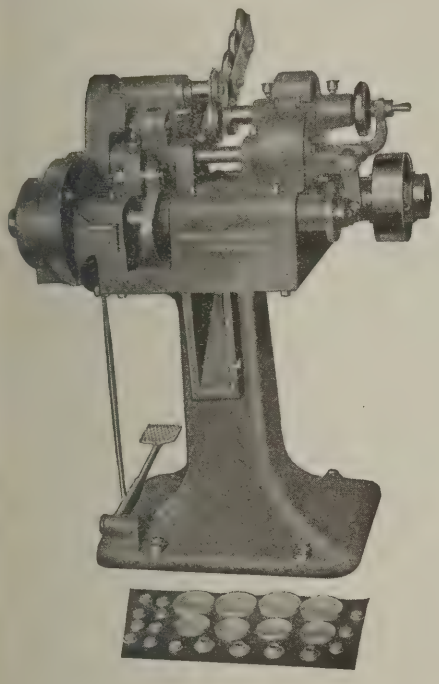
Another reason why the Pacific Northwest holds great barriers I spoke of, which break up the storms, keeping the differnt sections from being hurt from that source, is the soil itself. Nature has been kind in the centuries that are past, and the whole country is more or less built up of botanic ash. This is particularly true of the eastern part of Oregon and Washington. In some places you can go down a good many feet, and it is all the same. But the soil in the western part of Oregon and Washington is washed down from the mountains, giving a soil which to a great extent does not need the artificial fertilizing that the soils in this section of the country need.

Then again, it is new land, and we know that new land gives good crops, if that new land is kept up. If they take the experience of the growers in the East, who for many years took every thing the soil had to give and gave nothing back, they can profit out there by that experience and keep their soil in such shape that in future generations there will be the same conditions that they have there now.

Then another thing that creates a great possibility for the canner, and that will make the fruit canning industry in the Pacific Coast country a great thing in the future, more so even than in recent years, is the quality of the fruit.

Take, for instance, the cherry. I had an aunt that had a large orchard in the Susequenhanna Valley in Pennsylvania. She was very fond of cherries, but she happened to come to Portland at one time during cherry season and as long as she was able to make the trip after that cherry season always found her in Portland. That great cherry section extends up and down the Coast; not the small cherries such as we find so many of east of the Rocky Mountains, but the large cherry, which, in many cases, is more like the size of a prune than the size of a cherry. Undoubtedly you have seen them packed in boxes, coming with the small box that is about eight inches across the top with seven or eight cherries to a row and with only about two tiers of cherries in the box.

Strawberries from the Pacific Northwest are sold at a premium on the eastern markets in competition with the berries that are grown here, and I have heard at least a thousand people say that they never thought of eating a blackberry until they went to the Pacific Coast. I bought some blackberries here last summer and we tried to eat a few of them, but at least we stewed them up. They were mostly seeds. But in the Pacific Northwest, especially down around that part of the country where Mr. Holt, whom you all know, comes from, you will find the blackberry a big, luscious berry, full of juice and flavor, and with only a minimum of seeds.



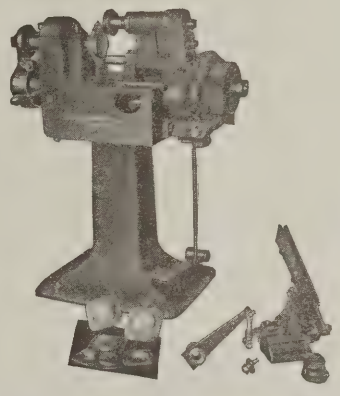
Indiana's Display at The Food Show, Buffalo.

Then there is another berry, the loganberry, which was unknown until nature produced it on the Pacific Coast and found a natural home for it in the Willamette Valley of Oregon, and there it is being grown in ever increasing quantities. This one berry probably has more of a future for the canner than any other fruit that we have. It has a pleasant, tart flavor, is good for pies or for table use as fruit, is, when thoroughly ripe a delicious berry to eat with sugar or cream, it is good for jams and jellies, and has a juice which rivals, and manay people think that it exceeds, grape juice. The great country for that berry is right in this small district, especially along from Cottage Grove, Oregon, north.

Then consider the lowly prune. You know, it used to be a terrible disgrace if you called a man a poor prune. That sometimes started a fight—but it has come into its own now. It is an aristocrat. It is like the sour kraut that the president talked about; it is found in the very best of homes, and I noticed the other day where the housewives of Berlin were filled with consternation when they found that the market quotation for prunes was four hundred million marks apiece.

Three-fourths of the world's supply of choice prunes—I am not speaking of prunes now; I am speaking of *choice prunes*, comes from the water shed of the Columbia River. It is true that there are prunes grown in practically every section of the country. It is true that some sections have advertised very extensively a wonderful prune and have told you to buy that and no other, but if your wife buys prunes at the market you will find that sometimes you will get a prune that has got a sickly sweet flavor. Then again you will find a prune that has got no flavor at all; but once in awhile she gets hold of some prunes—she doesn't know where they come from, doesn't know where they were grown—but that prune has got a pleasant and tart flavor, and you remark about it; you say, "Why don't you get this kind all the time? That is a pretty nice piece of fruit." You can gamble on it that those prunes came from a little bit of a circle right in there, with Vancouver, Washington, as the main point in the circle, and extending south to Eugene, Oregon, for it is in that circle that three-fourths of the world's supply of choice prunes is raised.

I am sorry to say that all of these prunes do not go out marked as Oregon or Washington fruit, and that is true of a great deal of the pack of fruit from the canneries. There is nothing on the label or nothing on the can to show you that that fruit came from Oregon or from Washington, and I sincerely trust that there will be a time when, on picking up a can of fruit, we can tell something about where it comes from.



ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

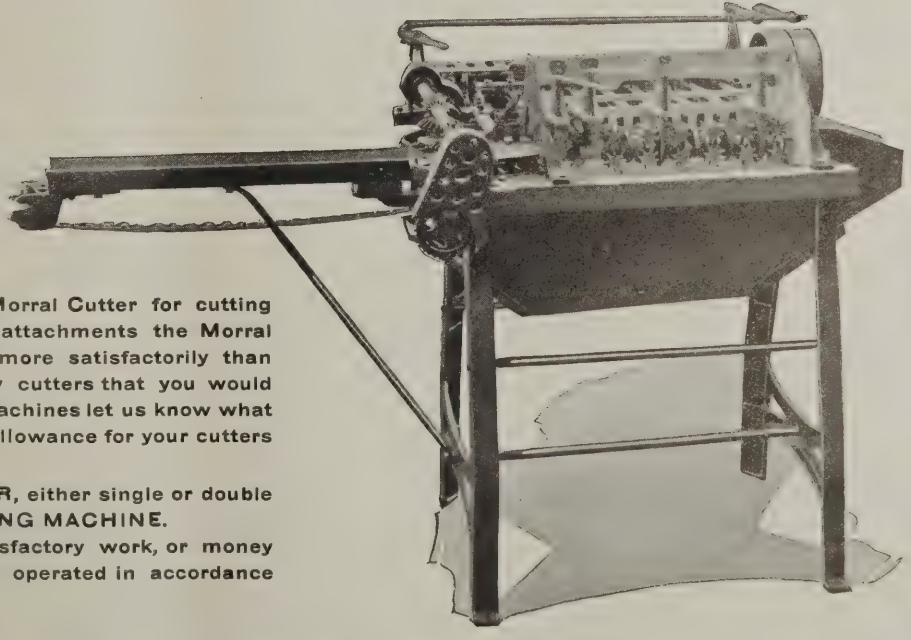
We make every machine for "can-making."

CAMERON CAN MACHINERY CO.

240 North Ashland Avenue CHICAGO, U. S. A.

THE MORRAL CORN CUTTING MACHINE

Either Single Or Double Cut



THE MORRAL CORN CUTTING MACHINE is the most durable, simple and efficient cutter you can buy. It has the most positive feed of any cutter in use.

The Morral Cutter will cut large ears, nubbins and pieces of ears, without clogging like other cutters and for this reason you can secure a larger yield of cans per ton with the Morral Cutter than with any other type of cutter.

We furnish special attachments for the Morral Cutter for cutting Golden Bantam Corn and with these attachments the Morral Cutter will cut the Golden Bantam Corn more satisfactorily than any other cutter in use. If you have any cutters that you would like to replace with new and up to date machines let us know what you have and we will make you a liberal allowance for your cutters on the price of new cutters.

We make the MORRAL CORN HUSKER, either single or double and we also make the MORRAL LABELING MACHINE.

Our machines are guaranteed to do satisfactory work, or money back if they fail to do so when set up and operated in accordance with directions furnished.

It will pay you to write at once for prices and further information.

MORRAL BROTHERS, Morral, Ohio

Then, in a great many places you will see a small packing house—maybe it is just a shed, and outside of that packing house you will find a big pile of barrels, and in those they put berries, mixing them with sugar and as the sugar and berries are put in the whole thing is rocked so it is worked down good and solid, then later a cover is put on, the barrel is lifted into a truck and taken away to a storage plant; so if you go out into a great many canneries in the Pacific Northwest today, while it may be cold and blowing outdoors, yet inside you will find them making strawberry jam or raspberry jam, or loganberry. And not only are they using it in that way there, but they are shipping hundreds of cars that are barreled in that fashion to the eastern jam plants.

THE CHAIRMAN—The next subject is the subject of perforations, and I know of no one who has spent more concerted effort on this one subject than Dr. Kohman. Dr. Kohman has something new for us, and I know you are going to be interested in what he has to say. Dr. Kohman. (Applause.)

(Because of the importance and length of Dr. Kohman's address we are going to reserve it for another issue).

THE CHAIRMAN—This will conclude the meeting this morning, and in order that we cover the points fully tomorrow morning that we have on the program I wish to suggest that you be here at ten o'clock. We have some things to take up tomorrow morning that will eventually lead us to a point where we will have standardization, and that is something that we are all very desirous of.

(Whereupon an adjournment was taken.)

SECOND SESSION—FRUIT SECTION

Thursday, January 24th.

EDWARD S. REYNOLDS, Chairman, Presiding.

THE CHAIRMAN—The first address this evening is on "A Possible Bulletin on Canned Fruits and Its Advantages," by Mr. H. M. Loomis, Washington, D. C.

POPULAR BULLETIN ON CANNED FRUITS AND ITS ADVANTAGES

By H. M. Loomis.

WHILE the subject assigned to me on the program is "A Possible Bulletin on Canned Fruits." I think that in order to cover what I have to say, it should be changed to read "A Popular Bulletin on Canned Fruits and Its Advantages."

Before referring particularly to the bulletin, a few words in reference to the general subject of popularizing the work of the National Canners' Association would be appropriate. Trade Association work, particularly when it represents an industry providing the necessities of life, must be of public interest, and under such regulation as is now provided by law must be of public benefit. Secretary Hoover has clearly expressed this view on several occasions.

In her address before the Canners' Association on Monday, Mrs. Julian Heath, President of the National Housewives League, called attention to the fact that there is a great deal of work done by the National Canners' Association that is of much interest to housewives and recommended that the consumer be kept better informed regarding it. She even suggested the organization of a great consumers' and producers' information bureau for the interchange of information of mutual interest, one result of which would be to show housewives how to use canned foods intelligently.

Mrs. Heath also stated that the housewife expected from the canning industry the production of canned foods of quality. There is no surer foundation for that most important service than the research work which has been carried on for a great many years by the Association, not only on the technicality of canning, but on the production of better raw materials and products, and the determination of the wholesomeness and nutritive value of canned foods.

The investigation of complaints involving canned foods, while conducted primarily for the information of the canning industry, is of direct benefit to the public, as prompt efforts are made to ascertain the facts in every case and to secure a correction where misinformation or false reports have been published regarding any such case. This work is being extended as far as practicable with a view of acquainting the medical profession with the science of canning, and the facts brought out by the work of the Research Laboratories and the University research financed by the National Canners' Association. Though simply a beginning has been made in attempting to correct misstatements which frequently occur regarding canned foods in text books, newspapers, magazines and other publications, wi the establishment of effective methods of distributing corre information to the public, there is continually less likelihood such misinformation being perpetuated.

There is no question about the value of commodity adve tising for canned foods, as illustrated by work which has be done with several canned commodities during the past few yea There is plenty of demand for popular literature dealing wi each canned food or classes of foods. Bulletins of that kind c cover in a more concise and simple manner all the importa information relating to these foods than can be done when a tempt is made to cover all kinds of canned foods in one bulleti

About a year ago the National Canners' Association pu lished a popular bulletin on canned corn which aroused consi erable interest, and for which there has been a constant deman Other similar bulletins are in the course of preparation. A illustrated bulletin on canned fruits has been prepared and now ready for the printer. It describes in a popular way th extent and variety of the canned fruit industry and commerci methods of preparing canned fruits from the orchard to th finished products.

The nutritive value of fruits is shown by quotations fro recognized authorities and a number of recipes for using canne fruits are given. The bulletin will be made particularly attrac tive by the use of illustrations and a cover design in colors.

While on this subject I wish to call attention of canner again to the great need for photographs illustrating the cannin industry. The National Canners' Association has a great man demands and uses for such photographs, but our supply is ver limited, and it is difficult for the Association to secure suc photographs except from individual canners. Any canner wh has a good photograph or several photographs illustrating thei cannery or canning operations would help the Association great deal if they would at least lend such photographs for th purpose of making copies.

I would like to secure some expressions from the canners present regarding the value to the industry of such a popula bulletin as above described. Any suggestions as to the contents or arrangement of such bulletins will be very gladly received.

Before Fruit Section, N. C. A., Buffalo, January 24th, 1924.

THE CHAIRMAN—The next address is:

"THE DIFFICULTIES CONFRONTING A NATIONAL STANDARDIZATION OF CANNED FRUITS AND THE IMPOSSIBLE SOLUTION BY MEANS OF SECTIONAL STANDARDS."

By Preston McKinney, San Francisco, Calif.

In the packing and marketing of our products to the distributor we are perhaps as well standardized as anyone. We standardized our fruit some years ago, and we did it in a thorough manner. We prepared these specifications in booklet form, and the Canners League has distributed forty thousand copies of these throughout the world. Every buyer has them, they are clear and specific, and arbitrations all over the world are based on them.

But we see a good many difficulties in the application of this to the label. The great need of the industry is more advertising. Canned fruits, on account of their beauty and on account of their appeal to the appetite, lend themselves well to advertising, and if you are studying the advertising of the wholesale grocers throughout the country, and in every market there is a brand or various brands which are extensively advertised, you will find that a greater percentage of that publicity is put on fruits than on any other item, despite the fact that the jobber in establishing his brands must establish not only fruits, but vegetables, spices, coffees and many other articles.

We want the advertiser to continue to advertise canned fruits, and we submit to you that there is grave danger—at least, if I were a jobber, and if through the Government and through women's organizations an effort was being made to make the public feel that a choice peach was a choice peach, no matter who put it out as a wholesaler, I would be inclined to think that my efforts were being negatived. In other words, taking the California brands—I know the best of the jobbers' brands, and to a less degree it is applicable to the canners' brands, too—if I were a jobber, if I were, we will say, S. & W. in San Francisco, and had spent a great deal of money establishing my brand, I would feel I was being pretty seriously hurt if through the Government and through all other methods the

retailer across the street, who was handling an unknown brand, and if a housewife came in and asked for S & W, he could say rightfully, "It doesn't make any difference what label it is under. Our Government has established what a choice of fancy is, and here it is."

Too much standardization—and understand again I am talking not just on the internal end of it—too much standardization does remove the means for the preparation of advertising copy, because, after all, in your advertisments you direct them toward telling the public that your brand is better.

I think a good example of that is sugar. Fred Mason, whom you all know, was the executive officer of the Shredded Wheat Company, certainly one of the greatest advertisers in this country of food products. He moved over to the sugar company. He believes in advertising; he has proved the tremendous force of it, and yet there has not been in years any advertising of sugar beyond one particular line, Domino, because there is nothing to say about sugar. Sugar is sugar. There is nothing to hang your copy on; nothing to direct people to it.

We get down now to the question of sectional standards, which might possibly remove some of the objections, and yet I am fearful of that. Certainly if this is a movement which, as I understand it, is intended to be of national scope, then you cannot very well have sectional standards. Odious comparisons begin at once, which are not good for the industry. We in California think we have a better quality of fruit than anyone else. We believe that when you count the pieces and look at the color and study every item that our product stands ahead.

There are other sections that produce fruit, and they are going to continue to produce fruit, and they are going to improve, but if we made a national standard today certainly the fruits of other districts would have to be graded lower, and I do not think that the packers in those states would like that. If we had a sectional standard for fruit in one state, and another in another, they could say, "Here is New York State choice grade," and "Here is California choice grade," and the Government backs the word choice on either one and says that the New York choice standard is as good as our choice standard, and it is so written in the specifications, we would feel that the Government was playing into the hands of the other fellow.

And in the national movement surely we don't want to be in the position of bucking our fellow-canners, who are endeavoring as we are to produce a good product, and who, I feel, do not want any special advantage over us nor we over them.

In closing it seems to me that the effort so far toward suddenly saying "Put the grade on the label; get our Government and our women's organizations and all back of it," is putting the cart before the horse. You must, if it means anything, have real standards established by the Government, or sectional perhaps, but as I think I have stated clearly, sectional standards seem impossible in the national movement. So it seems to me that our first movement—and we will be glad to help out on it and work with all if it is to be a national movement—is to prepare national standards. When these national standards are prepared and are understood, and we are packing to them in New York, Georgia, Washington, Oregon, and so on; when all of us pack to national standards, then the time will come to take the next step and put them on the label and I think, gentlemen, you will realize our sincerity of purpose in making these criticisms when we say that we feel now that when that time does come that the California canner will be in far better position than most others, because we have been at it longer, we think Nature has been a little kinder to us out the, and in national standards we would probably rate higher than the average of those states who are newer in the business and have not the same climatic conditions, which at least make for appearances, although my friend Mr. Street will tell us that they do not for other things.

THE CHAIRMAN—We will pass on to the next address, "A Consumer's Viewpoint of Interpretative Labeling of Canned Fruits," by Miss Anne Lewis Pierce, New York Tribune, New York city.

(This was published in The Canning Trade of February 11th.)

THE CHAIRMAN—In the matter of a uniform S. A. P. contract for canned fruits we would like to have some open discussion, so that they could arrive at something in drawing up and going ahead with the uniform S. A. P. contract.

MR. MEULENDYKE—I don't think I like the idea of the contract. I don't think the Senate approval of prices quite fair to the canner or manufacturer. I don't know just what the middle ground is.

MR. P. E. CULVERHOUSE (Vineland, Ontario)—May I ask if the canners are able to buy their raw fruits very far in advance of the packing? It would seem to me that might have some bearing.

THE CHAIRMAN—There is a great difference between what you contract for and what you get in fruit and in vegetables, because with vegetables, according to the acreage you put out, you have a fairly definite percentage of deliveries, but what acreage you contract for on fruits has no workable percentage of delivery. In other words, you may get a good delivery and you may not, because it is such a hazardous crop.

There is another matter which was held over from the last meeting at Atlantic City, and that is the matter of the appointment of regional directors for the fruit section.

I will read you this resolution carried over from last year, and if you want the same pushed tomorrow morning at the meeting of the new Board of Directors it can be brought to some decision.

"Resolution presented by Mr. Trautman, requesting the resolution committee of the National Association to provide for the selection of five, or perhaps six, regional directors from the different sections of the country to act as advisory board of this section, for the purpose of uniting the trade through all these sections and transmitting knowledge of trade conditions to fruit canners throughout the country. Upon their approval the chairman of the fruit section will have authority to appoint this board of regional directors for the ensuing year, and thereafter the members will be elected from the floor, as your chairman and secretary at the present time."

The Exhibit of The Ayars Mochine Co., In Machinery Hall.

MR. MEULENDYKE—As you were reading I have been trying to think of what benefits would accrue from such a board of regional directors. As far as dissemination of information is concerned, most sections have associations. For instance, in New York we have our worthy John Street here, and if there is any information to be given to the members it all goes through the secretary. California has the same. I do not quite understand the benefits which might be derived.

MR. STREET—That makes me think that at this meeting, at this convention, we have organized an association of state secretaries, and I would think, although we have not definitely formulated our plans, that one of our main functions would be covering just what this resolution suggests, so as Mr. Meulendyke suggested it seems to me it is almost taken care of.

THE CHAIRMAN—I believe that point was brought up a year ago, that it would be advisable to have the secretaries constitute this Board, and if that has already been formulated, why there certainly is no further action to be taken with the resolution.

THE ELECTION

MR. McKINNEY—Mr. Chairman, we suggest Mr. F. L. Monet, of Santa Clara, Cal., for chairman, and Mr. Amos Cobb, of the New York canners, for secretary.

Motion seconded and carried.

Whereupon the meeting adjourned.

CORN SECTION

Grill Room Hotel Statler, Thursday January 24 1924

Mr. J. W. HILL, Iowa, Presiding.
MR. ROBERT DICKINSON, Illinois, Acting as Secretary.

MR. JAMES MOORE (Rochester, New York, Acting Chairman)—Your chairman, Mr. Shriver, unfortunately, was obliged to leave the Convention. He asked me to open the Convention, and after saying a few words I will turn the meeting over to a permanent chairman, as I have another engagement with the Finance Commitee.

This section represents one of the most important branches of the canning industry. We are starting a new year in the corn market; the canned corn market is in a radically different position from what it was a year ago. At that time I remember that I had the pleasure of stating that I felt that fancy canned corn—and by that I meant quality canned corn, whether of fancy or extra standard grade—was in a very excellent position.

I went further, and I said that good standard corn, in my opinion, would soon come into greater favor with the consuming public and with the stocks in canners' hands once absorbed in consumption that we could expect a return of normal prosperity to the corn canners of the country.

That prediction, I think, has been very nearly realized and, as far as my vision of the trade is concerned, I believe that we can look forward with hope and confidence in the year that is to come. We must, however, always carry in mind that little things influence the market for canned foods very greatly. A little change in season, an open winter, a newspaper discussion, a little favorable publicity and, on the contrary a little unfavorable publicity, may upset all our calculations.

In our discussions of the canned corn problems, I have had occasion to say several times that I believed we were marketing our goods upon a false basis, that the canners of corn might learn something from the experience of the pea canning industry.

If you will take a price list of the canned peas, you will find the items varying from ninety cents a dozen up to $3.00 a dozen. You will find the same sieves of peas with a variance of fifty to seventy-five cents a dozen, dependent only upon the grade.

Now, in corn that is not true. Why the grades of corn have pulled so closely together in price, I am not sufficient of an economic analyst to say. But, it unquestionably is true that the differential in price between extra standard corn and fancy corn is relatively small and does not encourage the packing of fancy corn.

I will go farther and say that the margin of actual profit between extra standard corn and standard corn, all things being taken into consideration, is not sufficiently wide that it lends proper encouragement to the packing of extra standard corn.

As an economic proposition, I believe our requirements should be shaped along lines of advancing the prices of fancy and extra standard grades of canned corn. To those who pack quality corn and fear the effect upon consumption, I would say that I believe that their fears are absolutely unfounded. The difference in the price as the goods go to the consumer will never deter a satisfied customer from buying, and repeating her purchase of a fancy item.

If the fancy corn that is packed in the great Middle West, the fancy, "Country Gentleman," the fancy "Narrow Grained Evergreen," was sold at practically the level of fancy Maine corn, it would show none too great a return upon the investment; it would not in my opinion lessen consumption, and it would increase the supply of fancy corn so tremendously that instead of being a rarity, which the consumer hardly knows how to obtain, it would become canned corn, and that the consumer of canned corn would think in terms of fancy canned corn, and, thinking in terms of fancy canned corn, she would want fancy canned corn for her table.

I do not know that I can get the thought over; it is something that we cannot reduce to an absolute formula.

I have the same vision of the tomato packing industry. And I believe that my vision is entirely clear. We may not be able to make the change, but to those of you who are hesitating on your price lists let me suggest that you give most careful thought to the desirability of absorbing your increased costs of this year; and you will have them—in an advance in the price of fancy and extra standard grades of corn, leaving the price of standard corn to follow the trend of the established market.

When you go out to sell a commodity pure and simple you will follow the market. Your price will vary with supply and demand. When you are selling standard corn you are n selling an item that is specially attractive to the consumer; y are selling a food.

You cannot advance the price of standard corn beyond certain figure without deterring consumption, but I could gi you many, many illustrations from distributors of the advan in their sales of corn where they have purchased more free of fancy and extra standard grades during the past year or tw There is not a distributor that is listening to me, there is n a distributor's representative in this Convention but what wi tell you that his sales of fancy and extra standard grades corn during the past year have been very satisfactory and ha shown a very fine increase.

Now, why not recognize the viewpoint of the consumer; shape your costs, so shape your prices as to jusitfy the diversio of the maximum quantity of your raw material onto the fanc and extra standard size? It really is a question of cost, a que tion of return.

I am really confident that if some one would go out into th State of Iowa and offer to purchase the two million cases o fancy and extra standard corn, the price to range from $1.30 fo extra standard, to a dollar and a half for the fancy, that ther would be two million cases of extra standard and fancy cor packed in the State of Iowa. It might take more than one yea to bring it about, but there is nothing impossible in the situa tion, because you have canners who are packing a large percent age of their corn, extra standard and fancy, and if the reward is there the production will follow.

That is the one thought in opening the meeting, that would like to leave with you.

As the permanent chairman of the section, I would like t suggest Mr. Hill of Iowa, and will assume a second, if I hea no other nominations. All those in favor of the selection of Mr Hill as chairman of the Section Meeting, manifest it by saying aye, contrary no. Mr. Hill, you are duly elected. (Mr. Hil thereupon assumed the chair.)

CHAIRMAN HILL—Gentlemen, I appreciate very much the confidence you have in me in placing me in this position and I appreciate greater, however, the address of the chairman which has just been delivered by Mr. Moore.

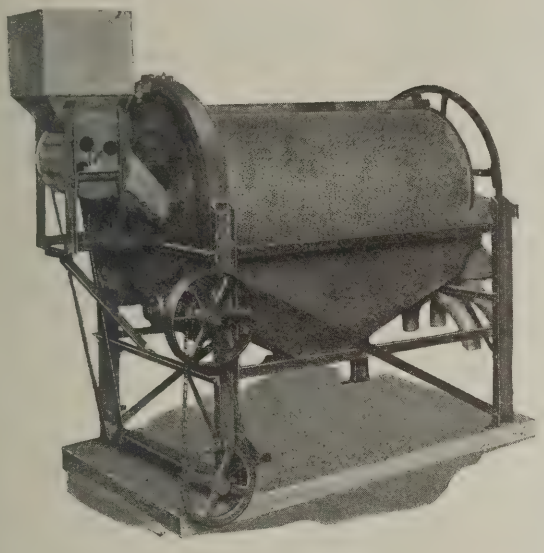
I take it for granted that every man on the floor is interested in corn canning, and most assuredly his remarks were along the right direction and certainly strike a sympathetic chord with the canners of the Middle West. Iowa, unfortunately, has heretofore packed some inferior corn, but for the past few years the tendency has been upward and forward, so far as grades and quality of corn are concerned. We are gradually getting our canners upon a basis as outlined by Mr Moore, and I am sure that his suggestion regarding this question will be endorsed by every man on the floor. It will no doubt be discussed more fully during the meeting.

Mr. Bell, of Waterloo, is the gentleman appointed as secretary of the session. He is absent. I would like to call to this chair Mr. Robert Dickinson, of Illinois. Will Mr. Dickinson kindly come forward and act as secretary of the meeting?

(Mr. Dickinson thereupon assumed the Secretary's chair.)

CHAIRMAN HILL—The appointment of committees is the first thing on the order of business, and I desire to appoint on the Nominating Committee Mr. Merritt Greene, Jr., of Iowa, and Mr. Mitchell, of Illinois, and Mr. James Baxter, of Maine.

Dr. Bohart's paper is the first thing on the program this morning. We will be glad to have him come forward.



Winter Time
Is Experiment Time.

Let me help you—

Improve The Quality Of Your Product.

LeROY V. STRASBURGER
303 Phoenix Building
Baltimore, Maryland

The Nested Sample Grader—

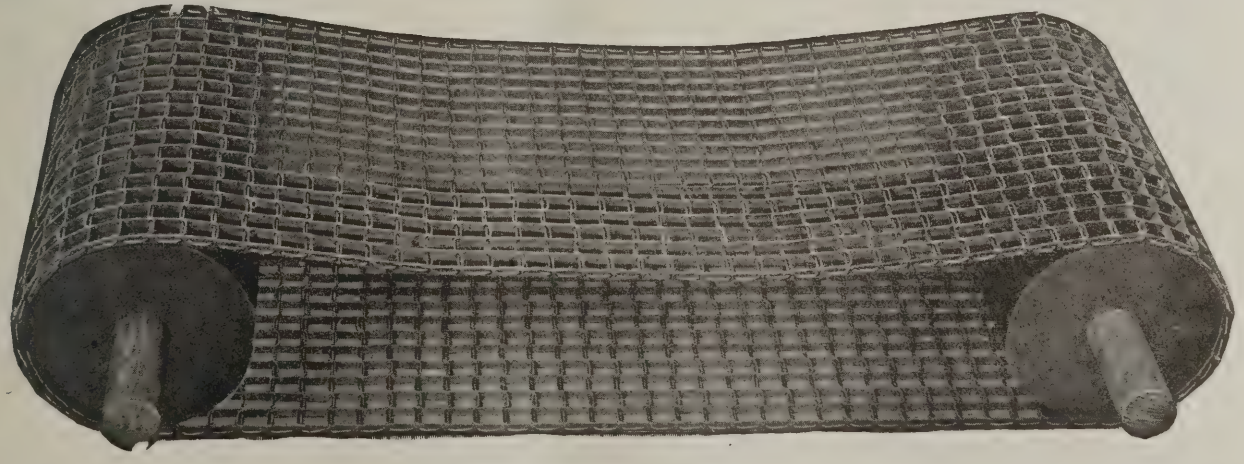
Feeling the need of a "Sampling" Grader that was at once accurate, sturdy, of sufficient capacity, and compact, we developed the Nested Sampling Grader.

It has a frame of angle and channel iron which makes it as sturdy as possible to be built. Its hopper will hold over 30 lbs. of peas, making it possible for one man to grade, weigh and keep the records; for after putting the 25 lbs. of sample peas into the feed hopper, he can forget them until he weighs the various sizes.

It has four sieves, making 5 sizes. These sieves are fastened onto the same cast iron spider. This spider has teeth cut on the periphery, which along with cut mitre gears and chain, make a positive drive.

Its feeder is new and novel, having a rotory with buckets about its circumference. These pockets pick up the peas from the hopper and deliver them to the inner sieve. Thus, no matter whether the beginning or the end of the run, the feed is uniform.

For the canner who wants individual motor drive we can attach ½ H. P. Motor.



Manufactured and Sold by

Sinclair-Scott Company

Baltimore, Maryland.

Makers of Nested Pea Graders, Colossus Pea Grader, and Other Canning Machinery.

HERCULES SANITARY FLEXIBLE STEEL CONVEYOR

The sanitary belt with the square mesh. Used for all conveying purposes, on Sorting Tables, Scalders, Washers and Exhausters. Made any size. Easily cleaned and durable. If your dealer doesn't handle, write for catalogue and prices.

1923 Progress In The Study Of Corn Black

By George S. Bohart
National Canners Association Research Laboritories

IT will probably not be out of place at this time to briefly review some of the experimental work which has been performed in the past with the object in view of saving time and expense of any who might otherwise repeat work which has already been done.

In 1915 a collaborative committee, consisting of the National Canners' Association, American Sheet and Tin Plate Co. and the American Can Co., in co-operation with chemists from the Bureau of Chemistry, United States Department of Agriculture, made a study of "Relative Value of Different Weights of Tin Coating on Canned Food Containers." The results of their work were published in detail in a bulletin, but it may be well to summarize some of the conclusions drawn by this committee whether included in the report or not.

1. They found that there was no relation between the weight of tin coating and discoloration.
2. Tin plate which had been purposely scratched in such a way as to expose the iron under the tin developed no more black than the controls.
3. No relation was found between waster plate and discoloration.
4. Corn mixed with considerable quantities of cobs, husks and expressed cob juice failed to develop more black than the normal product.
5. Corn was separated from the cob by the double cut method, by varying the depth of single cut and by light and heavy scraping of the cobs after cutting the corn, but in none of these variations was there evidence of any relation to the discoloration which developed after canning the product.
6. Discoloration occurred in cans made with both Bessemer and Open Hearth Steel.
7. Discoloration occurred in cans made from steel prepared under carefully controlled conditions so as to obtain metal as free from impurities as possible.
8. Titanium treated steel was not found to have any advantage from the standpoint of discolorations over plate made in the ordinary manner.
9. Corn black was not found to be due to the character of water employed.

In 1919 a committee of nine canners, together with an advisory board of three and a technical committee of four, continued and extended this work, with the particular object of developing a method for preventing corn discoloration.

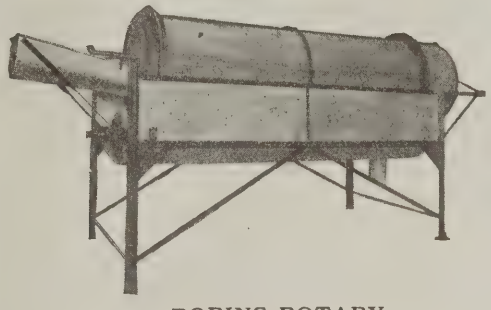
As a result of this investigation, the following conclusions were reached:

1. Discoloration occurs in cans having a heavy coating of tin electroplated on the surface of ordinary tin plate, even where the quantity of tin per base box runs as high as eight pounds.
2. No type of can used so far, regardless of the kind of fire employed, can be guaranteed to be consistently free from discoloration.
3. Elimination of air through decreased head space or high temperature of corn at the time the can is filled decreases the amount of discoloration which develops.
4. Venting and tipping sanitary cans improves the vacuum somewhat and discourages the formation of black to a slight extent. The advantage from the use of this procedure is so small, however, that it is not advisable.
5. Fractional sterilization, consisting of two hours' cooking of the closed cans at 212 degrees on three successive days, delays the formation of black, but the sterilizing value of this process is inadequate.
6. Cooking corn in an enameled-lined receptacle in order to obviate contact with metals before the cans are filled has no apparent effect on discoloration.
7. With the object in view of eliminating gases given off by corn while being heated, a large number of batches were cooked at various temperatures for varying periods of time; but, contrary to the hypothesis, discoloration was considerably aggravated thereby. It should be noted, however, that a pre-cook of any reasonable length of time is not harmful, and in special cases, when corn is so frothy at the time the can is filled that a slack fill results after processing, it is often necessary to either increase the time of the preliminary cook or to fill at a temperature slightly lower than is otherwise advisable. A frothy condition is frequently observed when corn is canned while very green, and in such cases it may be advisable to fill at a temperature as low as 185 degrees, although ordinarily 190 degrees or higher is to be recommended.
8. It has been claimed that when black has developed in the head space, inversion of the can will cause it to dissolve, and that under such conditions it will not reappear in the new head space. This has not been found to be consistently true.
9. The addition of acids to corn aggravates the development of both black and rust.
10. Holding corn in the shed over night before canning does not appear to have any effect on discoloration, but it should be remembered that if the piles are so deep that heating occurs, the danger of thermophilic spoilage developing after the corn is canned is increased.
11. Cooking the corn at 212 degrees in the can after sealing, but before processing, increases discoloration.
12. Decidedly mature corn from a given field produces more black than that which is picked at an earlier stage of development.
13. Paper liners prevent the deposition of black on the can to a large extent, but unless treated with a compound such as salt of zinc the discoloration appears on the paper.
14. Blanching corn on the cob produces no beneficial effect.
15. A long list of chemical substances were added to experimental batches of corn in order to determine what type of compounds would prevent discoloration. Most of these substances were harmful from the standpoint of discoloration, and those which helped were objectionable for some other reason and could not be used in corn to be marketed.
16. Several types of wax and also a lacquer containing metallic magnesium and aluminum applied to the can were only partially effective in preventing black.
17. Electroplated zinc superimposed on the tin plate gave promise of preventing discoloration, but its efficiency depends to a great extent on conditions during the electroplating, and it appears that the cost of producing electroplated cans may be too high to be practical.

Black sulphide discoloration is not confined to corn alone, but frequently occurs in such neutral or mildly acid foods as shrimp lobster, flaked fish, hominy, peas and beans.

The quantity of sulphide black which develops in pea cans is probably greater than in any other product, but because of the mobility of the liquid present, the shaking incidental to shipment washes it from the inner surface of the can, after which it soon dissolves and disappears.

In all of these products the discoloration consists of a mixture of sulphides of iron and tin, which are entirely harmless to the human organism and may be eaten with absolute impunity. The ink-black type consists largely of finely divided particles of iron sulphide frequently dispersed through small masses of the canned product. The brown discoloration usually contains a higher proportion of the sulphide of tin. The quantity of these sulphides which are responsible for even the worst cases of discoloration is extremely small, for they are virtually pigments with high tinctorial power. Since the amount present is invariably so small it naturally appears to those who have not actually rolled up their sleeves and tackled the plant or laboratory problem of black prevention that it would be a simple matter to alter conditions in canning procedure or methods of making the tin plate so as to prevent its formation in the can. The fact that numerous prominent canners and chemists have worked to overcome corn black without success so far indicates how real is the difficulty of the problem.



During the 1923 corn-packing season the National Canners' Association has co-operated with the Illinois Corn Canners' Association, the University of Illinois Agricultural Experiment Station and the American Can Co. in a study of the relation of soil fertilizer treatment to discoloration of the canned product. Professor Walter A. Huelsen, who is directing this work, has canned corn from 198 different plots, keeping the cans from each lot separate after canning. Professor Huelsen has fertilized these plots with varying amounts of phosphate, potash and nitrate on both limed and unlimed soil, and the canned corn from each treated area has been compared with that from an adjacent check plot. We are also collaborating with Professor G. N. Hofer, of the Purdue University Agricultural Experiment Station, in a study of the relation of soil solidity to canned corn, with particular reference to sulphide black.

In order that a method of black prevention may be practicable it must fulfil a variety of requirements. Anything applied to the container or added to the corn must be colorless, tasteless, odorless, non-toxic and commercially feasible from a manufacturing standopint. Several means for preventing discoloration are known which fail to meet one or more of the above requirements, and for that reason cannot be employed.

In the case of corn, discoloration develops in the air space or head space of the can, and is for that reason less conspicuous if the can is stored on the side. Contrary to the belief entertained by some, there is apparently no connection between bacterial action and black with the exception of one type of spoilage, which produces a marked dark color throughout the mass of the corn, but not on the can. Discoloration of this kind is not likely to be confused with typical corn black because the spoiled corn has a very offensive odor. Spoiled cans of this type are commonly, though rather indelicately, termed "Sulphur Stinkers," and result from lack of proper plant sanitation, inadequate processing, and especially from improper cooling after processing.

We have all become so accustomed to disappointments in this work that a statement that we are not yet in a position to recommend a positive cure will scarcely be received with surprise. Fortunately, however, the prospects look brighter now than ever before, and none of those who are working along this line show any signs of submitting to defeat. In collaboration with one of the can companies, the National Canners' Association has this past year put up experimental packs of over 50,000 cans, involving nine different varieties of treatment in seven different plants located in four of the more important corn-canning States. An examination of these experimental packs made in December, 1923, brought forth hopeful results. It is still too early, however, to take it for granted that the results in any type of experimental treatment used will be entirely satisfactory to consider a commercial basis for future can manufacture. In the meantime we are taking advantage of the knowledge gained from our first examination of these packs in making minor improvements in the nature of the experiments.

As a result of the work of the various committees it appears that the prevention of discoloration must depend upon the effect of the presence of some metal such as zinc. In order to accomplish its use without appreciable contamination of the corn with this metal, we have recently concentrated our attention on specially prepared lacquers. This involved a large amount of work, for it was necessary to obtain a material which would adhere to the can during processing and not alter the appearance or flavor of the corn, and one which would resist the abrasive effect incidental to the manufacture and subsequent handling of the cans.

Up to the present time certain types of lacquer employed in this past corn-canning season have been 100 per cent effective in preventing discoloration in all seven of the plants at which experimental packs have been made, and in five of these plants some of the control cans from the regular pack have developed in objectionable amounts.

CHAIRMAN HILL—Are there any questions that you would like to ask Dr. Bohart? Is there any further information you desire on this subject?

MR. POWELL—I would like to ask Dr. Bohart if he has had any experience with the corn black in relation to the hardness or softness of the water used for making the brine, if it causes any effect.

DR. BOHART—I have not personally been working on experiments in that connection. Certain committees who worked on corn discoloration before I took up the work myself, made a careful study of that. They tried very hard water and went from that extreme clear down to distilled water, and they were unable to observe any relation between discoloration and the nature of the water employed.

MR. POWELL—Is there any relation between the color of the corn itself?

DR. BOHART—I have not seen myself any case where that has affected the shade of the corn. However, I do know in a general way anything alkaline, or of an alkaline nature, tends to darken the color of corn somewhat, that is, it gives it more of a brownish tint than it would have if the lakaline substance were present. And it is conceivable, it seems to me, that there might be water which would run high enough in alkali to appreciably affect the color of corn. It really does not take much alkali to affect corn appreciably.

MR. POWELL—I might say that I had during the past season the opportunity of cookinig some corn in exceedingly hard water, also with a quantity of carbon dioxide and white corn turned to a golden color.

DR. BOHART—Did you have an analysis made of that water to determine whether it was alkaline?

MR. POWELL—Yes. It was extremely alkaline.

DR. BOHART—Well, I should have expected that.

MR. SEARS (Ohio)—I would like to ask as to the different varieties of corn, whether golden bantam and country gentleman would make any difference?

DR. BOHART—We have experimentally canned "country gentleman," "Crosby," two types of evergreen and so-called "Adams Early," and in all these varieties we have found black, and in addition to that I have observed black in some cases in "golden bantam." As far as I can see the variety of corn does not make as much difference as the stage of maturity of the particular variety in the black that you are apt to get.

MR. GREENE—I would like to ask the gentleman if that discoloration has appeared where paper gaskets are used as against composition gaskets?

DR. BOHART—I could answer that best, I guess, by pointing out that in general, if air is allowed to find its way into a can of corn, after it has been closed, processed, there is no question but what more black will develop than would otherwise be the case; and where paper gaskets are used, if the closure is not very tight, there is a possibility, of course, of a little air that would work its way into there. In that case you would get more black.

MR. L. A. ARGALL—If you used water high in sulphur content, would that have anything to do with the development of black?

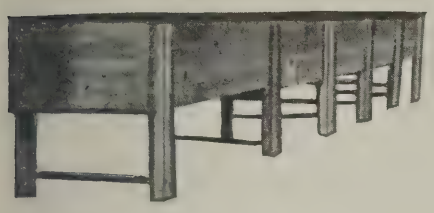
DR. BOHART—I should be very apprehensive of water containing sulphur in any form. I am afraid if you add a very small amount of sulphur to corn that usually you will get a tremendous increase in the amount of black, and therefore if the sulphur in the water was of such a nature that free sulphur was liberated, danger of discoloration would be greatly increased without question. As I say, I should be apprehensive of water that ran very high in sulphur.

MR. BAKER (Wilson Canning Company, Mexico, New York)—I would like to ask the Doctor for an opinion: that is, if the canner of corn would adopt our temporary chairman's idea of packing fancy corn, if it would not eliminate the black, so much that we would not hear anything more about the black. I mean by fancy corn—some people think that they can crush it, cut it fine, sugar it up and make a fancy corn.

My theory is that the young corn, the tender corn—and from his observations that he has announced and my own experience—it leads me to believe that the corn which you might say is immature would eliminate the black corn practically until you would not hear of it.

DR. BOHART—As I said before, in general the greener corn, which is usually a fancier article, will develop less discoloration than the more mature corn from the same field, but even with green corn occasionally, if the conditions are just right, or, I should say, just wrong, you will get quite a considerable discoloration, so that it would be objectionable. I would like to feel that that would be a way around it. I feel, even if all canners put up the bulk of the pack with very young corn, there would still be enough trouble to cause serious worry, and we will have to find auxiliary means for helping out, even with young corn.

CHAIRMAN HILL—This is a paper, an address supposed to have been delivered by Mr. Bell, who is Secretary, but he is absent. However, he sent a paper which your Secretary will now read, "The Circulating System in Canning Corn."



"THE CIRCULATING SYSTEM IN CANNING CORN"

THE subject assigned me is something like a mother hubbard—it covers the subject, but doesn't touch any particular place. What I am going to say has to do with the gravity system of canning corn; in other words, a three-story corn cannery, and not the modern, or otherwise, one-story corn-canning plant. Corn circulates from the time it leaves the stalks in the field, so far as a canner is concerned, until it arrives and is stacked in his warehouse. What I am going to talk about has to do with the corn between the time it is cut off the cob and until it reaches the fillers.

When corn canning was in its infancy, one-line factories, so called, were in vogue, which meant, for the purpose of this discussion, that one mixer, one filler and one closing machine was all that was operated in any one plant. So that consistency was more or less a matter of getting each day's pack alike.

With increasing demand, corn was soon being canned in factories with more than one line, sometimes as many as four and five lines, running continuously, and it was then, and has since been, a problem to get uniform consistency on each line, in addition to getting each day's run alike.

McSTAY MACHINE CO., Manufacturers
515 Van Nuys Building, Los Angeles

In the old method, whether one line or five were running, each line was a unit in itself, so far as consistency was concerned, and regardless of how painstaking one might be, it was almost an impossibility to guess at the looks and consistency of corn on each line, and have each can identical after it was canned. If you will agree with that statement, you will agree if some method were devised whereby all your lines could be fed from a common center or from one mixer, your troubles would be reduced, and each line would be packing the same consistency as all the other lines. In other words, instead of having each line an individual unit, so far as consistency is concerned, make all lines one unit.

In order to do this it is essential that the corn from all of your cutters have a common meeting point before it goes to the fillers. This could be arranged, I presume, in different ways, and our suggestion is that as your corn leaves the silker, run it through a Cuykendall mixer. We use the Cuykendall mixer in order to get our syrup more uniform than we could otherwise by simply running into a large tank.

You are all familiar with a Cuykendall mixer; it stirs the corn, as you know, continuously. We have the corn from two fillers running to a common point; these are two tanks about the size of an Economy mixer, fitted with steam coils where the temperature is brought up to about 180 degrees. We have one tank for each mixer; while the one is being emptied, the other is being filled and brought to temperature, and vise versa.

Our Waterloo factory is equipped with four lines. Therefore, we have four Cuykendall mixers and four tanks into which they discharge; from these tanks, equipped as above described, we run the corn from all four tanks into a central tank; this central tank holds approximately 250 gallons, and is equipped with paddles, which agitates the corn, and is also equipped with self-controlled regulators with recording thermometer. From this central tank we pump our corn to the various lines, keeping a continuous stream of corn going to the various lines. The pump is a "Gould Centrifical" two and one-half inch pump.

From the central tank the outlet is 4-inch pipe reduced to the intake of the pump, 3-inch, discharge 2½-inch; the 2½-inch pipe goes clear around to each one of the fillers. The piping we use for carrying our corn from the pump to the fillers is known as sanitary piping, made and distributed by the Creamery Package Manufacturing Co.

We equip our circulating system whereby all the time the factory is in operation the corn is passing through these pipe lines continuously, and it is also equipped so that if one or even three of our machines should be put out of operation for any reason whatever, the corn is kept circulating and returns to the tank from which it started.

In the early part of the pack where, perhaps, you start off with only one line and add one or more lines later, or where you start out with one line in the morning and then about 10 o'clock add a line or two or more, we have our pump equipped with a Reeves Speed Transmission control. While your pump is large enough for four lines or less with this control, you can so regulate it so that it will only feed one line or all four, as you require.

In this manner we have, from experience, solved the trouble of being unable to get uniform consistency on all lines, because all lines will be packing the same consistency of corn all the time, and all we have to do is watch the finished product and see that we have the right consistency, and it isn't a question of checking up each line, as in the old way.

CHAIRMAN HILL—The next subject for discussion will be "Effect of Variety on Quality," Mr. C. A. Magoon, Assistant Psychologist, Bureau of Plant Industry, Washington, D. C.

(Thereupon Dr. Magoon read his paper as follows:)

Relative Merits of Sweet Corn Varieties for Canning Purposes and The Relation of Maturity to the Quality of the Finshed Product

By G. A. Magoon.
Bacteriologist, Bureau of Plant Industry, U. S. Dept. of Agriculture.

IN the time allotted to me I would like to discuss with you the results of some of our studies carried on in the Bureau of Plant Industry upon the relative merits of sweet corn varieties for canning purposes and the relation of maturity of the corn to the quality of the finished product.

These investigations were begun in the season of 1919, when, among other projects concerned with canners' problems, a considerable number of sweet corn varieties, both of those commonly canned and of others less generally known, were subjected to comparative study to determine their suitability for canning purposes. The work was done at the Arlington Experiment Farm, just across the Potomac River from Washington.

In preparation for this work great care was exercised in the selection of good seed, in provision for uniform conditions of cultivation, in harvesting the different varieties of corn when each was considered to be in prime condition for canning, and in the standardization of canning procedures so that packs from the different corns would be entirely comparable.

At the close of the canning season sample cans from these packs were opened and the contents subjected to careful critical comparison with respect to appearance, flavor and general table quality. The results were placed on record to be used for comparison with future findings similarly obtained.

During the season of 1920 the work was repeated, using a somewhat larger number of varieties. Upon critical examination of the cut-out material, however, it was found that, although the corns had been grown under as nearly identical conditions as possible, and the same canning methods had been followed, the corns graded entirely differently from those of the preceding season. For instance, Country Gentleman, which graded "first" in the 1920 pack, held third place the previous year, and Golden Bantam, which was given first place in 1919, was replaced by Charlevoix in 1920. Other varieties likewise held different relative positions.

To find, if possible, the reason for these differences in the results of the two seasons' work, reserve stocks from the 1919 packs were opened and the canned product from the different varieties carefully compared with the product from the same varieties canned in 1920. From this comparison it was evident that some factor or factors other than varietal differences determined largely the quality of the corn.

Pressure of other nvestigations prevented the continuance of this work during the season of 1921, but in the spring of 1922 plans were laid for a rather comprehensive study of the matter. These plans called for both field and laboratory study of the corn plants, particularly of the development of the ear, of the physical and chemical changes taking place in the kernel during development, and of the quality of the canned product from each of the varieties packed at various stages in its development.

The soil selected for the growing of the crop was a deep rich loam, level and well drained by an undeground tile system. The seed was purchased from commercial concerns who regularly supply the sweet corn growers, and it is believed fairly represented that generally sold for canning purposes. The amount and kind of fertilizer and the cultivation of the corn was the same for all varieties, and the field and laboratory technique was uniform throughout the tests.

No attempt was made to investigate the relation of fertilizer and soil factors to the problem, but meteorological and other environmental factors were studied so far as data could be obtained. The daily mean temperature for the growing and maturing period of the corns under study was somewhat above the 49-year average during May and June, but fairly close to it during July. August was somewhat below the average. Taken as a whole, the season was rather wet, there being an excess of rainfall for the months May to August, inclusive, of 3¾ inches over the 10-year average for the corresponding period. The rainfall was well distributed throughout the period of the test. While several heavy rains occurred, in no case was there a drowning of the corn, as the underground drainage system rapidly removed the excess moisture.

The varieties studied included both white and yellow sorts, comprising all the important early, medium and late maturing corns. Named in the approximate order of their maturing, they were: Of the white sorts, Howling Mob, Crosby, Hickox' Improved, Potter's Excelsior, Kelly's Hybrid, Mammoth Sugar, Old Colony, Narrow Grained Evergreen, Country Gentleman and Stowell's Evergreen; and of the yellows, Golden Bantam, Dreer's Golden Giant, Charlevoix, Morse's Golden Cream and Vaughn's Bantam Evergreen. Reid's Yellow Dent and Boone's Country White, two standard varieties of field corn, were grown along

with the sweet varieties for comparison throughout the experiments.

In order to eliminate the possibility of error with respect to the degree of maturity of the corns at the time of harvesting, careful field records were kept of all the varieties. Every morning throughout the silking period the different plots were searched for the appearance of the first silks of the newly forming ears, and when these were found tags were attached which bore the date at which the tagging was done. By this means it was possible to go into the field and select readily ears of any desired age as needed.

Field records showing the time and rate at which the varieties of sweet corn came into silk were of much assistance in the present work, and they have shown that observations made upon the silking period may be of great practical value to the grower and field superintendent in estimating when and how rapidly a field of corn will come to canning maturity.

In studying the factors concerned with quality in canned corn, five matters need to be given consideration:

1. At what stage of the development of the ear are the highest yields of cut-off corn secured;
2. How does increasing maturity affect the tenderness of the kernels;
3. At what stage is the sugar content the highest and the flavor best developed;
4. At what stage is the condition of the kernel contents most satisfactory for the production of corn of the proper texture and consistency?
5. To what extent is quality determined by the variety of corn used?

We will consider each of these topics in turn.

The stage of maturity at which the highest yields of cut-off corn may be secured is a matter deserving particular attention, for the reason that this factor in canned corn production probably has more to do with the quality of the canned corn found in the market than almost anything else. Many farmers believe that the longer they can keep their corn in the field without danger from frost, the greater will be their returns, whether the crop is sold on the basis of gross tonnage of corn in the ear or of cut-corn. So long as they are paid on the basis of quantity without regard to condition it is natural that they should desire to harvest the crop when the yields will be the greatest, not being concerned particularly with the quality of the canned product. The canner, on the other hand, is well aware that while it is desirable that he get as high a yield of cut corn as possible, particularly if it has been paid for on a gross tonnage basis, he must guard carefully against over maturity of the corn as delivered. The quality of the pack, therefore, in large measure depends upon how successful the canner is in getting his corn delivered at the factory in proper condition.

Now, is it true that the more mature the corn the greater will be the cutoff, or is the yield heavier at about the time when the corn is in prime canning condition, an opinion expressed to me by a practical canner? To clear up this point, in our experiments samples of corn were taken from all the 15 different varieties at 5-day age intervals, beginning at 5 days from the first appearance of silks on the ears selected, and continuing up to the 30-day stage—that is, well beyond prime canning stage. The ears were weighed at once, then husked, and the proportions of husk, cob and cut corn determined.

It is impossible to show you here the figures derived from all these different varieties, though I believe you would find them of considerable interest. The salient facts are brought out by the averages computed from these findings, and they are presented here in tabular form:

Average gross weight of individual ears and the percentage of cut corn from 15 varieties of sweet corn at age intervals of 5 days.

	Average gross weight of individual ears.	Percentage of cut corn from the same.
At 5 days	4.9 oz.	15.2
At 10 days	8.1 oz.	16.8
At 15 days	10.1 oz.	25.3
At 20 days	11.1 oz.	37.1
At 25 days	11.9 oz.	46.9
At 30 days	11.8 oz.	52.0

These figures show that in our experiments the average gross weight of the ears of 15 varieties of sweet corn did increase up to the 25-day stage, after which it remained practically stationary, and the percentage of cut corn from the same cars continued to increase even to the 30-day stage, which was considerably beyond the stage at which the corn could be canned.

To many, if not most of you, these results are not surprising, being in accord with your own observations. There is one fact brought out by these figures, however, that I desire to call to your attention, which is that the rate of increase in the percentage of cut corn reached its highest point at close of the 20-day stage, which, as will be shown in further discussion, is close to the best canning stage.

While it is not my purpose to enter into a discussion of this particular phase of the corn-canners' problem, it does seem that since the farmers are correct in their belief with respect to yields, and since corn in prime condition is worth more to the canner than under or overmature corn, canners seeking quality in their product might profitably consider a sliding scale of prices to be paid for corn as delivered at the factory based upon its condition or degree of maturity.

We are coming to realize more and more that the tenderness or toughness of the kernel has a great deal to do with the quality of canned corn. This point was emphasized by Burton in an article in the Canner some time ago, in which he stated, as a result of his studies, that "commercial grades of canned Country Gentleman corn, as far as they are concerned by maturity, differ only in the proportion of tough and tender kernels present." Immaturity may be masked, in part, by the addition of starch, and too heavy consistency due to overmaturity may be overcome, in part, by the use of a greater proportion of brine or liquor. But toughness of the kernels cannot be masked. It seemed to us worth while, therefore, to study this matter of the toughness of the kernels in the different varieties throughout the development of the ears and to determine the relation of this toughness to the quality of the canned product.

A special instrument was devised which made it possible to determine by the resistance of the kernels to puncture just how rapidly the tenderness of the kernels changed with increasing maturity. Typical ears of all the 15 varieties were examined with this instrument at age intervals of 5 days, beginning at 10 days from the first appearance of silks on the ears tested. This stage proved to be the earliest at which the tests could be conveniently and profitably made. From 3 to 5 representative ears of known age were examined at each stage and the resistance to puncture determined upon 30 to 40 kernels well scattered over the entire surface of each ear.

The individual kernels on an ear were found to vary somewhat in their resistance to puncture in all stages of maturity, and the average readings for individual ears varied somewhat, but in the main fairly concordant results were obtained. Some varieties were consistently tougher than others throughout almost the entire growth period. Country Gentleman and Kelly's Hybrid, for instance, gave considerably higher readings than Golden Bantam, Dreer's Golden Giant and Charlevoix, which did not approach an extremely high mark even at the end of the 30-day stage.

To show the results of these tests in detail would be confusing and impractical at this time, but a curve illustrating the average figures for the 15 varieties may be of interest and is shown on the chart. Curves showing the readings for Country Gentlemen and Golden Bantam are given, also, as the former illustrates how great toughness is attained, and the latter shows a tendency for the increase in toughness to lag somewhat during the earlier stages, in which respect it was found to differ from all the other varieties.

The numerals represent the number of grams of pressure exerted on the plunger of the puncturing instrument (which was approximately 3/64 inch in diameter) to penetrate the kernels. Numerous tests in the laboratory at the Arlington Farm and in canning factories in Maine showed that the limits of toughness between which first quality canned corn could be produced were represented by the readings of 250 and 325. Three hundred and twenty-five was found to be the extreme limit. That you may have an idea of just how brief the period is during which, upon the basis of toughness, first quality canned corn may be produced, these points are marked on the curves. This applies, of course, to the conditions under which our corns were grown. We have been unable so far to determine the effect of drought or other seasonal or climatic factors upon this matter, though readings made in Maine closely confirmed the readings obtained in Washington.

We will turn now to the subject of the natural sugar content and flavor of the varieties of sweet corn. It may be said at the outset that in general desirable flavor and natural sweetness go hand in hand. That is, the more sweet, naturally, the corn is, the better the flavor. In this discussion we shall confine ourselves to the sugar content.

The history of the changes in sugar content in the 15 varieties of sweet corn was determined in our studies by chemical analysis of the cut corn at 5-day age intervals throughout the entire development period of each variety. The first tests were

made upon ears 5 days old, as determined by the time when their silks first appeared, and the last upon ears 30 days old. Here, again, I shall not burden you with the details of findings of the individual tests, but I would like to show you by means of a chart some of the important results in this phase of the investigation.

In the curve, which represents the average of individual curves for the 15 varieties, it is seen that the total sugar content increased progressively up to the 15-day stage, after which it decreased rapidly at first, and then more slowly in the later stages. It should be said that the sugar content of the different varieties did not vary widely at any stage of maturity. At the 5 and 10-day stages the differences were very slight. The greatest variation occurred at the 15-day stage, but even here amounted to only about one-half of one per cent on the basis of fresh green weight. The differences at 20 days were not significant.

To us certain features of these findings were somewhat surprising. For instance, we had not expected to find that, regardless of the earliness or lateness of the variety, the sugar content would be the highest at the same age of the ears, and we had not expected to find so little variation in the amount of sugar present. Even in Boone County White, one of the standard field varieties, which is much later than any of the sweet varieties, it was found that not only was the sugar content as high as many of the sweet varieties at the 15-day stage, but the highest point was reached at the same time as the others. Furthermore, we did not expect to find that in the slow maturing varieties the sugar content would decrease after the high point was reached almost as fast as in the more rapidly maturing corns.

Our investigations did not include studies of the effect of storage or the holding over of corn for different periods upon the sugar content of sweet corn as this work had already been done and the facts are widely known. It will do no harm, however, in this connection to emphasize again the fact that sweetness in corn is an exceedingly unstable property, being lost rapidly after the ear is pulled from the stalk, and particularly so when the weather is warm or the ears are allowed to remain in the pile.

The consistency of canned corn is intimately associated with the condition of the starchy contents of the corn kernels, as every canner knows, and it is to this more than anything else that the field superintendent pays attention in ordering in the corn. Since the canner is after quality in his product, he needs to know not only when the stage is reached which will give him the proper consistency, but also how this condition is related to the other factors which concern quality.

To obtain information upon this point, canning tests were made of all the varieties at age intervals of 5 days, beginning at 15 days from the time when the ears selected first showed silks and continuing up to the 30-day stage. Uniform methods were used thoroughout these tests in order that the different packs might be strictly comparable. At the end of the season samples from the different varieties canned at the various stages of maturity were opened and the whole series subjected to careful critical study. We may summarize briefly in a few sentences the results of these tests so far as they affect the consistency of the product.

At the 15-day stage all varieties were found to be too immature to give a product of the desired consistency, with the possible exception of Golden Bantam, Dreer's Golden Giant and Morse's Golden Crown of the yellow sorts and Crosby and Hickok's Improved of the white varieties, which were only slightly too thin in consistency. At the 20-day stage the consistency was good in all, though some of the later maturing, such as Stowell's and Narrow Grained Evergreen, Old Colony and Mammoth Sugar showed a little thinner consistency than the others. At the 25-day stage all except the last named were well past the prime canning condition. To give some idea of the comparative condition of the different groups as regard earliness and lateness, it may be said that the consistency of Crosby corn at the 20-day stage was practically the same as that of Stowell's and the others mentioned, which were a little less matured at the 25-day stage. At the 30-day stage all the varieties were entirely too mature for canning. In no case, therefore, could a satisfactory product be canned from ears of corn less than 15 days old or more than 25 days old. In the early and rapidly maturing corns the best stage for canning was found to be that represented by the age of from 17 to 20 days, and in the late and slower maturing sorts by the age of 20 to 25 days.

It is of interest now for us to glance back over the findings thus far set forth and to see if there is any correlation of facts that will be of service. It has been pointed out that at about the age of 20 days from the first appearance of silks the highest rate of increase in cut corn is secured; that from the standpoint of tenderness the corn should be canned as early as possible an not exceeding the 25-day stage; that at the age of 15 days th sugar content is highest in all varieties of corn, and that at th age of from 17 to 25 days the best consistency is secured in th canned product. These lines of evidence combine to point to definite, brief period of only 6 to 7 days' duration in the histor of sweet corns when first quality may be secured. They als show that the closer one can get to the earlier age the highe will be the quality of the pack, particularly with respect to ten derness, sweetness and flavor.

There remains now to be considered our last point—to wha extent quality is determined by the variety of corn used.

At the outset of our experiments we had expected to fin that it would be possible, on the basis of quality of the canne product, to distinguish varieties and to select from the group o sweet corns under study those varieties which would yield prod ucts superior to those from other sorts. Our expectations wer not realized. What we did find was that when any variety wa canned at the proper stage of maturity, as determined by th age of the ears, a product of first quality was obtained. Com parative judging of these 15 varieties at comparable stages o maturity failed to bring out significant differences in the qualit of the canned corn. To be sure, small differences in sweetnes were apparent, and it was possible when blindfolded to distin guish yellow varieties from the white; but when the creame corns were compared, one could not tell one white variety fro the other or distinguish Golden Bantam from the other yello sorts.

Quality in canned corn, therefore, seems to depend not upo the variety so much as upon the degree of maturity and prompt ness with which the corn is handled.

There are other phases of this subject which have beee brought to our attention in these investigations which might b discussed before a meeting of this kind, but I have already occu pied sufficient of your time. In conclusion, let me say that w look upon these stodies as in no sense complete. These result represent the findings of one season's work only in most of thei aspects, and we probably are not justified in drawing too man conclusions from them. There remains to be investigated th matter of the relation of geographical location and climate t the problem, of seasonal variations in temperature, rainfall, etc which it has not been possible for us to undertake so far. It i our hope that other workers will be encouraged by these result to investigate the field more thoroughly and make it possible fo canners to proceed with greater assurance in the production o canned corn of the highest quality.

(During the reading of the paper Mr. Magoon made th following remarks with reference to the charts):

This chart shows you that in five days from the first appear ance of silk upon ears the average gross weight of the ears wa 4.9 ounces. The cut off corn from those same ears a mounte to 15.2 per cent. In ten days the average weight for the fifteen varieties was 8.1 ounces and the percentage of cut corn 16.8 In fifteen days 10.1 was the average weight of the ear and 25. per cent amount of the cut corn. For twenty days the weigh was 11.1 with a percentage of cut corn of 37.1.

In 25 days 11.9 ounces. The weight of the average and th percentage of cut corn was 46.9. In thirty days the averag weight was 11.8 and the precentage cut corn 62.

Now, these figures show that in the experiments the aver age crop weight of ears of the fifteen varieties of sweet corn would increase up to the 25-day stage, after which they remaine practically stationary.

You will notice it dropped back just one point. And th percentage of cut corn from the same ears continued to increas even up to the thirty-day stage, which was beyond an age a which the corn could be canned.

You will notice that between the 15th and 20th days there was an increase of 11.8 per cent, which is greater than an other period thereafter. So that the increase in the weight o cut corn falls off from that point.

* * * *

On this chart the heavy black line began here and extende two-thirds the way up, reached an average increase in tough ness of fifteen varieties. That is the average of all the test made. The dotted line in the left which goes very high in th chart represents the results obtained for country gentleman corn and shows how exceedingly tough the corn becomes as it approches maturity.

The dotted line which comes off here and then goes up hal way represents the results obtained with golden bantam, an shows the exception in the rule—that in this case there seems to be a lag in the increase in toughness with this particular variety. All the other varieties went right on up.

Now, let me explain just what these figures mean. These numerals in the left represent the number of grams in pressure which was exerted upon the plunger of the apparatus used to puncture the kernels. 160 grams up to 480. The figures at the bottom represent the age of the corn from the first appearance of silk. These ten here give the age of the particular ear counting from the time when the first silk appears and running all over.

MR. GREENE—May I interrupt you to ask you what point in that chart is considered ideal position of the corn for canning?

DR. MAGOON—I am coming to that right away.

DR. MAGOON—I will say further, just to give you a little more clear idea just what these figures mean: That the plunger of the apparatus was constructed from brass wire which was approximately 3-64 of an inch in diameter. That gives you some notion of the size of it and these figures here represent the pressure which was exerted in that plunger to puncture the kernel. You are all familiar, of course, with the fact that when the skin or kernel, when it is punctured, the needle would penetrate very readily, so the readings are clear cut and you proseed to get very definite results.

* * * *

Now, I ought to say that this applies to the corn as grown in the Arlington Farm in Virginia just across the river from Washington. We have no way of knowing that these same results would be obtained elsewhere, but so far we have not been able to carry our investigations far enough, although I will say that the examination of the corn in Maine at some of the Maine factories very closely confirmed our findings at Washington.

We will turn now to the subject of the natural sugar contents or the flavor of the variety of sweet corn.

* * * *

This course represents the average for the fifteen varieties. The sugar content increased progressively up to the fifteen-day stage, after which it decreased rapidly (reading paper).

* * * *

Now, certain features of these findings were rather surprising: For instance, we had not expected to find that regardless of the earliness or lateness of the variety that the corn would arrive at its highest point in sugar content and we did not expect to find, furthermore, that there would be so little disagreement in the total amount of sugar present.

Furthermore, we had expected to find from the later varieties than the high sugar content would remain high for awhile. But, this was found not to be the case, and I may say that experiments upon Boone County White, one of the star field brands of corn, which is supposed to have no sugar at all, certainly from the standpoint of the canner—had a sugar content very nearly as high as that of the sweet varieties at the fifteen-day stage.

Boone County White is much later than that of the sweet varieties, and yet its sugar content was higher than a number of the sweet varieties at the fifteen-day stage, and the high point was reached at the fifteen-day stage.

* * * *

Let me explain at this point, that the proportion of corn and liquor or brine that was used in these experiments was four of corn to one of brine. That was uniform throughout the test. So that the results are entirely comparable.

A MEMBER—By measure or weight?

DR. MAGOON—By weight.

To arrive at these results the brine was heated in glass containers and measured into the cans first hot; then the corn which had been heated to about 190 degrees, 180 to 190 degrees, was weighed in, and—into the liquor. The reason we put the liquor in first was that we got a better mixture of corn with brine under those conditions than if we would put corn in first, then turn the brine on top. But, the methods were uniform throughout.

CHAIRMAN HILL—The attention which you have given to this paper indicates the interest which you have in this subject. I want to congratulate the audience on the very valuable paper given, and this matter is before you for discussion and remarks.

MR. GREENE—I would like to ask the Doctor what was the total percentage of sugar found? Do you have those figures?

DR. MAGOON—The highest went close to six per cent.

MR. GREENE—That was an extreme?

DR. MAGOON—That was the extreme. I believe in one instance it went just a trifle over six per cent. but not much more than that. The lowest percentage was a little below five. I believe it was golden bantam that gave the lowest amount.

MR. GREENE—What was the highest content of sugar that would be shown at the fifteen-day period? The percentage of sugar is of such small consequence as far as the canner is concerned, is it practical for him to give much attention to the sugar content—how it affects the maturity of corn.

DR. MAGOON—As I said at the outset the sugar content and desirable fresh corn flavor go hand in hand as a rule. The higher the sugar content the higher the quality from the standpoint of flavor.

MR. GREENE—I do not quite understand. I gather from your remarks that the ideal time in which to can the later varieties is between twenty and twenty-five days, somewhere along there after the sugar content has begun to fall.

DR. MAGOON—From the standpoint of consistency, yes.

MR. GREENE—Not from the standpoint of flavor?

DR. MAGOON—Not from the standpoint of flavor. That connection, total sugar and sweetness do not necessarily coincide. That is partly due to a difference in the moisture content. The more concentrated the sugar solution is the sweeter the tests. That accounts, I believe, for the result that even Stowell's Evergreen, which comes to canning maturity later than Golden Bantam, still was pretty sweet and in good condition. Does that answer your question?

DR. GREENE—Yes.

A MEMBER—I would like to ask the Doctor whether weather conditions did not have a great deal to do with his five-day experiments?

DR. MAGOON—The percentage of sugar?

THE MEMBER—No. Take it all the way through for canning purposes.

DR. MAGOON—Without question. It has been impossible for us, we have had just one farm to work on this, and it has not been possible for us to get around in other parts of the country. I have no doubt that those five-day readings would show differently in different parts of the country and under different seasonal conditions. I am merely giving you the result of one year's time, an give them as food for thought rather than as the last word upon the subject.

MR. MITCHELL (Illinois)—It may be that I misunderstood you, but I believe you stated that the sugar content in the field corn you mentioned was about the same percentage as sweet corn. Is that right?

DR. MAGOON—That is right.

MR. MITCHELL—Maybe the sugar exists in different form and makes the corn seem sweeter.

DR. MAGOON—There is a difference, of course, in the amount of different sugars in corn. That, of course, affects the sweetness in both reduced and non-reduced sugars; some of them are not very sweet and others are sweeter.

But to answer your question directly, I think field corn was just as sweet in the test at that stage as the sweet corn at fifteen days, but it was not so mature. It would not do for canning at that stage, but it was sweet to the taste.

MR. MITCHELL—How does the sugar exist in corn, in what shape is it? Do you get it always in one shape, or are there different kinds of sugar?

DR. MAGOON—There are several kinds of sugar, and the proportion of the different sugars determines the sweetness. If you have a larger proportion of sucrose sugar your corn will be much sweeter. If you have a larger proportion of what is known as non-reduced glucose, it is not so sweet, although it would show high in the total sugar analysis.

MR. MITCHELL—Does the sugar have to start as the corn matures?

DR. BOHART—Yes. That is, as the corn matures, and when the corn is held in pile the sweetness disappears, and according to the work of various investigators, while some of it is used up in what is known as respiration, most of it is condensed into starch and it goes over into that form.

MR. ARGALL—I would like to ask if you have any data on how rapidly the sugar content decreases before the corn has been packed and is held in storage, say beyond 24 hours, what percentage of the sugar has turned into starch.

DR. MAGOON—I did not make any test upon that, for the reason that the work was done some little time ago by Dr. Store, I believe, of the Maryland State University, and that usually figures are available from Government reports. I did not make any test of that at that time.

MR. SHANNON (Hamburg, Iowa)—When you speak of the five-day period, you mean when the silk appears at the end of the ear?

DR. MAGOON—Yes.

MR. SHANNON—How did you figure it?

DR. MAGOON—We went through the plot and watched for the first silk sticking out of the ears. They would come

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

out in increasing numbers every day until a maximum point was reached, and as soon as the silk showed the ear was tagged, and we figured the age from that time.

CHAIRMAN HILL—The next question for discussion is a round table discussion on the subject of

"HOW CAN CONSUMER DEMAND FOR CANNED CORN BE INCREASED?"

By Mr. Mitchell, of Illinois.

I have written down the subject, or the topic, that I want to talk about first. The demand may be increased from either or both of two classes of consumers. First, those that now regularly use canned foods, and second those who do not use canned foods regularly. We are told that this second class is more numerous than the first; that is, that less than half of the consumers are accustomed to using canned food. While some methods of approach are common to both classes of customers, in order to reach the people who do not use canned food at all it is necessary to proceed in a different manner from that which would interest the people that regularly use canned foods. About a year ago the directors of the National Canners Association talked this matter over and voted a sum of money for the establishment of a Department of Home Economics, with the understanding that it might be conducted or developed in a manner similar to that so successfully used when Dr. Woodbury was employed to develop the Department of Raw Products Research. It seems that this is the best method of approach for developing a desire for using canned foods among the people that now do not understand that these foods are desirable. The method of development or the stages that should be used to reach this large class of potential customers should, of course, be largely left to the initiative of the proper party, but it seems that the order of procedure that would accomplish the results in the best manner would be as follows:

1. The placing on the program of the various natio women's association papers that would indirectly or direc convey the idea that canned foods are wholesome and ec nomical.

2. The placing in various magazines and papers large circulation interesting articles relative to the canni of various commodities and pictures designed to particular call attention to the sanitary condition of the factories a the care taken in selection of the food products.

3. The cultivating of friendly relations with all of t domestic science training colleges so that they might be ful posted relative to the processes used in canning of the foo and also the best methods of using the same and the econon of such use.

4. The cultivating of similar relations with the small schools, colleges and institutes where teachers receive t training and the information relative to the progress of d mestic science problems.

5. Keeping in close contact with the various domest science classes in the schools over the country. The suppl ing to them of full information relative to the canning of foo and their use.

6. Having contact with the various women's household science clubs through the country and furnishing to them i formation for the preparation of papers.

7. Co-operating with the summer schools and teacher institutes to see that on the program is an opportunity fo visiting factories canning corn in the vicinity where available

All the above points are made general, as canned corn i classed as canned foods in the minds of all people that do no use canned foods at all.

To reach the people that have been accustomed to usin canned foods and to retain the interest of the other people wh might be interested by the above means we would emphasiz particularly the word "quality."

This part Mr. Cosgrove will take up.

How Can We Increase the Consumption of Corn

By E. B. Cosgrove

Experienced Corn Canner of Minnesota and Wisconsin.

MR. MITCHELL has asked that I drop the broader considerations bearing on the building up of canned foods consumption as a whole, and confine my remarks more especially to the product corn, and to factors affecting that product, corn, as to influence its popularity with the consumer.

We are agreed that canned corn consumption has not kept pace with the increasing consumption of some canned foods, conspicuously peas.

Let us bear in mind that you, Mr. Mitchell, and Mr. Hill, and I pack a competitive product; we are competitors, but that in a broader sense our products together, all corn, finds its real competition in other foods. You are my competitor, but peas, tomatoes, meats, dried beans, other foods, are the real competition canned corn must overcome.

I feel that corn popularity has been retarded by the occurrence of sulphide black. I am more certain that the light consistency adopted by many canners as a means of avoiding a loss because of black has lost many friends for corn. The greatest need of the corn canner today is a fool-proof can, so protected against formation of sulphide black by zinc cover, special coating or otherwise, as to make possible the packing of a big value can of corn that will stay white.

The great stumbling block to building up corn consumption has been a tool low price. Not too high, but too low.

What variety of corn has met with greater growth in consumer demand during the past five years than Golden Bantam, the highest priced corn on the list. Bantam has been dealt in at a price high enough to permit the producer to build into it the maximum quality of raw product and careful workmanship.

Minnesota, with pride, calls attention to the fact that Bantam was first canned there; its packing in this country originated with my good friend, Frank Bouthitt, at Big Stone. He got such a price for it as furnished an incentive to pack it better and better, and the demand for Golden Corn originating from that first pack from Western Minnesota has grown and grown until today the industry is hard put to meet with the demands of the trade, and we have seen second-hand trades in Bantam at above $2.00.

I am not afraid of a too high price on corn provided the quality is built into it to justify that price.

Let us for a minute analyze quality in corn, and discuss the factors that determine it.

The most commonly recognized factors are:

Tenderness.
Flavor.
Consistency.
Color.
Freedom from silk, husk and cob.
Uniformity of cut.

Corn canning today is a science. The modern canner takes on more and more the atmosphere of a laboratory. Let us blame nature less for our failures and approach our problem with a more accurate, searching, technical inquisitiveness.

In this analysis it is approximately accurate to say that nature plays an important part in determining but two factors—tenderness and flavor. It can be questioned that nature is more than half responsible for the apparent grade here.

A proper field organization, coupled with proper technique on the sorting table and the cutting room, can do much to disguise from the consumer a too great maturity, and that practice insofar as it renders a product more palatable to the consumer is justifiable.

Flavor is at best 50 per cent natural and 50 per cent artificial. I have seen Bantam so packed as to vie in flavor with Chinese punk, and I've seen Evergreen corn out of Ohio that was remarkably pleasant to take.

Of the remaining factors, consistency, cut, freedom from silk, husk and cob and color, workmanship or management (better called) is absolutely the determinator.

Our crimes have been many. Weather and the Lord have been burdened with blame for our failures too often.

A proper organization to survive in the canning industry today must be elastic enough to meet the emergency of the weather and season.

While I have great faith in Crosby and Bantam corns as varieties, and a great faith in Minnesota as a canning section, nevertheless I sincerely believe that the proper organization can pack a creditable product i any section now packing corn.

Gentlemen, a can of Iowa corn may be packed of a consistency to match Maine. It can be packed free from silk, it can be uniformly cut and of good color. Without giving away a Maine or Minnesota secret, I might say that the sugar markets of the world are open alike to Maine and Minnesota, Ohio or Indiana.

Let us put real workmanship into our product to the end thatcorn may meet with pleasure in the eyes of our LORD—the the consumer.

Such pleasure as will induce the consumer to pay us a living price.

Mr. Chairman—To review a moment—

We must get a fool-proof can. We must get a price that will warrant an expenditure to obtain quality.

We must play fair and deliver the quality.

Then 18.000.000 cases will just be bait.

MR. COSGROVE—Mr. Mitchell asked me to confine my corn in so far as the quality of corn in itself affects consumption.

If there is nothing further we will have the reports of committees. The Nominating Committee will now please make a report.

THE ELECTION.

MR. GREENE (Chairman Nominating Committee)—In making the selection of these gentlemen your committee kept in mind securing men not only of the right caliber, but men who will do things; and it is suggested to those who become the officers of the section that this section have additional meetings throughout the year instead of regarding quit now and die and not have any additional meetings from now until next year. There are other opportunities, such as the Western Canners meeting and others, when suitable meetings can be held.

The members of this committee present for nomination Messrs. E. B. Cosgrove, of Minnesota, as chairman, and Mr. Hall Wrightson, of Maryland, as Secretary.

Motion seconded and carried.

A MEMBER—Would the committee consent to a suggestion of a vice-presdient of this section?

CHAIRMAN HILL—I think that is a valuable suggestion. It has not heretofore been the practice of appointing vice-presidents, but if you think of the name of one whom you can add to your committee I would entertain a motion.

MR. GREENE—The committee would have to convene in order to do that. Had they been so requested they would have selected a vice-president.

I would like to place in nomination the name of Mr. A. J. Mitchell as vice-president.

CHAIRMAN HILL—If there is no objection the name of Mr. Mitchell will be added to the report of the committee as vice-president. The question is before you, gentlemen. All in favor of the motion signify by saying "aye," contrary "no." The motion is carried and I declare the gentlemen named duly elected to the respective offices.

If there is nothing further we will stand adjourned.

An adjournment was then taken.

KRAUT SECTION

National Kraut Packers Association Meeting, Iroquois Room Hotel Statler, Thursday January 24 1924

W. W. Wilder, Clyde, Ohio, Chairman, presiding.

Roy Irons, Clyde, Ohio, Secretary.

THE CHAIRMAN—We have one committee to appoint. That is the Nominating Committee for chairman and secretary of the Kraut Section for the ensuing year. I will appoint this nominating committee to consist of B. W. Weller, H. Hamilton and L. A. Colton.

We are fortunate this morning, I believe, in having all our expected speakers present. First we will have the address, "Fermentation of Kraut," by Dr. Edwin LeFevre, Bureau of Chemistry, Washington, D. C. (Applause.)

Factors Which Influence the Quality of Sauer Kraut

By Edwin Lefevre

Bureau of Chemistry, U. S. Dept. of Agriculture.

SAUERKRAUT is shredded cabbage which has undergone a lastic fermentation in the brine made from its own juice by the addition of salt. The quality of this product undoubtedly depends upon several factors. One of these, a very important one, is its acid content. Without acid it would not be sauerkraut. The very name implies acidity. Without a sufficient degree of acidity it lacks the proper flavor, and insofar as this is lacking becomes flat and insipid. The degree of acidity which can be obtained in sauerkraut is limited by the amount of sugar in the cabbage. This is usually about 4 per cent. The group of lactic organisms which are always present on cabbage are capable of converting this sugar into acids, chiefly lactic. We should get from the action of these organisms an acid percentage equivalent to about one-half of that of the sugar present. This is comparable to the results obtained in the fermentation of fruit juices, where we should obtain as a result of the action of yeasts and acetic bacteria an acetic acid production equivalent to one-half of the sugar in the juice. Unfortunately in neither of these fermentations do we, as a rule, get such a result. In the fermentation of sauerkraut we are sometimes able to get an acidity of 2 per cent, calculated as lactic. More often we get less than that. A percentage of 1.8 is considered a good result. An acidity of 1.5 per cent should, I think, be established as the minimum which a fully fermented product should show. Less than that would indicate either that the cabbage was deficient in sugar, or that the fermentation was not properly carried out.

Just why the acidity should be unduly low in some instances is not always easy to understand. Several factors, however, may be conducive of this result. A low sugar contact in the cabbage would, of course, mean a correspondingly low acid production. It may be said, however, that low acidities in the fermented product are very rarely due to a deficiency in the sugar content of the cabbage. In the great majority of cases this is due to the failure of the fermenting organisms to utilize all the sugar present. tI is well known that after fermentation has ceased a certain per cent of sugar usually remains unutilized. The lactic group of bacteria with which we are concerned in this fermentation is not one simple uniform species, but exists as numerous strains which differ somewhat in their morphology and doubtless in their ability to convert sugar into acids. Bacteriological investigations have shown that practically all micro-organisms are influenced adversely by the products of their own decomposition. So, with these high acid formers the increasing acidity soon operates to inhibit their activity, rendering them incapable of further attack on the sugar present.

In very many instances the failure to secure a satisfactory degree of acidity in sauerkraut is due to the fact that the essential organisms do not function under favorable conditions. One condition, which is of vital importance, is the proper temperature. In my experiments in the fermentation of cabbage under commercial conditions reported to this Association in 1920 it was clearly shown that we do not get the maximum results in acid formation unless these organisms are given a temperature which approximates their optimum of about 30 degrees C. (86 degrees F.). If cabbage goes into a tank cold, as it often does in our Northern cabbage belt unless it is preheated, the fermentation is bound to be slow in starting, the acidity slow in forming, and in the end usually falls much short of the possible production.

Another condition which may be unfavorable to acid production is improper salting. The group of organisms which are essential to the fermentation of cabbage are quite tolerant of salt. Large amounts are, however, to a certain extent inhibitive. Proper salting is a factor which must also be considered in connection with the quality of sauerkraut. This can very easily be injured by the use of too much salt, or by its uneven distribution. Very careful experiments have shown that 2.5 per cent of salt, based on the weight of the cabbage used, gives the best results. This amount of salt does not prevent the activity of the organisms and at the same time gives that flavor which is most desirable. Under certain conditions it may be advisable to increase this slightly, as, for example, in fermenting cabbage during very warm weather. The amount used, however, should never exceed 3 per cent.

It is equally certain that the kind of cabbage used in making sauerkraut has an influence upon the quality of the finished product. It is not my purpose to discuss the question of varieties

of cabbage most suitable for this purpose. Members of this Association undoubtedly understand this better than I do. In a general way, however, it may be said that in order to secure a good product we must have firm, solid heads of cabbage. My own experience, and I doubt not the experience of all, is to the effect that you cannot make a good quality of sauerkraut with heads of cabbage which are improperly filled and which do not contain the proper amount of moisture and other essential constituents.

Two factors which must always be considered in determining the quality of sauerkraut are crispness and color. By crispness we mean firmness, without, however, being tough or fibrous. The kraut should be firm in texture and yet should possess that degree of friability which renders it easy of mastication. The color of sauerkraut should always be as white as possible. This is desirable from the standpoint of appearance and also for the reason that lightness in color is indicative of proper handling. Crispness and whiteness being essential to a good product, it is well to consider those conditions and influences which are unfavorable to those qualities. Undoubtedly a slow fermentation is conducive to the touchening of the product; therefore, it is always advisable to secure a fairly rapid fermentation. Long holding in the tank is also conducive to the deterioration of the kraut, both as to its texture and color. Moreover, aromatic substances are formed which are not essential, and are productive of unpleasant odors in the cooking of the kraut. It should always be kept in mind that the fermentation of sauerkraut is essentially an anaerobic process. Therefore, the presence of air is to be avoided as far as possible. For this reason the distribution of sauerkraut in barrels cannot be considered the most desirable method. Transferring to barrels means the introduction of air and exposure to aerial infection. Yeasts and objectionable bacteria enter and lead to secondary changes which may be unfavorable to the quality of the product, rendering it dark in color and strong in flavor and with undesirable odors in cooking. Canning is undoubtedly the ideal method for placing sauerkraut in the hands of the consumer. This product having a high acid and salt content does not afford a favorable soil for the growth of spoilage organisms, and is, therefore, readily preserved by canning. Care should be taken in canning sauerkraut to see that a proper degree of acidity is maintained. A minimum of one per cent should be shown by a sauerkraut after canning. If proper methods are followed, this is perfectly possible, even if the initial acidity of kraut is not more than 1.5 per cent.

In conclusion, I desire to say that the demand for sauerkraut does not now come from the saloon and free lunch counter, but the appeal for its use must be made to the housewives of America. These form a large and a very discriminating and exacting clientele.

The manufacturers of sauerkraut must, therefore, produce a product which contains the proper degree of acidity, properly salted, and which has the proper crispness and color. Briefly, it should be a clean and appetizing product.

MR. KLUMP—What gives kraut a burnt taste, canned kraut? What is the cause of that?

A MEMBER—Not enough cooling after you cook it in the can.

A MEMBER—I understood Dr. LeFebre to say you could make kraut without salt. Did he mean that?

DR. LeFEVRE—No, I didn't mean to say that you could make sauerkraut without salt. I mean you could make a fermentation. Cabbage will undergo a fermentation.

A MEMBER—Won't it be soft and rotten?

Dr. LeFEVRE—No. You can shred cabbage and pour water over it and it will undergo a fermentation. It will become sour, but it does not have the flavor. It is not fit to eat. The same thing, you know, holds true in ensilage. That is fermented and becomes sour. It has no salt in it, and it does not have the flavor. We couldn't eat it. Cattle like it but we don't.

A MEMBER—If you salt kraut too little you get soft kraut I do, anyway.

DR. LeFEVRE—Of course, I do not pretend to say that would work on a large scale. I am simply talking about a shall experiment in the laboratory. I know that has been done in our laboratory.

MR. COFFLER—I believe that the process of making in Holland is without salt the majority of the time. When you import kraut in this country you find in the majority of cases it is imported under a process without salt, and they get this fermentation largely through pressure. That is in tank cure. That is only a very little experience I have had, but I believe that would help answer that question.

The CHAIRMAN—The next address on our program is "Chemical and Bacteriologcal Analysis of Sauerkraut," by Dr. E. E. Fred, University of Wisconsin, Madison, Wis.

SOME FACTORS THAT DETERMINE THE QUALITY O SAUERKRAUT

Summary of Address Delivered by Mr. E. B. Fred, of the De partment of Agricultural Bacteriology, Madison, Wis.

AN order to produce uniform sauerkraut of good quality, w believe that serious consideration must be given to such factors as kind of cabbage, age of cabbage, kinds of bacteria and the factors that favor the development of the proper bacteria. Chemical and bacteriological methods furnish valuable information, but cannot be used alone to judge quality of kraut.

From the results of a number of analyses it appears that good kraut should contain about 1 per cent of lactic acid. If the acid is present in small amounts the raw kraut may have a good flavor, but does not possess the same keeping qualities. Canned kraut usually contains about .9 per cent of lactic acid and about half as much alcohol as bulk kraut.

Although not exact, direct titration of the brine gives a fairly accurate measure of the total acidity of the kraut. It is highly important that the brine drawn for such tests be representative of that in the vat. It has been shown that a sample drawn from the side of the vat may be entirely different from that contained in the interior of the vat.

In the early stages of fermentation there are present various kinds of bacteria, but as the fermentation proceeds these disappear and are replaced by great numbers of the lactic acid bacteria. About one week after the kraut is packed the maximum number of bacteria is reached. This may represent more than one billion bacteria per cubic centimeter. Within a short time after a high acidity is reached the number of bacteria begins to decrease.

From the results of many tests in experimental vats it is concluded that inoculation with the proper bacteria will influence sauerkraut fermentation in several ways.

The normal flora is altered. It results in a great increase in the number of lactic acid bacteria, especially in the early stages of fermentation. The fermentation products are changed. There is a slight incrase in the amount of lactic acid and a decrease in the amount of volatile acid and alcohol. There is a well-defined improvement in the quality of the inoculated as compared with the uninoculated kraut.

In order to place the kraut industry on a firm basis and thereby insure the production of a better and more uniform product, it is evident that the bacteriology and the chemistry of the process must receive careful study. To secure the best results this laboratory study should be in a close contact with the kraut manufacturer.

THE CHAIRMAN—If not, I want to say that we are certainly fortunate in having two such wonderful addresses this morning by men who have devoted a great deal of their time and knowledge in the preparation of these very instructive and necessary parts to our business. Is the Committee on Nominations ready to report?

THE ELECTION.

MR. WELLER—Your committee would recommend that the same officers be elected, Mr. Wilder as chairman and Roy Irons as Secretary, and I would move that we elect them by acclamation.

The motion was duly seconded and carried.

THE CHAIRMAN—I will speak for myself and let Mr. Irons speak for himself. I want to thank you for this renomination and assure you that I will do my best for the year of 1924 to continue the work of the Kraut Section of the National Canners' Association.

This concludes the Kraut Section meeting, and according to the program, you will notice that the meeting of the National Kraut Packers' Association will convene at once. Everyone is invited, in fact expected, to remain throughout the entire meeting. We are going to push it along as fast as we can, as we have many good things before us.

MEETING OF THE NATIONAL KRAUT PACKERS' ASSOCIATION

Thursday Morning, January 24, 1924
10:45 o'Clock A. M.
Iroquois Room, Hotel Statler
W. W. Wilder, Clyde, Ohio, President, presiding.
Roy Irons, Clyde, Ohio, Secretary.

THE PRESIDENT—The first address on the program is:

"THE QUALITY MARKET"

By Mr. Earle W. Bachman, Chicago, Illinois.

(This was an advertising talk, explained by charts, showing the field reached by their magazines.)

THE CHAIRMAN—The next address on our program is the "Sauerkraut Campaign Up-to-Date," by R. J. Mooney, president of Conover, Mooney & Co., Chicago, Illinois.

FOR BETTER, LESS EXPENSIVE SHIPPING BOXES ---- See H & D

H & D Corrugated Fibre Boxes get there with the goods. Shipped to a nearby town or to a point across the continent, they arrive with contents intact.

You risk no defaced labels or leaky cans when you ship in these better boxes. Inexpensive, convenient and far above railroad requirements for strength, they solve your shipping problem once and for all.

Get our prices and free samples and you will be convinced of the efficiency and economy of these better boxes.

Ask also for your copy of our free "Canners Booklet".

The Sauer Kraut Campaign Up To Date

By Robert J. Mooney
The Mooney-Conover Adv. Co., Chicago.

THE Sauerkraut Campaign Up-to-Date" is not a subject for oratory and rounded periods. That is left to our forensic associate, Wm. Clendenin—"the sauerkraut apostle."

But it is a subject of the deepest interest, and ever-growing interest to me and our agency and to every member of this association.

A little more than a year ago we started on the sauerkraut adventure; for it was an adventure—a new departure in food advertising. Sauerkraut as a subject of an advertising campaign was declared impossible by certain competitors. But, backed by the most enthusiastic association with which any agency ever contacted, we were of another opinion. We had faith. We saw a vision.

Before a line of advertising was written, we spent months in the libraries of the country—reading and digging—gathering the facts, astonishing facts, regarding its history, its food and health ingredients and its medicinal and nutritive properties. We marshaled and assembled our authorities. We had material surprising to ourselves and a story that we felt would revolutionize an industry and in time might change the food habits of our people. We submitted our findings—and you approved.

Our next task was to translate these statements of eminent scientific and medical authorities from the terminology of science into the plain, everyday language of "the man in the street"—to make "the gospel of sauerkraut" so clear and simple that it would be understood by all, and would carry the conviction of truth and simplicity.

However, our way was not even then clear for sailing. Our findings were so unusual that great publications hesitated. But we sent photostats of every claim—and then with their acceptance, came the reply that no campaign had been so completely proven.

I am recalling these facts because it is proper that we should not forget that although the advertising and merchandising have brought sauerkraut into the limelight, it was not brought there by accident. We mastered its psychology—we found the sauerkraut gospel, and we determined to preach it in a new way. We did—and the results tell their own story.

Sauerkraut is becoming a household word. A favorite of thousands and tens of thousands today, its followers and lovers are enthusiastic. The day is fast approaching when the presidential candidate who does not eat it, will have difficulty in reaching the White House. At least if he is elected and remains ignorant of its health-giving properties, he will never live out his term.

Sauerkraut is on the shield today of the high and the lowly. A week ago a woman member of Chicago's "four hundred" told me its virtues had been extolled at a gathering of her exclusive circle, and each member advised to place it on the family menu. A great mail order house—the greatest in the country—Sears, Roebuck & Company—is feeding it three times a week to 7,500 employees in its cafeteria. A great bank—the largest west of New York City—The Continental and Commercial Bank of Chicago—serves it as a tri-weekly requisite to 1,500 employees, and the First National Bank of Chicago to 1,200. Schools, hospitals, sanitariums, hotels, restaurants are adopting it far and wide, and its nidividual consumers are increasing by leaps and bounds.

The story of sauerkraut has made new advertising history. It has been called repeatedly the most successful campaign in food advertising, considering the amount of money expended. We can assert that with becoming modesty, as we can truthfully say it has been the work of no one factor—but rather the joint work of the National Kraut Packers Association, then Advertising Committee, the Secretary and the Agency. No campaign has created more talk. I only mention that because the more talk it excites, the wider its fame and the more extended its use.

If you doubt this, you should spend a day in our offices. We are obliged to hold daily conferences on sauerkraut. I think the representatives of every magazine and half the newspapers in the United States have called to express their interest in the campaign and to ask when they were to have the privilege of running the sauerkraut story. Heads of associations have written, asking how the success had been achieved—a grapefruit association, a cherry association, a paper manufacturing association, a vegetable association; even a great association in California where food advertising, in large measure, had its beginning. Food experts accepting the sttaements in the advertisements are writing about it. And cooking and health experts cite it in their magazine and newspaper departments.

Not long since, a magazine, which we have not yet used, sent us a report of a survey made of the small town field for canned fruits and vegetables. It covered the East Central, Midwestern and Southwestern States, in order to secure a fair knowledge of the buying habits of their people.

In answer to the question: "Check the kind of fruits or vegetables that you buy," under sauerkraut were found the following results: East Central, 20 per cent; Midwestern, 46.4 per cent, and Southwestern, 65.5 per cent, a general average of over 44 per cent.

Gentlemen, that shows progress. A year ago the answers would have told another tale—and the investigation, in fact, would not have been made.

As all know, our advertising began a year ago last October, October 28, 1922, being the date of the first insertion. In the course of the year we used virtually only two magazines—one in a paramount way, with 24 insertions. Almost immediately the public responded—and the interest in sauerkraut widened.

This year we look forward, despite the comparative smallness of the crop, to even greater results. We are expanding somewhat. In the three months beginning with March we shall present our appeal in magazines whose combined circulation amounts to 4,172,225. Assuming that three to four persons read each magazine, over 16,000,000 have the opportunity of learning the "gospel of sauerkraut."

And in the summer months—we shall never be content until we make sauerkraut an all-year-round dish—we are broadening our circle by a more direct appeal to women. We think the time has come when we can do that with no uncertainty as to the outcome.

We have enlarged our booklet, adding interesting illustrations and many receipts which will educate the housewife to the many delicious dishes to be made from sauerkraut alone and in combination. But we have retained its geenral form and contents, which induced Dr. Harvey W. Wiley to call it the best food-product booklet he had read. The way in which our booklet has been received by the people and the conviction it has carried have proved that we were right in the beginning in making it simple and inexpensive, rather than an elaborate and costly one. It is the facts about sauerkraut which convince, and the more intelligent people are, the more quickly they believe these truths. We feel that everyone who had read our booklet is a sautrkraut convert for all time.

I cannot close this brief review without again paying tribute to the other factors in this campaign. We have had much experience in association advertising—I doubt if any agency has had more—but we know no association so responsive and encouraging as your own. And no advertising committee gave an agency more valuable support and help and inspiration than your committee. And, once again, let us say that no association's secretary ever surpassed Roy Irons. He, of course, needs no praise from us. You all know him and his work. Untiring in his devotion, ever on the job, his judgment and suggestions and enthusiasms have been a large contribution to the success of the enterprise, of which we can all be proud. Let us tell you, he keeps us busy at the wheel.

And great as has been the success so far, we look forward to this year, with even greater confidence. We feel, if possible, too, an even greater sense of responsibility.

We are telling the story to millions—yet we must not forget that there are many millions still to convince and enroll under the banner of Sauerkraut. But as we march on—the continuation of our advertising being assured—they will join. The campaign gathers momentum as it goes on—like a great rolling snowball—gaining weight and power. It is a stronger force today than it was a year ago, and a year hence it will be a power to be reckoned with greater than today.

We rejoice over our connection with sauerkraut. We feel, as must every member of the National Kraut Packers' Association, that in making known its virtues we are engaged in a work that is actually philanthropic; a blessing for the American people. Long live and flourish sauerkraut—the coming national dish of the country.

THE CHAIRMAN—I will ask Secretary-Treasurer Irons to give us his report as briefly as possible, and I know we will all be interested in the report which he is about to give.

SECRETARY IRONS—We are all anxious to know just how much enthusiasm has been stirred up among the consumers of the country. That is the party really that we want to reach, and by the report that I am just about to give here it will show you the number of letters that have come into the office direct, wanting the booklet "Sauerkraut, the Health Food," containing the recipes. I will first give you the coupons received from the "Saturday Evening Post:

Men	13,253
Women	16,291
Doctors	252

Making a total to date since the campaign started October a year ago, October 28th, of 29,796.

"Good Housekeeping"—Men, 659; women, 2,413; doctors, 20; making a total of 3,092.

"Elks' Magazie." Men, 1,448; women, 1,484; doctors, 27, making a total of 3,009.

This as of January 1st of this year.

"The Normal Instructor"—probably a lot of you do not know what a normal instructor is, but it is a book that goes out to the teachers of economics in the United States. Men, 121; women, 124, making a total of 245. They request booklets for their classes. They will probably send in for ten or a dozen, or 15 or 20. We have sent them altogether 13,641 booklets. As I said, they distribute them and teach sauerkraut to the kiddies in their school rooms.

"Today's Housewife." That is an organ we did not advertise in. They came out with a little announcement in their paper that we were publishing a booklet containing recipes, and there have been 337 women written in from that source.

"St. Louis Post-Dspatch" last year was 1,876. That has gained four coupons in December. Those ads were run over a year ago.

"Progressive Grocer." This is a medium we use early in the fall to get the retail grocer acquainted with our advertising campaign. We attach a coupon thereto to send in for the booklet. This goes out to about 3,000 grocers. We have sent out to them on their inquiries for the coupons 10,396 and 24,038 booklets.

Miscellaneous. Men, 1,008; women, 1,766; doctors, 23.

We do not know from what medium they might come. That makes a grand total to date of 41,987 inquiries which came in since we started October 28. a year ago.

I imght call your attention to the first ad we had in the "Saturday Evening Post," October 28th, one year ago. A party would think that we would not have any more inquiries from that ad. During the month of December there were four came in. Hardly a month goes by but that we do not receive a coupon from the first ad we put out in all of our papers. They seem to be an endless chain. They do not seem to destroy them. The life of a daily newspaper they say is 20 minutes. It does not seem so from these advertisements, because we get some coupons from an old ad in the "St. Louis Post-Dispatch" of last December. The number of letters received during the month of December was 5,441, against 5,050 during November.

The Secretary continued reading letters.

THE CHAIRMAN—The Kraut Meeting would hardly be complete without hearing from one of our well-known speakers, who is the next on the program, who will talk to us on "New Developments of the Sauerkraut Proposition," Mr. William Clendenin, of Chicago, Illinois.

THE KRAUT PACKERS LEAD ALL.

By William Clendenin.

HAVE just had paid to me the most distinguished compliment of my brief but meteoric career. A note handed up here reads as follows:

"Dear Mr. Clendenin: I understand you are the advertising man for sauerkraut, but if you wrote all those testimonials Roy Irons is reading, then I will tell the cockeyed world that you are a wonder." (Laughter.)

Well, I did not write them, but I would like to be able to claim or asseverate the fact that I did for it would be living proof that this world is progressing, getting better and abler every day. Shakespeare wrote "Hamlet," Milton wrote "Paradise Lost," but I am the author of "Paradise Regained." I wrote the story of Sauerkraut. (Applause and laughter.)

But my career approaches now its close. Mr. Mooney has referred to me as the official orator of Kraut. If there is anything of which I am wary it is the closing in of good close competition, and I have noted with alarm one fact, and that is that the entire personnel of this organization is waxing so eloquent on the subject of its own progress that they bid fair to rank very soon now not only as evangelists, but as exhorters.

Last night at the Food Show I heard the Rev. Archbishop Hubbard, of Milwaukee, holding forth on the virtues of kraut, reinforced by Mr. Cornell, of the Meter Organization, in the middle of the main aisle, and I says to myself says I, "I had better be going while the going is good. The next thing I know these gentlemen will have an official invitation to join the ranks of the Methodist Church and Billy Sunday will abandon his vocation and begin a new career as a canner of kraut." (Laughter.)

The truth of the matter is that the National Kraut Association is the one association of the fifteen that I have had the pleasure of serving in the matter of research and report and story that has been able to see the light and do something about it. I glory in it. I wrote the story of Beans. God bless my soul, and what happened? Nothing. I wrote the story of Peanut Butter, 900 pages long and full of good stuff. What happened? Nothing. Tomatoes? Nothing. Pickles? Nothing. Macaroni? Less than nothing. I can read you the list of fifteen of them, and the only bunch that saw the light and had the courage of its convictions, stepped to the front and nailed its colors to the mast, and put it through, was the National Kraut Packers' Association of the United States. (Applause.)

I made an address yesterday, a short one, before a luncheon upstairs of a newly organized group of men who are undertaking to do a considerable and a brave thing, if they forward it to the degree of actual execution, and I think they will. They believe that the time has come to maintain quality in the can and integrity in behalf of the label that identifies it. They feel that the time has come when character in this business of canning, whether it be kraut or corn or anything else, is the chief end of the business, and that to deceive the public, to disappoint the paramount right of the public, is worse—is worse than a crime—it is a mistake.

Out in Chicago the other day we had some wonderful kraut sent me by the president of this association, a strictly complimentary reference on my part. But it was most wonderful kraut, and we gave it to some friends of ours, particularly two elderly ladies who said they were fond of kraut. They took it home and served it in their home to their family, and it was they went around the corner when it came time to replenish the delicious, and rather than ask for another little gift package larder and bought somebody else's—I won't say who's—at the grocery store, and it was not good kraut, and they were disappointed, but they had faith enough left to try it again. So that they went in the other direction the next time and bought some at the delicatessen store, and that was even worse, and they have quit, they have given it up.

What is the answer to that sort of thing? Some of you said, "Hit the standardization thing, and hit it hard." Others said, "Well, touch it lightly and pass on." I am here to tell you—and my hair is white and I am old—that by the Lord Harry reform this thing, get behind brands that mean something. There has been the faith and the good will of the public, that has believed in you enough to make the initial purchase. Don't reason like P. T. Barnum, that there is a sucker born every minute, because if you are doing that change your exhibit. That is what he did. Shift your brand, like the American Tobacco Company; it has 1,500 brands waiting for their turn. But don't try to standardize a brand unless you standardize the quality. You have no right to disappoint the American public.

You have spent $75,000 to advertise sauerkraut, and there is not a man jack of you advertising his brand. Again, good night! I think the least you should and ought and could do would be to put on direct mail campaigns for yourselves, and particularly for your quality pack, your fancy and your choice and your extra standards at least, within your trade territory and to your trade at least. If you are going to build this thing up that is one sure way to do it.

You are all so far ahead that even at this convention I hear it whispered in the corridors around and the columns and the pillars and back stairs, "How do these sauerkraut fellows do this? Damn it, can't we do things like these kraut fellows?" That is exactly the effect we want to have prevail with our fellow-men in this business, to keep ahead of them.

Here, now, is my humble contribution to the gayety of nations, and I read it for what it is worth, an Ode to Sauerkraut. Modesty, as I indicated, forbids me to reveal its authorship.

"I have dined at Delmonico's,
Dined at the Ritz,
At Claridge's, Faust's, and Beau Peep;
I've chatted with geniuses,
Listened to wits,
And to some who would put you to sleep.

I remember the eggs foo yong,
Foo sow;
I remember the oysters McTague;
I have fond recollections of grouse, not now
Could you steal it or buy it, or beg.
Old memories come of the quail on toast,
Of venison cuts—and the jelly—
Of Chambertin (some), but champagne (most),
And 'three stars' that tickled your ('tummy).
My mind goes back to the feasts of old,
Delights which today we lack,
The duck, the teal and the canvas back,
The bar le duc and the punches cold,

Ad the Pommery there in its pack.
The lobster king in his palace bright,
A-swim in a seethe of wine,
The wine of the Rhine, or, well, Moselle,
I'd take either one for mine.
But that isn't it, there were cocktails, too,
Martinis for me—and you—
In those fugitive days and those vanished nights,
When skies were blue and our friends were true,

And the eats were out of sight.
But those days are gone, by Gad!
They're gone
They're gone like a flicker of light;
And they've left us here without even beer,
And yet there is **something** in sight!
There was one thing then,
And there's one thing still
We never could live without—
The dish that digested the whole damn bill,
And that, my friends, was KRAUT!

There was the dish that settled the hash
Of the mountain dew, and the terrapin stew,
And all the collations that epicures knew,
The which I'll say was by no means few,
And make you feel like a fighting cock,
SAUERKRAUT!
There was the dish with the old ham hocks,
The antidote for soda and hock,
That cleaned the debris
From your system, see?
SAUERKRAUT!

How few of us knew in those days gone by
If it weren't for the kraut we would surely die?
But it saved us then and it saves us yet
From the horrors of hootch, the best you can get,
Just SAUERKRAUT forever and aye.
Why it cures your pains and it cures your aches,
And it steadies your nerves when you've got the shakes,
And diabetes, old age and gastritis,
And rheumatism and Fletcherism,
And beyond all question for indigestion,
And for thin and stout, and you with the gout,
There's nothing so potent as just SAUERKRAUT.

No matter what your special disease,
Thin as a rail or quite obese,
Or tight with the tightness of civilization,
The chronic curse of constipation—
Mentally muddy or clogged with doubt—
There's one sure cure, and that is KRAUT.
Why, even the women are coming our way,
They have found at last they can make it pay,
For the ladies now say that the only way
To clear the complexion in just one day
Is to can cosmetics and buy a can
Of good sauerkraut from the grocery man.

There is nothing like it under the sun,
A corrective food—the only one.
If you're sick abed it'll make you well,
You can tell the world to go to—Steubenville—
You may think it won't, but I tell you it will.
So this is the food physicians advise,
This is the food the wise one buys.
The food whose virtue none denies
The sovereign dish in the whole world's eyes,
The dish of dishes—to advertise—
SAUERKRAUT." (Applause.)

THE CHAIRMAN—It does us good to laugh. I enjoy hearing you laugh when Roy Irons read those letters. You always smile when our friend Clendenin gets up. There is something contagious about it. You get it really before he gets u He never disappoints you. That was fine.

Next we will have the presentation of the advertising pl for 1924 and 1925, presented by Mr. Martin Meeter.

MR. MEETER—In a general way all I want to indicate that the program of advertising as laid out by the committee conjunction with the agency is to continue principally in t publications that we have been using, the adoption of the qua ity group that was discussed here a little while ago, but the ma feature of which I think will begin in the April number, w be an appeal to the women in the presentation not alone of t gospel of sauerkraut, but suggesting recipes and particular salads. Sauerkraut has never been used to any extent in t salad form, and if you will refer to the book you will find som very surprising recipes that have been tried and tested in very thorough way, and they are being adopted we find in hotel and restaurants and in some homes. But this has not bee published as yet, and the committee wants to put these out es pecially to the women in "The Ladies' Home Journal," begin ning in the April number. This we believe, and undoubtedl you will agree with us, that it will increase considerably th consumption of sauerkraut in the summer months.

There is just one thought that struck me here while som of these men were speaking. What would happen right no during 1924 if we were to drop this advertising? Did you eve think of that? I will let you answer the question. It cer tainly would be a disaster from the standpoint of good adver tising and from the practical standpoint of the packer. If tha is true, the reverse must also be true. What would happen i can increase the advertising? The advertising will go onl as far as the appropriations are made. You can't figure no that we have about $50,000 to $75,000, wherever we end up, i accordance with the pack, now that money has been sub scribed and will be paid, that that is as far as we will have t go. Why, we are only scratching the surface. We could wel use $100,000 or more, and the success of the campaign depend entirely upon you, and we hope that there will be a considerabl increase at this meeting in men who will pledge themselves t this campaign, as the great increase was shown at Atlantic City and at the Chicago meetings.
